These studies report fibrogenic lesions in both animals and humans from exposure to minerals of very low silica content. In the animal studies conducted, the fibrogenicity of various minerals was shown to vary from 25 to 50 percent of that of quartz. The quartz content of minerals used in these experiments ranged 0 to 76 percent. Of the 29 minerals used in the experiments, 13 had quartz contents of less than 1 percent and 5 were between 1 and 2.6 percent. Of these 18 minerals, most samples showed a fibrogenic reaction. A study by the Pneumoconiosis ResearchUnit Council for Scientific and Industrial Research at the South African Institute for Medical Research of 13,296

deceased miners indicates that 1.4 percent of the miners showed mixed-dust fibrosis (ref. 32). These miners worked in coal, gold, asbestos, platinum, tin, copper, iron, diamond, chrome, manganese, antimony, mica, and feldspar mines. The study concludes that there was no obvious relationship between the prevalence of MDF and the type of mine. Again, however, exposure data were poor.

MSHA believes that the 5 mg/m^3 respirable mine dust limit will prevent the development of PAP and MDP. However, the Agency requests comments on available documentation further demonstrating health hazards associated with inhalation of low silica mine dust and the appropriate means for regulating respirable mine dust, including any information suggesting a PEL.

One commenter suggested that a total dust standard would be more appropriate than a respirable dust standard because a respirable dust limit does not address exposures to the upper respiratory tract. At this time MSHA does not believe that health documentation supports a total dust standard for substances containing less than 1 percent quartz.

Another commenter suggested that salt, trona, and potash operations should be regulated under a nuisance dust standard. All three were regulated by MSHA as unlisted nuisance dusts prior to July 1982. Since that time, these three substances have not been regulated by MSHA. The proposed respirable mine dust PEL would apply to the respirable fraction of the airborne dust at all mines, including salt, trona, and potash.

Controls and Respirators

Existing metal/nonmetal standards §§ 56/57.5005 require mine operators to control harmful airborne substances, insofar as feasible, by prevention of contamination, removal by exhaust ventilation, or dilution with uncontaminated air. These standards also require use of respiratory protection when accepted engineering controls have not been developed, when unusual circumstances necessitate occasional entry into hazardous areas to perform maintenance or investigation, or while controls are being installed. Whenever respirators are required, operators must implement a respiratory protection program. The existing respiratory protection program requirements for metal/nonmetal mines are incorporated by reference from the American National Standard Institute's "American National Standards Practices for Respiratory Protection," ANSI Z88.2-1969.

Existing coal standard § 70.300 requires respirators to be made available to all miners underground when concentrations of respirable dust in excess of the applicable standard are known to exist. The standard specifically prohibits the substitution of the use of respirators for environmental control measures in the active workings.

The proposed rule would require mine operators to reduce worker exposure to airbone substances through feasible engineering or administrative controls. When appropriate controls do not reduce exposure to the PEL, they would have to be used to reduce exposure as low as feasible and be supplemented with respiratory protection. MSHA intends for operators to have 6 months from the date of publication of the final rule in the Federal Register to comply with the new standard through any combination of controls and respiratory protection. The Agency believes that the 6-month period from the date of publication would give operators reasonable opportunity to evaluate exposures and comply with any new limits with a combination of controls and a respiratory protection program. Within one year from the date of publication of the final rule in the **Federal Register**, operators would have to institute all feasible controls to meet permissible exposure levels. Respiratory protection would be required only as a supplement for controls. Given the present state of the art in mining technology, all operators can reasonably achieve the proposed limits within one year. On June 5, 1989, OSHA published a proposed rule addressing methods of compliance and the hierarchy of controls (54 FR 23991). As a result of this rulemaking, OSHA may change its hierarchy of controls, which is similar to that proposed by MSHA. MSHA requests public comment on what the hierarchy of controls should be for the mining industry and the period of time it should take to comply with a final rule.

Engineering controls reduce exposure by modifying the source of, or decreasing the concentration of, potentially harmful substances in the workplace. Examples of engineering controls are local exhaust ventilation, enclosures, barriers, or suppression methods that eliminate or reduce the dispersion of the substances. Exposures may also be controlled by substituting less hazardous materials in the process used. The most common method of engineering control in mining is ventilation. Local exhaust ventilation prevents exposure by capturing the contaminant at its source before it escapes into the work environment.

In mining, as well as in general industrial hygiene practice, the concept of engineering controls represents an integrated approach to controlling exposure. Generally the airbone contaminant has multiple sources in the workplace. For example, dust may be generated from drills, crushers, conveyors, baggers, and travel surfaces. In this situation, the engineering controls would probably include both general and local exhaust ventilation, suppression or dispersion controls, isolation, as well as housekeeping practices such as vacuuming or wet mopping instead of dry sweeping. This integrated approach allows the operator to optimize the controls that best fit the particular operation. Some operators may choose a more costly ventilation control system that collects dust in order to reduce or eliminate the need for manual cleanup, while others may opt for regular housekeeping of a work area.

In a recent report, the Congressional Office of Technology Assessment found that health professionals rank engineering controls as the priority means of controlling exposure, followed by administrative controls, with personal protective equipment as a last resort. If the primary control method involves the use of process containment, then such method can be supplemented by the availability of personal protective equipment. If respirators are the primary method of control, then the opportunity to provide supplemental protection is eliminated because the personal respiratory protection is already the final resource. Work practices frequently fall between engineering controls and respiratory protection ("Preventing Illness and Injury in the Workplace," Office of Technology Assessment, U.S. Congress, April 1985).

Engineering controls inherently provide more consistent and reliable protection than respirators because they do not depend upon constant human supervision or intervention to function, whereas respirator programs require continued administrative attention. Once engineering controls are installed and adequately maintained, they usually provide consistent and reliable protection to all workers. They do not depend, as do respirators, on maintaining an appropriate fit for every individual in order to provide protection. Also, monitoring devices can measure the amount of protection that engineering controls provide the worker, whereas it is difficult to make periodic measurements of a respirator's effectiveness. MSHA's experience indicates that, when respiratory protection has been used for long-term protection in mining, the effectiveness of such protection is difficult to maintain.

Administrative controls may be used as an alternative to engineering controls. Administrative controls are the reduction of time during which a worker is exposed to a hazardous substance. Such controls include use of work practices, personal work schedules, and production or operation schedules to reduce exposure. For example, a miner who would normally work 8 hours in an exposed environment could work only 4 hours in the exposed environment and be changed to a nonexposed work area while another person takes over the latter half of the job assignment in the exposed area. Few comments were received on the use of administrative controls. One of the greatest limitations to its use is in mines where jobs are usually well defined, making it difficult to reassign workers.

A respirator is a device worn by the individual miner and designed to protect that particular miner from inhaling the harmful airborne substances in the work area. Respirators are designed to protect against hazardous atmospheres ranging from irritation to atmospheres immediately dangerous to life and health (IDLH). The hazard may be caused by one or many substances, ranging from particulates to gases. Protection may be required intermittently or for long periods of time. While many types of respirators have been developed for various conditions, they are all limited in protection and application. Studies have indicated many limitations involving respirators. They include cartridge effectiveness, breathing resistance, medical effects, psychological problems and interaction with other safety equipment and work (refs. 33–52).

The primary disadvantage of using respirators is that they are less effective than engineering controls in most workplaces in mines. MSHA's experience regarding respiratory protection in mining supports this. Other research conducted in the workplace indicates that the protection provided by respirators is unequal, highly variable, and substantially lower than predicted from laboratory data as summarized in "Preventing Illness and Injury In The Workplace" by the Office of Technology Assessment. Moreover, the effectiveness of the respirator is dependent largely upon appropriate selection. A health hazard may be created if failure occurs in the protective capacity of the respirator against the airborne substances in the mine without the wearer's knowledge. Therefore respirators cannot achieve their full protective potential without a program that includes selection, fit testing, training, and maintenance, as well as an insistence that workers wear the respirators.

Until recently silica flour operations had difficulty complying with the silica standard with engineering controls. Because of the high silica content and size distribution at these operations, extensive engineering controls are needed which can be extremely expensive and complex to retrofit. Thus such controls have taken most operators years to install. Nevertheless, improved engineering technology has reduced the number of silica operations out of compliance. Presently the greatest noncompliance problem results from poor maintenance and cleanup procedures.

MSHA has 22 active silica flour operations. Since January 1, 1989, 22 citations have been issued at these operations due to overexposures to the silica PEL. For those operators that are out of compliance, most have poor housekeeping and maintenance procedures. In order to avoid overexposure to silica dust, strict adherence to procedures such as not dropping bags of the product and avoiding dry sweeping, along with daily pre-shift checks of dust collectors, would assure greater compliance. Most operators, even when the PEL is not exceeded, require workers to use respiratory protection, especially at bagging facilities.

Health data indicate that respirator use alone has been unsatisfactory and that the high ratio of silicosis is due to ineffective respiratory protection programs and failure to monitor (NIOSH HETA–79–104–107, 79–103–106). Clearly, respirators must be used with adequate respirator programs if they are to protect workers. Follow-up medical examinations showed that miners employed at these plants had an excessive prevalence of silicosis and development of complicated silicosis (PMF) within a relatively short time. In these reports, NIOSH stated:

> In conclusion, the very high prevalence of silicosis is due to the respirable size of the particles, the high free silica content of the dust, excessive respirable dust levels and ineffective respiratory protection (NIOSH HETA–79–104–107 and 79–103–106).

MSHA would continue to require that all feasible engineering or administrative controls be installed and supplemented with respiratory protection at silica flour mills. However, the proposed rule would require operator monitoring whenever respiratory protection is required to be used to provide assurance that the respirators are providing the necessary protection.

The most cited disadvantage of engineering controls is cost. The cost-effectiveness issue is raised primarily by operators concerned that they would be required to install controls that lower exposure levels, but not to compliance levels. When this occurs, respirators would be required in order to further reduce exposures to the permissible limit. Some operators believe that costs to install such engineering controls are wasted since they still have to resort to respirators. However, in such instances respirators supplement the protection provided by the engineering controls and do not function as the sole line of protection for the worker. In addition, it has been MSHA's experience that the type of respirator needed to protect workers in atmospheres without engineering controls would be more costly for operators and burdensome to workers than the type of respirators required to supplement engineering controls that have reduced exposure to as low as feasible.

In the metal/nonmetal preproposal draft, MSHA requested comments on the use of respirators as an alternative to, or in combination with, controls where respirator use could provide equivalent protection. MSHA asked for data on processes, operations or circumstances in which respirators could be as effective as controls in achieving health protection along with progress in respirator design and technology. MSHA also requested information on the health effects of respirator use in mines where engineering or administrative controls have not been feasible. The Agency received few comments and little verifying data. To date, MSHA's data indicate that engineering and administrative controls are more effective than respirators. However MSHA still solicits comments regarding this issue.

MSHA is seeking comment on the controls to be used for protection of miners. In particular, MSHA requests information that would help the Agency to focus on three primary policy considerations.

The first consideration is health protection. It has been postulated that there may be instances where respirators would provide protection to employees equivalent to engineering controls and that their routine use should be permitted.

The second consideration is that respirator technology and use practices have progressed significantly since initial adoption of MSHA's compliance

requirements in the 1970's. As a result of many of these advances, the consensus among some occupational health professionals concerning what constitutes a reasonable effective respirator program has changed. This point is demonstrated by the issuance of the American National Standards Institute (ANSI) Z–88.2–1980 standard entitled "Practices for Respiratory Protection," a revision of the 1969 ANSI standard. In addition, improved respiratory protection programs are currently being addressed in this rulemaking. Therefore it is possible that, in the presence of such programs, respirators could be capable of playing a more significant role in air contaminant protection than they do in the existing standards.

The third consideration is cost effectiveness. There may be instances where the cost of engineering controls would exceed the expected costs of respiratory protection and where the routine use of respirators may provide adequate employee protection. Should such instances exist, reasonable allowances for the use of respiratory protection should be made.

The question arises as to whether there are circumstances in the mining workplace where the protection afforded by respirators would be equal to the protection provided through implementation of engineering controls. In particular, the question arises as to whether there are circumstances where the costs of the respirator program would be less than those of engineering controls and yet equal protection would be afforded by either. Are there circumstances in which cost-effectiveness factors are a legitimate consideration in determining the acceptability of one exposure control method over another? Also, what workplace factors would have to be considered to evaluate the effectiveness of a control method before costs could be taken into account? MSHA seeks comment on how factors such as described below should be taken into account by MSHA or the employer in determining the acceptability of using either engineering controls or respirators. Workplace factors that may affect the performance and degree of protection provided by exposure control means may include: Number of exposed employees and number of employees with respirator-fit problems; severity of acute and chronic health effects; length and frequency of exposure; ability to measure and ensure the adequacy of exposure control; work rate; temperature and humidity of the workplace; ability to assess the probability of protection failure; detectability of control failure before harm; and the extent to which employees may be expected to wear respirators for any required period. It has been suggested that engineering controls are particularly preferred where health effects are more severe, where there are more lengthy and frequent periods of exposure; where respirator failure warning properties do not exist; where the work rate exertion level is greater; where significant respirator fit problems exist and where extreme temperature and humidity conditions exist. MSHA raises for comment the question as to how or if these workplace factors should be viewed in deciding whether engineering controls or respirators are more appropriate and, further, how these factors could be reflected in a final rule to define those circumstances where respirator use would provide appropriate protection and thus would be permitted under the rule. How would it be determined that employees would be provided with the desired degree of protection?

MSHA maintains its support for a continuance of its existing compliance method hierarchy but, as the preceding discussion indicates, is open to discussion of whether, under certain specific sets of circumstances, it may be appropriate to allow respirator use in lieu of feasible engineering controls, thus providing flexibility in determining the appropriate method of compliance. For example, MSHA seeks comment on a requirement to permit respirator use in lieu of feasible engineering controls in certain instances where the employer has submitted a comprehensive written respirator compliance program to the Agency. This compliance plan would be subject to MSHA approval and would be required to demonstrate to the agency that the use of respirators under the circumstances described would provide protection to the employee equivalent to that afforded if feasible engineering controls were implemented. MSHA believes, however, that this flexibility may not be appropriate where the substance involved is a carcinogen, has no identified dose-response threshold, continues to pose a significant risk at the PEL, has no respirator breakthrough warning properties, or if there are no means of determining the specific in-use effectiveness of the respirator. On the other hand, if the effectiveness of respirators can be monitored readily in some manner, such as by biological monitoring, it may be appropriate to permit their limited use. The Agency solicits comment on the issue of MSHA-approved respirator use. Views are sought on criteria that should be considered and met for respirator compliance program approval and on circumstances, as suggested above, under which respirator use should not be permitted in lieu of feasible engineering controls.

Some commenters stated that engineering controls are too costly, and MSHA should require only those engineering controls that are effective in reducing the exposure to the PEL. Other commenters suggested that MSHA allow operators to use respirators rather than engineering controls, especially when the controls may not reduce the exposure to the PEL. Though the proposed rule allows greater use of respiratory protection in most instances, MSHA believes that respirators should only be used as an interim method of protection since their effectiveness may be secondary to that of engineering and administrative controls. While in some instances a single engineering control may not reduce the exposure to the PEL, a combination of controls, such as local exhaust ventilation and good housekeeping, may bring the operator within compliance. The operator has the flexibility to choose those controls which would be the most effective in reducing the exposure. However, the cost of a total respirator program must be figured into the cost of respiratory protection, especially when making comparisons between engineering controls and respirators. Such long-term costs can exceed those associated with the long-term cost of effective engineering controls.

Some commenters stated that the primacy of engineering controls should be determined by: (1) The achievable reduction of the air contaminant; (2) the number of employees exposed; (3) the seriousness of the hazard; and (4) costs to operators. The proposed feasibility criteria responds to these comments. However, it must be noted that MSHA's statutory mandate requires MSHA to protect all miners, regardless of the number exposed.

One commenter stated that engineering controls should be required only when necessary to maintain exposure below the level of an immediately dangerous to life or health (IDLH) atmosphere. The commenter did not believe that engineering controls should be required if exposure is below the IDLH level, although above the PEL, when controls would not reduce exposure to the PEL. According to this commenter, such a requirement represents a wasteful use of resources with no accompanying benefit to employee health, since respiratory protection would still have to be worn. This commenter stated that the determination as to the extent of engineering controls and respirator usage should be based upon evaluation of the conditions by the operator's industrial hygienist. However, less than one percent of mines have industrial hygienists on staff to make such determinations. Moreover, the concentrations of contaminants below a level immediately dangerous to life or health, yet above the PEL, can cause serious harmful effects because the documented hazard is likely to result from exposure above the PEL. Respiratory protection for many contaminants in the range below the IDLH level, but well above the PEL, would require employees to wear supplied-air, self-contained respirators, or full-face gas masks. This type of respiratory protection is difficult to use routinely in the mining environment because of the type of work and the physical activity, mobility, and visual acuity needed. For example, the IDLH level for ammonia that is generally recognized by the industrial hygiene community is 500 ppm, while the TWA is 25 ppm. At levels above 300 ppm to the IDLH level, a gas mask would have to be used in order to protect the worker adequately. At this concentration, eye and respiratory tract distress would occur with respirator leakage or failure. For hydrochloric acid, the IDLH level is 100 ppm and the ceiling limit is 5 ppm. An exposure level above 50 ppm to the IDLH level would require a full-face cartridge respirator or gas mask. Exposure to these levels would be intolerable if failure or leakage were to occur.

A commenter suggested that the Agency allow respiratory protection in lieu of engineering and administrative controls for cleanup activities. The Agency presently believes that because cleanup activities are more routine than occasional and inherently cause high levels of contaminant concentration, they necessitate use of feasible engineering or administrative controls. However, comments are specifically requested on this issue.

Sections 58/72.610 Abrasive Blasting

Surface Mines and Surface Areas of Underground Mines

Existing metal/nonmetal §§ 56/57.5010 prohibit use of silica sand or other materials containing more than one percent free silica as an abrasive substance or in abrasive blasting cleaning operations at all surface mines and the surface of underground mines unless the user is protected with a full-flow respirator or equivalent. This proposed standard is not intended to be a comprehensive safety and health standard on abrasive blasting. It is meant to replace existing provisions. MSHA will continue to evaluate the need for additional rulemaking on abrasive blasting.

The term "full-flow" respiratory protection used in the existing standard would be deleted and replaced by "a supplied-air respirator approved for abrasive blasting." The proposed rule would not contain the specifications of the respirator that were included in the metal/nonmetal preproposal draft, because the description "supplied-air respirator approved for abrasive blasting" would require respiratory protection specifically approved under 30 CFR part 11 for abrasive blasting.

Currently MSHA does not explicitly regulate abrasive blasting at either the surface coal mines or surface worksites of underground coal mines. However, § 77.1710 requires protective clothing for protection against the impact of particles from such operations.

Under the proposed rule, at both coal and metal/nonmetal surface operations supplied-air respirators approved for abrasive blasting would have to be used when abrasive blasting is done with silica sand or other materials containing more than one percent quartz, unless the work is performed in a totally-enclosed device with the operator outside the device. Several types of abrasive-blasting booths are commercially available and can be used successfully without causing any exposure to the miner. Such booths would provide equivalent protection without the burden of abrasive-blasting respiratory protection.

Exposure to silica is the major health hazard in abrasive blasting. The Agency believes that the difficulty in ventilating this type of operation and the potential of contaminating mine air, which could expose many people to the respirable silica health hazard, create too great a health risk to allow the procedure underground.

Abrasive blasting is used primarily for cleaning equipment. Rebounding or ricocheting abrasive materials, caused by high velocity impact on the blasted surface, could penetrate normal personal protective equipment and expose the miner to serious hazards. Respirators approved for abrasive blasting would be required in part because they are designed to protect the wearer's head and neck against impact and abrasion from rebounding material, regardless of the abrasive material used. The respiratory protection also provides additional protection from potential exposure to toxic contaminants attached to the article being blasted that could become airborne as a result of the abrasive blasting.

Heavy respirable dust clouds are generated in the immediate vicinity of the abrasive-blasting operation because of the high-velocity impact and subsequent grinding of the abrasive materials along with other potential contaminants. Because the respirable fraction of airborne particulates is high, a much greater potential respiratory health risk occurs, thus necessitating restrictions on the activity. Abrasive-blasting sands may contain high concentrations of quartz, organic or inorganic abrasives, all of which pose a serious health hazard to exposed workers. Also, a hazard may result from high concentrations of the base metal that may be removed during blasting and from any surface coating. Miners may be exposed to lead-based paints and chemical contaminants from the surface of articles that are cleaned. Many operators reuse abrasives, which allows the concentration of metal dusts or other contaminants to accumulate. MSHA found that one slag abrasive used in industry contained significant quantities of lead, cobalt, and cadmium. Therefore operators should be aware of exposure risks when doing abrasive blasting.

One commenter stated that the requirement for "all exposed persons" to wear respiratory protection needed clarification because it could be interpreted too broadly. MSHA interprets "all exposed persons" to mean only those persons directly exposed to the abrasive-blasting operation by immediate location and involvement in the operation. The need for respiratory protection or other personal protection for incidental exposures, such as to workers passing nearby or working in an adjoining area, would be determined on a case-by-case basis through exposure monitoring or the observance of flying debris. Under normal circumstances, abrasive-blasting operations are isolated and would not expose other workers. When abrasive blasting cannot be isolated because of the nature of the task, then all persons exposed to flying debris or above the PEL must be protected.

Underground Areas of Underground Mines

Existing metal/nonmetal § 57.5016 prohibits operators from using silica sand or other materials containing more than 1 percent free silica as an abrasive substance in abrasive blasting operations underground. The proposed rule would retain this prohibition for metal/nonmetal mines due to the likelihood of inhalation of silica being carried throughout the mine by the ventilation system, thus exposing unprotected workers. MSHA does not explicitly regulate abrasive blasting underground at coal mines. However, § 75.1720 requires protective clothing for protection against the impact of particles from such operations. The proposal would explicitly prohibit the use underground of abrasives containing more than 1 percent silica at coal mines. There are substitute abrasives such as steel shot or artificial abrasives that have been used effectively for this type of activity underground.

If substitute abrasives are used and there would be no overexposure to substances on the PEL Table, MSHA would still require that abrasive-blasting protection be used at metal/nonmetal and coal mines according to §§ 56/57.15006, 75.1720 and 77.1710. Rebounding or ricocheting abrasive materials caused by high-velocity impact on the blasted surface provides ample opportunity for penetration of regular personal protective equipment. MSHA believes that the additional devices on abrasive-blasting respirators are necessary because they are designed to protect the wearer's head and neck against impact and abrasion from rebounding material.

Sections 58/72.620 and 72.630 Drill Dust Control

MSHA proposes no substantive changes to the existing §§ 56/57.5003 for drill dust control at metal/nonmetal mines. However, this standard would be a new requirement for surface coal mines. The Agency would require that drill holes be collared and drilled wet or that other effective dust-control measures be used when drilling non-water-soluble materials. Effective dust-control measures would also be required when drilling water-soluble materials.

At underground coal operations, the provisions contained in §§ 70.400 through 70.400–3 would be recodified as §§ 72.630. Existing § 70.400 would be amended in proposed § 72.630 to require that dust collectors be maintained in permissible operating condition when they are provided as a method of controlling dust. Because MSHA has enforced these standards as part of the existing respirable dust standard for underground coal mines, the Agency proposes to retain the existing provisions except for strengthening the maintenance requirement for dust collectors.

MSHA believes that a specific standard addressing the dust hazards of drilling continues to be warranted due to the likelihood of overexposure inherent in such drilling operations. In addition, basic and effective control technology is readily available. Most problems with this technology are usually the result of human failure rather than a breakdown in the controls; for example, when the equipment operator fails to turn on the water, water-holding tanks are not filled, or bags on dust collectors are not emptied when full. These failures are easily and quickly corrected, restoring the effectiveness of the dust-control system.

MSHA experience has shown that drilling without effective dust controls is highly likely to result in overexposures to the drill operator and other workers in the drilling area. Dust generated by drills underground can be carried throughout the mine by the ventilation system, creating contaminated air throughout the mine and exposing unprotected miners.

Pneumoconiosis began to receive increased attention toward the end of the last century as a result of the introduction of machine drills and the large quantity of dust they generate. Wet drilling as a dust-control measure has been in use as early as 1922. Wet drilling has long proven to be an inexpensive, practical and effective dust-control measure for drilling non-soluble materials. Effective dry-dust collectors are also readily available from several equipment manufacturers for drilling both water-soluble and non-water-soluble materials.

Sections 58/72.200 Exposure Monitoring

Section 103(c) of the Mine Act states that:

> The Secretary, in cooperation with the Secretary of Health, Education, and Welfare, shall issue regulations requiring operators to maintain accurate records of employee exposures to potentially toxic materials or harmful physical agents which are required to be monitored or measured under any applicable mandatory health or safety standard promulgated under this Act. Such regulations shall provide miners or their representatives with an opportunity to observe such monitoring or measuring, and to have access to the records thereof. Such regulations shall also make appropriate provisions for each miner or former miner to have access to such records as will indicate his own exposure to toxic materials or harmful physical agents. Each operator shall promptly notify any miner who has been or is being exposed to toxic materials or harmful physical agents in concentrations or at levels which exceed those prescribed by an applicable mandatory health or safety standard promulgated under section 101, or mandated under title II, and shall inform any miner who is being thus exposed of the corrective action being taken.

Existing §§ 56/57.5002 and 71.701 require metal and nonmetal mine operators to conduct dust, gas, mist, and fume surveys when necessary to determine the adequacy of controls. Existing §§ 71.701 (a) and (b) state that the Secretary will take air samples to determine concentrations of noxious or poisonous gases, dusts, fumes, mists, and vapors in surface installations and at surface worksites. Upon the Secretary's written notification to the coal operator, the operator must conduct any additional air-sampling tests and analyses as the Secretary may from time to time require in order to ensure compliance.

The proposed standard would address the following aspects of exposure monitoring: frequency, procedures, recordkeeping, access to records, observation of monitoring, and notification of overexposure.

Frequency

The proposed rule would require exposure monitoring under the following circumstances: When the operator has reason to believe that a change in production, process, materials, equipment, or engineering or administrative controls would increase a contaminant's concentration above the PEL listed on the PEL table; upon installation of controls that are used to reduce exposure to the PEL; and upon modification of existing controls that are used to reduce exposures to the PEL. The purpose of operator monitoring would be to evaluate the effectiveness of the controls. MSHA intends that mine operators monitor when existing controls are modified to bring exposures into compliance. It is not MSHA's intent to require monitoring when modifications are made for purposes other than reducing exposure; for example, replacing a fan. MSHA intends that the monitoring would continue until the concentration is at or below the PEL, as determined with 95-percent confidence. This would ensure that the operator has determined that affected miners' exposures are at or below the PEL with statistical certainty. Specifying only the confidence level allows the operator to choose from the full range of sampling and analytical options available. In choosing the sampling and analytical methods, the operator would be able to identify the number of samples as well as the concentration range needed to ensure that the permissible limits are not exceeded at a 95-percent confidence level. Although an operator using detector tubes would have a different strategy than an operator using a field electronic gas analyzer, both methods would be able to determine whether exposures are at or below the PEL at 95-percent confidence.

When production changes occur, there is a possibility of increasing the concentrations of airborne substances. Changes in the material being mined or processed can also increase airborne concentrations or introduce new substances unrecognized in previous sampling. However, at most mines exposure monitoring would be triggered only by major changes in production, processes, material, equipment, engineering or administrative controls. Minor changes are unlikely to alter exposure levels significantly and are not usually of concern except at operations where airborne concentrations already border on the PEL. Areas where exposure levels are well below the PEL would most likely remain so. In some instances, even major changes might not necessitate monitoring if the exposure levels were very low prior to the changes. The Agency intends for operators to exercise the standard of care that a reasonable operator would take to guard against an overexposure.

Under the proposed standard, a 3-month interval sampling program would be required when respirators must be worn in order to verify their adequacy. MSHA believes that the 3-month interval is adequate to detect potential increases in contaminant levels due to seasonal changes and provide information on trends that may be useful for contaminant-control strategies. Many commenters suggested that this provision would require all operators to sample every 3 months. However, MSHA intends that this requirement would apply only to those operations where respiratory protection is required by MSHA's standards. MSHA requests comments on the appropriateness of the frequency of exposure monitoring, especially with regard to the 3-month interval. Also, is it possible to devise a more performance-oriented approach that increases monitoring where exposures are highly variable and reduces monitoring where exposures are predictable? This monitoring requirement does not affect the existing respirable coal mine dust sampling provisions in §§ 70/71.201 and 90.201.

Some commenters stated that the monitoring standard would require operators to sample for all the substances on the PEL table. While operators would be responsible for knowing what substances are on their property, MSHA intends that they sample for those substances that have not been reduced to the PEL at the particular mine site or could increase to concentrations above the PEL due to change in production, process, materials, equipment, or controls. MSHA would expect monitoring for only those substances that are present at the particular mine site.

In the metal/nonmetal preproposal draft, MSHA included a provision requiring monitoring whenever persons exhibit signs or symptoms that could be attributable to workplace exposure to any substance in the PEL table. Because such signs and symptoms are not always attributable to workplace exposures, the Agency is not proposing this requirement.

Many commenters suggested that MSHA retain the existing performance standard rather than the more specific proposal. MSHA believes that the existing standards need further clarification. At this stage, the Agency believes that the proposed monitoring requirements are necessary to provide adequate guidance as to the Agency's intent and to provide appropriate health protection for miners.

Several commenters suggested an initial monitoring provision in order to determine if a person may be exposed to any of the substances in the PEL table. The proposed rule would require operators to sample whenever the PEL could be exceeded. The operator would have to identify those chemicals in the process that could exceed the PEL. It would not be necessary for the operator to sample for every chemical, only for those that could exceed the PEL. In addition, much of the initial monitoring would be done by MSHA as part of its enforcement sampling during required inspections (underground mines quarterly; surface mines semi-annually), as well as by State agencies and insurance carriers. This should be sufficient initial monitoring.

Sampling Procedure

The proposed rule would require monitoring samples to be representative of exposures during the workday. The mine operator would have the flexibility to conduct either personal or area sampling, as long as the sampling results accurately represent the exposure of each miner for whom the monitoring is required. Personal sampling does not require separate measurements for each miner exposed, as long as adequate sampling is done to allow the operator to determine each miner's exposure. For example, if a number of miners perform essentially the same job under the same conditions, even on different shifts, it would be sufficient to monitor those few miners expected to have the highest exposure to obtain data that are representative of the remaining exposed miners.

The proposed rule would require that the samples be collected and analyzed by appropriate instrumentation and methods. The instruments used to measure exposures would have to be maintained and calibrated. Accurate measurements of exposure can be obtained only when the instruments used are functioning properly and have been calibrated to the manufacturer's specifications. In addition, MSHA would require that the samples be collected and analyzed by persons trained or experienced in the procedures. Knowledgeable personnel help ensure that sampling will be representative of worker exposures. Several commenters suggested that MSHA specify the type of sampling equipment, methods, and analysis procedures to be used and that equipment used for sampling by MSHA and NIOSH be required. However, with the exception of respirable dusts, which are defined in part by the sampling method used, to place such specifications within the standard would restrict use of future improvements in monitoring technology. Upon request, MSHA will provide its sampling and analytical methods.

Recordkeeping for Exposure Monitoring

To implement the provisions of the Mine Act regarding records of employee exposure, MSHA is proposing that mine operators maintain a record or required monitoring. The mine operator would have to retain such records for 5 years.

Some commenters indicated that the 1-year record retention period in the metal/nonmetal preproposal draft was too short and should be consistent with OSHA's minimum 30-year retention period in 29 CFR 1910.20. These commenters believe that such records could be useful for epidemiological studies and compensation claims by workers. It is not the Agency's intent to establish a long-term inclusive exposure-record system for epidemiological purposes. Mine operators may voluntarily retain exposure records for a longer period. However, at this time, MSHA intends that the proposed 5-year retention period serve as a tool for analyzing the effectiveness of established controls and give an indication of seasonal or production trends associated with overexposure. If respirators are used, monitoring records also serve to determine whether the respirators are being used within their protection limitations. MSHA requests comments regarding the record-retention period, including any benefits of lengthening it, along with who should retain the record.

The proposed standard would require the mine operator to make monitoring records available to MSHA. MSHA intends to review these records during inspections in order to be alerted to problem areas of the mine. The operator could use this record to determine progress, over a period of time, toward implementation of controls that would keep exposure at or below the permissible exposure limit.

In order to reduce the operator's paperwork burden, this record may be used to inform the employee under the notification requirement of this standard. However, operators may use some other format of notice for miner notification, as long as the substance to which the person has been overexposed and the corrective action being taken are included.

The record must contain eight informational items that are necessary for determining an individual's exposure: The date of sampling; the name of miner or location of work area in which each sample was collected; substances sampled; the sampling and analytical method used; the duration of sample; the concentrations of each substance determined by sampling; the person conducting the sampling and analysis; and the corrective action being taken if exposure is above the PEL. MSHA believes that these items are the minimum requirements for an effective monitoring program. MSHA requests comment on whether the record should include the names of the miners for whom the exposure is representative and the utility of such information.

One commenter suggested that operators be required to record exposure for only those persons wearing a personal sampling device. The proposal does not reflect this comment since each affected miner's exposure must be recorded even though only a few representative personal samples have to be taken. Monitoring and exposure records provide essential information to persons affected by the contaminants by informing them of their own exposure and the corrective action being taken to eliminate or avoid future exposure.

Access to Exposure Records

Miners would have access to their records for examination and copying. Miners' representatives would have similar access to the records of all miners whom they represent. Miners could also designate other individuals or organizations to have access. Former employees would also have access to records of samples that reflect their exposure. These provisions are required by the Mine Act. The mine operator would have to provide copies of the records at the operator's expense.

Workers would have 5 years from the sampling date to examine and copy their exposure records. MSHA believes the 5-year record retention period gives each employee an adequate opportunity to obtain this information. Each designated representative of miners would also have the same time period to obtain monitoring results required by the proposed standard for those miners whom they represent.

Many commenters suggested that the Agency clarify these provisions to state that miners are entitled to access to records of their own exposure and representatives of miners are entitled only to records of miners whom they represent. The proposed rule reflects these recommendations. The Agency intends that miners and their representatives be given the opportunity to review and copy such records. MSHA does not intend that miners have access to records of all monitoring, only to records that reflect their own exposure.

Operators would be required to transfer all records required by this subpart to any successor operator. Where there is no successor operator, the proposed rule would require that operators notify affected miners of their rights of access at least 3 months prior to disposal of the records.

Observation of Monitoring

The proposed rule would require the mine operator to provide affected miners or their representatives with an opportunity to observe required monitoring. Commenters preferred that only representatives of miners be given the opportunity to observe monitoring. However, under the Mine Act both miners and their representatives may observe such monitoring. Commenters requested that the Agency clarify whether statutory "walkaround pay" would apply to such observance. Section 103(f) of the Mine Act requires "walkaround pay" when a representative of miners who is employed by the operator accompanies an MSHA inspector during an inspection of the mine. Section 103(f) does not authorize "walkaround pay" for time spent by a representative of miners observing an operator's monitoring program. Therefore, MSHA does not intend for "walkaround pay" to apply to this standard.

Notification of Overexposure

This provision would require mine operators to notify miners in writing within 15 days when a sample indicates that their exposure has exceeded a permissible exposure limit and what corrective action is being taken. MSHA believes that this time is adequate for the operator to perform the administrative tasks necessary to issue the notification.

Sections 58/72.300 Dangerous Atmospheres

This section would address the problem of entry into areas with dangerous atmospheres. During the last 10 years, 61 injuries and 1 fatality have occurred in metal/nonmetal mines and 13 injuries and 1 fatality have occurred in coal mines due to health hazards in confined spaces. The proposed standard would not apply to the special emergency conditions of underground rescue and recovery operations, which are addressed specifically in 30 CFR Part 49 for mine rescue teams.

Paragraph (a) would require testing for hazardous gases, vapors, and oxygen deficiency prior to entrance into areas that have the potential for very hazardous environmental conditions. These areas include abandoned areas underground; silos, vats, tanks and other confined spaces; and areas where there has been a release of contaminant that could cause an acute respiratory exposure that poses an immediate threat of loss of life, immediate or delayed irreversible adverse effects on health, or acute eye exposure that would prevent excape from a hazardous atmosphere (IDLH atmosphere). This testing, which could be for toxicity, flammability or other inherent hazards, would determine whether or not the atmoshere is safe to enter. In the metal/nonmetal preproposal draft, the testing requirement was included under the draft standard for exposure monitoring. MSHA would include this requirement under the dangerous atmospheres standard in the proposed rule to emphasize the importance of such testing under the specific circumstances listed.

In the preproposal draft, the Agency required operators to sample for "toxic gases" and oxygen deficiency prior to entering a confined space or previously sealed workings. Commenters objected to use of the term "toxic gases" and stated that it was ambiguous. The proposed rule uses the more generic term "hazardous gases." Certain gases, although not toxic in nature, can be asphyxiants by displacing oxygen or can be flammable or combustible. This condition can occur especially in areas where ventilation is poor. Area samples may be the most appropriate means of determining concentrations prior to entry into confined spaces or areas where there has been a liberation of any contaminant in sufficient quantities to create an IDLH atmosphere.

Commenters suggested that "confined space" be defined, and MSHA agrees that the term needs some explanation. The proposed rule defines "confined space" as areas having restricted means of entrance, unfavorable atmospheres, and which are not intended for continuous occupancy. The restricted nature of confined spaces makes the problem of harmful gases or oxygen deficiency particularly critical should rescue measures be necessary.

Another commenter stated that there were no circumstances in which oxygen deficiency would pose a hazard to persons at surface operations. MSHA's accident records show that oxygen-deficient atmospheres have occurred as a result of work activity in confined spaces such as bins, hoppers, tanks, conveyor tunnels, dust collectors, crushers, and grinding mills, all of which may be found at surface operations. These records include multiple fatalities in which the would-be rescuer succumbs to the same oxygen-deficient atmosphere as the original victim. In addition, MSHA's own data indicate that confined space accidents causing injuries and fatalities have occurred when painting inside a dragline bucket, entering into acid storage tanks, maintenance in dust collection devices, and welding in such areas as dryers, tanks, and chutes.

Paragraph (b) would require that all work areas contain at least 19.5 percent oxygen by volume. If the oxygen content of the air falls below that level, mine operators would be required to take immediate corrective action to restore the level to at least 19.5 percent. At most altitudes where people work, air normally contains about 20.9 percent oxygen; therefore, levels below 19.5 percent indicate that an oxygen-deficient atmosphere is developing that warrants attention. The corrective action needed may be as simple as increasing ventilation to an area. Both OSHA and the American National Standards Institute (ANSI) specify 19.5 volume percent oxygen as the level for determination of an oxygen-deficient atmosphere.

Existing §§ 57.5015 and 75.301 require that 19.5 volume percent oxygen be maintained in all active workings underground. The metal/nonmetal preproposal draft recommended that the same percentage of oxygen be maintained at "all active workings," including both surface and underground mines. Because of the potential presence for oxygen-deficient atmospheres in confined spaces, the Agency continues to believe that this standard is appropriate for both surface and underground mines, including surface coal operations and facilities.

If the oxygen content of the air falls below 19.5 percent, workers not wearing respiratory protection in accordance with §§ 58/72.500 would have to be withdrawn.

Oxygen deficiency results in a reduction of the oxygen supply to the blood and retardation of the oxidizing processes in the brain that leads to disturbances of the central nervous system. A sudden decrease of the oxygenation of the blood can lead to loss of consciousness within 1 minute without any warning symptoms. A gradual decrease in oxygen content may cause dizziness, tachypnoea, or tachycardia, followed by a gradual decrease of physical and mental capacities beginning with changes in the sensory and mental functions (vision, hearing, perceptions, memory, attention, and judgment). The speed of onset of these symptoms depends upon the magnitude of the oxygen deficiency. Both rapid or gradual decreases in oxygen conditions have caused fatalities and injuries in mining.

The oxygen level in an area may be reduced by consumption or displacement. In a confined space, combustion of flammable substances such as from welding or flame cutting, bacterial action, and chemical reaction (possibly the oxidation of metal or rusting) can all cause an oxygen-deficient atmosphere. Oxygen can also be displaced by another gas, either naturally, such as carbon dioxide, or by inert gases introduced through work activity, such as during welding.

Paragraph (c) would require operators to take precautions as specified in the standard when entering an oxygen-deficient atmosphere listed in the table or any of the potentially dangerous atmospheres listed in paragraph (a). Respiratory protection would be required. There would have to be at least one standby person outside the affected area with equipment capable of rescuing the other person without entering the area. If equipment for a one-person rescue is unavailable, a two-person rescue system capable of recovery of the affected person would be necessary. This practice is recommended in the International Labour Organization's "Encyclopedia of Occupational Health and Safety" (3rd Edition). Communications would also be required between the standby person and the persons entering or working in the hazarous atmosphere. Communication is necessary to recognize early distress and to have adequate time to rescue the exposed worker. The body positions that are assumed in a confined space could make it difficult for a standby rescuer to detect an unconscious person. Usually, voice communication would be sufficient. However, surrounding noise levels, obstructions, or distances between workers and standby persons are some circumstances that may require other types of communication, such as timed lights or buzzers. MSHA recognizes that these provisions may not address every possible precaution for confined spaces, such as permit systems. The Agency is developing an advance notice of proposed rulemaking on confined spaces. Currently, OSHA is in the process of revising its confined space standard, and MSHA will monitor that rulemaking closely.

Sections 58/72.401 through 58/72.450 Carcinogens

Existing metal-nonmetal standards in §§ 56/57.5001 and 56/57.5006 address exposure to 22 chemicals that MSHA considers to be carcinogens. Existing §§ 56/57.5001 incorporate by reference the 1973 ACGIH "TLV® Booklet" which lists 5 carcinogens with a TLV® and 12 carcinogens for which no TLV® has been assigned, but to which exposure must be controlled. Of those 17 carcinogens, MSHA further restricts the use of 11 of them at metal/nonmetal mines in existing §§ 56/57.5006. Sections 56/57.5006 list 16 chemicals (11 listed by ACGIH and 5 others) that cannot be used or stored except by competent persons under laboratory conditions approved by a nationally-recognized agency acceptable to the Secretary of Labor. Fourteen of these 16 "restricted use" chemicals were regulated by OSHA in 1974 as carcinogens. Through incorporations by reference of the ACGIH "TLV® Booklet," MSHA currently regulates exposure to 18 carcinogens at coal mines. At present, besides MSHA, the only Federal agencies that develop guidelines or regulations for carcinogen handling are NIOSH, OSHA, and the Environmental Protection Agency.

TABLE 13.—EXISTING METAL/NONMETAL RESTRICTED-USE CHEMICALS

2-Acetylaminofluorene
4-Aminodiphenyl
Benzidine
Carbon tetrachloride
bis(Chloromethyl) ether
3,3 Dichlorobenzidine
4-Dimethylaminoazobenzene*
Ethyleneimine

TABLE 13.—EXISTING METAL/NONMETAL RESTRICTED-USE CHEMICALS—Continued

Methyl-chloromethyl ether
4,4'-Methylene bis(2-chloroaniline)
α1-Naphthylamine
β-Naphthylamine
4-Nitrobiphenyl
N-Nitrosodimethylamine
Phenol*
β-Propiolactone

*Not carcinogens

The metal/nonmetal preproposal draft listed 15 chemicals that could be used only under restricted conditions approved by MSHA. The Agency used evidence of carcinogenicity and knowledge of their presence on mining property in developing the list. The preproposal draft did not include procedures for use of these chemicals but operators were to have Agency approval for such use. Appeal procedures were also included. Many commenters supported the concept of restricted-use procedures for certain chemicals but objected to the approval process, stating that it was too burdensome and could create long delays. Some commenters stated that laboratory use of these chemicals by "competent persons" should be excluded from the standard.

For this proposal, MSHA reviewed the known or suspected carcinogens adopted by ACGIH in the 1989–90 "TLV® Booklet" and the documentation on which ACGIH based its decision to list the substances. Among other sources of information, MSHA reviewed the regulatory actions of OSHA and other Federal agencies, as well as the "Fourth Annual Report on carcinogens," prepared by the National Toxicology Program of the U.S. Public Health Service and issued by the Secretary of Health and Human Services. The majority of the chemicals listed by ACGIH are also listed in the "Fourth Annual Report on Carcinogens" or are regulated by other agencies as carcinogens.

TABLE 4.—SOURCES LISTING CARCINOGENS IN PROPOSED RULE

Listed by ACGIH:
Acrylamide
Acrylonitrile
4-Aminodiphenyl
Antimony trioxide production
Arsenic trioxide production
Asbestos
Benzene
Benzidine
Benzo(a)pyrine
Beryllium and compounds
1,3-Butadiene

TABLE 4.—SOURCES LISTING CARCINOGENS IN PROPOSED RULE—Continued

Carbon tetrachloride
Chloroform
bis(Chloromethyl) ether
Chloromethyl methyl ether
Chromite ore processing (Chromate), as Cr
Chromium (VI) compounds, Cr (certain water insoluble)
Chrysene
Coal tar pitch volatiles, as benzene solubles
3,3'-Dichlorobenzidine
Dimethyl carbamoyl chloride
1,1-Dimethylhydrazine
Dimethyl sulfate
Ethyl acrylate
Ethylene dibromide
Ethylene oxide
Formaldehyde
Hexachlorobutadiene
Hexamethyl phosphoramide
Hydrazine
Lead chromate, as Cr
Methylene chloride
4,4'-Methylene bis(2-chloroaniline)
4,4'-Methylene dianiline
Methyl hydrazine
Methyl iodide
β-Naphthylamine
Nickel sulfide roasting, fume & dust, as Ni
4-Nitrodiphenyl
2-Nitropropane
N-Nitrosodimethylamine
N-Phenyl-β-naphthylamine
Phenylhydrazine
Propane sultone
β-Propiolactone
Propylene imine
o-Tolidine
o-Toluidine
p-Toluidine
Vinyl bromide
Vinyl chloride
Vinyl cyclohexene dioxide
Xylidine
Zinc chromates

Regulated by OSHA as Carcinogens:
2-Acetylaminofluorene
Acrylamide*
Acrylonitrile
4-Aminodiphenyl
Amitrole*
Arsenic, inorganic
Asbestos
Benzene
Beryllium and compounds
Carbon tetrachloride*
Chloroform*
bis(Chloromethyl) ether
Coal tar pitch volatiles
3,3'-Dichlorobenzidine
4-Dimethylaminoazobenzene
Dimethyl sulfate*
Ethyleneimine
Ethylene dichloride*
Ethylene oxide
Formaldehyde
4,4'-Methylene bis(2-chloroaniline)
α-Naphthylamine
β-Naphthylamine
2-Nitropropane*
4-Nitrodiphenyl
Perchloroethylene*
o-Toluidine*
p-Toluidine*
Vinyl bromide*
Vinyl chloride
Vinyl cyclohexene dioxide*

TABLE 4.—SOURCES LISTING CARCINOGENS IN PROPOSED RULE—Continued

*Carcinogenicity used to establish OSHA PEL; no separate standard.

Listed in the Fourth Annual Report on Carcinogens:
Acrylonitrile
4-Aminobiphenyl (4-Aminodiphenyl)
Arsenic, certain compounds (Arsenic trioxide)
Asbestos
Benzene
Benzidine
Benzo(a)pyrene
Beryllium and certain compounds
Carbon tetrachloride
Chloroform
bis(Chloromethyl) ether
Chromium, certain compounds
3,3'-Dichlorobenzidine
4-Dimethylaminobenzene
Dimethyl sulfate
Ethylene oxide
Formaldehyde
Hexamethyl phosphoramide
Hydrazine
4,4'-Methylene bis(2-chloroaniline)
4,4'-Methylene dianiline
Methyl iodide
2-Naphthylamine (β-Naphthylamine)
Nickel, certain nickel compounds (Nickel sulfide roasting)
2-Nitropropane
N-Nitrosodimethylamine
1,3-Propane sultone (Propane sultone)
β-Propiolactone
o-Toluidine
Vinyl chloride

MSHA is proposing additional requirements to control exposure to carcinogens beyond those required by §§ 58/72.100 because MSHA believes that carcinogens pose unique risks to exposed individuals. Although exposure to other toxic materials can result in death, as can cancer, the disease progress due to cancer has several significant, unique features that increase the hazard to exposed individuals.

Carcinogens alter the target cell's genome which causes the cancer cell to proliferate rapidly and invade healthy tissue. Although the cancer starts with a single cell, during the course of the disease the cancer grows to contain millions of cells. This constantly-increasing number of cells may localize in one area or spread throughout the body. All of the cancer cells must be removed or destroyed to cure the cancer or the number of cells significantly reduced to cause remission. On the other hand, a toxic material may destroy or injure a target cell, but the amount of injury is dependent upon the amount of toxin and not upon cell proliferation.

Typically, there is a long latency period between exposure to a carcinogenic chemical and the development of cancer. This latency period allows time for detection and intervention of the disease process.

BEST COPY AVAILABLE

However, it also allows for exposure to other chemicals that may act as promoters or activators in the carcinogenic process. These exposures can increase the risk to the individual exposed to the carcinogen.

However, MSHA is aware that other chemicals pose life-threatening health risks that are as great as or greater than carcinogens and that some of these may be of more concern in mining. MSHA specifically solicits comments as to whether separate precautions should be required for chemicals that potentially cause cancer as opposed to chemicals that pose other potentially life-threatening risks.

The Agency is proposing a tiered approach to the regulation of these chemicals. The proposed standard delineates four classes of known or suspected carcinogens and separate provisions for asbestos construction work. One class would require MSHA approval prior to their use. The other three classes would have different requirements. MSHA is proposing separate provisions for asbestos construction work because the conditions of exposure and the necessary work practices to control that type of exposure are unique.

The tiered approach groups the carcinogenic chemicals and processes involving carcinogens according to their strength and toxicity, sources and potential routes of exposure. MSHA is proposing what it believes to be the necessary work practices for safely working with each class of carcinogens established by the tiering.

Class 1 carcinogens, addressed in §§ 58/72.401, are those that are brought onto mining property that have no assigned safe limit by any recognized agency, with one exception: bis(chloromethyl) ether. Chloromethyl methyl ether and bis(chloromethyl) ether are generally found simultaneously because bis(chloromethyl) ether often is produced as a by-product of chloromethyl methyl ether use. Therefore MSHA proposes to regulate both chemicals as class 1 carcinogens. Under the proposal, class 1 carcinogens would have to be controlled so that the miner would have virtually no contact with the carcinogen. Eleven of these carcinogens, including bis(chloromethyl) ether, are regulated by OSHA so that employees have no contact with the chemical. Along with other provisions, OSHA requires that employees be protected with the use of a closed isolated system that prevents exposure. Since these chemicals are likely to be used in procedures and operations other than those encountered in general industry, MSHA proposes to require prior approval for their use, rather than identifying specific control technology. This approach would allow flexibility to address new technology particular to mining while at the same time ensuring that the miner would have virtually no contact with the chemical. MSHA anticipates that there will be few operations that will choose to use these carcinogens over other alternative chemicals.

Class 2 and class 3 carcinogens are carcinogens brought onto mining property and which have been assigned PELs. Exposures to these carcinogens are controlled by their assigned PELs and additional requirements specified for each class. In addition, the other provisions of the proposed rule such as exposure monitoring, dangerous atmospheres, and respiratory protection would apply as appropriate.

The class 2 carcinogens addressed in §§ 58/72.402 consist of four chemicals that are currently regulated in metal/nonmetal §§ 56/57.5006: ethylenimine, β-propiolactone, carbon tetrachloride, 4-4′-methylene bis(2-chloroaniline), and one other chemical, vinyl chloride. As mentioned, under the existing MSHA standard the chemicals cannot be used or stored except by competent persons under laboratory conditions approved by a nationally-recognized agency. Under OSHA standards, no employee contact is allowed for ethylenimine and β-propiolactone. Under OSHA, this must be achieved primarily through the use of isolated systems, closed systems, and laboratory-type hoods, as well as restricted areas. For vinyl chloride, exposure is controlled through the use of PEL as well as establishment of restricted areas. Although process requirements are not specified, the OSHA standard does not allow any direct contact with liquid vinyl chloride. MSHA believes that similar engineering controls and restricted areas are necessary to control exposures to class 2 carcinogens in mines. MSHA's proposal specifies engineering and work practices to ensure that all routes of exposure would be controlled tightly. Since there is an exposure limit that can be used to determine the effectiveness of engineering controls for airborne exposure, MSHA does not believe it is necessary to require prior approval for the use of these chemcials.

Class 3 carcinogens addressed in §§ 58/72.403 are those that would be regulated to the PEL without specifying the technology required for their handling. If an overexposure is found, a restricted area would have to be established and additional work practices to control exposure would have to be implemented. This approach is consistent with the approach OSHA has taken for benzene, ethylene oxide, and formaldehyde. The proposal also includes requirements for labeling, monitoring and training, which are not dependent upon establishment of a restricted area. MSHA has included perchloroethylene and amitrole in this class based on the findings in the OSHA PEL rulemaking that these substances may increase the risk of cancer among exposed workers.

The class 4 carcinogens in §§ 58/72.404 are carcinogens that are mining processes, chemical processes, or chemicals for which the contribution of individual components toward the carcinogenic activity are not fully understood. The nature of the processes involved, as well as the type of exposure, requires different work practices than for the other classes of carcinogens.

Asbestos mining and milling, vermiculite mining and milling containing 1 percent asbestos in the ore or concentrate, and beryllium and cadmium (excluding welding) are all mining operations. Exposure to the carcinogenic material can occur from the initial recovery of the ore through the processing until bagging or shipping of the final product. Because the carcinogenic material is being recovered from the environment, there would be no area of the mine where contact with the carcinogen is not possible. Exposure could result from airborne dust, resuspension of dust from clothes, equipment, facilities, and ingestion of material from contaminated skin, food, and liquids. In addition, especially in regard to asbestos, the risk can spread to the employee's family if contaminated material is brought home.

Antimony trioxide production, arsenic trioxide production, chromite ore processing, and nickle sulfide roasting are processes that would not involve the entire mine but would involve a large part, if not all, of the milling process. The carcinogenic activity is associated with processes rather than a unique chemical form of the carcinogen.

MSHA has separated the class 4 carcinogens to require specific work practices that address the risks of mining and milling these carcinogens. MSHA specially solicits comments on this approach as well as on other approaches that may address the hazards posed.

The chemicals addressed in the proposed carcinogen standards are all substances listed in the 1988–89 ACGIH "TLV® Booklet" as known or suspected human carcinogens or have been regulated by MSHA and OSHA as carcinogens. The ACGIH documentation demonstrates that the substances have proven carcinogenic to humans or have induced cancer in animals under appropriate experimental conditions. The February 1985 policy statement of the Office of Science and Technology Policy established the following principles to be used by regulatory agencies in assessing cancer risks from chemicals:

> Decisions on the carcinogenicity of chemicals in humans should be based on considerations of relevant data, whether they are indicative of a positive or negative response, and should use sound biological and statistical principles. This weight of evidence approach should include consideration of all relevant factors and should give appropriate weight to each on a case by case basis * * *. Examples of the types of information that should be taken into account include:
>
> (a) Findings from long-term animal studies * * *;
>
> (b) Results from epidemiological studies * * *;
>
> (c) Results from *in vivo* and *in vitro* short term tests * * *;
>
> (d) Data from studies of mechanism, including factors such as structure-activity relationships, and known similarities and differences in metabolic and kinetic profiles for different species (50 FR 10378) * * *.

The proposed rule would cover the use of these chemicals in all situations, including use by competent persons in laboratories, as required by the existing standard. Workers in laboratories are exposed to these chemicals and face the same health risk as other exposed miners. Accidents and overexposures to chemicals have occurred in mine laboratories, resulting in both injuries and poisonings. This history of laboratory hazards is by no means unique to mining. Current industrial hygiene literature reports many instances of laboratory accidents. In some cases, these laboratory accidents have been included in the ACGIH documentation of the TLVs®. For these reasons, MSHA believes that the hazards of laboratory use of such chemicals should be regulated. However, the Agency believes that in many cases the current methods for laboratory use of these carcinogens would need only slight modification in order to meet the proposed standards for use.

Exposure to carcinogens must be controlled as any other substance listed in the PEL Table. If overexposures occur or can be anticipated, then exposure monitoring, feasible engineering controls, and respiratory protection would have to be implemented. However, worker rotation would not be allowed to meet the PEL.

Two chemicals currently regulated at metal/nonmetal mines as restricted-use chemicals, phenol and 4-dimethylaminobenzene, do not appear in this proposed carcinogen standard. MSHA would, however, regulate them at all mines according to their permissible exposure limits in the PEL Table and other applicable standards in the proposed rule. Phenol has never been shown by scientific data to be carcinogenic and was evidently included in the existing restricted-use standard primarily due to its PEL. The hazards posed to miners by phenol would be adequately addressed by the other standards in this proposal. The chemical "4-dimethylaminobenzene" is spelled incorrectly. Dimethylaminobenzene, commonly called xylidine, is not chemically written with the prefix "4" and it is not listed currently by ACGIH as a carcinogen. However, 4-dimethyl-amino*azo*benzene is a suspected human carcinogen, which is regulated by OSHA. The omission of the letters "azo" caused the confusion.

Sections 58/72.401 Class 1 Carcinogens

Proposed §§ 58/72.401 address carcinogens that present the greatest potential risk to workers involved in their use since there are no PELs to determine environmental exposures at which there would be no expected increase in cancer or mortality. These chemicals are also brought onto mining property. These are termed "class 1 carcinogens" in the proposal. With the exception of bis(chloromethyl) ether, these carcinogens have no specified TLV®, since ACGIH has been unable to determine a safe exposure limit. As mentioned, bis(chloromethyl) ether is generally found as a by-product of chloromethyl methyl ether use. Three other chemicals currently regulated by MSHA as restricted-use chemicals at metal/nonmetal mines are not addressed by ACGIH but are regulated by OSHA as carcinogens. These chemicals are α-naphthylamine, 2-acetylaminofluorene, and 4-dimethylaminoazobenzene. The "Fourth Annual Report on Carcinogens" also lists 2-acetylaminofluorene and 4-dimethylaminoazobenzene as carcinogens. MSHA proposes to continue regulating these chemicals, placing them with the class 1 carcinogens. This standard would require mine operators to have MSHA approval of their procedures prior to usage of these chemicals. Such procedures would have to specify the use of engineering controls, personal protection, and administrative measures that ensure virtually no contact with the chemicals. Administrative measures are not the same as administrative controls. Administrative measures are management efforts used to define work practices and to limit possible contamination. Administrative measures could include designating only one door as entry into the restricted area or only one path to move containers of carcinogens from the loading dock to the restricted area. Administrative controls (work rotation), on the other hand, reduce one individual's exposure by spreading the exposure among several workers. This would not be permitted for carcinogens. Although worker rotation may lower one individual's risk, it may place more individuals at risk or increase the risk of others. The term "virtually" is used to prevent the analytical problems encountered when measuring chemicals at extremely low concentrations, which are near the limits of detection and the sensitivity of analytical techniques. MSHA intends that exposure to these class 1 carcinogens be minimal. Because of the high risk posed by these chemicals and the unique situations where they would be used in mining, MSHA believes that MSHA approval would be necessary to allow flexibility for new mining technology while assuring adequate protection for the miners involved. MSHA recognizes that procedures may vary from operation to operation. However, the Agency expects equivalent protection to be provided to all workers involved in the use of these chemicals. Comments are requested on the approval procedures and their appropriateness for regulating class 1 carcinogens. In addition, the public is invited to comment on whether MSHA should allow the use of these substances on mining property.

Each class 1 carcinogen present in a concentration of greater than 0.1 percent by weight or volume would be subject to approved restricted-use procedures. The 0.1 percent threshold is consistent with general industrial hygiene practice. MSHA recognizes that benzo(a)pyrene and chrysene can be found as a constituent of diesel exhaust, and it is not the Agency's intent to regulate diesel exhaust under this standard. For this reason, only mixtures containing more than 0.1 percent commercially manufactured benzo(a)pyrene and chrysene would be addressed as class 1 carcinogens. Benzo(a)pyrene has been used as a laboratory reagent in mining. MSHA also recognizes that benzo(a)pyrene and chrysene may be found in coal tar pitch, but in this case exposure would be controlled through regulating coal tar pitch volatiles as a class 4 carcinogen under § 58.404.

MSHA approval of proposed procedures would be based on the Agency's knowledge of the hazard from exposure to the chemical. However, as new evidence becomes available about the hazard, the Agency would reassess an approval. If additional safeguards would be needed to protect miners exposed to the chemical, MSHA would notify the mine operator of the need to revise the approved procedures. Failure to make needed modifications within a reasonable period of time would result in revocation of the approval. A revocation action or disapproval of proposed procedures could be appealed to the Assistant Secretary of the Mine Safety and Health Administration. Consistent with the concept of participation by all parties in achieving a safe and healthful workplace, the proposal provides that a copy of the MSHA-approved procedures be available at the mine site for inspection by MSHA and examination by miners and their representatives.

Sections 58/72.402 Class 2 Carcinogens

Proposed §§ 58/72.402 address class 2 carcinogens. As mentioned, class 2 carcinogens consist of four chemicals that are currently regulated in metal-nonmetal §§ 56/57.5006: ethylenimine, β-propiolactone, carbon tetrachloride, 4,4′-methylene bis(2-chloroaniline), and one other chemical, vinyl chloride. MSHA proposes to specify use of engineering and work practices to ensure that all routes of exposure would be tightly controlled. MSHA believes that the exposure limits for these carcinogens can be used to determine the effectiveness of the engineering controls for airborne exposure. For this reason, MSHA is not requiring prior approval for the use of these chemicals.

The existing metal/nonmetal standards contain a conflict concerning carbon tetrachloride in §§ 56/57.20005 which prohibit the use of carbon tetrachloride, while §§ 56/57.5006 allow its use by competent persons under laboratory conditions. Under the existing standards, the Agency's intention was to ban carbon tetrachloride's use as a fire extinguishing agent and a common solvent, while permitting its use under restricted conditions. Carbon tetrachloride is currently used under restricted conditions approved by MSHA in mine laboratories for specific analytical and metallurgical procedures. The metal/nonmetal preproposal draft listed carbon tetrachloride as a restricted-use chemical to be used under conditions or procedures approved by MSHA. One commenter felt that permitting its use as a restricted chemical would be less protective than the existing standards. MSHA disagrees since the existing standards allow the use of carbon tetrachloride under conditions similar to the proposed rule. For these reasons, MSHA proposes to delete §§ 56/57.20005 which prohibit the use of carbon tetrachloride entirely and require that carbon tetrachloride be addressed as a class 2 carcinogen.

Sections 58/72.402 would require that a restricted area be established for class 2 carcinogens and exposures would have to be controlled according to §§ 58/72.100 if the contaminant has a listed PEL. The restricted area would limit the number of people exposed and prevent untrained workers from contaminating themselves and others. MSHA solicits comments on what methods may be necessary to identify individuals entering a restricted area in the event of an accidental leak, spill, or contamination. One option would be to require that a work log be kept.

Paragraph (b) would require that restricted areas be posted with signs stating the nature of the hazard and the procedures to be followed when entering and leaving the restricted areas. MSHA intends that any signs used would be compatible with any sign and labelling requirements in the Agency's hazard communication standard which is currently under development.

In paragraph (c), MSHA proposes to ban the storage and use of food, beverages, tobacco products, chewing products, and cosmetics in the restricted area to prevent ingestion and absorption of the restricted chemical. These products could become contaminated by contact with contaminated surfaces, gloves, and storage areas.

The requirements of paragraphs (d), (e), and (f) would prevent spreading a contaminant to areas outside the restricted area as a result of the process, material handling, or maintenance. Contamination of unrestricted areas could cause accidental exposure to unprotected workers. Contamination of the restricted area should also be minimized to prevent any unnecessary exposure to individuals handling the restricted chemicals. Therefore, paragraph (g) would require that the restricted chemicals be processed or used in a system that minimizes entry of the contaminant into the air.

Because these chemicals can be ingested, absorbed, or react with the skin, paragraphs (h), (i), (j), and (k) would require protection against skin and body contact with the restricted chemical. Carbon tetrachloride and 4,4′-methylene bis(2-chloraniline) have a "skin" notation that indicates that absorption through the skin can contribute significantly to the total body burden. Handwashing and showering reduce the risk of ingestion, absorption, or prolonged skin interaction for the miner and other individuals who may come in contact with the miner. At coal mines, bathing facilities are already required under other standards. These facilities could be used to meet paragraph (k). In addition, proper disposal or decontamination of clothing would prevent contamination of other areas and eliminate possible exposure of other workers.

Paragraph (l) would require that written decontamination, disposal, and emergency procedures be developed and operational. Properly planned and implemented decontamination procedures would help ensure that contamination of equipment could be contained within the restricted areas. The use of proper decontamination for individuals would prevent injury and illness from unplanned exposure. The ability to implement emergency procedures when needed would enable employees to handle emergency situations and minimize unnecessary exposure or contamination. Proper disposal of contaminated clothing and equipment would prevent contamination of other areas, thereby preventing exposure to unprotected miners.

Paragraph (m) would require the operator to conduct appropriate monitoring at least every 12 months to evaluate the effectiveness of control and decontamination procedures. Without evaluation, controls could deteriorate and the risk to the miners could increase significantly. Effective decontamination procedures are critical to controlling exposures.

Paragraph (n) would require that persons authorized to enter the restricted area, or who are involved in maintenance on contaminated equipment, decontamination, disposal, or emergency response, be trained prior to assignment and once every 12 months on the risks of applicable substances, decontamination, disposal and emergency procedures to be used. Miners can assist in controlling their exposure to carcinogens when they are fully advised of the hazards and methods to minimize exposure. MSHA intends that the training in the health risks be compatible with those that may be required under the Agency's future hazard communication standard.

Sections 58/72.403 Class 3 Carcinogens

Sections 58/72.403 address class 3 carcinogens that would be regulated to the PEL without specifying the technology required for their handling. As mentioned, overexposures would necessitate the establishment of a restricted area and the implementation of additional work practices to control exposures.

Concentrations of the chemicals exceeding 0.1 percent would require implementation of restricted-use procedures. However, restricted-use procedures for benzene and lead chromates and zinc chromates would be required when these substances exceed 5 percent in a product of formulation (liquids, solids, or gases).

Benzene is found in gasoline in volumes up to 5 percent, and MSHA does not intend to regulate exposure to gasoline by this standard. Benzene exposure resulting from gasoline vapors would be regulated by limiting exposure to the PEL under §§ 58/72.100. Mining exposure to gasoline containing benzene is characterized by short duration, intermittent exposure to gasoline vapors. Variable concentrations of airborne benzene primarily occur when fueling vehicles. MSHA believes that this type of exposure does not warrant inclusion under the proposed carcinogen standard.

Lead and zinc chromates are used as paint pigments. However, MSHA does not intend to restrict the use of paint. Lead and zinc chromate exposure resulting from paint would be regulated by limiting exposure to the PELs under §§ 58/72.100. MSHA believes that the exposure characteristics typical in painting operations in mining do not warrant inclusion in the restricted-use chemical standard.

Paragraph (a) requires that whenever a PEL or STEL overexposure is found, or when such overexposures may be anticipated to be above the PEL or the STEL, the operator would have to establish a restricted area. This restricted area would limit the number of people exposed, clearly identify the hazard area, and ensure that corrective work practices are initiated.

Paragraph (b) would require that restricted areas be posted with signs stating the nature of the hazard and the procedures to be followed when entering or leaving the restricted area. MSHA intends that any signs used would be compatible with signs and labels required by MSHA's forthcoming hazard communication proposal.

In paragraph (c), MSHA proposes to ban the storage and use of food, beverages, tobacco products, chewing products, and cosmetics to prevent ingestion and absorption of the chemical in the restricted area and in any area where these items may come into direct contact with the chemical.

The requirements of paragraphs (d), (e), and (f) would prevent spreading a contaminant to areas outside the restricted area as a result of the process, material handling, or maintenance. Contamination of unrestricted areas could cause accidental exposure to unprotected workers. Contamination of the restricted area should also be minimized to prevent any unnecessary exposure to individuals handling the restricted chemicals.

For emergency control activities and where direct contact with the carcinogen is possible, paragraphs (g), (h), and (i) would require protection against skin and body contact with the restricted chemical. Seventeen of the 29 chemicals listed have a "skin" designation which indicates that absorption through the skin is a significant exposure route for the body dose. Handwashing and showering reduce the risk of ingestion, absorption, or prolonged skin interaction for the miner and other individuals who may come in contact with the miner. At coal mines, bathing facilities are already required under other standards. These facilities could be used to meet the showering requirements of paragraph (i).

MSHA recognizes that high airborne concentrations of contaminants that can be absorbed through the skin (as indicated by a skin notation in the PEL table) may contribute significantly to the body burden by the skin absorption route. The preamble of the "TLV Booklet" states that:

> Little quantitative data are available describing absorption of vapors and gases through the skin. The rate of absorption is a function of the concentration to which the skin is exposed.
>
> Substances having a skin notation and a low TLV may present a problem at high airborne concentrations, particularly if a significant area of the skin is exposed for a long period of time. Protection of the respirator tract, while the rest of the body surface is exposed to a high concentration, may present such a situation. [p. 7].

MSHA believes that skin contact by airborne vapors and gases is also of particular concern, given the potential effects. MSHA specifically solicits comments on the appropriateness of requiring special clothing and daily showers when individuals are exposed to carcinogens with a skin notation in the PEL table at levels above the permissible exposure limit. MSHA also requests comment on whether such clothing and showers are appropriate for exposure to any carcinogen above the PEL to reduce potential exposures through ingestion and resuspension of contaminants.

Paragraph (j) would require that written documentation, disposal, and emergency procedures be developed and operational. Properly planned and implemented documentation procedures would help ensure that contamination of equipment could be contained. The use of proper documentation for individuals would prevent injury and illness from unplanned exposure. The ability to implement emergency procedures when needed would enable employees to handle emergency situations and minimize unnecessary exposure or contamination. Proper disposal of contaminated clothing and equipment would prevent contamination of other areas, thereby preventing exposure to unprotected miners.

Paragraph (k) would require the operator to conduct appropriate monitoring at least every 12 months to evaluate the effectiveness of controls and decontamination procedures. Without evaluation, control could deteriorate and the risk to the miners could increase significantly. Effective decontamination procedures are critical to controlling exposures.

Paragraph (l) would require that persons authorized to enter the restricted area or who are involved in maintenance on contaminated equipment, decontamination, disposal or emergency response, be trained prior to assignment and every 12 months on the risks of the applicable substances, decontamination, disposal and emergency procedures to be used. Miners can assist in controlling their exposure to carcinogens when they are fully advised of the hazard and methods to minimize exposure. MSHA intends that this training be compatible with training that may be required under MSHA's future hazard communication standard.

Sections 58/72.404 Class 4 Carcinogens

Sections 58/72.404 address known carcinogens that involve mining processes, chemical processes, or substances for which the contribution of individual components toward the carcinogenic activity is not clearly understood. Asbestos mining and milling and vermiculite mining and milling where asbestos is greater than 0.1 percent in the ore or concentrate are included. Chemicals used in mixtures of gases, liquids, or solids in concentrations exceeding those in the table of class 4 carcinogens would

OL

AG
29
989
MI

require implementation of these procedures. Because several of these processes are found only in metal/nonmetal mines, they do not appear on the class 4 carcinogen table for coal mines. By use of applicable PELs, the risks to individuals would be adequately controlled. Asbestos mining and milling and vermiculite mining and milling where asbestos is greater than 0.1 percent in the ore or concentrate involve mined commodities, and therefore no minimum percentage would be required. The carcinogenic potential of processes involving the manufacturing of chromite ore, nickel sulfide, arsenic and antimony trioxide is due to exposure from the process itself; therefore no minimum percentage of content is required.

Coal tar pitch would have to be present in a minimum concentration of 2 percent. The use of the 2 percent limit concentration would be the equivalent of a 0.1 percent limit on the polycyclic hydrocarbons contained in coal tar pitch volatiles. Many polycyclic hydrocarbons are carcinogens, and scientific evidence indicates that they may be responsible for the carcinogenic effects of coal tar pitch volatiles.

While beryllium and cadmium are used as agents in various metals commonly found in welding operations, it is not MSHA's intent to regulate welding processes by this carcinogen standard. MSHA believes that typical beryllium and cadmium exposures resulting from welding operations would be adequately controlled by enforcement of the beryllium and cadmium PELs under §§ 58/72.100.

Exposure of miners in arsenic trioxide production would be primarily controlled by § 58.404, but airborne exposure also would have to meet the limit for arsenic and soluble compounds in the PEL table. Similarly, antimony trioxide production would also have to meet the PEL for antimony trioxide.

MSHA has identified three types of asbestos exposure that occur in mining that warrant special requirements in addition to the feasible engineering controls, exposure monitoring, and respiratory protection requirements that apply whenever exposure exceeds the PEL or may be anticipated to exceed the PEL. Asbestos mining and milling and vermiculite mining and milling where asbestos exceeds 0.1 percent in the ore or concentrate are listed as class 4 carcinogens. Asbestos construction work would be regulated separately because of the nature of exposure and the type of work practices that are unique to that operation. The demolition and renovation of older facilities containing asbestos-insulated pipes and asbestos-containing material represent significant sources of exposures to miners at both coal and metal/nonmetal mines. These sources will continue to exist as long as older mine facilities are replaced or expanded.

MSHA believes that asbestos mining and milling and vermiculite mining and milling where asbestos exceeds 0.1 percent in the ore or concentrate represent a long-term risk of exposure to the miner because asbestos is a natural constituent of the ore. MSHA believes that the occurrence of asbestos in other commodities is sporadic in nature and does not represent a long-term risk to the miner. In addition, MSHA believes that the use of asbestos in underground coal mining applications could lead to only sporadic intermittent exposure. For example, asbestos continues to be used as a packing material to ensure the flame path integrity of specific types of cable entrances into explosion-proof electrical contactor enclosures on approved equipment. Other applications include use as gaskets in flame safety lamps. Control of these types of asbestos exposure to the PEL in such situations should provide adequate protection to the miners involved. MSHA specifically solicits comments on data regarding asbestos exposure and any additional provision necessary for these limited, intermittent exposures.

Paragraph (a) would restrict the access into contaminated areas to essential personnel. This would reduce the number of potentially exposed individuals and prevent untrained persons from contaminating themselves and others.

Paragraph (b) would require that restricted areas be posted with signs stating the nature of the hazard and the procedures to be followed when entering and leaving the restricted areas.

In paragraph (c), MSHA proposes to ban the storage and use of food, beverages, tobacco products, chewing products, and cosmetics in the restricted area to prevent ingestion and absorption of the restricted chemical. These products could become contaminated by contact with contaminated surfaces, gloves, and storage areas.

Because these chemicals can be ingested, absorbed, or react with the skin, paragraphs (d), (e), (f) and (g) would require protection against skin and body contact with the restricted chemical. In addition, proper disposal or decontamination of clothing would prevent contamination of other areas and eliminate possible exposure of unprotected workers.

Paragraph (h) requires that containers of class 4 carcinogens be clearly marked and their contents identified. MSHA intends that labels required by this standard would be consistent with labels required under any future hazard communication standard. This section would adequately warn miners of the potential hazard of the carcinogen and enable them to take proper action. However, MSHA recognizes that several of these carcinogens are processes involving ore. In these cases, paragraph (h) would not apply to materials contaminated by the carcinogen as is required for class 2 and class 3 carcinogens in §§ 58.402 and 58.403. Otherwise materials discarded from the mining process, such as tailings, would be included.

Paragraph (i) would require that written decontamination, disposal and emergency procedures be developed and operational. Properly planned and implemented decontamination and disposal procedures help assure that contamination of equipment and individuals could be contained within the restricted areas. The ability to quickly implement emergency procedures would enable employees to handle such situations and minimize unnecessary exposure or contamination.

Paragraph (j) would require that the operator conduct appropriate monitoring at least every 12 months to evaluate the effectiveness of control and decontamination procedures. Without evaluation, controls could deteriorate and the risk to the miners could increase significantly. It is also critical in controlling exposure that decontamination procedures continue to be effective.

Paragraph (k) would require that persons required to enter a restricted area or who are involved in decontamination, disposal, or emergency response be trained prior to initial assignment and at least annually on the risks of applicable substances, decontamination, disposal and emergency procedures to be used. Employees can assist in controlling their exposure to carcinogens when they are fully advised of the hazards and methods to minimize exposure. MSHA intends that the training on health risks be compatible with the requirements of the Agency's hazard communication standard, which is under development.

Section 58/72.405 Asbestos Construction Work

Asbestos construction work would be regulated under §§ 58/72.406 and be defined as construction work such as demolition or salvage of structures where asbestos is present; installation, removal, or encapsulation of asbestos and materials containing greater than

0.1 percent asbestos; spill and emergency cleanup of asbestos and material containing greater than 0.1 percent asbestos; transportation, disposal, storage or containment of asbestos or materials containing greater than 0.1 percent asbestos on the site or location at which construction activities are performed.

Paragraph (a) would require that operators designate a person to be responsible for the asbestos construction work who would have authority to take prompt corrective action to eliminate hazards. This person would have to have had comprehensive training on the hazards of asbestos and asbestos construction work, such as a course conducted by an EPA Asbestos Training Center, or be a certified industrial hygienist (C.I.H.) certified by the American Board of Industrial Hygiene, or be certified for asbestos construction work by a state program. This provision would ensure that a trained individual would be able to quickly correct any hazards. Asbestos construction work, unlike plant processes, usually is accomplished quickly, generally over a span of weeks. The exposure resulting from incorrectly handled and unrecognized hazards can be quite excessive. If the hazards are not quickly corrected, miners will be subject to exposures which will place them at increased risk.

Paragraph (b) would require that areas where asbestos construction work is being done be restricted to essential personnel. This would reduce the number of potentially exposed individuals and prevent untrained persons from contaminating themselves and others.

Paragraph (c) would require that the restricted area be posted with signs stating the nature of the hazard and the procedures to be followed when entering and leaving the restricted area.

MSHA proposes to ban the storage and use of food, beverages, tobacco products, chewing products and cosmetics in the restricted area in paragraph (d) to prevent ingestion of asbestos and other toxic material resulting from the construction work. These products could become contaminated by contact with contaminated surfaces, gloves, and storage areas.

Paragraphs (e), (f), and (g) would prevent exposure to asbestos through personal contamination. Proper disposal or decontamination of clothing would prevent contamination of other areas; regeneration of asbestos dust from the clothing, exposing the wearer; and eliminate possible exposure of unprotected workers.

Paragraph (h)(1) would require the mine operator to establish negative-pressure enclosures before beginning removal, demolition, or renovation operations, whenever feasible. This type of work generates large amounts of asbestos-contaminated dusts and materials. The use of negative-pressure enclosures is required to prevent contamination of non-restricted areas, thereby preventing exposure of unprotected persons.

Paragraph (h)(2) would allow the use of glove bags and wet methods instead of negative-pressure enclosures for small-scale, short-duration activities involving removal of asbestos-containing insulation on pipes, removal of entire and intact asbestos-insulated pipes or structures, and replacement of electrical conduits through or near asbestos-containing material. Under these circumstances, MSHA recognizes that currently available glove bags, in conjunction with wet methods, can prevent contamination in nonrestricted areas.

Paragraph (i) would require daily monitoring in the restricted area if the exposure exceeds the PEL or reasonably could be expected to exceed the PEL. This type of work generates large amounts of dust and debris, which can vary significantly as the work progresses. Daily monitoring is necessary to determine if the respiratory protection provided is adequate. When all workers within a restricted area are equipped with supplied-air respirators operated in the positive-pressure mode, daily monitoring would not be required because this type of respirator is adequate for all levels of exposure.

Paragraph (j) would require that written decontamination, disposal, and emergency procedures be developed and operational. Properly planned and implemented decontamination procedures would help ensure that contamination of equipment and individuals could be contained within the restricted areas. The ability to implement emergency procedures when needed would enable employees to handle emergency situations and minimize unnecessary exposure or contamination.

Paragraph (k) would require that persons authorized to enter the restricted area or who are involved in decontamination, disposal, or emergency response be trained prior to initial assignment and at least annually on the risks of applicable substances, decontamination and emergency procedures to be used. Miners can assist in controlling their exposure to carcinogens when they are fully advised of the hazards and methods to minimize exposure.

Paragraph (l) would require that MSHA be notified at least 20 days prior to commencement of asbestos construction work involving at least 80 linear meters (260 linear feet) of asbestos or asbestos-containing materials or at least 15 square meters (160 square feet) of asbestos or asbestos-containing materials. The provision parallels the mine operator's reporting requirements to the Environmental Protection Agency (EPA) under the National Emissions Standard for Hazardous Air Pollutants (NESHAPS), 40 CFR Part 61, Subpart M. MSHA does not intend that the notice be written. A telephone call to the local MSHA field or district office would satisfy this requirement. Because asbestos construction activities may be done quickly before MSHA's next regular inspection, this reporting requirement would enable MSHA to ensure proper compliance with the regulation as well as allow time for MSHA to provide suitable personal protection for the MSHA inspector who might become involved.

Paragraph (m) would require that containers of asbestos and materials containing greater than 0.1 percent asbestos be stored in a manner that prevents contamination of restricted and nonrestricted areas. Asbestos construction work typically generates large amounts of asbestos waste material. Through proper labeling, miners would be able to recognize the necessary procedures to follow to prevent exposure or contamination. Proper storage would prevent contamination of restricted and nonrestricted areas, thereby decreasing the risk of exposure to miners. Not all areas of a restricted area are contaminated or have the same level of contamination. Controlling contamination inside the restricted area provides protection through use of protective equipment and procedures. Preventing contamination outside the restricted area eliminates exposure of unprotected miners. The labels would be consistent with those required under any hazard communication standard developed by MSHA.

Paragraph (n) would require that equipment, material, or other items introduced or removed from the restricted areas not contaminate a nonrestricted area. Asbestos construction work typically requires the movement of large volumes of equipment to and from the restricted area. This provision would prevent contamination of other areas and

eliminate the exposure of unprotected miners.

Sections 58/72.450 Medical Surveillance Program

These sections would require operators to establish a written medical surveillance program that would offer miners who are or will be working with substances or processes listed in Table C–5 the option to be examined by a licensed physician. The medical examination would have to be conducted at a reasonable time and place. As required by the Mine Act, all costs of the medical examination, including the miner's time, would be paid by the mine operator. Section 101(a)(7) of the Mine Act provides in part, that:

> * * * [W]here appropriate, any such [health or safety] mandatory standard shall prescribe the type and frequency of medical examinations or other tests which shall be made available, by the operator at his cost, to miners exposed to such hazards in order to most effectively determine whether the health of such miners is adversely affected by such exposure. Where appropriate, the mandatory standard shall provide that where a determination is made that a miner may suffer material impairment of health or functional capacity by reason of exposure to the hazard covered by such mandatory standard, that miner shall be removed from such exposure and reassigned. Any miner transferred as a result of such exposure shall continue to receive compensation for such work at no less than the regular rate of pay for miners in the classification such miner held immediately prior to his transfer. In the event of the transfer of a miner pursuant to the preceding sentence, increases in wages of the transferred miner shall be based upon the new work classification.

The legislative history of the Mine Act states that the Secretary should:

> * * * [I]nclude in health standards, where appropriate, the requirement that miners be given periodic medical examinations. The [Senate] Committee intends that mine operator must bear the cost of providing such medical examinations or tests. Such medical examinations are intended to be for the benefit of miners, and are for the purpose of both testing the adequacy of the standard and testing whether the miner has been subjected to material impairment of health or functional capacity as a result of exposure to the substance or hazard. As such, the medical examinations are a key aspect of the health standards. To encourage miners to take such medical examinations, this section requires the Secretary to issue appropriate standards requiring that miners who, as a result of these examinations, are determined to have suffered material impairment of health or functional capacity as a result of exposures be reassigned to positions where they will not be so exposed; and they continue to receive compensation at no less than the regular rate for miners in the classification such miner held immediately prior to transfer. This "regular rate" is to include any subsequent salary increase received by miners in the classification each miners held immediately prior to transfer. These requirements would be enforced through the issuance of appropriate citations, orders and penalties under sections 105 and 108 [sections 104 and 105]. In addition, under section 106(c) [section 105(c)], it would be unlawful for an operator to discriminate against a miner who is the subject of medical examination and potential transfer under the provisions of a standard issued under this section. S. Rep. No. 95–181, 95th Cong., 1st Sess. 22–23 (1977).

MSHA believes that routine medical examinations may result in early detection and prevention of the development of serious or fatal illnesses for the carcinogens listed in Table C–5. The major goal of medical monitoring is to detect any evidence of biological change that suggests a premalignant phase or to detect a preclinical neoplasm in a stage at which appropriate therapy may decrease morbidity and mortality. While recognizing that medical surveillance may not change the final outcome in every case of cancer, MSHA believes that early detection could also provide increased longevity because of treatments resulting in temporary remission or delayed progression of disease.

Cancer treatment can involve surgery, radiation, and chemotherapy—either individually or in combination. Recent advances in chemotherapy have resulted in increased survival times as well as increased cures in a large variety of tumor types (refs. 53, 54, and 56). New drugs involving immunotherapy, such as interleukin–2, have been successfully used in curing some advanced cancer cases (ref. 55). Medical surveillance is necessary, because early detection increases the effectiveness of cancer treatment (refs. 54 and 56). Larger, bulkier tumors are less likely to be penetrated by chemotherapy agents than smaller tumors (ref. 56). In addition, intensive polychemotherapy alone or in combination with other treatments is more effective in patients with low tumor loads (ref. 56).

Table C–5 in §§ 58/72.450 represents MSHA's selection of carcinogens for which the Agency believes early detection of health problems would have some benefit, either in terms of longevity or outcome. The carcinogens listed in Table C–5 also have medical-surveillance requirements under OSHA. MSHA requests comment on the appropriateness of medical surveillance for the other carcinogens listed in this proposed standard. Issues that should be addressed include evidence of biological precursors for cancer caused by such chemicals, the specificity and accuracy of tests available for these precursors, the timing of the precursors following exposure, and the implications of any latency period for the timing of follow-up medical testing. MSHA is interested in situations where cancer screening has been beneficial and situations where it has not. Additionally, commenters should provide information and supporting data on the feasibility of expanding the scope of the provisions on medical surveillance and medical transfer to other chemicals such as lead, mercury, cadmium, and arsenic and the health benefits that would be obtained.

A medical examination by a licensed physician would have to be made available to a miner: (1) Before the miner could be assigned to work within a carcinogen on Table C–5, (2) once every 12 months, and (3) whenever the miner is exposed to these carcinogens as a result of an emergency.

MSHA recognizes that other agencies have recommended or required medical surveillance and linked its availability and frequency to criteria such as number of days per year, different exposure levels, age, contact with the chemical, and duration of employment. MSHA specifically requests comment on the appropriate criteria to be used when offering medical examinations to miners.

The operator would have to direct the examining physician to transmit examination results to the operator. In order to protect miners' medical records that are irrelevant for the medical examination required under this section, MSHA intends that the mine operator receive only information relevant to the miner's exposure to carcinogens on Table C–5. The operator would have to provide the examining physician with relevant job information in the operator's possession. All medical records would have to be retained by the operator for a period of the miner's employment plus 30 years. This is consistent with OSHA's record retention period for carcinogens. Miners, their designated representatives, and authorized representatives of the Secretary of Labor and the Secretary of Health and Human Services would have access to miners' medical records. In addition, operators would have to give miners copies of their medical records upon termination of employment.

Whenever an operator ceases to do business and there is a successor operator, the successor operator would have to continue to retain the medical records for the required period of this section. Where there is no successor

---

operator, the mine operator would have to notify affected miners of their rights of access to records within 3 months prior to destroying such records.

Under the proposal, the mine operator would have to notify MSHA in writing of any miner requesting to transfer as a result of the physician's medical report indicating that the miner has developed cancer or any impairment of health or functional capacity due to exposure to a carcinogen listed in Table C–5. The notice would have to be sent to MSHA within 15 calendar days of receipt of the miner's request for transfer and include the miner's occupation, new assignment, and the date of transfer. The transfer would have to take place before the 21st calendar day following receipt by the operator of the miner's request.

The proposal would include statutory requirements regarding compensation protection for transferred miners. The miner would retain at least the previous hourly rate of pay and subsequently would receive actual increases applicable to the assigned work classification. For example, if a transferred miner previously had a $10.00 per hour job and is transferred to an $8.00 per hour job, the operator must continue to pay that miner at least $10.00 per hour. If the rate of pay at the new position is increased to $9.00 per hour, the operator must pay the transferred miner $11.00 per hour to protect the miner from loss in wages.

The Agency realizes that these provisions are not as detailed as medical surveillance and transfer rights under 30 CFR Part 90. However, the number of miners potentially affected by this provision would be very limited. MSHA requests comment on whether medical examinations and transfer under this section should be at each miner's option as in this proposal, or mandatory.

Sections 58/72.500 Respiratory Protection Program

Existing §§ 56/57.5005(b) requires metal/nonmetal operators to establish a respiratory protection program consistent with the American National Standards Institute "Practices for Respiratory Protection," ANSI Z88.2–1969, whenever respiratory protection is required. This ANSI document is incorporated by reference. The standard sets accepted practices for respirator users and provides information and guidance on the proper selection, use, and care of respirators.

In the metal/nonmetal preproposal draft, MSHA recommended deleting the incorporation by reference and including specific requirements in the standard, based on the latest edition of the ANSI standard, Z88.2–1980. The proposed rule would eliminate this incorporation by reference in the same manner.

When respirator use is required by an MSHA standard that relates to an exposure limit, including radiation protection, proposed §§ 58/72.500 would require operators to establish a respiratory protection program. In addition, MSHA proposes to revise existing coal § 70.300 to reference the proposed respiratory protection provisions. As a result, coal mine operators would be required to implement a respiratory protection program when respirators are required by any coal standard. Existing § 70.300 would be recodified as § 70.302, and similar wording would be included in parts 71 and 90 as § 71.302 and § 90.302. These three standards would strengthen the existing provisions concerning respiratory protection and further protect miners against hazardous levels of respirable coal dust. Changes concerning the referencing of respiratory equipment approvals under 30 CFR Part 11 would be made, and the Secretarial references would be deleted. MSHA would require respiratory equipment to be used, rather than merely provided, where exposures to excessive dust occur. Use of such equipment would also have to meet the requirements of proposed §§ 72.500. Existing §§ 70.300–1, 70.305, and 70.305–1 also would be replaced by proposed § 72.500.

In the proposed rule, MSHA has retained the principal requirements of the existing standard for metal/nonmetal mines by extracing the relevant portions of ANSI Z88.2–1980. The proposal contains requirements for selection, fit testing, use, maintenance and training. Mine operators would have flexibility to use methods for compliance that are best suited for their particular operators, provided that the basic requirements of the standard are met. The standard would not apply to voluntary use of respiratory protection, mine rescue team use which is covered by 30 CFR part 49, or self-rescuers designed for escape purposes covered by existing §§ 57.15030 and 75.1714.

Several commenters suggested that a more performance-oriented standard would allow development of a cost-effective respirator program and lessen the likelihood that the standard would become outdated by new technology. MSHA agrees that performance requirements for respiratory protection programs could allow a more rapid introduction of new technology into the workplace, creating a safer work environment and accommodating a greater variety of working conditions. Accordingly, the proposed standard identifies the minimum elements of an acceptable respiratory protection program. The written standard operating procedures (SOP) for an operation must describe how compliance is achieved for each required element. Standard operating procedures are required currently. The content of the standard operating procedures is dependent upon the respiratory protection needs of the mine and the type of respiratory protection used. Several commenters stated that SOPs need not be a summary of technological specification but should be tailored to responsibilities and types of respirators required for specific jobs. Other commenters stated that SOPs should address administration, respirator selection, training, fitting, issuance, maintenance, inspection, workplace surveillance, program evaluation, and approved or accepted equipment. MSHA believes that standard operating procedures addressing the proposed minimum elements would be sufficient.

Several commenters suggested that all persons who wear respirators should be covered by the respiratory protection program and not just those who would be required to wear respirators by MSHA standards. Repirators are frequently worn voluntarily by miners working in areas that meet the permissible exposure levels for airborne contaminants. These persons wear respirators for additional personal protection. While the Agency would encourage such wearers to continue to follow a respiratory protection program, MSHA does not intend for this standard to apply to voluntary use of respirators.

Paragraph (a) of the proposed standard would require that operators provide respirators approved under 30 CFR part 11 and that they be maintained in approved conditions. This would clarify what is meant by the existing requirement for "MSHA-approved respirators." Several commenters suggested that "approved or accepted by MSHA or NIOSH" would allow for the use of effective respirators for which no approval requirements currently exist. MSHA and NIOSH recognize the need for updating and improving portions of 30 CFR part 11, and NIOSH has proposed updated respirator approval standards on August 27, 1987 (52 FR 32402). MSHA is monitoring that rulemaking closely and will revise this rule as appropriate. However, MSHA believes that only those devices certified as approved by NIOSH should be permitted so that the effectiveness of the devices meet uniform test requirements and specifications. One commenter objected to the cross

reference of 30 CFR part 11 and requested that part 11 requirements be included in the proposed standards. The part 11 provisions are provided for manufacturers or designers of respiratory devices who seek approval for a design model or product for a specific classification or application. The mine operator has no responsibility for filing applications for approval or testing respiratory devices; however the operator must provide approved respirators for use.

A few commenters requested that MSHA permit modifications that do not adversely affect respirator performance, including allowing the interchange of respirator parts from different manufacturers, except on self-contained breathing apparatus (SCBA). MSHA believes that any modifications to an approved respirator would negate that approval if the modification has not been tested and approved under 30 CFR part 11.

Paragraph (b) would require respirators to be selected according to the criteria in three tables in §§ 58/72.500, the manufacturer's limitations on the respirator, and the characteristics of the work environment, which includes the exposure levels, the period of time the respiratory protection will be worn, and the work activities of the employees. These tables indicate whether a respirator is permitted for use in oxygen-deficient atmospheres or in IDLH atmospheres, what maximum protection factors are, and what additional precautions must be taken when using certain respirators. The respirator protection factors in the tables would have to be used in conjunction with the manufacturer's limitations on the respirator to determine the concentrations of harmful atmospheres in which the respirator can be used. To determine the maximum concentration of the substance for a particular respirator application, the operator must use the manufacturer's limitations on the respirator, the respirator wearer's own protection factor as determined by quantitative fit testing, or the respiratory protection factor in the table, whichever is more stringent. Manufacturers place limitations on the filters, cartridges, and canisters used in air purifying respirators. If, for example, a manufacturer places a limitation on a particular cartridge or canister and the quantitative fit test indicates a protection factor of 100, that cartridge or canister could not be used in concentrations greater than the manufacturer's limitation. Several factors, including type and quantity of the sorbent, the toxic contaminant involved, and the concentration of the contaminant, can affect the service life of an air-purfying respirator. As a result, a manufacturer may place a more stringent limitation on a respirator cartridge than would be indicated by facepiece fit tests. These limitations are those of filters, cartridges, and canisters used in air-purifying respirators.

The tables in the proposed rule are much simpler than in the metal/nonmetal preproposal draft. The tables list the maximum assigned protection factor for the various respriators, as well as the basic minimum limiting criteria for use. MSHA believes that these new tables present selection criteria to the operator in a more understandable form.

Scientific data have shown that protection factors determined under laboratory conditions overestimate greatly the protection offered by respirators in the actual working environment. This may be due to many factors, including the following. Laboratory exercises do not mimic all the body movements done by workers in the actual workplace, nor do they match all the environmental conditions to which miners are exposed at work. The individual pulmonary characteristics of persons under various types of work loads also can cause variations in the protection factors. Fit testing of a respirator wearer only lasts a few minutes, but generally workers who wear required respiratory protection wear respirators for much longer periods of time. The testing methodology itself, such as the placement of a probe in a facepiece for quantitative testing, may affect the protection factors.

Because of the extensive data indicating the importance of these elements, MSHA has assigned maximum-use protection factors for the various types of respirators used in the mining environment. Operators by their choice of fit-testing methods may select the type of respiratory protection up to the maximum protection factors. However, MSHA believes that the majority of respiratory protection wearers will only need protection factors of 10. There will be a limited number of circumstances where protection factors greater than 10 would be needed. In these situations, the nature of the hazard is such that it is important that the person exposed is assigned respiratory protection that will provide the required protection under actual work conditions.

MSHA believes that closed-circuit self-contained breathing apparatus approved for mine rescue under 30 CFR part 11 would provide adequate protection for miners when used for IDLH and oxygen-deficient atmospheres, based on the Agency's experience with these apparatus. However, the Agency requests information of any situations where the higher protection factor would be inappropriate.

The selection table in the metal/nonmetal preproposal draft would have prevented the use of negative-pressure, closed-circuit self-contained breathing apparatus approved for mine rescue in oxygen-deficient and IDLH atmospheres. These respirators are currently used for mine rescue and recovery under 30 CFR part 49. Based on the Agency's experience with these types of apparatus, MSHA believes that they are appropriate for use in the hazardous atmospheres addressed by these standards and has included them in the respirator selection table.

To determine whether respirators remain in proper operating condition, paragraph (c) would require their inspection prior to use and after cleaning, sanitizing, and maintenance, including repair. Emergency-use respirators would have to be inspected monthly, with a record kept of the last inspection. These requirements do not differ for the existing standard for metal/nonmetal mines. Proper care and maintenance of respirators is an essential component of any respiratory protection program to prevent failure due to undetected or unrepaired defects or damage. Maintenance of supplied-air or self-contained breathing apparatus should include recharging cylinders, replacing chemical canisters, and checking integral components such as filters. If disposable-type respirators are damaged or defective, they would have to be replaced. These inspection requirements are derived from ANSI Z88.2–1980. However, the proposed rule would not require inspection of respirators after use. Inspection of respirators should detect any damage that must be repaired prior to reuse of the respirator. One commenter suggested that an inspection should be performed before cleaning and sanitizing. MSHA believes that this is unnecessary because any damage to a respirator that occurred prior to or during cleaning and sanitizing should be detected during the inspection when the respirator is reassembled.

The purpose of the proposed inspection after maintenance or cleaning and sanitizing is detection of damage or defects occurring in respirator units during these processes. Inspection prior to use provides a second, more cursory check to determine whether damage or contamination has been sustained during storage. The wearer would be the most likely person to inspect the respirator prior to use. MSHA intends this pre-use inspection to be a visual one in order to check for proper assembly and obvious damage or defects. This inspection should include checking to see that cartridges or canisters are inserted correctly, facepiece seals are not cracked or deteriorated, valves are present and functional, and all connections are tight. Because cleaning, sanitizing, and maintenance may involve dissassembly of the respirator, a more detailed inspection is needed. These inspections must be done by the person performing the tasks involved. During tasks that involve disassembly of a unit, it is important to inspect the reassembled parts for those that may be attached incorrectly, or only partially reattached. Inspection of the assembly of parts, as well as the parts themselves, is essential for maintaining respirators in proper operating condition. For example, use of an approved replacement valve for repairs is negated if the value is not seated correctly. Also, cross-threaded cartridges or canisters could render a respirator useless. Another problem that can occur in tasks involving disassembly is use of a wrong part, which may not work effectively. Many component parts, especially those for the same type of respirator, appear to be similar. When handling multiple models of respirators, it is essential to inspect the respirator to see that correct replacement parts have been used.

Monthly inspections of emergency-use respirators are critical to ensure the miner protection in the event of an accident. If this type of respiratory protection is not available and ready at all times, the miner cannot be guaranteed protection since there will be no time to correct and repair the equipment at the time of the emergency. A record of the latest inspection will enable the operator to determine when the equipment will need to be inspected again. This requirement represents no change from the existing standards for metal/nonmetal mines. The record is generally a tag placed on the equipment which has the date of inspection, the status of the equipment (pass/fail, ok, etc.), and the initials of the person conducting the inspection.

One commenter stated that MSHA should make it clear that the mine operator must do the cleaning, sanitizing, inspection, repair, and storage of respirators. Another commenter suggested the MSHA permit mine operators to issue respirators to the wearers and to have the wearers be responsible for the maintenance of their own respiratory protective equipment. The mine operator is ultimately responsible for administrative management of the respiratory protection program. However, the proposed rule would not prohibit the operator from delegating specific duties to trained miners or contracted services, as long as the requirements of the standard are met.

The preproposal draft included a provision for maintenance to be performed according to a schedule. Several commenters stated that this was too restrictive and could conflict with some maintenance programs under the existing provisions where wearers maintain their own respirators. MSHA agrees that scheduled maintenance is unnecessary if the proposed inspections are properly conducted and the respirators are maintained in approved condition.

Paragraph (d) would require that respirator wearers be supplied with a clean and sanitized respirator each day and that a respirator worn by one person be cleaned and sanitized before use by another person. The proposed rule would require emergency-use respirators to be cleaned and sanitized promptly after each use. This requirement has several purposes. Malfunction of a respirator can be caused by the interference of dirt or other contamination with internal working parts. This allows leakage and could result in exposure to a hazardous or IDLH atmosphere. Contamination on the facepiece can also allow leakage and exposure. Skin irritation or dermatitis can be caused by chemical contamination or soiling of a respirator facepiece. Use of unclear respirators can also lead to transfer of diseases or illness between wearers. Discomfort to the respirator wearer caused by contamination of the respirator may lead to the respirator's not being used. Respirators can be sanitized with a simple water and chlorine solution.

Emergency-use equipment must be ready to perform when needed. This type of respirator is usually provided for use in potentially dangerous atmospheres and must be maintained promptly and properly after each use, including cleaning and sanitizing, to ensure that it is effective when needed. The failure of this type of respirator, due to internal contamination, could compound the severity of an emergency situation by causing additional injury or death.

Several commenters stated that the language in the preproposal draft requiring that clean and sanitized respirators be provided "before each use" would require the mine operator to issue intermittent users a clean and sanitized respirator at the beginning of each intermittent wearing period. This, they stated, would be unnecessarily expensive and restrictive. Several commenters suggested wording similar to "respirators shall be cleaned often enough to remove contamination and maintain the function of the respirator." MSHA recognizes that intermittent respirator wearers are frequently in and out of mandatory respirator areas and that the supplied respirators may be used numerous times during a work shift. When this occurs throughout a full shift, respirators become dirty and contaminated from normal use and handling by the end of the shift. Therefore MSHA has proposed that clean and sanitized respirators be supplied each day, allowing the flexibility necessary for intermittent users. Daily issuance of clean and sanitized respirators is a reasonable schedule that would provide for needed maintenance. Disposable-type respirators that cannot be cleaned and sanitized would have to be replaced.

One commenter recommended a provision that would allow the operator an option of cleaning and sanitizing respirators after use by providing the facilities for the wearer to carry out this requirement. The proposed language would accommodate this option as well as other alternatives such as use of disposable-type respirators.

Paragraph (e) would require that respirators be stored in a manner that protects them from damage or contamination and that emergency-use respirators be accessible to persons who may need to use them. This requirement would prevent physical damage or contamination of the respirator that could cause the respirator to malfunction during use and allow the wearer to be overexposed. Some examples of damage or contamination are cuts or abrasions in the facepiece, dents or holes in canisters or cartridges, damage to seals due to improper placement, or from dust, chemicals, grease, or paints. Extreme heat or cold can also cause damage that could affect the proper function of a respirator. Damage or contamination can occur when respirators are stored in tool boxes, multiple-use storage lockers, lunch boxes, hung on walls, laid on tables, desks, counters, or any area where work actively could adversely affect the respirator. In determining whether respirators are properly stored, MSHA would consider whether there is opportunity for damage or

contamination to occur, or whether

conducting fit tests. Test agents, such as

with this type of respirator in the mining

half-face respirator for protection, while

when facial hair comes between the

rescue and respiratory devices, where

contamination to occur, or whether damage or contamination has occurred.

So that respirators are not subject to unauthorized access, one commenter submitted that "readily available" would be a more appropriate requirement than "accessible" for emergency-use respirator storage. MSHA agrees that emergency-use respirators need to be readily available and protected from unauthorized access but interprets "in a manner that protects them from contamination or damage" to include potential damage from unauthorized access. Unauthorized access can be prevented by storage in occupied areas such as control rooms, shops, rescue rooms, first-aid rooms, or warehouses.

Paragraph (f) would require that qualitative or quantitative respirator fit tests be conducted for respirators with tight-fitting facepieces. This would ensure that the facepiece fits the wearer and would minimize or eliminate the possibility of inward leakage of a hazardous substance.

The facepiece seal of a respirator must be adequate so that the wearer does not inhale the hazardous substance. If the fit is inadequate, air will move into the facepiece through the pathway of least resistance, leaking through the seal around the facepiece. This can occur even in positive-pressure apparatus if the fit is poor due to air turbulence in the facepiece which causes small eddies of negative pressure. Such leakage circumvents the protection that the respirator provides the wearer.

This provision would apply only to respirators with tight-fitting facepieces. Loose-fitting respirators, such as helmets or hoods, are designed so that their effectiveness is not dependent on fit. Mouthpiece respirators would not be covered because they do not have tight-fitting facepieces that would require fit testing.

MSHA recognizes that in the past qualitative fit tests were unreliable because of inadequate design and procedure. However, the Agency believes that there are simple and effective qualitative fit tests currently available that have been demonstrated for protection factors of 10. Because qualitative fit-testing procedures have not been validated adequately for fit factors greater than 10, any respirator, regardless of type, would be limited to a protection factor of 10 if the respirator wearer was qualitatively tested. Disposable respirators would be limited to a protection factor of 5.

In the metal/nonmetal preproposal draft, MSHA specified use of a series of test agents at 6-month intervals for conducting fit tests. Test agents, such as odorous vapors, are used to simulate potential invasion of a respirator by a hazardous substance. Many commenters felt that the standard should not specify the procedures to be used. MSHA concurs that the standard should be performance-oriented to allow the mine operator flexibility. However, based on MSHA experience, many operators will find that they will need different types of test agents for qualitative fit testing because of an individual's insensitivity to vapors or particulates such as isoamyl acetate, irritant smoke, or saccharin. To assist operators in conducting qualitative fit testing, MSHA is proposing a nonmandatory appendix of recommended procedures. MSHA solicits comment as to the need for mandatory protocols.

MSHA believes that the majority of respirator wearers will need only qualitative fit testing. For those few cases where qualitative fit testing would be inadequate, the operator would be required to conduct qualitative fit testing. Quantitative fit testing utilizes sensitive equipment to determine the ratio of the concentration of a test agent inside the respirator wearer's facepiece by a probe inserted inside the facepiece. The equipment simultaneously measures the concentration of the test agent in the test chamber and within the facepiece. By comparing these two concentrations, a protection factor can be determined. The sensitivity of the instrumentation allows for the determination of protection factors greater than 10.

However, because the fit testing is done in a laboratory environment which is unlike actual working conditions, the protection factor determined under testing conditions would have to be divided by 10 to attain the working protection up to the maximum-use protection factor listed in the selection tables. For quantitative fit testing, a minimum ratio of 100 must be obtained in order to be considered providing a satisfactory fit. This number of 100 is equivalent to the minimum level achieved by a qualitative fit test. The maximum-use protection factors listed in these tables are the highest that MSHA believes have been adequately verified for protection factors in the work environment. MSHA requests comments on these protection factors. MSHA intends to follow the NIOSH rulemaking closely to ensure that MSHA's final rule is consistent with the NIOSH certification program.

MSHA would restrict all negative-pressure SCBA to 50, except for those approved for closed-circuit demand respirators approved for mine rescue. Based upon the Agency's experience with this type of respirator in the mining work environment, MSHA believes that a higher protection factor for mining is warranted. SCBA approved for mine rescue would be assigned protection factors greater than 1000 for IDLH or unknown concentrations.

Many of the commenters stated that annual fit testing would be adequate to ensure that respirators still fit the individual. They also pointed out that ANSI Z88.2–1980 specifies annual testing. Commenters felt that annual fit testing could be done with the annual refresher training. MSHA agrees, and the proposed rule would require fit tests after the initial fit test at least once every 12 months.

Some commenters felt that negative-pressure and positive-pressure seal checks should be considered a qualitative fit test. Although such testing is adequate as a field test to check the seal of the facepiece known to fit a wearer prior to entering a hazardous atmosphere, it is inadequate as a selection test. This is consistent with ANSI Z88.2–1980, other federal regulatory agencies, and other fit-test protocols.

Paragraph (g) would require accurate records to be kept for 1 year from the latest fit test, or until the next fit test is recorded for each respirator wearer, regardless of how often the person actually wears the respirator. Matching the appropriate make, model, and size respirator to each wearer is essential for providing the necessary respiratory protection. These records would provide mine operators with a fit reference for each worker for any subsequent need for wearing respirators. The proposed rule would require that the record include the test date, the wearers name, and the specific make, model, and size of respirators for which there was a satisfactory fit. If quantitative fit tests are used, the protection factor determined by the testing also would be recorded. For a respirator to adequately protect the wearer, it must fit the wearer's facial size and contours. Because the face varies considerably from person to person, especially the critical areas of the nose and chin, even small groups of wearers might require multiple sizes and models of respirators to fit every member of the group. The more employees an operator has, the more likely a wider variety of respirators would be needed. These physiological variables are compounded when a mine site includes various working environments that would require different levels of respiratory protection. For example, some tasks may require a person to wear only a

half-face respirator for protection, while other tasks may require the same person to wear a full-face gas mask. That person's fit-test information would be specific for each type of respirator.

Fit-test records also determine when a person's required fit test is due. MSHA would require fit tests to be conducted once every 12 months because changes in body weight, facial wrinkles, scars, and the presence of dentures, would each affect the fit of a respirator.

For respirators with a tight-fitting facepiece, paragraph (h) would require that a negative- and positive-pressure sealing test or an equivalent qualitative sealing test be done prior to each use. This sealing test is essential prior to entry into hazardous atmospheres to ensure that the face-to-respirator seal does not leak, potentially allowing overexposure of the wearer. The existing standard requires that the facepiece fit be checked by the wearer each time the respirator is put on. ANSI Z88.2–1980 coninues to specify that facepiece seal be checked prior to each entry into a hazardous atmosphere.

When a wearer is donning a respirator, the straps of the respirator can be adjusted to various tensions and the facepiece can be fitted in different positions at the nose and chin. Incorrect positioning of a respirator can cause leakage and result in exposure to airborne substances.

Once a respirator has been shown to fit an individual by use of a qualitative or quantitative fit test, then there is reasonable assurance that an adequate face-to-respirator seal can be achieved. The positive- and negative-pressure seal tests are a field method to check that facepiece-to-face seal in the workplace reproduces the seal achieved when the fit testing was performed. In addition to checking the seal, these tests can be used to detect faulty parts of respirators such as torn, missing, or misthreaded cartridges. The negative and positive-pressure test checks different parts of the respirator such as inhalation and exhalation valves.

Several commenters were concerned that the metal/nonmetal preproposal draft would have precluded the use of disposable particulate respirators since a positive- and negative-pressure seal test cannot be performed with many of them. MSHA has included the wording "use of an equivalent qualitative sealing test" to allow for disposable respirators. The intent is not to duplicate the steps involved in conducting a fit test but rather to allow use of a test agent, such as banana oil or saccharin, to test the seal.

Paragraph (i) would prohibit use of respirators with tight-fitting facepieces when facial hair comes between the sealing surface of the respirator facepiece and the face. This provision is similar to the existing standard, but MSHA did not include this requirement in the metal-nonmetal preproposal draft. Test data, industrial use data, and MSHA's own fit-test data show the difficulty of obtaining a satisfactory seal when facial hair comes between the facepiece and face. This provision would be consistent with the guidelines in ANSI Z88.2–1980.

Paragraph (j) would require that respirator wearers, supervisors, and persons issuing or maintaining respirators be trained initially and then once every 12 months in the selection, use, and maintenance of respiratory devices. The proposed standard allows flexibility in the development of a proper training program according to the complexity of a site's needs. The trained worker should be able to demonstrate an acceptable level of familiarity and competence in performing the assigned duties and understand each element of the training program.

Training of individuals involved in a respirator protection program, whether the wearer, supervisor, issuer, or maintainer, is important for the success of the program. Trained wearers should know how to conduct proper sealing tests to detect leaks and be alert for contamination damage not detected in a before-use inspection. Trained persons responsible for maintenance, including cleaning or sanitizing, should know the importance of reassembling the internal parts of a respirator properly so that wrong replacement parts which could cause respirator malfunction are not substituted. Training helps ensure that proper respirators are selected and used, so that respirator failure or lack of protection due to improper filters or cartridges does not occur. A trained supervisor should know how to oversee proper use and maintenance of respirators.

Two commenters stated that the training requirements should be deleted since they are covered in 30 CFR part 48 "Training and Retraining of Miners." MSHA believes that for the most part the training requirements in Part 48 adequately would meet the respirator training requirements in this proposal. Consistent with the current requirements, if a respirator program is necessary, potential respirator wearers must receive initial training that encompasses all of the individual aspects necessary to protect them from the hazardous contaminant identified. Under 30 CFR 48.25(b)(2), training must include instruction and demonstration in the use, care, and maintenance of self-rescue and respiratory devices, where applicable. However, under the proposal, operators would have to provide separate respirator training in instances in which miners do not receive respirator training in Part 48 instruction.

Paragraph (k) would require that compressors or blowers used to provide respirable air be constructed and located to prevent entry of contaminated air into the air-supply system. The intent is to prevent the intake of air contaminated by external sources. This paragraph would also require that compressors be equipped with in-line air purifying sorbent beds or filters. One commenter suggested that when the quality of the intake air is adequate, non-oil-lubricated compressors specifically designed to supply breathing air should not be required to have in-line air-purifying sorbent beds. However, with such compressors, assurance of the quality of intake air would require continuous or frequent monitoring for the presence of a number of potential contaminants, such as organic particulate matter. This is unnecessary with an in-line purifier.

Paragraph (k) would also require that oil-lubricated compressors be equipped with a carbon-monoxide or high-temperature alarm. Internally, oil-lubricated compressors can produce carbon monoxide when overheated, necessitating a carbon-monoxide alarm or high-temperature alarm. Either alarm should be adequate to warn users of a potential problem for the supplied air user. In one nearly fatal mining accident, the high temperature alarm in a compressor was disconnected, resulting in a sand blaster's being poisoned by carbon monoxide. Several commenters suggested that all compressors should have carbon monoxide alarms. However, the potential for carbon monoxide contamination in non-oil-lubricated compressors from external sources, such as car exhaust, is far less likely than from oil-lubricated compressors where the compressor itself could be the source of carbon monoxide. Furthermore, the construction and location requirements of this provision make it unnecessary to require carbon monoxide alarms for non-oil-lubricated compressors.

Paragraph (l) would require that supplied air or oxygen used for respiration meet the requirements of 30 CFR part 11. It is essential that supplied, compressed air or oxygen is of the same quality as that used for the approval of the respirator. Some commenters expressed concern about the availability of supplied air or oxygen that would meet this requirement. The Agency

believes that supplied air or oxygen

to the individual respirator wearer. The

miner cannot do work where respirators

V. Executive Order 12291 and

include, wherever possible, compliance

airborne substances? What engineering

believes that supplied air or oxygen meeting the 30 CFR part 11 requirements is readily available through commercial gas suppliers.

Paragraph (m) would prohibit compressed oxygen from being used in atmosphere-supplying respirators or in open-circuit, self-contained breathing apparatus that have previously used compressed air. Compressed gaseous air may contain low concentrations of oil, even when it meets breathing quality criteria. If high-pressure oxygen passes through an oil-coated or grease-coated orifice, an explosion or fire could occur.

Section 58/72.550 Medical Surveillance Program

The proposed rule would require that mine operators establish a medical surveillance program in writing whereby a miner cannot be assigned to wear respiratory protection until it has been determined by a licensed physician that the miner is physically able to wear the respirator while performing the work. It is critical that miners be able to wear the respirator because each miner's job performance and actions may affect his or her own health and safety, as well as the health and safety of other miners. The operator would have to comply with any medical or physical limitations related to respirator use as determined by the physician. Medical evaluations are currently required at metal/nonmetal mines through the incorporation by reference of ANSI Z88.2–1969, "American National Standard for Respiratory Protection." As required by statute, all costs of medical examinations, including the employee's time, would have to be paid by the mine operator.

Medical examinations, as well as the other elements of the proposal, would apply only when respiratory protection is required by MSHA. It would not be required for voluntary use of respirators; however, in such instances MSHA would encourage operators to follow the elements of the proposed respiratory protection program.

In the proposal MSHA has specified only the types of information that the operator would have to provide to the examining physician. The Agency considers this information the minimum necessary to conduct a meaningful evaluation; it is consistent with the requirements in ANSI Z88.6–1984, "American National Standard for Respiratory Protection—Respirator Use—Physical Qualifications for Personnel." MSHA has not specified the physician's evaluation procedures because the Agency believes that a physical examination must be tailored to the individual respirator wearer. The physician who ultimately decides if an individual can wear respiratory protection is the person who can best determine the requirements of the exam. However, MSHA recognizes that some local physicians may not be familiar with this type of examination; therefore the Agency is proposing to include a nonmandatory appendix to assist such physicians. The appendix is consistent with ANSI Z88.6–1984.

Under the proposal, a person would have to be examined prior to using respiratory protection, at any time the wearer experiences difficulty breathing while being fitted or while using a respirator, and at intervals designated according to a frequency table based on the age of the wearer and working conditions. The proposed frequency table is derived from the "NIOSH Guide to Industrial Respiratory Protection" (1987) and ANSI Z88.6–1984. More frequent examinations with advancing age relate to the increased prevalence of most diseases in older people. More frequent examinations are also important for individuals doing strenuous work involving the use of SCBA.

MSHA believes that the majority of situations requiring respirator use could be remedied by other controls within a year. If the overexposure is such that the respirator must be worn on a long-term basis, it is critical that the wearer be examined periodically. A change in lung or heart function could severely affect the ability of the person to wear the assigned respiratory protection. The outcome of a periodic exam might require no change in respiratory protection, or it might require use of a respirator with a lower breathing resistance or less weight.

The proposed rule would require medical records from the licensed physician to be kept for 5 years. MSHA believes that this period of time is sufficient to determine if the wearer has experienced any medical changes from respirator usage. MSHA requests comment on the appropriate retention period of these medical records and any benefit a longer retention period would provide.

The proposed rule would require that miners who have been determined to be unable to wear a respirator, based upon the medical evaluation carried out under this subpart by a licensed physician, be transferred to an area of the mine where respiratory protection is not required.

The operator would have to notify MSHA in writing within 15 calendar days from receipt of the licensed physician's report indicating that the miner cannot do work where respirators are required. The notice would have to include the miner's occupation, new assignment, and the date of transfer, which must take place on or before the 21st calendar day following receipt by the operator of the licensed physician's report. Under this proposal, at any time an operator transfers a miner, the operator is required to assign the miner to an existing job at the same mine. The standard would provide miners the flexibility to transfer to a job at a different mine if agreed upon between the mine operator and the miner.

The proposal also includes compensation protection for transferred miners. The miner would retain at least the previsous hourly rate of pay and subsequently would receive actual increases applicable to the assigned work classification.

MSHA requests comment on the feasibility of expanding the scope of the provisions on medical surveillance and medical transfer for some workers exposed to carcinogens and respirator wearers. The Agency realizes that these provisions are not as extensive as medical surveillance and transfer rights of 30 CFR Part 90 miners. However, the number of miners that would be affected by this provision would be very limited. Small operators, such as those in sand and gravel, would have few operations that would not be controlled so that respirators would have to be used. Also, if a carcinogen would have to be used in a laboratory and a miner would elect to transfer, other positions would be available, such as crusher or dredge operator, which would have no exposure to the carcinogen.

Other Changes

Existing §§ 56/57.20014, "Prohibited areas for food and beverages," would be revised and renumbered as § 56.600. No such standard now exists for coal mines. This standard addresses the need to keep food and beverages out of toilet rooms or areas where they could become contaminated by hazardous substances. The same standard is proposed as § 72.600 for coal mines.

Existing § 70.300 would be revised as a new § 70.300 would be revised as a new § 70.302. The revised standard would require approved respiratory protecton to be provided and used by persons exposed to excessive levels of respirable dust. This provision would also be added to Parts 71 and 90 as new §§ 71.302 and 90.302.

V. Executive Order 12291 and Regulatory Flexibility Act

A. Summary of Costs and Benefits

Under Executive Order 12291, MSHA has prepared an initial analysis to identify potential costs and benefits associated with proposed changes to its standards for air quality, chemical substances, and respiratory protection standards in metal/nonmetal and coal mines. The Agency has incorporated this analysis into the initial regulatory flexibility analysis required by the Regulatory Flexibility Act. In this analysis, MSHA has determined that the proposed rule would not result in major cost increases nor have an incremental effect of $100 million or more on the economy.

The benefits of the proposed rule are the fatalities and illnesses that will be prevented at approximatley 15,600 mines with about 324,000 employees. MSHA estimates that a minimum of 880 cases of adverse health effects can be prevented in the mining industry. On an annual basis, the proposed rule will prevent 22 cases of adverse health effects. It will also prevent an average of about seven injuries that occur each year resulting from entry into confined spaces. These are considered conservative estimates because exposure data are not available for many of the chemicals whose permissible exposure levels are being reduced, and therefore quantitative estimates cannot be made. MSHA requests additional data to better describe the population at risk that will be affected by this proposed rule.

MSHA estimates that the incremental annual and annualized cost of complying with the proposed rule, assuming full compliance with the existing standards, is $11.28 million; $8.43 million for metal and nonmetal mines and $2.86 million for coal mines. Annual and annualized costs are $3.05 million at small metal and nonmetal mines and $1.80 million at small coal mines.

Specific mines in some cases may incur higher compliance costs than the norm. Mines with exposures to asbestos, for example, may incur greater than the average compliance costs due to extensive controls that are required. MSHA lacks information on the exact number of affected mines and the cost of controls and therefore cannot determine the economic impact for these unique situations. MSHA requests additional data to more accurately determine the economic impact of the proposed rule.

The Regulatory Flexibility Act requires that, in developing regulatory proposals, agencies evaluate and include, wherever possible, compliance alternatives that, minimize any adverse impact on small businesses. MSHA believes that, due to the size of the workforce, small mines are likely to have fewer workers performing tasks for longer periods of time than large mines; consequently, 8-hour time-weighted limits are less likely to be exceeded in small mines than in large mines. MSHA is uncertain of the impact on small mines resulting from exceeding short-term exposure limits because many STEL's have been eliminated.

B. Request for Additional Information

MSHA requests additional information to form a better basis for its final regulatory impact analysis. All information received will be carefully evaluated in developing the final rule. Of particular interest to MSHA is information concerning the following:

1. What is produced at the mine you work at or operate?
2. How many full-time employees work at this operation? Part-time employees?
3. How many areas such as silos, vats, tanks, and other types of confined spaces exist at the mine you work at or operate? How often, on the average, are these entered during a year?
4. Is the atmosphere in these confined spaces tested for suspected hazardous gases and vapors prior to entry? Describe the precautions taken prior to entry into confined spaces (for example, respiratory protection, rescue personnel, means of communicating to the persons at increased risk).
5. To what airborne substances are miners overexposed under the existing rule? How many miners are overexposed to each substance? If possible, provide data documenting these exposures.
6. How many cases of worker illness due to chemical exposures have been recognized in this mine? To what chemicals were they exposed? What were the circumstances of exposure? How was the illness detected? What steps were taken to remedy the overexposure?
7. What is currently being done to measure exposures to airborne contaminants, including asbestos and other carcinogens? What kind of equipment is being used to determine exposures? How often are measurements taken?
8. How often do overexposures to airborne contaminants occur (daily, weekly, monthly)? What is the duration of these overexposures (hours/day, days/week)?
9. What measures are currently being taken to minimize exposures to these airborne substances? What engineering controls would be required to reduce these overexposures to the levels identified in the existing rule? In the proposed rule? How much do these controls cost?
10. How often do asbestos overexposures occur at this mine (hourly, daily, weekly)? What is the duration of these overexposures (hours/day, days/week)? If possible, provide data documenting these exposures.
11. What controls are currently being done (for example, engineering controls, administrative procedures) to minimize exposures to asbestos? What engineering controls would be required to reduce overexposures to asbestos to the level identified in the existing rule? In the proposed rule? What do these controls cost?
12. How many miners are overexposed to the carcinogens listed in the proposal? How often do overexposures to these carcinogens occur (hourly, daily, weekly, monthly)? What is the duration of these overexposures (hours/day, days/week)? If possible, provide data documenting these exposures.
13. What controls are currently being done to minimize exposure to these carcinogens? What engineering controls would be required to reduce overexposures to these carcinogens to the levels identified in the existing rule? In the proposed rule? What do these controls cost?
14. How are areas where asbestos and other carcinogens are being used delineated from other areas? Are instructions informing employees of the procedures to be followed posted at these areas? Is food storage or consumption prohibited in these areas?
15. What types of protective clothing are miners wearing when working in areas where asbestos and other carcinogens are being used?
16. What types of precautions are being taken when leaving areas where asbestos and classes 1 through 4 carcinogens are being used (for example, appropriate disposal of contaminated clothing, hand and face washing, showering, etc.)?
17. What kind of training is conducted for employees working with asbestos and other carcinogens?
18. Are medical surveillance programs provided to employees overexposed to carcinogens; asbestos, in particular? To individuals required to wear respirators? What are the components of the medical surveillance program? What are their costs?
19. Are respiratory protection programs provided for miners

overexposed to carcinogens, including

20. Provide any compliance cost,

VI. Reference Tables

TABLE 5—SUBSTANCES THAT WOULD BE REGULATED FOR THE FIRST TIME UNDER THE PROPOSED RULE FOR BOTH METAL/NONMETAL

overexposed to carcinogens, including asbestos? To other airborne substances? What are the components of these programs and their costs?

20. Provide any compliance cost, exposure, and industry profile data as they relate to abrasive blasting and drill dust control.

VI. Reference Tables

The following tables list changes and additions, resulting from the proposed exposure limits.

TABLE 5—SUBSTANCES THAT WOULD BE REGULATED FOR THE FIRST TIME UNDER THE PROPOSED RULE FOR BOTH METAL/NONMETAL AND COAL MINES.

Acetylsalicylic acid	TWA		5 mg/m^3
Acrylic acid	TWA	3 ppm	6 mg/m^3
Amitrol	TWA		0.2 mg/m^3
Ammonium perfluorooctanoate	TWA		0.1 mg/m^3
Atrazine	TWA		5 mg/m^3
Barium sulfate	TWA		10 mg/m^3
Benomyl	TWA	0.8 ppm	10 mg/m^3
Benzo(a)pyrene (commercially manufactured)	Carcinogen		
bis(Chloromethyl) ether	TWA, Carcinogen	0.001 ppm	0.005 mg/m^3
Borates, tetra, sodium salts, all forms	TWA		5 mg/m^3
Bromacil	TWA	1 ppm	10 mg/m^3
Butyl acrylate	TWA	10 ppm	55 mg/m^3
n-Butyl lactate	TWA	5 ppm	25 mg/m^3
o-sec Butyl phenol	TWA	5 ppm	30 mg/m^3
Calcium cyanamide	TWA		0.5 mg/m^3
Caprolactam dust	TWA		1 mg/m^3
Captrolactam vapor	TWA	5 ppm	20 mg/m^3
Captafol	TWA		0.1 mg/m^3
Captan	TWA		5 mg/m^3
Carbofuran	TWA		0.1 mg/m^3
Carbon tetrabromide	TWA	0.1 ppm	1.4 mg/m^3
Carbonyl fluoride	TWA	2 ppm	5 mg/m^3
Catechol	TWA	50 ppm	20 mg/m^3
Cesium hydroxide	TWA		2 mg/m^3
Chloroacetone	Ceiling	1 ppm	4 mg/m^3
Chloroacetyl chloride	TWA	0.05 ppm	0.2 mg/m^3
Chlorodifluoromethane	TWA	1000 ppm	3,500 mg/m^3
Chloropentafluoroethane	TWA	1000 ppm	6,320 mg/m^3
o-Chlorostyrene	TWA	50 ppm	285 mg/m^3
o-Chlorotoluene	TWA	50 ppm	250 mg/m^3
Chloropyrifos	TWA		0.2 mg/m^3
Chromyl chloride	TWA	0.025 ppm	0.15 mg/m^3
Chrysene (commercially manufactured)	Carcinogen		
Clopidol	TWA		10 mg/m^3
Cobalt carbonyl	TWA		0.1 mg/m^3
Cobalt hydrocarbonyl, as Co	TWA		0.1 mg/m^3
Crufomate	TWA		5 mg/m^3
Cyanamide	TWA		2 mg/m^3
Cyanogen chloride	Ceiling	0.3 ppm	0.6 mg/m^3
Cyclohexylamine	TWA	10 ppm	40 mg/m^3
Cyclopentane	TWA	600 ppm	1,720 mg/m^3
Cyhexatin	TWA		5 mg/m^3
Dibutyl phenyl phosphate	TWA	0.3 ppm	3.5 mg/m^3
Dichloroacetylene	Ceiling	0.1 ppm	0.4 mg/m^3
Dichloropropene	TWA	1 ppm	5 mg/m^3
2,2-Dichloropropionic acid	TWA	1 ppm	6 mg/m^3
Dicrotophos	TWA		0.25 mg/m^3
Dicyclopentadiene	TWA	5 ppm	30 mg/m^3
Dicyclopentadienyl iron	TWA		10 mg/m^3
Diethanolamine	TWA	3 ppm	15 mg/m^3
Diethyl ketone	TWA	200 ppm	705 mg/m^3
Diethyl phthalate	TWA		5 mg/m^3
Dimethyl carbamoyl chloride	Carcinogen		
Dinitolmide	TWA		5 mg/m^3
Dipropyl ketone	TWA	50 ppm	235 mg/m^3
Disulfiram	TWA		2 mg/m^3
Disulfoton	TWA		0.1 mg/m^3
2,6-Di-tert-butyl-p-cresol	TWA		10 mg/m^3
Diuron	TWA		10 mg/m^3
Divinyl benzene	TWA	10 ppm	50 mg/m^3
Enflurane	TWA	75 ppm	575 mg/m^3
Ethion	TWA		0.4 mg/m^3
Ethylidene norbornene	Ceiling	5 ppm	25 mg/m^3
Fenamiphos	TWA		0.1 mg/m^3
Fensulfothion	TWA		0.1 mg/m^3
Fenthion	TWA		0.2 mg/m^3
Fonofos	TWA		0.1 mg/m^3
Formamide	TWA	10 ppm	15 mg/m^3
Glutaraldehyde	Ceiling	0.2 ppm	0.8 mg/m^3
Halothane	TWA	50 ppm	400 mg/m^3
Hexachlorobutadiene	TWA, Carcinogen	0.02 ppm	0.24 mg/m^3
Hexachlorocyclopentadiene	TWA	0.01 ppm	0.1 mg/m^3
Hexamethylene diisocyanate	TWA	0.005 ppm	0.035 mg/m^3
Hexamethyl phosphoramide	Carcinogen		

TABLE 5—SUBSTANCES THAT WOULD BE REGULATED FOR THE FIRST TIME UNDER THE PROPOSED RULE FOR BOTH METAL/NONMETAL AND COAL MINES.—Continued

Hexylene glycol	Ceiling	25 ppm	125 mg/m^3
Hydrogenated terphenyls	TWA	0.5 ppm	5 mg/m^3
2-Hydroxypropyl acrylate	TWA	0.5 ppm	3.0 mg/m^3
Iodoform	TWA	0.6 ppm	10 mg/m^3
Isooctyl alcohol	TWA	50 ppm	270 mg/m^3
Isophorone diisocyanate	TWA	0.005 ppm	0.045 mg/m^3
Isopropoxyethanol	TWA	25 ppm	105 mg/m^3
N-Isopropylaniline	TWA	2 ppm	10 mg/m^3
Manganese cyclopentadienyl tricarbonyl, as Mn	TWA		0.1 mg/m^3
Methacrylic acid	TWA	20 ppm	70 mg/m^3
Methomyl	TWA		2.5 mg/m^3
2-Methoxyethyl acetate	TWA	5 ppm	24 mg/m^3
4-Methoxyphenol	TWA		5 mg/m^3
4,4′-Methylene bis(2-chloroaniline)	TWA, Carcinogen	0.02 ppm	0.22 mg/m^3
Methylene bis(4-cyclohexylisocyanate)	Ceiling	0.005 ppm	0.055 mg/m^3
4,4′-Methylene dianiline	TWA, Carcinogen	0.1 ppm	0.8 mg/m^3
Methyl ethyl ketone peroxide	Ceiling	0.2 ppm	1.5 mg/m^3
Methyl isopropyl ketone	TWA	200 ppm	705 mg/m^3
Metribuzin	TWA		5 mg/m^3
Mica	TWA		3 mg/m^3 Respirable dust
Mineral wool fiber	TWA		10 mg/m^3
Monocroptophos	TWA		0.25 mg/m^3
Naphtha (coal tar)	TWA	100 ppm	400 mg/m^3
Nitrapyrin	TWA		10 mg/m^3
Nonane	TWA	200 ppm	1,050 mg/m^3
Paraffin wax fume	TWA		2 mg/m^3
Perlite	TWA		10 mg/m^3
N-Phenyl-β-naphthylamine	Carcinogen		
Phenyl mercaptan	TWA	0.5 ppm	2 mg/m^3
Phorate	TWA		0.05 mg/m^3
Phosphorus oxychloride	TWA	0.1 ppm	0.6 mg/m^3
m-Phthalodinitrile	TWA		5 mg/m^3
Picloram	TWA		10 mg/m^3
Piperazine dihydrochloride	TWA		5 mg/m^3
Platinum Metal	TWA		1 mg/m^3
Potassium hydroxide	Ceiling		2 mg/m^3
Propane sultone	Carcinogen		
Propionic acid	TWA	10 ppm	30 mg/m^3
Propoxure	TWA		0.5 mg/m^3
Propylene glycol dinitrate	TWA	0.05 ppm	0.3 mg/m^3
n-Propyl nitrate	TWA	25 ppm	105 mg/m^3
Resorcinol	TWA	10 ppm	45 mg/m^3
Sesone	TWA		10 mg/m^3
Silicon tetrahydride	TWA	5 ppm	7 mg/m^3
Silica, precipitated	TWA		10 mg/m^3
Soapstone	TWA	3 mg/m^3 respirable	6 mg/m^3 total
Sodium azide	Ceiling	0.1 ppm as NH_3	0.3 mg/m^3 as NaN_3
Sodium bisulfite	TWA		5 mg/m^3
Sodium metabisulfite	TWA		5 mg/m^3
Subtilisins (Proteolytic enzymes as 100% crystalline enzyme	Ceiling		0.00006 mg/m^3
Sulprofos	TWA		1 mg/m^3
Tetrasodium pyrophosphate	TWA		5 mg/m^3
4,4′-Thiobis(6-tert-butyl-m-cresol)	TWA		10 mg/m^3
Thioglycolic acid	TWA	1 ppm	4 mg/m^3
Thionyl chloride	Ceiling	1 ppm	5 mg/m^3
o-Tolidine	Carcinogen		
m-Toluidine	TWA	2 ppm	9 mg/m^3
p-Toluidine	TWA, Carcinogen	2 ppm	9 mg/m^3
Trichloroacetic acid	TWA	1 ppm	7 mg/m^3
1,2,4 Trichlorobenzene	Ceiling	5 ppm	40 mg/m^3
Trichlorofluoromethane	Ceiling	1000 ppm	5,600 mg/m^3
Trimellitic anhydride	TWA	0.005 ppm	0.04 mg/m^3
Trimethyl amine	TWA	10 ppm	24 mg/m^3
Trimethyl phosphate	TWA	2 ppm	10 mg/m^3
Triphenyl amine	TWA		5 mg/m^3
n-Valeraldehyde	TWA	50 ppm	175 mg/m^3
Vinyl cyclohexene dioxide	TWA, Carcinogen	10 ppm	60 mg/m^3
Vinylidene chloride	TWA	5 ppm	20 mg/m^3
VM&P Naphtha Welding fumes (not otherwise classified)	TWA	300 ppm	1,350 mg/m^3
Welding fumes (not otherwise classified)	TWA		5 mg/m^3
m-Xylene, α, α′-diamine	Ceiling		0.1 mg/m^3

Iron oxide fume Fe$_2$O^3 as Fe	5 mg/m^3	10 mg/m^3
Isobutyl alcohol	50 ppm, 150 mg/m^3	100 ppm, 300 mg/m^3
Isopropyl ether	500 ppm, 2100 mg/m^3	250 ppm, 1050 mg/m^3
Isophorone	Ceiling 5 ppm, 25 mg/m^3	25 ppm, 140 mg/m^3
Manganese as Mn, dust and compound	Ceiling 5 mg/m^3	Manganese, as Mn, Dust and compounds:
Manganese as Mn, fume	1 mg/m^3	Ceiling 5 mg/m^3
Mercury, as Hg—Alkyl compounds	0.01 mg/m^3	Mercury alkyl compounds: 0.01 mg/m^3
Mercury, as Hg—Vapor	0.05 mg/m^3	
Mercury, as Hg—Aryl and inorganic compounds	0.1 mg/m^3	Mercury all forms except alkyl 0.05 mg/m^3
Mesityl oxide	15 ppm, 60 mg/m^3	25 ppm, 100 mg/m^3
2-Methoxyethanol	5 ppm, 16 mg/m^3	25 ppm, 80 mg/m^3
Methyl-n-amyl ketone	50 ppm, 235 mg/m^3	100 ppm, 465 mg/m^3
Methyl n-butyl ketone	5 ppm, 20 mg/m^3	100 ppm, 410 mg/m^3
Methyl chloride	50 ppm, 105 mg/m^3	100 ppm, 210 mg/m^3
Methylcyclohexane	400 ppm, 1600 mg/m^3	500 ppm, 2000 mg/m^3
Methylene bisphenyl isocyanate	0.005 ppm, 0.055 mg/m^3	0.02 ppm, 0.2 mg/m^3
Methylene bromide	5 ppm, 20 mg/m^3	15 ppm, 60 mg/m^3
Methylene chloride	50 ppm, 175 mg/m^3	500 ppm, 1740 mg/m^3
Methyl iodide	2 ppm, 10 mg/m^3	5 ppm, 28 mg/m^3
Methyl isoamyl ketone	50 ppm, 240 mg/m^3	100 ppm, 475 mg/m^3
Methyl isobutyl ketone	50 ppm, 205 mg/m^3	100 ppm, 410 mg/m^3
Methyl silicate	1 ppm, 6 mg/m^3	Ceiling 5 ppm, 30 mg/m^3
α-Methyl styrene	50 ppm, 240 mg/m^3	100 ppm, 480 mg/m^3
n-Methyl aniline	0.5 ppm, 2 mg/m^3	2 ppm, 9 mg/m^3
Nickel—Metal	1 mg/m^3	Nickel, metal and soluble compounds as Ni 1 mg/m^3
Nickel soluble compound as Ni	0.1 mg/m^3	
p-Nitroaniline	3 mg/m^3	6 mg/m^3
p-Nitrochlorobenzene	0.1 ppm, 0.6 mg/m^3	1 mg/m^3
Nitroglycerin	0.05 ppm, 0.5 mg/m^3	0.2 ppm
Nitrogen dioxide	3 ppm (6 mg/m^3) or 1 ppm STEL	Ceiling 5 ppm, 9 mg/m^3
2-Nitropropane	10 ppm, 35 mg/m^3 carcinogen	25 ppm, 90 mg/m^3
Nitrotoluene	2 ppm, 11 mg/m^3	5 ppm, 30 mg/m^3
Nitrous oxide	50 ppm, 91 mg/m^3	Simple asphyxiant
Octane	300 ppm, 1,450 mg/m^3	400 ppm, 1900 mg/m^3
Oil mist	5 mg/m^3	Oil mist particulate 5 mg/m^3 and oil, mist, and vapor, additive effect of components
Oxygen difluoride	Ceiling 0.05 ppm, 0.1 mg/m^3	0.05 ppm, 0.1 mg/m^3
Paraquat, respirable sizes	0.1 mg/m^3	0.5 mg/m^3
Perchloroethylene	25 ppm, 170 mg/m^3 carcinogen	100 ppm, 670 mg/m^3
Phenyl glycidyl ether	1 ppm, 6 mg/m^3	10 ppm, 60 mg/m^3
Phosphorus trichloride	0.2 ppm, 1.5 mg/m^3	0.5 ppm, 3 mg/m^3
Phthalic anhydride	1 ppm, 6 mg/m^3	2 ppm, 12 mg/m^3
β-Propiolactone	0.5 ppm, 1.5 mg/m^3 carcinogen	Carcinogen no limit
Propylene oxide	20 ppm, 50 mg/m^3	100 ppm, 240 mg/m^3
Stoddard solvent	100 ppm, 525 mg/m^3	200 ppm, 1,150 mg/m^3
Styrene, monomer	50 ppm, 215 mg/m^3	100 ppm, 420 mg/m^3
Sulfur dioxide	2 ppm, 5 mg/m^3	5 ppm, 13 mg/m^3
Sulfur monochloride	Ceiling 1 ppm, 6 mg/m^3	1 ppm, 6 mg/m^3
Sulfur pentafluoride	Ceiling 0.01 ppm, 0.1 mg/m^3	0.025 ppm, 0.25 mg/m^3
Terphenyl	Ceiling 0.5 ppm, 5 mg/m^3	Ceiling 1 ppm, 9 mg/m^3
1,1,2,2-Tetrachloroethane	1 ppm, 7 mg/m^3	5 ppm, 35 mg/m^3
Tetraethyl lead, as Pb	0.075 mg/m^3	0.1 mg/m^3
Tetra methyl lead, as Pb	0.075 mg/m^3	0.15 mg/m^3
Thiram	1 mg/m^3	5 mg/m^3
Tin oxide	2 mg/m^3	10 mg/m^3
Toluene-2,4 diisocyanate	0.005 ppm, 0.04 mg/m^3	Ceiling 0.02 ppm, 0.14 mg/m^3
o-Toluidine	2 ppm, 9 mg/m^3	5 ppm, 22 mg/m^3

TABLE 8.—CHANGES OF TWA EXPOSURE LIMITS FOR SUBSTANCES CURRENTLY REGULATED AT METAL/NONMETAL AND COAL

TABLE 9—CHANGES OF SHORT-TERM EXPOSURE LIMITS FOR COAL AND METAL/NONMETAL MINES.—Continued

TABLE 8.—CHANGES OF TWA EXPOSURE LIMITS FOR SUBSTANCES CURRENTLY REGULATED AT METAL/NONMETAL AND COAL MINES.—Continued

Chemical	Proposed PEL	Current PEL
Tributyl phosphate	0.2 ppm, 2.5 mg/m^3	5 mg/m^3
Trichloroethylene	50 ppm, 270 mg/m^3	100 ppm, 535 mg/m^3
1,2,3 trichloropropane	10 ppm, 60 mg/m^3	50 ppm, 300 mg/m^3
Triethylamine	10 ppm, 40 mg/m^3	25 ppm, 100 mg/m^3
Trinitrotoluene	0.5 mg/m^3	1.5 mg/m^3
Vanadium dust	0.05 respirable dust	0.5 mg/m^3 total dust
Vinyl bromide	5 ppm, 10 mg/m^3	250 ppm, 1,100 mg/m^3
Vinyl chloride	1 ppm	250 ppm, 510 mg/m^3
Vinyl toluene	50 ppm, 240 mg/m^3	100 ppm, 480 mg/m^3
Wood dust hard woods	1 mg/m^3	Wood dust non-allergenic: 5 mg/m^3
Wood dust soft woods	5 mg/m^3	
Xylidine	0.5 ppm, 2.5 mg/m^3	5 ppm, 25 mg/m^3

TABLE 9—CHANGES OF SHORT-TERM EXPOSURE LIMITS FOR COAL AND METAL/NONMETAL MINES.

Chemical	Proposed STEL	Current STEL
Acetaldehyde	150 ppm, 270 mg/m^3	None.
Acetic acid	15 ppm, 37 mg/m^3	40 ppm (5 min) from Pennsylvania Rules.
Acetone	1,000 ppm, 2,400 mg/m^3	1,000 ppm (30 min) from Pennsylvania Rules.
Acetonitrile	60 ppm, 105 mg/m^3	None.
Acrolein	0.3 ppm, 0.8 mg/m^3	0.5 ppm (5 min) from Pennsylvania Rules.
Acrylonitrile	None	40 ppm (30 min) from Pennsylvania Rules.
Aldrin	None	1 mg/m^3 (30 min) from Pennsylvania Rules.
Allyl alcohol	4 ppm, 10 mg/m^3	5 ppm (30 min) from Pennsylvania Rules.
Allyl chloride	3 ppm, 2 mg/m^3	None.
Allyl glycidyl ether	10 ppm, 44 mg/m^3	10 ppm (5 min) from Pennsylvania Rules.
Allyl propyl disulfide	3 ppm, 18 mg/m^3	None.
Ammonia	35 ppm, 27 mg/m^3	100 ppm (30 min) from Pennsylvania Rules.
Ammonium chloride fume	20 mg/m^3	None.
Amyl acetate	None	200 ppm (30 min) from Pennsylvania Rules.
Aniline	None	50 ppm (30 min) from Pennsylvania Rules.
Asbestos	1 fiber/cc	10 fibers/cc (15 min) from Pennsylvania Rules.
Benzene	5 mg/m^3	75 ppm (30 min) from Pennsylvania Rules.
Benzoyl peroxide	None	10 mg/m^3 (15 min) from Pennsylvania Rules.
Beryllium	None	0.025 mg/m^3 (5 min) from Pennsylvania Rules.
Boron trifluoride	None	1 ppm (5 min) from Pennsylvania Rules.
Bromine	0.3 ppm, 2 mg/m^3	0.4 ppm (30 min) from Pennsylvania Rules.
2-Butoxyethanol	None	200 ppm (5 min) from Pennsylvania Rules.
n-Butyl acetate	200 ppm, 950 mg/m^3	300 ppm (30 min) from Pennsylvania Rules.
Butyl alcohol	None	150 ppm (30 min) from Pennsylvania Rules.
tert-Butyl alcohol	150 ppm, 450 mg/m^3	150 ppm (30 min) from Pennsylvania Rules.
Butylamine	None	5 ppm (5 min) from Pennsylvania Rules.
tert-Butyl chromate	None	5 mg/m^3 (5 min) from Pennsylvania Rules.
p-tert-Butyltoluene	20 ppm, 120 mg/m^3	None.
Cadmium oxide fume	None	0.3 mg/m^3 (30 min) from Pennsylvania Rules.
Calcium oxide	None	10 mg/m^3 (30 min) from Pennsylvania Rules.
Camphor	None	3 ppm (30 min) from Pennsylvania Rules.
Caprolactam		
Dust	3 mg/m^3	None.
Vapor	10 ppm, 40 mg/m^3	None.
Carbaryl	None	30 mg/m^3 (30 min) from Pennsylvania Rules.
Carbon dioxide	30,000 ppm, 54,000 mg/m^3.	None.
Carbon disulfide	12 ppm, 36 mg/m^3	100 ppm (30 min) from Pennsylvania Rules.
Carbon monoxide	200 ppm, 229 mg/m^3	400 ppm (15 min) from Pennsylvania Rules.
Carbon tetrabromide	0.3 ppm	None.
Carbon tetrachloride	None	25 ppm (30 min) from Pennsylvania Rules.
Carbonyl fluoride	5 ppm, 15 mg/m^3	None.
Chlordane	None	2 mg/m^3 (30 min) from Pennsylvania Rules.
Chlorinated camphene	1 mg/m^3	None.
Chlorine	1 ppm, 3 mg/m^3	3 ppm (5 min) from Pennsylvania Rules.
Chlorine dioxide	0.3 ppm, 0.9 mg/m^3	None.
Chlorine trifluoride	None	0.1 ppm (5 min) from Pennsylvania Rules.
Chloroacetaldehyde	None	1 ppm (5 min) from Pennsylvania Rules.
Chloroform	None	400 ppm (30 min) from Pennsylvania Rules.
o-Chlorostyrene	75 ppm, 430 mg/m^3	None.
o-Chlorotoluene	75 ppm, 375 mg/m^3	None.
Chlorpyrifos	0.6 mg/m^3	None.
Cobalt	None	0.5 mg/m^3 (30 min) from Pennsylvania Rules.
Copper fume	None	0.1 mg/m^3 (30 min) from Pennsylvania Rules.
Cyanide, as CN	None	5 mg/m^3 (30 min) from Pennsylvania Rules.
Cyclopentadiene	None	200 ppm (15 min) from Pennsylvania Rules.
Decaborane	0.15 ppm, 0.9 mg/m^3	None.
Demeton	None	0.5 mg/m^3 (30 min) from Pennsylvania Rules.
Dichlorvos	None	3 mg/m^3 (30 min) from Pennsylvania Rules.

TABLE 9—CHANGES OF SHORT-TERM EXPOSURE LIMITS FOR COAL AND METAL/NONMETAL MINES.—Continued

Chemical	Proposed STEL	Current STEL
Diacetone alcohol	None	150 ppm (30 min) from Pennsylvania Rules.
Dibutyl phosphate	2 ppm, 10 mg/m^3	None.
o-Dichlorobenzene	None	50 ppm (15 min) from Pennsylvania Rules.
p-Dichlorobenzene	110 ppm, 675 mg/m^3	None.
1,3-Dichloro-5,5-dimethylhydantoin	0.4 mg/m^3	0.5 mg/m^3 (15 min) from Pennsylvania Rules.
1,1-Dichloroethane	250 ppm, 1,010 mg/m^3	200 ppm (30 min) from Pennsylvania Rules.
Dichloroethyl ether	10 ppm, 60 mg/m^3	35 ppm (30 min) from Pennsylvania Rules.
1,1-Dichloro-1-nitroethane	None	10 ppm (30 min) from Pennsylvania Rules.
Dieldrin	None	1 mg/m^3 (30 min) from Pennsylvania Rules.
Dimethylamine	25 ppm	100 ppm (30 min) from Pennsylvania Rules.
Diglycidyl ether	None	0.5 ppm (5 min) from Pennsylvania Rules.
Diisobutyl ketone	None	50 ppm (30 min) from Pennsylvania Rules.
Dimethylamine	None	20 ppm (5 min) from Pennsylvania Rules.
N,N-Dimethylaniline	10 ppm, 50 mg/m^3	None.
Dinitro-o-cresol	None	1 mg/m^3 (30 min) from Pennsylvania Rules.
Dipropylene glycol methyl ether	150 ppm, 900 mg/m^3	None.
Di-sec-octyl phthalate	10 mg/m^3	None.
Endrin	None	0.5 mg/m^3 (30 min) from Pennsylvania Rules.
Epichlorhydrin	None	10 ppm (30 min) from Pennsylvania Rules.
EPN	None	2.5 mg/m^3 (30 min) from Pennsylvania Rules.
Ethanolamine	6 ppm, 15 mg/m^3	None.
2-Ethoxyethanol	None	300 ppm (30 min) from Pennsylvania Rules.
2-Ethyoxyethyl acetate	None	300 ppm (5 min) from Pennsylvania Rules.
Ethyl acetate	None	1,000 ppm (15 min) from Pennsylvania Rules.
Ethyl acrylate	15 ppm, 61 mg/m^3	50 ppm (15 min) from Pennsylvania Rules.
Ethyl alcohol	None	5,000 ppm (15 min) from Pennsylvania Rules.
Ethylamine	None	25 ppm (30 min) from Pennsylvania Rules.
Ethyl benzene	125 ppm, 545 mg/m^3	200 ppm (30 min) from Pennsylvania Rules.
Ethyl bromide	250 ppm, 1,110 mg/m^3	None.
Ethylenediamine	None	20 ppm (5 min) from Pennsylvania Rules.
Ethylene dichloride	2 ppm, 8 mg/m^3	200 ppm (30 min) from Pennsylvania Rules.
Ethylene glycol dinitrate	0.1 mg/m^3	0.2 ppm (30 min) from Pennsylvania Rules.
Ethylene oxide	5 ppm	200 ppm (30 min) from Pennsylvania Rules.
Ethyleneimine	None	5 ppm (30 min) from Pennsylvania Rules.
Ethyl ether	500 ppm, 1,500 mg/m^3	1,000 ppm (30 min) from Pennsylvania Rules.
N-Ethylmorpholine	None	20 ppm (15 min) from Pennsylvania Rules.
Ethyl silicate	None	200 ppm (30 min) from Pennsylvania Rules.
Ferrovanadium dust	3 mg/m^3	None.
Fluorides	None	10 mg/m^3 (30 min) from Pennsylvania Rules.
Fluorine	2 ppm	0.5 ppm (5 min) from Pennsylvania Rules.
Formaldehyde	2 ppm, 3 mg/m^3	5 ppm (5 min) from Pennsylvania Rules.
Formic acid	10 ppm, 18 mg/m^3	None.
Furfural	None	15 ppm (15 min) from Pennsylvania Rules.
Furfural alcohol	15 ppm, 60 mg/m^3	50 ppm (15 min) from Pennsylvania Rules.
Gasoline	500 ppm, 1,500 mg/m^3	500 ppm (30 min) from Pennsylvania Rules.
Glycidol	None	100 ppm (5 min) from Pennsylvania Rules.
Heptachlor	None	2 mg/m^3 (30 min) from Pennsylvania Rules.
Heptane	500 ppm, 2,000 mg/m^3	500 ppm (30 min) from Pennsylvania Rules.
Hexane (other than n-Hexane)	1,000 ppm, 3,600 mg/m^3	500 ppm (30 min) from Pennsylvania Rules.
Hydrazine	None	1 ppm (30 min) from Pennsylvania Rules.
Hydrogen bromide	None	5 ppm (5 min) from Pennsylvania Rules.
Hydrogen chloride	None	5 ppm (5 min) from Pennsylvania Rules.
Hydrogen cyanide	None	20 ppm (20 min) from Pennsylvania Rules.
Hydrogen fluoride	None	3 ppm (15 min) from Pennsylvania Rules.
Hydrogen sulfide	15 ppm, 21 mg/m^3	20 ppm (5 min) from Pennsylvania Rules.
Iodine	None	0.1 ppm (5 min) from Pennsylvania Rules.
Iron pentacarbonyl, as Fe	0.2 ppm, 1.6 mg/m^3	None.
Isoamyl alcohol	125 ppm, 450 mg/m^3	150 ppm (30 min) from Pennsylvania Rules.
Isoproyl acetate	310 ppm, 1,185 mg/m^3	None.
Isopropyl alcohol	500 ppm, 1,255 mg/m^3	None.
Isopropylaniline	10 ppm, 24 mg/m^3	None.
Isopropyl glycidyl ether	75 ppm, 360 mg/m^3	100 ppm (30 min) from Pennsylvania Rules.
Ketene	1.5 ppm, 3 mg/m^3	None.
Lindane	None	1 mg/m^3 (30 min) from Pennsylvania Rules.
Manganese		
Dust	None	5 mg/m^3 (30 min) from Pennsylvania Rules.
Fume	3 ppm	
Mercury (alkyl compounds)	0.03 ppm	None.
Mesityl oxide	25 ppm, 100 mg/m^3	None.
2-Methoxyethanol (Methyl cellosolve)	None	50 ppm (30 min) from Pennsylvania Rules.
2-Methoxyethyl acetate (ethylene glycol monomethyl ether acetate)	None	50 ppm (30 min) from Pennsylvania Rules.
Methyl acetate	250	400 ppm (5 min) from Pennsylvania Rules.
Methyl acetylene-propadiene mixture	1,250 ppm, 2,250 mg/m^3	None.
Methyl acrylate	None	25 ppm (30 min) from Pennsylvania Rules.
Methyl alcohol	250 ppm, 310 mg/m^3	None.
Methyl bromide	None	20 ppm (5 min) from Pennsylvania Rules.
Methyl n-butyl ketone (Hexanone)	None	200 ppm (30 min) from Pennsylvania Rules.
Methyl chloride	100 ppm, 205 mg/m^3	100 ppm (5 min) from Pennsylvania Rules.
Methyl chloroform	450 ppm, 2,450 mg/m^3	1,500 ppm (5 min) from Pennsylvania Rules.
Methyl 2-cyano-acrylate	4 ppm, 16 mg/m^3	None.

TABLE 9—CHANGES OF SHORT-TERM EXPOSURE LIMITS FOR COAL AND METAL/NONMETAL MINES.—Continued

Chemical	Proposed STEL	Current STEL
o-Methylcyclo-hexanone	75 ppm, 345 mg/m ^{3}	Now.
Methylene bisphenyl isocynate	None	0.25 mg/m ^{3} (5 min) from Pennsylvania Rules.
Methylene chloride	500 ppm, 1,740 mg/m ^{3}	1,000 ppm (30 min) from Pennsylvania Rules.
Methyl ethyl ketone	800 ppm	300 ppm (5 min) from Pennsylvania Rules.
Methyl formate	150 ppm, 375 mg/m ^{3}	None.
Methyl isobutyl carbinol	40 ppm, 165 mg/m ^{3}	None.
Methyl isobutyl ketone	75 ppm, 300 mg/m ^{3}	400 ppm (5 min) from Pennsylvania Rules.
Methyl mercaptan	None	20 ppm (5 min) from Pennsylvania Rules.
Methyl methacrylate	None	200 ppm (15 min) from Pennsylvania Rules.
Methyl propyl ketone	250 ppm, 875 mg/m ^{3}	None.
α-Methyl styrene	100 ppm, 485 mg/m ^{3}	100 ppm (30 min) from Pennsylvania Rules.
Morpholine	30 ppm, 105 mg/m ^{3}	20 ppm (15 min) from Pennsylvania Rules.
Mevinphos	0.03 ppm	0.5 ppm (30 min) from Pennsylvania Rules.
Naphthalene	15 ppm, 75 mg/m ^{3}	15 ppm (5 min) from Pennsylvania Rules.
Nickel carbonyl	None	0.04 ppm (5 min) from Pennsylvania Rules.
Nitrapyrin	20 mg/m ^{3}	None.
Nitric acid	4 ppm, 10 mg/m ^{3}	15 ppm (5 min) from Pennsylvania Rules.
Nitrobenzene	None	10 ppm (30 min) from Pennsylvania Rules.
Nitrogen dioxide	5 ppm (10 mg/m ^{3}) or 1 ppm (1.8 mg/m ^{3})	25 ppm (5 min) from Pennsylvania Rules.
Nitroglycerin	0.1 mg/m ^{3}	0.2 ppm (30 min) from Pennsylvania Rules.
Octachloro-naphthalene	0.3 mg/m ^{3}	None.
Octane	375 ppm, 1,800 mg/m ^{3}	500 ppm (30 min) from Pennsylvania Rules.
Oil mist, mineral	10 mg/m ^{3}	None.
Osmium tetroxide, as Os	0.0006 ppm, 0.006 mg/m ^{3}	None.
Oxalic acid	2 mg/m ^{3}	None.
Ozone	None	1 ppm (30 min) from Pennsylvania Rules.
Parathion	None	0.5 mg/m ^{3} (30 min) from Pennsylvania Rules.
Petaborane	0.015 ppm, 0.03 mg/m ^{3}	None.
Petane	750 ppm, 2,250 mg/m ^{3}	None.
Perchloroethylene	None	200 ppm (30 min) from Pennsylvania Rules.
Perchloryl fluoride	6 ppm, 28 mg/m ^{3}	None.
Phenyl ether vapor	2 ppm, 14 mg/m ^{3}	None.
Phenylhydrazine	10 ppm, 45 mg/m ^{3}	None.
Phorate	0.2 mg/m ^{3}	None.
Phosgene	None	1 ppm (5 min) from Pennsylvania Rules.
Phosphine	1 ppm, 1 mg/m ^{3}	1 ppm (30 min) from Pennsylvania Rules.
Phosphoric acid	3 mg/m ^{3}	None.
Phosphorus pentasulfide	3 mg/m ^{3}	None.
Phosphorus trichloride	0.5 ppm 3 mg/m ^{3}	None.
Phthalic anhydride	None	4 ppm (5 min) from Pennsylvania Rules.
Picloram	20 mg/m ^{3}	None.
Picric acid	0.3 mg/m ^{3}	None.
Propionic acid	15 ppm, 45 mg/m ^{3}	None.
n-Propyl acetate	250 ppm, 1,050 mg/m ^{3}	None.
Propyl alcohol	250 ppm, 625 mg/m ^{3}	400 ppm (30 min) from Pennsylvania Rules.
Propylene dichloride	110 ppm, 510 mg/m ^{3}	None.
Propylene glycol monomethyl ether	150 ppm, 540 mg/m ^{3}	None.
n-Propyl nitrate	40 ppm, 170 mg/m ^{3}	None.
Pyridine	None	10 ppm (30 min) from Pennsylvania Rules.
Resorcinol	20 ppm, 90 mg/m ^{3}	None.
Selenium compounds, as Se	None	0.3 mg/m ^{3} (30 min) from Pennsylvania Rules.
Sodium fluoroacetate	0.15 mg/m ^{3}	None.
Styrene, monomer	100 ppm, 425 mg/m ^{3}	100 ppm (5 min) from Pennsylvania Rules.
Sulfotep (TEDP)	None	1 ppm (30 min) from Pennsylvania Rules.
Sulfur dioxide	5 ppm, 10 mg/m ^{3}	20 ppm (5 min) from Pennsylvania Rules.
Sulfuric acid	None	3 mg/m ^{3} (5 min) from Pennsylvania Rules.
Sulfuryl fluoride	10 ppm, 40 mg/m ^{3}	None.
Tantalum	10 mg/m ^{3}	None.
TEPP	None	1 mg/m ^{3} (30 min) from Pennsylvania Rules.
1,1,2,2-Tetra-chloroethane	None	10 ppm (30 min) from Pennsylvania Rules.
Tetrahydrofuran	250 ppm, 735 mg/m ^{3}	500 ppm (30 min) from Pennsylvania Rules.
Tin (inorganic compounds)	None	5 mg/m ^{3} (30 min) from Pennsylvania Rules.
Tin (organic compounds)	0.2 mg/m ^{3}	None.
Toluene	150 ppm, 560 mg/m ^{3}	600 ppm (30 min) from Pennsylvania Rules.
Toluene-2,4-diisocyanate	0.02 ppm, 0.15 mg/m ^{3}	0.02 ppm (5 min) from Pennsylvania Rules.
Trichloroethylene	200 ppm, 1.080 mg/m ^{3}	200 ppm (30 min) from Pennsylvania Rules.
1,1,2-Trichloro-1,2,2-trifluoroethane	1,250 ppm, 9,500 mg/m ^{3}	None.
Triethylamine	15 ppm, 60 mg/m ^{3}	100 ppm (30 min) from Pennsylvania Rules.
Trimethylamine	15 ppm, 36 mg/m ^{3}	None.
2,4,6-Trinitro-toluene	None	5 mg/m ^{3} (30 min) from Pennsylvania Rules.
Tungsten, as W		
Insoluble compounds	10 mg/m ^{3}	None.
Soluble compounds	3 mg/m ^{3}	None.
Turpentine	None	200 ppm (30 min) from Pennsylvania Rules.
Uranium, as U		
Insoluble compounds	0.06 mg/m ^{3}	None.
Vanadium compounds	None	0.5 mg/m ^{3} (30 min) from Pennsylvania Rules (V_2O_5 dust/fume).
Vinyl acetate	20 ppm, 60 mg/m ^{3}	None.
Vinyl chloride	5 ppm	500 ppm (5 min) from Pennsylvania Rules.

TABLE 9—CHANGES OF SHORT-TERM EXPOSURE LIMITS FOR COAL AND METAL/NONMETAL MINES.—Continued

Chemical	Proposed STEL	Current STEL
Vinyl toluene	100 ppm	400 ppm (5 min) from Pennsylvania Rules.
Wood dust		
Soft wood	10 mg/m ^{3}	None.
Xylene (o-, m-, p-isomers)	150 ppm, 655 mg/m ^{3}	300 ppm (30 min) from Pennsylvania Rules.
Zinc oxide fume	10 mg/m ^{3}	10 mg/m ^{3} (30 min) from Pennsylvania Rules.
Zirconium compounds, as Zr	10 mg/m ^{3}	None.

TABLE 10—CHANGES IN CURRENT EXPOSURE LIMITS AT METAL/NONMENTAL MINES ONLY

Chemical	Proposed PEL	Current PEL
Butane	TWA 800 ppm, 1,900 mg/m ^{3}	500 ppm, 1,200 mg/m ^{3}
1,1-Dichloromethane	TWA 200 ppm, 810 mg/m ^{3}	TWA 200 ppm, 320 mg/m ^{3}
Silica fused	0.1 mg/m ^{3}	$\frac{10\ mg/m^3}{\%\ respirable\ quartz}$
Silica—quartz	0.1 mg/m ^{3}	$\frac{10\ mg/m^3}{\%\ respirable\ quartz+2}$
Talc (containing no asbestos)	TWA 2.5 mg/m ^{3}, respirable dust.	TWA 20 mppcf
Tridymite	0.05 mg/m ^{3}	One-half the value calculated from the formula for quartz.

TABLE 11—CHANGES AND REDUCTIONS OF EXPOSURE LIMITS FOR SUBSTANCES ALREADY REGULATED AT COAL MINES

Chemical	Proposed PEL	Current PEL
Acetaldehyde	TWA 100 ppm, (180 mg/m ^{3})	TWA 20.0 ppm, (360 mg/m ^{3})
Acetic anhydride	Ceiling 5 ppm, 20 mg/m ^{3}	TWA 5 ppm, 20 mg/m ^{3}
Ammonia	TWA 25 ppm, 18 mg/m ^{3}	50 ppm, 35 mg/m ^{3}
1,1-Dichloruethane	TWA 200 ppm, 810 mg/m ^{3}	100 ppm, 400 mg/m ^{3}
Dichloroethyl ether	TWA 5 ppm, (30 mg/m ^{3})	Ceiling 15 ppm, (90 mg/m ^{3})
Diisobutyl ketone	TWA 25 ppm, (250 mg/m ^{3})	TWA 50 ppm, (290 mg/m ^{3})
Fluorine	TWA 1 ppm, 2 mg/m ^{3}	TWA 0.1 ppm, 0.2 mg/m ^{3}
Furfuryl alcohol	TWA 10 ppm, (40 mg/m ^{3})	TWA 5 ppm, (20 mg/m ^{3})
Methyl cyclohexanol	TWA 50 ppm, (235 mg/m ^{3})	TWA 100 ppm, (470 mg/m ^{3})
Methyl cyclohexanone	TWA 50 ppm, (230 mg/m ^{3})	TWA 100 ppm, (460 mg/m ^{3})

TABLE 12.—CHEMICALS WHICH WOULD HAVE A NEW SKIN NOTATION—COAL AND METAL/NONMETAL MINES

Acetonitrile
Allyl glycidyl ether
n-Butyl alcohol
o-sec Butyl phenol
Captafol
Chlorpyrifos
Cyclohexanol
Cyclohexanone
DDT (Dichlorodiphenyl-trichloroethane)
Dichloropropene
Dicrotophos
Ethion
Fenamiphos
Fenthion
Furfural alcohol
Hexafluoroacetone
2-Hydroxypropyl acrylate
Isooctyl alcohol
Lindane
Manganese cyclopentadienyl tricarbonyl, as Mn
Mercury
2-Methoxyethyl acetate
Methyl alcohol
4,4'-Methylene bis(2-chloroaniline)
4,4'-Methylene dianiline
Phorate
Propyl alcohol
Thioglycolic acid
o-Tolidine
o-Toluidine

TABLE 12.—CHEMICALS WHICH WOULD HAVE A NEW SKIN NOTATION—COAL AND METAL/NONMETAL MINES—Continued

m-Toluidine
p-Toluidine
m-Xylene α,α'-diamine

TABLE 13.—CHEMICALS WHICH WILL BE DELETED FROM EXISTING REGULATIONS. NUISANCE DUSTS WOULD BE REGULATED UNDER RESPIRABLE DUST STANDARDS

Calcium carbonate—nuisance dust
Cellulose—nuisance dust
Cotton dust—TWA 1 mg/m ^{3}
Emery—nuisance dust
Ethylene glycol, particulate—10 mg/m ^{3}
Gypsum—nuisance dust
Kaolin—nuisance dust
Limestone—nuisance dust
Magnesite—nuisance dust
Marble—nuisance dust
Pentaerythritol—nuisance dust
Phenyl-ether-diphenyl mixture—1 ppm 7 mg/m ^{3}
Plaster of Paris—nuisance dust

TABLE 13.—CHEMICALS WHICH WILL BE DELETED FROM EXISTING REGULATIONS. NUISANCE DUSTS WOULD BE REGULATED UNDER RESPIRABLE DUST STANDARDS—Continued

Polytetrafluoroethylene decomposition products—no TLV/sampling method provided
Rouge—nuisance dust
Starch—nuisance dust
Sucrose—nuisance dust
Titanium dioxide—nuisance dust
Vegetable oil mists—nuisance dust

TABLE 14.—SKIN NOTATIONS THAT WOULD BE DELETED FROM EXISTING REGULATIONS FOR BOTH METAL/NONMETAL AND COAL MINES

Acetonitrile
Allyl glycidyl ether
n-Butyl alcohol
Cyclohexanol
Cyclohexanone
DDT (Dichlorodiphenyl-trichloroethane)
Diproylene glycol methyl ether
Furfuryl alcohol
Hexachloroethane

TABLE 14.—SKIN NOTATIONS THAT WOULD BE DELETED FROM EXISTING REGULATIONS FOR BOTH METAL/NONMETAL AND COAL MINES—Continued

Hexafluoroacetone
Lindane
Methyl alcohol
Methyl isobutyl carbinol
Paraquat
Propyl alcohol
o-Toluidine
1,2,3-Tricholopropane
Triorthocresyl phosphate

TABLE 15.—EXISTING NAMES THAT HAVE BEEN CHANGED TO A NEW NAME IN THE PROPOSED PEL TABLE

Abate—see Temephos
2-Butanone—see Methyl ethyl ketone
1,2-Dibromoethane—see Ethylene dibromide
Dibrom—see Naled
1,2-Dichlorethane—see Ethylene dichloride
Diphenyl—see Biphenyl
Ethylene glycol monomethyl ether acetate—see 2-Methoxyethyl acetate
Fluorotrichloromethane—see Trichlorofluoromethane
2-Hexanone—see Methyl-n-butyl ketone
2-Heptanone—see Methyl-n-amyl ketone
Hexone—see Methyl isobutyl ketone
Mevinphos—see Phosdrin
Monomethyl aniline—see N-Methyl aniline
Monomethyl hydrazine—see Methyl hydrazine
Napetha (coal tar)—see Rubber solvent
2-Pentanone—see Methyl propyl ketone
Phosdrin—see Mevinphos
Pival—see Pindone
RDX—see Cyclonite
TEDP—see Sulfotep

TABLE 16.—SUBSTANCES WHICH WILL BE REGULATED AS CARCINOGENS FOR THE FIRST TIME FOR METAL/NONMETAL AND COAL MINES

Acrylamide
Acrylonitrile
Amitrol
Asbestos
Benzene
Benzo (a) pyrene
Beryllium and compounds (except welding)
Cadmium and compounds (except welding)
1,3 Butadiene
Chloroform
Chrysene
1,1-Dimethylhydrazine
Dimethyl sulfate
Ethyl acrylate
Ethylene dibromide
Ethylene dichloride
Ethylene oxide
Formaldehyde
Hexachlorobutadiene
Hexamethyl phosphoramide
Hydrazine
Lead chromate
Methyl hydrazine
Methylene chloride
4,4'-Methylene dianiline
Methyl iodide
2-Nitropropane

TABLE 16.—SUBSTANCES WHICH WILL BE REGULATED AS CARCINOGENS FOR THE FIRST TIME FOR METAL/NONMETAL AND COAL MINES—Continued

Perchloroethylene
N-Phenyl-β-naphthylamine
Propane sultone
Phenylhydrazine
Propylene imine
o-Tolidine
o-Toluidine
p-Toluidine
Vinyl bromide
Vinyl chloride
Vinyl cyclohexene dioxide
Xylidine
Zinc chromate, as Cr

TABLE 17.—SUBSTANCES WHICH WILL BE REGULATED AS CARCINOGENS FOR THE FIRST TIME FOR COAL MINES

bis (Chloromethyl) ether
Carbon tetrachloride
Ethylenimine
α-Naphthylamine
4,4'-Methylene bis(2-chloroaniline)
4-Dimethylaminoazobenzene

TABLE 18.—SUBSTANCES WHICH WILL BE REGULATED AS CARCINOGENS FOR THE FIRST TIME FOR METAL/NONMETAL. THESE SUBSTANCES NOT PROPOSED FOR COAL MINES BECAUSE THEY ARE PROCESSES FOUND ONLY IN METAL/NONMETAL MINING

Asbestos mining and milling
Antimony trioxide production
Arsenic trioxide production
Chromite ore processing
Nickel sulfide roasting
Vermiculite mining and milling where asbestos is present in concentrations greater then 1 percent in ore or concentrate.

Derivation Table

The following derivation table lists the section number of each standard in the proposed rule and the section number of the existing standard from which it is derived.

List of Subjects in 30 CFR Parts 56, 57, 58, 70, 71, 72, 75, and 90

Mine safety and health, Chemicals, Hazardous substances, Recordkeeping and recording requirements.

Accordingly, it is proposed to amend chapter I of title 30, Code of Federal Regulations as set forth below.

Dated: August 16, 1989.

David C. O'Neal,

Assistant Secretary for Mine Safety and Health.

PART 56—[AMENDED]

A. It is proposed to amend subpart D, 30 CFR part 56, as follows:

1. The authority citation for part 56 continues to read as follows:

Authority: 30 U.S.C. 811, 957 and 961.

§ 56.5001 [Removed]

2. Section 56.5001 is removed.

§ 56.5002 [Removed]

3. Section 56.5002 is removed.

§ 56.5003 [Removed]

4. Section 56.5003 is removed.

§ 56.5005 [Removed]

5. Section 56.5005 is removed.

§ 56.5006 [Removed]

6. Section 56.5006 is removed.

§ 56.5010 [Removed]

7. Section 56.5010 is removed.

§ 56.0014 [Removed]

8. Section 56.0014 is removed.

9. The undesignated center heading "Air Quality" is removed.

PART 57—[AMENDED]

B. It is proposed to amend subpart D, 30 CFR part 57, as follows:

1. The authority citation for part 57 continues to read as follows:

Authority: 30 U.S.C. 811, 957 and 961.

2. Section 57.5001 is removed.

§ 57.5002 [Removed]

3. Section 57.5002 is removed.

§ 57.5003 [Removed]

4. Section 57.5003 is removed.

§ 57.5005 [Removed]

5. Section 57.5005 is removed.

§ 57.5006 [Removed]

6. Section 57.5006 is removed.

§ 57.5010 [Removed]

7. Section 57.5010 is removed.

§ 57.20014 [Removed]

8. Section 57.20014 is removed.

9. The undesignated center headings "Air Quality—Surface and Underground" and the first heading "Air Quality—Underground Only" are removed.

C. It is proposed to add a new part 58 to subchapter N, 30 CFR chapter I to read as follows:

PART 58—HEALTH STANDARDS FOR AIR QUALITY, CHEMICAL SUBSTANCES, AND RESPIRATORY PROTECTION AT METAL/NONMETAL MINES

Subpart A—General

Sec.
58.1 Scope.
58.2 Definitions.

Subpart B—Air Quality

58.100 Control of exposure to airborne substances.
58.200 Exposure monitoring.
58.300 Dangerous atmospheres.

Subpart C—Carcinogens

58.401 Class 1 carcinogens.
58.402 Class 2 carcinogens.
58.403 Class 3 carcinogens.
58.404 Class 4 carcinogens.
58.405 Asbestos construction work.
58.450 Medical surveillance program.

Subpart D—Respiratory Protection

58.500 Respiratory protection program.
58.550 Medical surveillance program.

Subpart E—Miscellaneous

58.600 Prohibited areas for food and beverages.
58.610 Abrasive blasting.
58.620 Drill dust control.

Appendix A—Nonmandatory—Work Practices and Engineering Controls for Major Asbestos Removal, Renovation and Demolitions Operations

Appendix B—Nonmandatory—Medical Evaluation Procedures for Respirator Use

Appendix C—Nonmandatory—Fit Testing Protocols

Authority: 30 U.S.C. 811.

Subpart A—General

§ 58.1 Scope.

The health standards in this part apply to all metal and nonmetal mines.

§ 58.2 Definitions.

The following definitions apply to this part.

Access. The right to examine and copy records.

Confined space. A space that by design has restricted openings for entry and exit, an unfavorable atmosphere that could contain or produce dangerous air contaminants and is not intended for continuous occupancy.

Designated representative. Any individual or organization to whom a miner gives written authorization to exercise a right of access to records.

Permissible exposure limit (PEL). The time-weighted average (TWA), the short-term exposure limit (STEL), the ceiling exposure limit (ceiling) for an airborne substance, or the mixed exposure limit (MEL) for airborne substances.

Qualitative fit test. An assessment of the adequacy of respirator fit by determining whether an individual wearing the respirator can detect the odor, taste, or irritation of a contaminant introduced into the vicinity of the wearer's head.

Quantitative fit test. An assessment of the adequacy of respirator fit by numerically measuring concentrations of a test agent inside and outside the facepiece simultaneously. The ratio of

the two measurements is an index of leakage of the seal between the respirator facepiece and the wearer's face.

Respirable dust. The fraction of airborne dust passing a size-selector with the following characteristics:

Aerodynamic diameter (µm)	Percent passing selector
<2	90
2.5	75
3.5	50
5.0	25
10	0

For non-coal dust, this is airborne dust that MSHA collects by a sampling device with a 10-mm nylon cyclone operated at a flow rate of 1.7 liters per minute. For coal dust, this is airborne dust that MSHA collects by a sampling device with a 10-mm nylon cyclone operated at a flow rate of 2.0 liters per minute. The concentration of coal dust will be multiplied by the conversion factor of 1.38.

Respirator protection factor. A measure of the degree of protection provided by a respirator to the wearer.

Subpart B—Air Quality

§ 58.100 Control of exposure to airborne substances.

(a) *Time-weighted average (8 hours-[TWA$_8$].* For any workday, 8 hours or less in length, a miner's exposure to an airborne substance shall not exceed the time-weighted average listed in Table B-1. Exposure shall be calculated by the following formula:

$$\text{Exposure} = \frac{(C_1 \times T_1) + (C_2 \times T_2) + \ldots (C_n \times TC_n)}{8 \text{ hours}}$$

Where $C_1, C_2, \ldots C_n$ is the concentration of the airborne substance as measured by sample "1", sample "2", through the last sample, $T_1, T_2, \ldots T_n$ is the duration in minutes of the exposure at C_1, C_2, and any other C_n.

(b) *Time-weighted average (novel schedule)—TWAC$_{ns}$.* For workdays longer than 8 hours, full shift sampling shall be conducted and exposure calculated by the following formula:

$$\text{Exposure} = \frac{(C_1 \times T_1) + (C_2 \times T_2) + \ldots (Cn \times T_n)}{\text{Total Time}}$$

Where $C_1, C_2, \ldots C_n$ is the concentration of the airborne substance as measured by sample "1," sample "2," through the last sample, $T_1, T_2, \ldots T_n$ is the duration in minutes of the exposure at C_1, C_2, and any other C_n. The miners exposure to an airborne substance listed in Table B-1 shall not exceed the TWA_{ns} as calculated by the following formula:

TWA (Novel Schedule)=

$$\text{TWA (as listed in Table B-1} \times \frac{8 \text{ hours}}{\text{Total time sampled.}}$$

(c) *Short-term exposure limit (STEL) and ceiling limit (C).* A miner's exposure to an airborne substance shall not exceed the short-term exposure limit or ceiling limit (designated by "C") listed in Table B-1. The STEL is a 15-minute time-weighted exposure. If the concentration of an airborne substance exceeds the STEL or ceiling, the mine operator shall take immediate corrective action in accordance with paragraph (e) of this section.

(d) *Mixed exposure limit (MEL).* A miner's combined exposure to two or more airborne substances that act upon the same organ system shall not exceed 1.0 as determined by this formula:

$$\text{Exposure} = \frac{C_a}{PEL_a} + \frac{C_b}{PEL_b} + \ldots + \frac{C_n}{PEL_n}$$

"C" is the concentration of each substance. The MEL is the TWA_8, TWA_{ns}, short-term exposure limit, or ceiling for each substance. Time-weighted averages and short-term exposure limits are not to be mixed in computing exposure.

(e) *Means of control.* (1) The mine operator shall use feasible engineering or administrative controls to maintain exposure of all miners at or below the permissible exposure limits (PELs) in this section. When appropriate controls do not reduce exposure to the PEL, they shall be used to reduce exposure as low as feasible and supplemented with respiratory protection.

(2) The following factors shall be used to determine whether an engineering or administrative control is feasible:

(i) Nature and extent of the overexposure.

(ii) The demonstrated effectiveness of available technology.

(iii) Whether committed resources would be wholly out of proportion to the expected results.

(3) Respiratory protection shall be used when—

(i) The concentration of an airborne substance exceeds the PEL in areas where controls are being established;

(ii) Controls to reduce exposure to the PEL are not feasible; or

(iii) Occasional entry into hazardous atmospheres is required to perform maintenance, investigation, or emergency cleanup.

(f) *Skin absorption.* Whenever a miner could have contact with any airborne substance designated by "Skin" in Table B-1 at levels above the PEL, personal protection shall be provided and used to prevent absorption through the skin. Direct skin contract with these substances in a nonairborne form shall also be prevented through use of provided personal protection.

TABLE B-1—PERMISSIBLE EXPOSURE LIMITS

Substance and RTEC's number	TWA		STEL		Ceiling		Skin
	ppm	mg/m³	ppm	mg/m³	ppm	mg/m³	
Common gases:							
Ammonia—BO0875000	25	18	35	27			
Carbon dioxide—FF6400000	5,000	9,000	30,000	54,000			
Carbon monoxide—FG3500000	35	40	200	229			
Hydrogen sulfide—MX1225000	10	14	15	21			
Nitric oxide—QX0525000	25	30					
Nitrogen dioxide—QW9800000	3	6	5	10			
	or						
			1	1.8			
Sulfur dioxide—WS4550000	2	5	5	10

Zirconium compounds (as Zr)		5		10			

---

[1] Fibers greater than 5 microns in length, as determined by the membrane filter method at 400–450 magnification (4 millimeter objective) phase contrast illumination. Asbestos is defined as chrysotile, amosite, crocidolite, anthophyllite asbestos, tremolite asbestos, and actinolite asbestos and any of these minerals that have been chemically treated or altered.

§ 58.200 Exposure monitoring.

(a) *Frequency.* For miners exposed to substances listed in Table B–1, the mine operator shall monitor their exposure—

(1) When the operator has reason to believe that a change in production, process, materials, equipment, or engineering or administrative controls would increase a substance's concentration above the PEL;

(2) Upon installation of controls;

(3) Upon modification of controls used to reduce exposure to the PEL; and

(4) At least once every 3 months if respirators are required to be worn because a substance's concentration is above the PEL.

(b) *Cessation of monitoring.* Monitoring required by paragraphs (a)(1), (a)(2), and (a)(3) of this section shall no longer be required when airborne concentrations are determined to be at or below the PEL with 95 percent confidence.

(c) *Monitoring procedures.* Monitoring samples shall be—

(1) Representative of the affected miners' exposures;

(2) Collected and analyzed by appropriate instrumentation and methods. Instruments used to measure exposures shall be maintained and calibrated; and

(3) Collected and analyzed by a person trained or experienced in the monitoring procedures.

(d) *Recordkeeping.* The mine operator shall record the results of required exposure monitoring and retain these records for 5 years. These records shall include the following:

(1) Date of sampling.

(2) Name of miner or location of work area where each sample was collected.

(3) Substances sampled.

(4) Sampling and analytical method used, including error factor.

(5) Time or duration of each sample.

(6) Concentrations of each substance determined by sampling.

(7) Names of persons conducting the sampling and analysis.

(8) The corrective action being taken if exposure exceeds the PEL.

(e) *Access to exposure records.* (1) Upon request, the mine operator shall ensure immediate access to exposure records to the following:

(i) Miners whose exposures are included in the records.

(ii) The miners' representative for miners whom they represent.

(iii) The miner's designated representative.

(iv) Authorized representatives of the Secretary of Labor or the Secretary of Health and Human Services.

(2) Former employees shall have access to their exposure records during the five-year retention period.

(3) A copy of the record shall be provided without cost to the miner or representative.

(4) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator. The successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records subject to this section, the operator shall notify the affected employees of their rights of access to records at least 3 months prior to disposal of the records.

(f) *Observation of monitoring.* The mine operator shall provide affected miners or their representatives with an opportunity to observe exposure monitoring required by this section.

(g) *Notification of overexposure.* When a sample indicates that a miner's exposure exceeds the PEL for any substance listed in Table B–1, the mine operator shall notify the miner in writing within 15 calendar days following receipt of sampling results of the overexposure and the corrective action being taken.

§ 58.300 Dangerous atmospheres.

(a) The atmosphere shall be tested for suspected hazardous gases and vapors and oxygen deficiency prior to entrance into any of the following areas:

(1) Silos, vats, tanks, and other confined spaces with atmospheres that could contain or produce dangerous levels of air contaminants.

(2) Areas where there has been a liberation of contaminants in sufficient quantities that could result in acute respiratory exposure that poses an immediate threat of loss of life, immediate or delayed irreversible adverse health effects, or acute eye exposure that would prevent escape from a hazardous atmosphere (IDLH atmosphere).

(b) Air in work areas shall contain at least 19.5 percent oxygen by volume. If the oxygen content of the air falls below 19.5 percent, all miners affected shall be withdrawn unless they are using respiratory protection in accordance with § 58.500, and immediate action shall be taken to restore the level to at least 19.5 percent.

(c) The following precautions shall be taken when entering a dangerous atmosphere in an area listed in paragraph (a) of this section or an oxygen-deficient atmosphere listed in paragraph (b) of this section:

(1) Respiratory protection shall be used in accordance with the respiratory protection program required by § 58.500.

(2) There shall be two standby persons outside the affected area with backup equipment and rescue capabilities, or one standby person with appropriate equipment outside the affected area who could rescue the other person without entering the area.

(3) Communication (visual, voice, signal-box, radio, or other means) shall be maintained with the persons exposed.

Subpart C—Carcinogens

§ 58.401 Class 1 carcinogens.

(a) Liquids, solids, or gases containing class 1 carcinogens in concentrations that exceed those listed in Table C–1 shall not be processed, used, handled, packaged, or stored except under restricted-use conditions and procedures approved by MSHA. At a minimum, the condition and procedures shall include specifications for the use of engineering controls, personal protection, and administrative measures that ensure virtually no contact with a class 1 carcinogen. The conditions and procedures shall also include emergency and decontamination procedures, monitoring and training requirements associated with the class 1 carcinogen. Exposure to class 1 carcinogens that have PELs on Table B–1 shall be further controlled in accordance with § 58.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(b) *Approval procedures.* The mine operator shall submit proposed conditions or procedures for class 1 carcinogens for approval to the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203.

(1) The Administrator shall approve or disapprove the operator's submission within 120 days from its receipt by MSHA. The Administrator shall notify the operator in writing of specific reasons for disapproval of any condition or procedures and provide the operator with an opportunity to discuss necessary changes.

(2) The operator shall notify the Administrator of any significant change or modification in conditions or procedures approved by MSHA.

(3) Approval of the conditions or procedures may be revoked if, based on new evidence unavailable at the time of approval, MSHA finds that they are inadequate to protect the health of miners. The Administrator shall notify the operator in writing or modifications

that must be made in order for the operator to retain use approval. The Administrator shall provide a reasonable opportunity to implement the changes before MSHA revokes the operator's approval.

(c) *Appeal procedures*. A decision by the Administrator to disapprove or revoke approval of any part of an operator's conditions or procedures may be appealed to the Assistant Secretary for Mine Safety and Health, 4015 Wilson Boulevard, Arlington, Virginia 22203. The appeal shall be submitted within 30 days of notification of the decision made by the Administrator. The Assistant Secretary shall provide a written determination to the operator within 30 days of receipt of the appeal.

(d) *Availability of approval*. The operator shall make a copy of the MSHA-approved conditions of procedures available at the mine site for inspection by MSHA and examination by miners and their representatives.

TABLE C–1.—CLASS 1 CARCINOGENS

Carcinogen	Concentration, percent (weight or volume)
2-Acetylaminofluorene	.1
4-Aminodiphenyl	.1
Benzidine	.1
Benzo(a)pyrene (commercially manufactured)	.1
bis(Chloromethyl) ether	.1

3,3'-Dichlorobenzidine	.1
4-Dimethylaminoazobenzene	.1
Dimethyl carbamoyl chloride	.1
Ethylene dibromide	.1
Hexamethyl phosphoramide	.1
α-Naphthylamine	.1
α-Naphthylamine	.1
4-Nitrodiphenyl	.1
N-Phenyl-β-naphthylamine	.1
Propane sultone	.1
o-Tolidine	.1

§ 58.402 Class 2 carcinogens.

Exposure to liquids, solids, or gases containing class 2 carcinogens in concentrations that exceed those listed in Table C–2 shall be controlled by implementation of the following requirements. Exposure to class 2 carcinogens that have PELs on Table B–1 shall also meet requirements of § 58.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(a) The mine operator shall establish a restricted area where a class 2 carcinogen is processed, used, packaged, handled, or stored.

(b) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing persons of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(d) The restricted area shall be controlled by engineering controls and administrative measures to prevent contamination of nonrestricted areas.

(e) The introduction or removal of any equipment, material, or other items to or from restricted areas shall be done in a manner that does not contaminate nonrestricted areas.

(f) Containers of class 2 carcinogens or materials contaminated by them shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(g) Class 2 carcinogens shall be processed or used in an isolated system, closed system, laboratory-type hood, or in any system that offers equivalent protection against entry of the substances into a restricted or nonrestricted area.

(h) At the beginning of each shift, prior to entering a restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(i) Prior to exiting a restricted area, miners shall remove and leave protection clothing and equipment at the point of exit. At the last exit of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination and disposal.

(j) Miners shall wash hands, forearms, face and neck at each exit from a restricted area close to the point of exit and before engaging in other activities.

(k) Miners shall shower after the last exit of the day.

(l) Written decontamination, disposal, and emergency procedures shall be developed and implemented for the restricted area and process.

(m) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(n) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in maintenance on contaminated equipment, decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 2 carcinogens being used and the decontamination and emergency procedures to be followed.

TABLE C–2.—CLASS 2 CARCINOGENS

	Concentration percent (weight or volume)
Carbon tetrachloride	.1
Ethylenimine	.1
4,4'-Methylene bis(2-chloroaniline)	.1
β-Propiolactone	.1
Vinyl chloride	.1

§ 58.403 Class 3 carcinogens.

Exposure to liquids, solids, or gases containing class 3 carcinogens in concentrations that exceed those listed in Table C–3 shall be controlled by implementation of the following requirements. Exposure to class 3 carcinogens that have PELs on Table B–1 shall also meet the requirements of § 58.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(a) The mine operator shall establish a restricted area where a class 3 carcinogen is found to be above the PEL or STEL or may be anticipated to be above the PEL or STEL.

(b) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing persons of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area or in any area where these items may come into direct contact with the carcinogen.

(d) The restricted area shall be controlled by engineering and administrative measures.

(e) The introduction or removal of any equipment, material, or other items to or from restricted areas, or equipment, materials, or other items contaminated with the carcinogen, shall be done in a manner that does not contaminate nonrestricted areas.

(f) Containers of class 3 carcinogens or materials contaminated by them shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(g) For emergency control activities and where direct contact with the carcinogen is possible, miners shall be provided with wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(h) Prior to the end of the shift and after completion of emergency control activities or any work involving direct contact with the carcinogen, miners shall place protective clothing and equipment in impervious containers for purposes of decontamination and disposal.

(i) After completion of emergency control activities or any work involving direct contact with the carcinogen, miners shall wash hands, forearms, face and neck before engaging in other activities and shower at the end of the shift.

(j) Written decontamination, disposal, and emergency procedures shall be developed and implemented for the restricted area and process.

(k) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(l) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in maintenance on contaminated equipment, decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 3 carcinogens being used and the decontamination and emergency procedures to be followed.

TABLE C–3.—CLASS 3 CARCINOGENS

	Concentration percent (weight or volume)

§ 58.404 Class 4 carcinogens.

Exposure to liquids, solids, or gases containing class 4 carcinogens in concentrations exceeding those listed in Table C–4 or a process listed in Table C–4 shall be controlled by implementation of the following requirements. Exposure to class 4 carcinogens that have PELs on Table B–1 shall also meet the requirements of § 58.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(a) The area where a class 4 carcinogen is processed, packaged, used, handled, or stored shall be restricted to essential personnel.

(b) Entrances to the restricted area shall be posted with signs stating the natue of the hazard. Appropriate instructions shall be posted informing miners of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(d) At the beginning of each shift, prior to entering the restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(e) Prior to exiting a restricted area, miners shall remove and leave protective clothing and equipment at the point of exit. At the last exist of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination and disposal.

(f) Miners shall wash hands, forearms, face and neck at each exit from a restricted area close to the point of exit and before engaging in other activities.

(g) Miners shall shower upon the last exit of the day.

(h) Containers of class 4 carcinogens shall be clearly marked and their contents identified. The container shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(i) Written decontamination, disposal, and emergency procedures shall be developed and implemented for the restricted area and process.

(j) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(k) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 4 carcinogens being used and the decontamination and emergency procedures to be followed.

§ 58.405 Asbestos construction work.

Exposure to asbestos resulting from asbestos construction work shall be controlled by implementation of the following requirements. Exposure to asbestos in these situations shall also meet the requirements of § 58.100 of this part. Rotation of workers shall not be used to comply with the PEL. For purposes of this section, asbestos construction work means construction work such as demolition or salvage of structures where asbestos is present; installation, removal, or encapsulation of asbestos and materials containing greater than 0.1 percent asbestos; spill and emergency cleanup of asbestos and material containing greater than 0.1 percent asbestos; transportation, disposal, storage or containment of asbestos or materials containing greater than 0.1 percent asbestos on the site or location at which construction activities are performed.

(a) The operator shall designate a person to be responsible for the asbestos construction work who will have authority to take prompt corrective action to eliminate hazards. This person shall have had comprehensive training on the hazards of asbestos and asbestos construction work, such as a course conducted by an EPA Asbestos Training Center, or be a certified industrial hygienist (C.I.H.) certified by the American Board of Industrial Hygiene, or be certified for asbestos construction work by a state program.

(b) The area where asbestos construction work is being done shall be restricted to essential personnel.

(c) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing miners of the procedures that must be followed when entering or leaving the restricted area.

(d) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(e) At the beginning of each shift, prior to entering a restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, head covers, and other appropriate personal protection.

(f) Prior to exiting a restricted area, miners shall remove and leave protective clothing and equipment at the point of exit. At the last exit of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal.

(g) Miners shall shower immediately after each exit.

(h)(1) Whenever feasible, the mine operator shall establish negative-pressure enclosures before beginning removal, demolition, or renovation operations.

(2) For small-scale, short-duration activities involving removal of asbestos-containing insulation on pipes, removal of entire and intact asbestos-insulated pipes or structures, and replacement of electrical conduits through or near asbestos-containing material, glove bags and wet methods may be used instead of negative-pressure enclosures.

(i) Daily monitoring shall be conducted in the restricted area if the exposure exceeds the PEL or could reasonably be expected to exceed the PEL. When all workers within a restricted area are equipped with supplied-air respirators operated in the positive-pressure mode, daily monitoring is not required.

(j) Written decontamination, disposal and emergency procedures shall be developed and implemented for the restricted area and process.

(k) Prior to initial assignment and at least once every 12 months, persons required to enter the restricted areas or who are involved in decontamination, disposal, and emergency response shall receive training on the risks and hazards of asbestos and asbestos construction work, as well as the decontamination, disposal, and emergency procedures to be followed.

(l) The mine operator shall notify MSHA at least 20 days prior to beginning asbestos construction work involving—

(1) At least 80 linear meters (260 linear feet) of asbestos or material containing greater than 0.1 percent asbestos on pipes; or

(2) At least 15 square meters (160 square feet) of asbestos or material containing greater than 0.1 percent asbestos on other facility components.

(m) Containers of asbestos and materials containing greater than 0.1 percent asbestos shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(n) The introduction or removal of any equipment, material, or other items to or from the restricted area shall be done in a manner that does not contaminate nonrestricted areas.

§ 58.450 Medical surveillance program.

(a) *Establishment.* The mine operator shall develop and implement a written medical surveillance program that shall make available medical examinations to miners who are working with or will be assigned to work with a chemical or process listed on Table C–5. The medical examination shall be provided at the operator's cost and at a reasonable time and place.

(b) *Medical examinations.* (1) Under the medical surveillance program, a medical examination by a licensed physician shall be made available to miners—

(i) Prior to initial assignment;

(ii) At least once every twelve months; and

(iii) At any time a miner is exposed to any carcinogen listed on Table C–5 as a result of an emergency.

(2) The operator shall provide the examining physician with the following information:

(i) The names of chemicals to be used.

(ii) Description of the work to be performed by the miner.

(iii) Duration and frequency of chemical usage.

(iv) Environmental conditions of the intended worksite.

(v) Type of personal protective equipment to be worn by the miner.

(vi) Relevant information from any previous medical examinations of the affected miner that is in the operator's possession.

(3) The mine operator shall require the physician to submit a written report of the miner's condition to the operator. The mine operator shall instruct the physician not to reveal orally, or in the written evaluation, any specific findings or diagnoses unrelated to the miner's exposure to carcinogens.

(4) The mine operator shall inform any miner who refuses to have the medical examination of the possible health consequences of such refusal and shall obtain a signed statement from the miner indicating that the miner understands the risk involved in the refusal to be examined.

(c) *Medical transfer.* (1) Upon notification from the physician that a miner's medical examination shows evidence that the miner has developed cancer or any material impairment of health of functional capacity due to occupational exposure to a carcinogen listed on Table C–5, the miner shall be given the option to work in an area of the mine where there is no exposure to the carcinogen. The operator shall notify the miner in writing of eligibility to exercise the option of medical transfer.

(2) When a miner requests to transfer, the mine operator shall notify the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203, within 15 calendar days from receipt by the operator of the miner's request for transfer. The operator's notice to the Administrator shall include the miner's name, occupation and assignment of new duties including the scheduled date of transfer.

(3) When a miner elects to transfer, the transfer shall take place on or before the 21st calendar day following receipt by the operator of the miner's request. The mine operator shall transfer the miner to an existing position at the same mine. If the miner agrees in writing, the

operator may transfer the miner to a different mine.

(4) Any miner transferred under this section shall—

(i) Continue to receive compensation at no less than the regular rate of pay for a miner in the classification held by that miner immediately prior to the transfer.

(ii) Receive wage increases based upon the new work classification.

(d) *Recordkeeping.* (1) The mine operator shall maintain a record of the medical evaluation conducted for each miner. These records shall be kept for the duration of the miner's employment plus 30 years.

(2) Upon request, the operator shall give access to the miner's medical records required by this section to the miner or, with the miner's written consent, to the miner's designated representative. Access shall also be given to authorized representatives of the Secretary of Labor and the Secretary of the Department of Health and Human Services. Upon termination of employment, miners shall be given a copy of their medical evaluation records. Copies of the records shall be provided without cost.

(3) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator. The successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records, the operator shall notify all affected miners of their rights of access to records at least 3 months prior to disposal of the records.

Subpart D—Respiratory Protection

§ 58.500 Respiratory protection program

When respiratory protection is required by this part, written standard operating procedures shall be developed and implemented that include the requirements of this section.

(a) Only respirators approved under 30 CFR Part 11 shall be used. Respirators shall be maintained in approved condition.

(b) Respirators shall be selected according to the nature of the hazard, the criteria in Tables D–1, D–2 and D–3, the manufacturer's limitations on the respirator, and the characteristics of the work environment, which includes the exposure levels, the period of time the respiratory protection will be worn, and work activities of the employees.

(c) Respirators shall be inspected before each use and after cleaning, sanitizing, and maintenance. Emergency-use respirators shall be inspected monthly with a record kept of the last inspection.

(d) Respirator wearers shall be provided with a clean and sanitized respirator each day. Respirators shall be cleaned and sanitized prior to use by another person. Emergency-use respirators shall be cleaned and sanitized promptly after each use.

(e) Respirators shall be stored in a manner that protects them from damage or contamination. Respirators stored for emergency use shall be accessible to persons who may need to use them.

(f) For respirators with tight-fitting facepieces, a qualitative or quantitative respirator fit test that has been shown by scientific data to be capable of indicating the adequacy of the fit shall be conducted initially and at least once every 12 months thereafter. Respirators failing to provide a satisfactory fit shall not be used. For respirators fitted quantitatively, a minimum ratio of 100 must be obtained. The maximum assigned protection factor allowed for qualitatively-fitted respirators is 10, with the exception of disposable dust/mist respirators which is limited to 5. For respirators fitted quantitatively the assigned protection factor is one-tenth the measured ratio but no greater than the maximum assigned protection factor listed in Table D–2 and D–3.

(g) A record of the latest fit test for each respirator wearer shall be kept for 1 year or until the next fit test. The record shall include the date the fit test was made, the respirator wearer's name, and the make, model, and size of the respirators tested for which a satisfactory fit was obtained. When quantitative fit-testing is conducted, the protection factor assigned to each respirator wearer and tested respirator shall be included in the record.

(h) For respirators with tight-fitting facepieces, negative- and postive-pressure sealing tests or equivalent qualitative sealing tests shall be conducted prior to use. Respirators failing to provide a satisfactory seal shall not be used.

(i) Respirators shall not be used when facial hair comes between the sealing surface of the respirator facepiece and the face.

(j) Respirator wearers, supervisors, and persons issuing or maintaining respirators shall be trained initially and at least once every 12 months thereafter in the selection, use, and maintenance of respiratory devices. The mine operator and the person trained shall both certify that the training was conducted.

(k) When compressors or blowers are used to provide respirable air, they shall be constructed and located to prevent entry of contaminated air into the air supply system. Compressors shall be equipped with in-line air purifying sorbent beds or filters to ensure breathing air quality. Oil-lubricated compressors shall be equipped with a carbon monoxide or high-temperature alarm.

(l) When supplied air, compressed air, or oxygen is provided for respiration, it shall meet the requirements of 30 CFR part 11.

(m) Compressed oxygen shall not be used in atmosphere-supplying respirators or in open-circuit, self-contained breathing apparatus that have previously used compressed air.

TABLE D–1 OXYGEN-DEFICIENT ATMOSPHERES

Altitude (ft.)	Oxygen-deficient atmospheres	Oxygen-deficient IDLH atmospheres
0–3,000	19.5	16
3,001–4,000	19.5	16.4
4,001–5,000	19.5	17.1
5,001–6,000	19.5	17.8
6,001–7,000	19.5	18.5
7,001–8,000	19.5	19.3
Above 8,000 ft. to 14,000 ft.		19.5

TABLE D-2 AIR-PURIFYING RESPIRATORS [1]

	Assigned maximum protection factor
Half Mask or Quarter Facepiece	10
Full Facepiece	50
Disposable, Dust/Mist	5
Powered Air-Purifying	
Tight-fitting full facepiece	250
Tight-fitting half mask [2]	50
Loose-fitting hood or helmet	25

[1] Air-purifying respirators may not be used in oxygen-deficient or IDLH atmospheres. Air-purifying respirators used for particulate protection against carcinogens shall be equipped with high-efficiency filters.

[2] Only full-facepiece respirators are to be used in contaminant concentrations that produce eye irritation.

TABLE D-3 ATMOSPHERE-SUPPLYING RESPIRATORS

	Assigned maximum protection factor
Supplied-Air Respirator (SAR): [1]	
Negative Pressure (demand):	
Half mask	10.
Full facepiece	50.
Continuous Flow:	
Hood or helmet	25
Half mask	50.
Full facepiece	250.
Pressure Demand:	
Half mask	1,000.
Full facepiece	1,000.
Combination Full Facepiece:	
Pressure Demand SAR with Auxiliary Self-Contained Air Supply	(2)
Self-Contained Breathing Apparatus (SCBA): [3]	
Demand (except for apparatus approved for mine rescue)	50.
Demand—approved for mine rescue	(2)
Pressure Demand	(2)

[1] Any atmosphere-supplying respirator may be used in an oxygen-deficient atmosphere where the oxygen content is below the level listed for an oxygen-deficient atmosphere but above the level listed for oxygen-deficient IDLH atmospheres in Table D-1.

[2] Only a full-facepiece pressure-demand SCBA, combination full-facepiece pressure-demand SAR with auxiliary self-contained air supply or SCBA approved for mine rescue may be used in unknown IDLH or oxygen-deficient IDLH atmospheres listed in Table D-1.

[3] Greater than 1,000, and IDLH, or unknown concentrations.

§ 58.550 Medical surveillance program.

(a) *Establishment.* The mine operator shall develop and implement a written medical surveillance program that shall require miners who are working, or will be assigned to work, in an area requiring respiratory protection to receive a medical examination. The medical examination shall be provided at the operator's cost and at a reasonable time and place.

(b) *Medical examinations.* (1) Under the medical surveillance program, miners shall be examined by a licensed physician—

(i) Prior to initial assignment;

(ii) At least once during the period listed in Table D-4; and

(iii) At any time the miner experiences difficulty breathing while being fitted for, or while using, a respirator.

(2) The operator shall provide the examining physician with the following information:

(i) The type of respiratory protection to be used.

(ii) Description of the work effort required.

(iii) Duration and frequency of usage.

(iv) The type of work performed, including any special responsibilities that could affect the safety of other miners, such as firefighting or rescue efforts.

(v) Any special environmental conditions, such as heat or work in confined spaces.

(vi) Relevant additional requirements for protective clothing and equipment.

(vii) Anticipated exposure levels.

(3) The mine operator shall require the physician to submit a written report of the miner's condition to the operator. The mine operator shall instruct the physician not to reveal orally, or in the written evaluation, any specific findings or diagnoses unrelated to the miner's respirator use.

(c) *Medical transfer.* (1) Upon notification from the physician that a miner's medical examination shows evidence that the miner is unable to wear a respirator, the miner shall be transferred to work in an area of the mine where respiratory protection is not required.

(2) When a miner must be transferred under this section, the mine operator shall notify the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203, within 15 calendar days from receipt of the physician's evaluation, that a miner will be transferred. The operator's notice to the Administrator shall include the miner's name, occupation, and assignment of new duties, including the scheduled date of transfer.

(3) The miner's transfer shall be on or before the 21st calendar day following receipt of the physician's evaluation. The mine operator shall transfer the miner to an existing position at the same mine. If the miner agrees in writing, the operator may transfer the miner to a different mine.

(4) Any miner transferred under this section shall—

(i) Continue to receive compensation at no less than the regular rate of pay for a miner in the classification held by that miner immediately prior to the transfer.

(ii) Receive wage increases based upon the new work classification.

(d) *Recordkeeping.* (1) The mine operator shall maintain a record of the medical evaluation conducted for each miner. These records shall be kept by the operator for 5 years.

(2) Upon request, the operator shall give access to the miner's medical records required by this section to the miner or, with the miner's written consent, to the miner's designated representative. Access shall also be given to authorized representatives of the Secretary of Labor and the Secretary of the Department of Health and Human Services. Upon termination of employment, miners shall be given a copy of their medical evaluation records. Copies of records shall be provided without cost.

(3) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator. The successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records, the operator shall notify all affected miners of their rights of access to records at least 3 months prior to disposal of the records.

TABLE D-4.—FREQUENCY OF MEDICAL EXAMINATIONS FOR RESPIRATOR USE

	Worker age (years)		
	<35	35–45	>45
Most working conditions requiring respirators.	Every 5 years.	Every 2 years.	Annually.
Strenuous work conditions with SCBA.	Every 3 years.	Every 18 months.	Annually.

Subpart E—Miscellaneous

§ 58.600 Prohibited areas for food and beverages.

No one shall be allowed to consume or store food or beverages in a toilet room or in any area where the food or beverages could be contaminated by a hazardous substance.

§ 58.610 Abrasive blasting.

(a) *Surface areas.* When an abrasive blasting operation is performed and silica sand or other materials containing

more than 1 percent quartz are used as an abrasive substance, all exposed miners shall use supplied-air respirators approved for abrasive blasting in accordance with § 58.500 or the operation shall be performed in a totally enclosed device with the person outside the device.

(b) *Underground areas of underground mines.* Silica sand or other materials containing more than 1 percent quartz shall not be used as an abrasive substance in abrasive blasting.

§ 58.620 Drill dust control.

Holes shall be collared and drilled wet, or other effective dust-control measures shall be used when drilling non-water-soluble material. Effective dust-control measures shall be used when drilling water-soluble materials.

Appendix A—Nonmandatory—Work Practices and Engineering Controls for Major Asbestos Removal, Renovation, and Demolitions Operations

This is a nonmandatory appendix designed to provide guidelines to assist employers in complying with the requirements of § 58.405. Specifically, this appendix describes the equipment, methods, and procedures that should be used in major asbestos-removal projects conducted to abate a recognized asbestos hazard or in preparation for building renovation or demolition. These projects require the construction of negative-pressure temporary enclosures to contain the asbestos material and to prevent the exposure of bystanders and other workers at the worksite. Paragraph (h) of § 58.405 of the standard requires that, whenever feasible, the mine operator must establish negative-pressure enclosures before beginning asbestos-removal, demolition, or renovation operations. The operator should also be aware that, when conducting asbestos-removal projects, enclosures may be required under the National Emissions Standards for Hazardous Air Pollutants (NESHAPS), 40 CFR part 61, subpart M, or EPA regulations under the Clean Water Act.

Construction of a negative-pressure enclosure is a simple but time-consuming process that requires careful preparation and execution; however, if the procedures below are followed, contractors should be assured of achieving a temporary barricade that will protect workers and others outside the enclosure from exposure to asbestos and minimize to the extent possible the exposure of asbestos workers inside the barrier as well.

The equipment and materials required to construct these barriers are readily available and easily installed and used. In addition to an enclosure around the removal site, the standard requires that workers leave their work clothes at the point of exit and shower immediately after each exit. A recommended facility is described below. The steps in the process of preparing the asbestos-removal site, building the enclosures, constructing hygiene facilities, removing the asbestos-containing material, and restoring the site include:

(1) Planning the removal project;

(2) Procuring the necessary materials and equipment;

(3) Preparing the work area;

(4) Removing the asbestos-containing material;

(5) Cleaning the work area; and

(6) Disposing of the asbestos-containing waste.

Planning the Removal Project

The planning of an asbestos-removal project is critical to completing the project safely and cost-effectively. A written asbestos-removal plan should be prepared that describes the equipment and procedures that will be used throughout the project. The asbestos-abatement plan will aid not only in executing the project but also in complying with the reporting requirements of the USEPA asbestos regulations (40 CFR part 61, subpart M), which call for specific information such as a description of control methods and control equipment to be used and the disposal sites the contractor proposes to use to dispose of the asbestos-containing materials.

The asbestos-abatement plan should contain the following information:

- A physical description of the work area;
- A description of the approximate amount of material to be removed;
- A schedule for turning off and sealing existing ventilation systems;
- Personnel hygiene procedures;
- Labeling procedures;
- A description of personal protective equipment and clothing to be worn by workers;
- A description of the local exhaust ventilation systems to be used;
- A description of work practices to be observed by workers;
- A description of the methods to be used to remove the asbestos-containing material;
- The wetting agent to be used;
- A description of the sealant to be used at the end of the project;
- An air monitoring plan;
- A description of the method to be used to transport waste materials; and
- The location of the dump site.

Materials and Equipment Necessary for Asbestos Removal

Although individual asbestos-removal projects vary in terms of the equipment required to accomplish the removal of the material, some equipment and materials are common to most asbestos-removal operations. Equipment and materials that should be available at the beginning of each project are (1) rolls of polyethylene sheeting; (2) rolls of gray duct tape or clear plastic tape; (3) HEPA-filtered vacuum(s); (4) HEPA-filtered portable ventilation systems; (5) a wetting agent; (6) an airless sprayer; (7) a portable shower unit; (8) appropriate respirators; (9) disposable coveralls; (10) signs and labels; (11) preprinted disposal bags; and (12) a manometer or pressure gauge.

Rolls of Polyethylene Plastic and Tape. Rolls of polyethylene plastic (6 mil in thickness) should be available to construct the asbestos-removal enclosure and to seal windows, doors, ventilation systems, wall penetrations, and ceilings and floors in the work area. Gray duct tape or clear plastic tape should be used to seal the edges of the plastic and to seal any holes in the plastic enclosure. Polyethylene plastic sheeting can be purchased in rolls up to 20 feet in width and up to 100 feet in length.

HEPA-Filtered Vacuum. A HEPA-filtered vacuum is essential for cleaning the work area after the asbestos has been removed. Such vacuums are designed to be used with a HEPA (High-Efficiency Particulate Air) filter, which is capable of removing 99.97 percent of the asbestos particles from the air. Various sizes and capacities of HEPA vacuums are available. All of these models are portable, and all have long hoses capable of reaching out-of-the-way places, such as areas above ceiling tiles and behind pipes.

Exhaust Air Filtration System. A portable ventilation system is necessary to create a negative pressure within the asbestos-removal enclosure. Such units are equipped with a HEPA filter and are designed to exhaust and clean the air inside the enclosure before exhausting it to the outside of the enclosure. The number and capacity of units required to ventilate an enclosure depend on the size of the area to be ventilated.

Wetting Agents. Wetting agents (surfactants) are added to water (which is then called amended water) and used to soak asbestos-containing materials; amended water penetrates more effectively than plain water and permits more thorough soaking of the asbestos-containing materials. Wetting the asbestos-containing material reduces the number of fibers that will break free and become airborne when the asbestos-containing material is handled or otherwise disturbed. Asbestos-containing materials should be thoroughly soaked before removal is attempted; the dislodged material should feel spongy to the touch. Wetting agents are generally prepared by mixing 1 to 3 ounces of wetting agent to 5 gallons of water.

One type of asbestos, amosite, is relatively resistant to soaking, either with plain or amended water. The work practices of choice when working with amosite-containing material are to soak in the material as much as possible and then to bag it for disposal immediately after removal, so that the material has no time to dry and be ground into smaller particles that are more likely to liberate airborne asbestos.

In a very limited number of situations, it may not be possible to wet the asbestos-containing material before removing it. Examples of such rare situations are: (1) Removal of asbestos material from a "live" electrical box that was oversprayed with the material when the rest of the area was sprayed with asbestos-containing coating; and (2) removal of asbestos-containing insulation from a live steam pipe. In both of these situations, the preferred approach would be to turn off the electricity or steam, to permit wet removal methods to be used. However, where removal work must be performed during working hours (that is, when normal operations cannot be disrupted), the asbestos-containing material must be removed dry. Immediate bagging is then the only method of minimizing the amount of airborne asbestos generated.

Airless Sprayer. Airless sprayers are used to apply amended water to asbestos-containing materials. Airless sprayers allow the amended water to be applied in a fine spray that minimizes the release of asbestos fibers by reducing the impact of the spray on the materials to be removed. Airless sprayers are inexpensive and readily available.

Portable Shower. Unless the site has available a permanent shower facility that is contiguous to the removal area, a portable shower system is necessary to permit workers to clean themselves after exposure to asbestos and to remove any asbestos contamination from their hair and bodies. Taking a shower prevents workers from leaving the work area with asbestos on their clothes and thus prevents the spread of asbestos contamination to areas outside the asbestos-removal area. This measure also protects members of the families of asbestos workers from possible exposure to asbestos. Showers should be supplied with warm water and a drain. A shower water filtration system to filter asbestos fibers from the shower water is recommended. Portable shower units are readily available, inexpensive, and easy to install and transport.

Respirator. Workers involved in asbestos-removal projects should be provided with appropriate NIOSH-approved respirators. Selection of the appropriate respirator should be based on the concentration of asbestos fibers in the work area. If the concentration of asbestos fibers is unknown, workers should be provided with respirators that will provide protection against the highest concentration of asbestos fibers that can reasonably be expected to exist in the work area. For most work within an enclosure, workers should wear half-mask dual-filter cartridge respirators. Disposable face mask respirators (single-use) should not be used to protect employers from exposure to asbestos fibers.

Disposable Coveralls. Workers involved in asbestos-removal operations should be provided with disposable impervious coveralls that are equipped with head and foot covers. The coverall has a zipper front and elastic wrists and ankles.

Signs and Labels. Before work begins, a supply of signs to demarcate the entrance to the work area should be obtained. The required labels are also commercially available as press-on labels and preprinted on the 6-milpolyethylene plastic bags used to dispose of asbestos-containing waste material.

Preparing the Work Area

Preparation for constructing negative-pressure enclosures should begin with the removal of all movable objects from the work area (for example, desks, chair, rugs, and light fixtures) to ensure that these objects do not become contaminated. When movable objects are contaminated or suspected of being contaminated, they should be vacuumed with a HEPA vacuum and cleaned with amended water, unless they are made of material that will be damaged by the wetting agent; wiping with plain water is recommended in those cases where amended water will damage the object. Before the asbestos-removal work begins, objects that cannot be removed from the work area should be covered with a 6-mil thick polyethylene plastic sheeting that is securely taped with duct tape or plastic tape to achieve an airtight seal around the object.

Constructing the Enclosure

When all objects have either been removed from the work area or covered with plastic, all penetrations of the floor, walls, and ceiling should be sealed with 6-mil polyethylene plastic and tape to prevent airborne asbestos from escaping into areas outside the work area or from lodging in cracks around the penetrations. Penetrations that require sealing are typically found around electrical conduits, telephone wires, and water-supply and drain pipes. A single entrance to be used for access and egress to the work area should be selected, and all other doors and windows should be sealed with tape or be covered with 6-mil polyethylene plastic sheeting and securely taped. Covering windows and unnecessary doors with a layer of polyethylene before covering the walls provides a second layer of protection and saves time in installation because it reduces the number of edges that must be cut and taped. All other surfaces such as support columns, ledges, pipes, and other surfaces should also be covered with polyethylene plastic sheeting and taped before the walls themselves are completely covered with sheeting.

Next a thin layer of spray adhesive should be sprayed along the top of all walls surrounding the enclosed work area, close to the wall-ceiling interface, and a layer of polyethylene plastic sheeting should be stuck to this adhesive and taped. The entire inside surfaces of all wall areas are covered in this manner, and the sheeting over the walls is extended across the floor area until it meets in the center of the area, where it is taped to form a single layer of material encasing the entire room except for the ceiling. A final layer of plastic sheeting is then laid across the plastic-covered floor area and up the walls to a level of 2 feet or so; this layer provides a second protective layer of plastic sheeting over the floor, which can then be removed and disposed of easily after the asbestos-containing material that has dropped to the floor has been begged and removed.

Building Hygiene and Decontamination Facilities

The standard requires that personal protective equipment be left at the point of exit and the person shower immediately. In addition, the movement of equipment, material, and other items to and from the restricted area must be done in a manner that does not contaminate the restricted or nonrestricted areas. This is usually accomplished by the construction of hygiene and decontamination facilities that consist of—

(1) A clean change room;
(2) A shower; and
(3) An equipment room.

The clean change room is an area in which workers remove their street clothes and don their respirators and disposable protective clothing. The clean room should have hooks on the wall or be equipped with lockers for the storage of workers' clothing and personal articles. Extra disposable coveralls and towels can also be stored in the clean change room.

The shower should be contiguous with both the clean and dirty change rooms and should be used by all workers leaving the work area. The shower should also be used to clean asbestos-contaminated equipment and materials, such as the outside of asbestos waste bags and hand tools used in the removal process.

The equipment room (also called the dirty change room) is the area where workers remove their protective coveralls and where equipment that is to be used in the work area can be stored. The equipment room should be lined with 6-mil thick polyethylene plastic sheeting in the same way as was done in the work area enclosure. Two layers of 6-mil polyethylene plastic sheeting that are not taped together form a double flap or barrier between the equipment room and the work area and between the shower and the clean change room.

When feasible, the clean change room shower and equipment room should be contiguous and adjacent to the negative-pressure enclosure surrounding the removal area. In an overwhelming number of cases, hygiene facilities can be built contiguous to the negative-pressure enclosure. In some cases, however, hygiene facilities may have to be located on another floor of the building where removal of asbestos-containing materials is taking place. In these instances, the hygiene facilities can in effect be made to be contiguous to the work area by constructing a polyethylene plastic "tunnel" from the work area to the hygiene facilities. Such a tunnel can be made even in cases where the hygiene facilities are located several floors above or below the work area; the tunnel begins with a double-flap door at the enclosure, extends through the exit from the floor, continues down the necessary number of flights of stairs and goes through a double-flap entrance to the hygiene facilities which have been prepared as described above. The tunnel is constructed of 2-inch by 4-inch lumber or aluminum struts and covered with 6-mil thick polyethylene plastic sheeting.

In the rare instances when there is not enough space to permit any hygiene facilities to be built at the work site, workers should be directed to change into a clean disposable worksuit immediately after exiting the enclosure (without removing their respirators) and to proceed immediately to the shower.

The clean room, shower, and equipment room must be sealed completely to ensure that the sole source of air flow through these areas originates from uncontaminated areas outside the asbestos-removal, demolition, or renovation enclosure. The shower must be drained properly after each use to ensure that contaminated water is not released to uncontaminated areas. If waste is

inadvertently released, it should be cleaned up as soon as possible to prevent any asbestos in the water from drying and becoming airborne in areas outside the work area.

Establishing Negative Pressure Within the Enclosure

After construction of the enclosure is completed, ventilation systems should be installed to create a negative pressure within the enclosure with respect to the area outside the enclosure. Such ventilation systems must be equipped with HEPA filters to prevent the release of asbestos fibers to the environment outside the enclosure and should be operated 24 hours per day during the entire project until the final cleanup is completed and the results of final air samples are received from the laboratory. A sufficient amount of air should be exhausted to create a pressure of −0.02 inches of water within the enclosure with respect to the area outside the enclosure.

These ventilation systems should exhaust the HEPA-filtered clean air outside the building in which the asbestos removal, demolition, or renovation is taking place. If access to the outside is not available, the ventilation system can exhaust the HEPA-filtered asbestos-free air to an area within the building that is as far away as possible from the enclosure. Care should be taken to ensure that the clean air is released either to an asbestos-free area or in such a way as not to disturb any asbestos-containing materials.

A manometer or pressure gauge for measuring the negative pressure within the enclosure should be installed and should be monitored frequently throughout all work shifts during which asbestos removal, demolition, or renovation takes place. Several types of manometers and pressure gauges are available for this purpose.

All asbestos-removal, renovation, and demolition operations should have a program for monitoring the concentration of airborne asbestos and worker exposure to asbestos. Area samples should be collected inside the enclosure (approximately four samples for 5000 square feet of enclosure area). At least two samples should be collected outside the work area, one at the entrance to the clean change room and one at the exhaust of the portable ventilation system. In addition, several breathing-zone samples should be collected from those workers who can reasonably be expected to have the highest potential exposure to asbestos.

Removing Asbestos Materials

It is recommended that a competent person be designated to—

(1) Set up the enclosure;
(2) Ensure the integrity of the enclosure;
(3) Control entry to and exit from the enclosure;
(4) Supervise all exposure monitoring required;
(5) Ensure the use of personal protective clothing and equipment;
(6) Ensure that workers are trained in the use of engineering controls, work practices, and personal protective equipment;
(7) Ensure the use of hygiene facilities and the observance of proper decontamination procedures; and
(8) Ensure that engineering controls are functioning properly.

The competent person will generally be a Certified Industrial Hygienist, an industrial hygienist with training and experience in the handling of asbestos, or a person who has such training and experience as a result of on-the-job training and experience.

Ensuring the integrity of the enclosure is accomplished by inspecting the enclosure before asbestos-removal work begins and prior to each workshift throughout the entire period work is being conducted in the enclosure. The inspection should be conducted by locating all areas where air might escape from the enclosure; this is best accomplished by running a hand over all seams in the plastic enclosure to ensure that no seams are ripped and the tape is securely in place.

The competent person should also ensure that unauthorized personnel do not enter the enclosure and that all workers who enter the enclosure use the hygiene facilities and observe the proper decontamination procedures (described below).

Proper work practices are necessary during asbestos removal, demolition, and renovation to ensure that the concentration of asbestos fibers inside the enclosure remains as low as possible. One of the most important work practices is to wet the asbestos-containing material before it is disturbed. After the asbestos-containing material is thoroughly wetted, it should be removed by scraping (as in the case of sprayed-on or troweled-on ceiling material) or removed by cutting the metal bands or wire mesh that support the asbestos-containing material on boilers or pipes. Any residue that remains on the surface of the object from which asbestos is being removed should be wire-brushed and wet-wiped.

Bagging asbestos waste material promptly after its removal is another work practice control that is effective in reducing the airborne concentration of asbestos within the enclosure. Whenever possible, the asbestos should be removed and placed directly into bags for disposal rather than dropping the material to the floor and picking up all of the material when removal is complete. If a significant amount of time elapses between the time that the material is removed and the time it is bagged, the asbestos material is likely to dry out and generate asbestos-laden dust when it is disturbed by people working within the enclosure. Any asbestos-contaminated supplies and equipment that cannot be decontaminated should be disposed of in prelabeled bags; items in this category include plastic sheeting, disposable work clothing, respirator cartridges, and contaminated wash water.

A checklist is one of the most effective methods of ensuring adequate surveillance of the integrity of the asbestos-removal enclosure. Such a checklist is shown in Figure A–1. Filling out the checklist at the beginning of each shift in which asbestos removal is being performed will serve to document that all the necessary precautions will be taken during the asbestos-removal work. The checklist contains entries for ensuring that—

- The work area enclosure is complete;
- The negative-pressure system is in operation;
- Necessary signs and labels are used;
- Appropriate work practices are used;
- Necessary protective clothing and equipment are used; and
- Appropriate decontamination procedures are being followed.

Cleaning the Work Area

After all of the asbestos-containing material is removed and bagged, the entire work area should be cleaned until it is free of all visible asbestos dust. All surfaces from which asbestos has been removed should be cleaned by wire-brushing the surfaces, HEPA vacuuming these surfaces, and wiping them with amended water. The inside of the plastic enclosure should be vacuumed with a HEPA vacuum and wet-wiped until there is no visible dust in the enclosure. Particular attention should be given to small horizontal surfaces such as pipes, electrical conduits, lights, and support tracks for drop ceilings. All such surfaces should be free of visible dust before the final air samples are collected.

Additional sampling should be conducted inside the enclosure after the cleanup of the work area has been completed. Approximately four area samples should be collected for each 5000 square feet of enclosure area. The enclosure should not be dismantled until the final samples show asbestos concentrations of less than 0.1 f/cc. EPA recommends that a clearance level of 0.01 f/cc be achieved before cleanup is considered complete.

A clearance checklist is an effective method of ensuring that all surfaces are adequately cleaned and the enclosure is ready to be dismantled. Figure A–2 shows a checklist that can be used during the final inspection phase of asbestos abatement, removal, or renovation operations.

Appendix B—Nonmandatory Medical Evaluation Procedures for Respirator Use

This appendix contains recommended elements that should be taken into account during the performance of the required medical evaluation for respirator use. These elements should be evaluated in taking the medical history and performing the medical examination. However, the specific nature of the medical evaluation and the extent of testing performed at left for the responsible physician to determine. This recommended list of elements to be considered is not meant to limit the physician to the testing procedures recommended. The examining physician is free to perform additional tests, if necessary, to determine a person's ability to wear a respirator.

(a) The medical history should include the following:

(1) Previously diagnosed diseases, particularly cardiovascular or respiratory diseases.

(2) Problems associated with breathing during normal work activities.

(3) Past problems with respirator use.

(4) Past and current usage of medication.

(5) Any known physical conditions that may interfere with respirator use.

(6) Previous occupations.

(7) Use of medications whose side effects might affect cardiopulmonary fitness.

(b) The medical examination should assess the following:

(1) Hearing ability. This should be sufficient to ensure communication and response to instructions and alarm systems.

(2) Pulmonary function testing including spirometry for FEV_1 and FVC. Presence and degree of restrictive or obstructive disease or perfusion disorders. In interpreting spirometry, if the FVC is less than 80 percent or the FEV_1 is less than 70 percent, restriction from respirator use should be considered.

(3) Cardiovascular system. Evidence of symptomatic coronary artery disease, significant arrhythmias, occurrence of frequent premature ventricular contraction (PVCs) with elevated pulse rates, or uncontrolled hypertension symptoms.

(4) Endocrine system. Conditions that may result in sudden loss of consciousness or response capability.

(5) Neurological system. Inability to perform coordinated movements and conditions affecting response and consciousness.

(6) Psychological condition. Claustrophobia, severe anxiety.

(7) Miscellaneous conditions specific to the work situation. Skin conditions where occlusive materials may result in symptoms or aggravation of a preexisting dermatitis.

(8) Exercise stress. For those workers who use a self-contained breathing apparatus or rebreather-type respirator under strenuous work conditions, or in emergencies, particularly in fire and rescue operations.

Appendix C—Nonmandatory Fit Testing Protocols

I. Isoamyl Acetate Protocol

(a) *Odor threshold screening.* The odor threshold screening test, performed without wearing a respirator, is intended to determine if the individual tested can detect the odor of isoamyl acetate.

(1) Three 1-liter glass jars with metal lids are required.

(2) Odor-free water (for example, distilled or spring water) at approximately 25 degrees C shall be used for the solutions.

(3) The isoamyl acetate (IAA) (also known as isopentyl acetate) stock solution is prepared by adding 1 cc of pure IAA to 800 cc of odor-free water in a 1-liter jar and shaking for 30 seconds. A new solution shall be prepared at least weekly.

(4) The screening test shall be conducted in a room separate from the room used for actual fit testing. The two rooms shall be well ventilated but shall not be connected to the same recirculating ventilation system.

(5) The odor-test solution is prepared in a second jar by placing 0.4 cc of the stock solution into 500 cc of odor-free water using a clean dropper or pipette. The solution shall be shaken for 30 seconds and allowed to stand for 2 to 3 minutes so that the IAA concentration above the liquid may reach equilibrium. This solution shall be used for only 1 day.

(6) A test blank shall be prepared in a third jar by adding 500 cc of odor-free water.

(7) The odor test and test blank jars shall be labeled 1 and 2 for jar identification. Labels shall be placed on the lids so they can be periodically peeled, dried off and switched to maintain the integrity of the test.

(8) The following instruction shall be typed on a card and placed on the table in front of the two test jars (that is, 1 and 2): "The purpose of this test is to determine if you can smell banana oil at a low concentration. The two bottles in front of you contain water. One of these bottles also contains a small amount of banana oil. Be sure the covers are on tight, then shake each bottle for two seconds. Unscrew the lid of each bottle, one at a time, and sniff at the mouth of the bottle. Indicate to the test conductor which bottle contains banana oil."

(9) The mixtures used in the IAA odor detection test shall be prepared in an area separate from where the test is performed, in order to prevent olfactory fatigue in the subject.

(10) If the test subject is unable to correctly identify the jar containing the odor test solution, the IAA qualitative fit test shall not be performed.

(11) If the test subject correctly identifies the jar containing the odor-test solution, the test subject may proceed to respirator selection and fit testing.

(b) *Isoamyl acetate fit test.* (1) The fit-test chamber shall be similar to a clear 55-gallon drum liner suspended inverted over a 2-foot diameter frame so that the top of the chamber is about 6 inches above the test subject's head. The inside top center of the chamber shall have a small hook attached.

(2) Each respirator used for the fitting and fit testing shall be equipped with organic vapor cartridges or offer protection against organic vapors. The cartridges or masks shall be changed at least weekly.

(3) After selecting, donning, and properly adjusting a respirator, the test subject shall wear it to the fit-testing room. This room shall be separate from the room used for odor threshold screening and respirator selection, and shall be well ventilated, as by an exhaust fan or lab hood, to prevent general room contamination.

(4) A copy of the test exercises and any prepared text from which the subject is to read shall be taped to the inside of the test chamber. The tests shall include the following:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that the subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(iv) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those tests environments such as shroud-type QLFT units that prohibit bending at the waist.

(5) Upon entering the test chamber, the test subject shall be given a 6-inch by 5-inch piece of paper towel, or other porous, absorbent, single-ply material, folded in half and wetted with 0.75 cc of pure IAA. The test subject shall hang the wet towel on the hook at the top of the chamber.

(6) Allow 2 minutes for the IAA test concentration to stabilize before starting the fit-test exercises. This would be an appropriate time to talk with the test subject; to explain the fit test, the importance of cooperation, and the purpose for the head exercises; or to demonstrate some of the exercises.

(7) If at any time during the test the subject detects the banana-like odor of IAA, the test has failed. The subject shall quickly exit from the test chamber and leave the test area to avoid olfactory fatigue.

(8) If the test has failed, the subject shall return to the selection room and remove the respirator, repeat the odor sensitivity test, select and put on another respirator, return to the test chamber and again begin the procedure described in (4) (i) through (vii) above. The process continues until a respirator that fits well has been found. Should the odor sensitivity test be failed, the subject shall wait about 5 minutes before retesting. Odor sensitivity will usually have returned by this time.

(9) When a respirator is found that passes the test, its efficiency shall be demonstrated for the subject by having the subject break the face seal and take a breath before exiting the chamber.

(10) When the test subject leaves the chamber, the subject shall remove the saturated towel and return it to the person conducting the test. To keep the test area from becoming contaminated, the used towels shall be kept in a self-sealing bag so there is no significant IAA concentration build-up in the test chamber during subsequent tests.

II. Saccharin Solution Aerosol Protocol

The saccharin solution aerosol QLFT protocol is the only currently available, validated test protocol for use with particulate disposable dust respirators not equipped with high-efficiency filters. The entire screening and testing procedure shall be explained to the test subject prior to the conduct of the screening test.

(a) *Taste threshold screening.* The saccharin taste threshold screening, performed without wearing a respirator, is intended to determine whether the individual being tested can detect the taste of saccharin.

(1) During threshold screening as well as during fit testing, subjects shall wear an enclosure about the head and shoulders that is approximately 12 inches in diameter by 14 inches tall with at least the front portion clear and that allows free movements of the head when a respirator is worn. An enclosure substantially similar to the 3M hood assembly, parts # FT 14 and # FT 15 combined, is adequate.

(2) The test enclosure shall have a ¾-inch hole in front of the test subject's nose and mouth area to accommodate the nebulizer nozzle.

(3) The test subject shall don the test enclosure. Throughout the threshold screening test, the test subject shall breathe with the mouth wide open and the tongue extended.

(4) Using a DeVilbiss Model 40 Inhalation Medication Nebulizer the test conductor shall spray the threshold check solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the fit-test solution nebulizer.

(5) The threshold check solution consists of 0.83 grams of sodium saccharin USP in 1 cc of warm water. It can be prepared by putting 1 cc of the fit-test solution (see (b)(5) below) in 100 cc of distilled water.

(6) To produce the aerosol, the nebulizer bulb is firmly squeezed so that it collapses completely, then released and allowed to fully expand.

(7) Ten squeezes are repeated rapidly and then the test subject is asked whether the saccharin can be tested.

(8) If the first response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(9) If the second response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(10) The test conductor will take note of the number of squeezes required to solicit a taste response.

(11) If the saccharin is not tasted after 30 squeezes (step 10), the test subject may not perform the saccharin fit test.

(12) If a taste response is elicited, the test subject shall be asked to take note of the taste for reference in the fit test.

(13) Correct use of the nebulizer means that approximately 1 cc of liquid is used at a time in the nebulizer body.

(14) The nebulizer shall be thoroughly rinsed in water, shaken dry, and refilled at least each morning and afternoon or at least every 14 hours.

(b) *Saccharin solution aerosol fit test procedure.* (1) The test subject may not eat, drink (except plain water), or chew gum for 15 minutes before the test.

(2) The fit test uses the same enclosure described in (a) above.

(3) The test subject shall don the enclosure while wearing the respirator selected. Respirators shall be properly adjusted and equipped with particulate filters.

(4) A second DeVilbiss Model 40 Inhalation Medication Nebulizer is used to spray the fit-test solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the screening-test-solution nebulizer.

(5) The fit-test solution is prepared by adding 83 grams of sodium saccharin to 100 cc of warm water.

(6) As before, the test subject shall breathe through the wide open mouth with tongue extended.

(7) The nebulizer is inserted into the hole in the front of the enclosure and the fit-test solution is sprayed into the enclosure using the same number of squeezes required to elicit a taste response into the screening test.

(8) After generating the aerosol, the test subject shall be instructed to perform the following:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(vi) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those test environments such as shroud-type QLFT units that prohibit bending at the waist.

(9) Every 30 seconds the aerosol concentration shall be replenished using one-half the number of squeezes as initially.

(10) The test subject shall indicate to the test conductor if at any time during the fit test the taste of saccharin is detected.

(11) If the taste of saccharin is detected, the fit is deemed unsatisfactory and a different respirator shall be tried.

III. Irritant Fume Protocol

(a) *Screening procedures.* (1) The respirator to be tested shall be equipped with high-efficiency particulate air (HEPA) filters.

(2) The test subject shall be allowed to smell a weak concentration of the irritant smoke before the respirator is donned to become familiar with its characteristic odor and to determine if the individual is responsive to the smoke.

(b) *Irritant fume fit test procedures.* (1) Break both ends of a ventilation smoke tube containing stannic oxychloride, such as the MSA part No. 5445, or equivalent. Attach one end of the smoke tube to a low-flow air pump set to deliver 200 milliliters per minute.

(2) Advise the test subject that the smoke can be irritating to the eyes and instruct the subject to keep the eyes closed while the test is performed.

(3) The test conductor shall direct the stream of irritant smoke from the smoke tube towards the face seal area of the test subject. The test conductor shall begin at least 12 inches from the facepiece and gradually move to within 1 inch, moving around the whole perimeter of the mask. Alternatively, the test may be conducted in a tent as described in the isoamyl fit-test protocol. The irritant smoke should be introduced through a small hole in the tent until a light, visible concentration of irritant smoke is observed. Throughout the test, additional smoke should be introduced to maintain the concentration.

(4) The following exercises shall be performed by the test subject while the respirator seal is being challenged by the smoke:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(vi) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those tests environments such as shroud-type QLFT units that prohibit bending at the waist.

(5) Each test subject passing the smoke test without evidence of a response shall be given a sensitivity check of the smoke from the same tube once the respirator has been removed to determine whether the person reacts to the smoke. Failure to evoke a response shall void the fit test.

(6) The fit test shall be performed in a location with exhaust ventilation sufficient to prevent general contamination of the testing area by the test agent.

PART 70—[AMENDED]

D. It is proposed to amend 30 CFR part 70 as follows:

1. The heading of part 70 is revised to read as follows: "Part 70—Health Standards—Underground Coal Mines".

2. The authority citation for Subpart D is revised to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957 and 961.

§§ 70.300–70.305 [Removed]

3. Sections 70.300—70.305–1 are removed.

4. A new § 70.302 is added to subpart D to read as follows:

Subpart D—Respirable Dust Control Plans

§ 70.302 Respiratory protection; respirable dust.

Respiratory equipment approved for protection against respirable dust under 30 CFR part 11 shall be provided to and properly worn by all miners exposed to concentrations of respirable dust in excess of the levels required to be maintained under this part 70. Use of respirators shall not be substituted for environmental control measures in active workings. Use of respirators under this section shall be in accordance with Subpart D—Respiratory Protection of part 72 of this chapter.

§§ 70.400—70.400-3 (Subpart E) [Removed]

5. Subpart E, consisting of §§ 70.400 through 70.400–3, is removed.

PART 71—[AMENDED]

E. It is proposed to amend 30 CFR part 71 as follows:

1. The authority citation for part 71 is revised to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957, and 961.

2. The heading of part 71 is revised to read as follows: "Part 71—Health Standards—Surface Coal Mines and Surface Work Areas of Underground Coal Mines".

§ 71.700 [Removed]

3. Section 71.700 is removed.

§ 71.701 [Removed]

4. Section 71.701 is removed.

5. The authority citation for subpart D is revised to read as follows:

Authority: 30 U.S.C. 811, 813(h), 957, and 961.

6. A new § 71.302 is added to subpart D to read as follows:

Subpart D—Respirable Dust Control Plans

§ 71.302 Respiratory protection; respirable dust.

Respiratory equipment approved for protection against respirable dust under 30 CFR Part 11 shall be provided to and properly worn by all miners exposed to concentrations of respirable dust in excess of the levels required to be maintained under this Part 71. Use of respirators shall not be substituted for environmental control measures in active workings. Use of respirators under this section shall be in accordance with Subpart D—Respiratory Protection of part 72 of this chapter.

F. It is proposed to add a new part 72 to subchapter O 30 CFR chapter I to read as follows:

PART 72—HEALTH STANDARDS FOR AIR QUALITY, CHEMICAL SUBSTANCES, AND RESPIRATORY PROTECTION AT COAL MINES

Subpart A—General

Sec.
72.1 Scope.
72.2 Definitions.

Subpart B—Air Quality

72.100 Control of exposure to airborne substances.
72.200 Exposure monitoring.
72.300 Dangerous atmospheres.

Subpart C—Carcinogens

72.401 Class 1 carcinogens.
72.402 Class 2 carcinogens.
72.403 Class 3 carcinogens.
72.404 Class 4 carcinogens.
72.405 Asbestos construction work.
72.450 Medical surveillance program.

Subpart D—Respiratory Protection

72.500 Respiratory protection program.
72.550 Medical surveillance program.

Subpart E—Miscellaneous

72.600 Prohibited areas for food and beverages.
72.610 Abrasive blasting.
72.620 Drill dust control at surface mines and surface areas of underground mines.
72.630 Drill dust control at underground areas of underground mines.

Appendix A—Nonmandatory—Work Practices and Engineering Controls for Major Asbestos Removal, Renovation and Demolition Operations

Appendix B—Nonmandatory Medical Evaluation Procedures for Respirator Use

Appendix C—Nonmandatory—Fit Testing Protocols

Authority: 30 U.S.C. 811.

Subpart A—General

§ 72.1 Scope.

The health standards in this part apply to all coal mines.

§ 72.2 Definitions.

The following definitions apply to this part.

Access. The right to examine and copy records.

Confined space. A space that by design has restricted openings for entry and exit, an unfavorable atmosphere that could contain or produce dangerous air contaminants and is not intended for continuous occupancy.

Designated representative. Any individual or organization to whom a miner gives written authorization to exercise a right of access to records.

Permissible exposure limit (PEL). The time-weighted average (TWA), the short-term exposure limit (STEL), the ceiling exposure limit (ceiling) for an airborne substance, or the mixed exposure limit (MEL) for airborne substances.

Qualitative fit test. An assessment of the adequacy of respirator fit by determining whether an individual wearing the respirator can detect the odor, taste, or irritation of a contaminant introduced into the vicinity of the wearer's head.

Quantitative fit test. An assessment of the adequacy of respirator fit by numerically measuring concentrations of a test agent inside and outside the facepiece simultaneously. The ratio of the two measurements is an index of leakage of the seal between the respirator facepiece and the wearer's face.

Respirator protection factor. A measure of the degree of protection provided by a respirator to the wearer.

Subpart B—Air Quality

§ 72.100 Control of exposure to airborne substances.

(a) *Time-weighted average (8 hours)–[TWA$_8$].* For any workday, 8 hours or less in length, a miner's exposure to an airborne substance shall not exceed the time-weighted average listed in Table B-1. Exposure shall be calculated by the following formula:

$$\text{Exposure} = \frac{(C_1 \times T_1) + (C_2 \times T_2) + \ldots (C_n \times T_n)}{8 \text{ hours}}$$

Where $C_1, C_2, \ldots C_n$ is the concentration of the airborne substance as measured by sample "1", sample "2", through the last sample. $T_1, T_2, \ldots T_n$ is the duration in minutes of the exposure at C_1, C_2, and any other C_n.

(b) *Time-weighted average (novel schedule)–TWA_{ns}.* For workdays longer than 8 hours, full-shift sampling shall be conducted and exposure calculated by the following formula:

$$\text{Exposure} = \frac{(C_1 \times T_1) + (C_2 \times T_2) + \ldots (C_n \times T_n)}{\text{Total Time}}$$

Where $C_1, C_2, \ldots C_n$ is the concentration of the airborne substance as measured by sample "1", sample "2", through the last sample. $T_1, T_2, \ldots T_n$ is the duration in minutes of the exposure at C_1, C_2, and any other C_n. The miner's exposure to an airborne substance listed in Table B-1 shall not exceed the TWA_{ns} as calculated by the following formula:

TWA (Novel Schedule) =

$$\text{TWA (as listed in Table B-1)} \times \frac{8 \text{ hours}}{\text{total time sampled.}}$$

(c) *Short-term exposure limit (STEL) and ceiling limit (C).* A miner's exposure to an airborne substance shall not exceed the short-term exposure limit or ceiling limit (designated by "C") listed in Table B-1. The STEL is a 15-minute time-weighted exposure. If the concentration of a airborne substance exceeds the STEL or ceiling, the mine operator shall take immediate corrective action in accordance with paragraph (e) of this section.

(d) *Mixed exposure limit (MEL).* A miner's combined exposure to two or more airborne substances that act upon the same organ system shall not exceed 1.0 as determined by this formula:

$$\text{Exposure} = \frac{C_a}{PELG5_a} + \frac{C_b}{PEL_b} + \ldots + \frac{C_n}{PEL_n}$$

"C" is the concentration of each substance. The MEL is the TWA_s, TWA_{ns}, short-term exposure limit, or ceiling for each substance. Time-weighted averages and short-term exposure limits are not to be mixed in computing exposure.

(e) *Means of control.* (1) The mine operator shall use feasible engineering or administrative controls to maintain exposure of all miners at or below the permissible exposure limits (PELs) in this section. When appropriate controls do not reduce exposure to the PEL, they shall be used to reduce exposure as low as feasible and supplemented with respiratory protection.

(2) The following factors shall be used to determine whether an engineering or administrative control is feasible:

(i) Nature and extent of the overexposure.

(ii) The demonstrated effectiveness of available technology.

(iii) Whether committed resources would be wholly out of proportion to the expected results.

(3) Respiratory protection shall be used when—

(i) The concentration of an airborne substance exceeds the PEL is areas where controls are being established;

(ii) Controls to reduce exposure to the PEL are not feasible; or

(iii) Occasional entry into hazardous atmospheres is required to perform maintenance, investigation, or emergency cleanup.

(f) *Skin Absorption.* Whenever a miner could have contact with any airborne substance designated by "Skin" in Table B-1 at levels above the PEL, personal protection shall be provided and used to prevent absorption through the skin. Direct skin contact with these substances in a nonairborne form shall also be prevented through use of provided personal protection.

TABLE B-1—PERMISSIBLE EXPOSURE LIMITS

Substance and RTEC's number	TWA		STEL		Ceiling		Skin
	ppm	mg/m³	ppm	mg/m³	ppm	mg/m³	
Common gases:							
Ammonia—BO0875000	25	18	35	27

[1] Fibers greater than 5 microns in length, as determined by the membrane filter method at 400–450 magnification (4 millimeter objective) phase contrast illumination. Asbestos is defined as chrysotile, amosite, crocidolite, anthophylite asbestos, tremolite asbestos, and actinolite asbestos and any of these minerals that have been chemically treated or altered.

§ 72.200 Exposure monitoring.

(a) *Frequency.* For miners exposed to substances listed in Table B-1, the mine operator shall monitor their exposure—

(1) When the operator has reason to believe that a change in production, process, materials, equipment, or engineering or administrative controls would increase a substance's concentration above the PEL;

(2) Upon installation of controls;

(3) Upon modification of controls used to reduce exposure to the PEL; and

(4) At least once every 3 three if respirators are required to be worn because a substance's concentration is about the PEL.

(b) *Cessation of monitoring.* Monitoring required by paragraphs (a)(1), (a)(2) and (a)(3) of this section shall no longer be required when airborne concentrations are determined to be at or below the PEL with 95 percent confidence.

(c) *Monitoring procedures.* Monitoring samples shall be—

(1) Representative of the affected miners' exposures;

(2) Collected and analyzed by appropriate instrumentation and methods. Instruments used to measure exposures shall be maintained and calibrated; and

(3) Collected and analyzed by a person trained or experienced in the monitoring procedures.

(d) *Recordkeeping.* The mine operator shall record the results of required exposure monitoring and retain these records for 5 years. These records shall include the following:

(1) Date of sampling.

(2) Name of miner or location of work area where each sample was collected.

(3) Substances sampled.

(4) Sampling and analytical method used, including error factor.

(5) Time or duration of each sample.

(6) Concentrations of each substance determined by sampling.

(7) Names of persons conducting the sampling and analysis.

(8) The corrective action being taken if exposure exceeds the PEL.

(e) *Access to exposure records.* (1) Upon request, the mine operator shall ensure immediate access to exposure records to the following:

(i) Miners whose exposures are included in the records.

(ii) The miners' representative for miners whom they represent.

(iii) The miner's designated representative.

(iv) Authorized representatives of the Secretary of Labor or the Secretary of Health and Human Services.

(2) Former employees shall have access to their exposure records during the 5-year retention period.

(3) A copy of the record shall be provided without cost to the miner or representative.

(4) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records subject to this section, the operator shall notify the affected employees of their rights of access to records at least 3 months prior to disposal of the records.

(f) *Observation of monitoring.* The mine operator shall provide affected miners or their representatives with an opportunity to observe exposure monitoring required by this section.

(g) *Notification of overexposure.* When a sample indicates that a miner's exposure exceeds the PEL for any substance listed in Table B–1, the mine operator shall notify the miner in writing within 15 calendar days following receipt of sampling results of the overexposure and the corrective action being taken.

§ 72.300 Dangerous atmospheres.

(a) The atmosphere shall be tested for suspected hazardous gases and vapors and oxygen deficiency prior to entrance into any of the following areas:

(1) Silos, vats, tanks, and other confined spaces with atmospheres that could contain or produce dangerous levels of air contaminants.

(2) Areas where there has been a liberation of contaminants in sufficient quantities that could result in acute respiratory exposure that poses an immediate threat of loss of life, immediate or delayed irreversible adverse health effects, or acute eye exposure that would prevent escape from a hazardous atmosphere (IDLH atmosphere).

(b) Air in work areas shall contain at least 19.5 percent oxygen by volume. If the oxygen content of the air falls below 19.5 percent, all miners affected shall be withdrawn unless they are using respiratory protection in accordance with § 72.500, and immediate action shall be taken to restore the level to at least 19.5 percent.

(c) The following precautions shall be taken when entering a dangerous atmosphere in an area listed in paragraph (a) of this section or an oxygen-deficient atmosphere listed in paragraph (b) of this section:

(1) Respiratory protection shall be used in accordance with the respiratory protection program required by § 72.500.

(2) There shall be two standby persons outside the affected area with backup equipment and rescue capabilities, or one standby person with appropriate equipment outside the affected area who could rescue the other person without the affected area who could rescue the other person without entering the area.

(3) Communication (visual, voice, signal-box, radio or other means) shall be maintained with the persons exposed.

Subpart C—Carcinogens

§ 72.401 Class 1 carcinogens.

(a) Liquids, solids, or gases containing class 1 carcinogens in concentrations that exceed those listed in Table C–1 shall not be processed, used, handled, packaged, or stored except under restricted-use conditions and procedures approved by MSHA. At a minimum, the conditions and procedures shall include specifications for the use of engineering controls, personal protection, and administrative measures that ensure virtually no contact with a class 1 carcinogen. The conditions and procedures shall also include emergency and decontamination procedures, monitoring and training requirements associated with the class 1 carcinogen. Exposure to class 1 carcinogens that have PELs on Table B–1 shall be further controlled in accordance with § 72.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(b) *Approval procedures.* The mine operator shall submit proposed conditions or procedures for class 1 carcinogens for approval to the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203.

(1) The Administrator shall approve or disapprove the operator's submission within 120 days from its receipt by MSHA. The Administrator shall notify the operator in writing of specific reasons for disapproval of any condition or procedure and provide the operator with an opportunity to discuss necessary changes.

(2) The operator shall notify the Administrator of any significant change or modification in conditions or procedures approved by MSHA.

(3) Approval of the conditions or procedures may be revoked if, based on new evidence unavailable at the time of approval, MSHA finds that they are inadequate to protect the health of miners. The Administrator shall notify the operator in writing of modifications that must be made in order for the operator to retain use approval. The Administrator shall provide a reasonable opportunity to implement the changes before MSHA revokes the operator's approval.

(2) *Appeal procedures.* A decision by the Administrator to disapprove or revoke approval of any part of an operator's conditions or procedures may be appealed to the Assistant Secretary for Mine Safety and Health, 4015 Wilson

Boulevard, Arlington, Virginia 22203. The appeal shall be submitted within 30 days of notification of the decision made by the Administrator. The Assistent Secretary shall provide a written determination to the operator within 30 days of receipt of the appeal.

(3) *Availability of approval.* The operator shall make a copy of the MSHA-approved conditions or procedures available at the mine site for inspection by MSHA and examination by miners and their representatives.

TABLE C–1.—CLASS 1 CARCINOGENS

Carcinogen	Concentration, percent (weight or volume)
2-Acetylaminofluorene	.1
4-Aminodiphenyl	.1
Benzidine	.1
Benzo(a)pyrene (commercially manufactured)	.1
bis(Chloromethyl) ether	.1
Chloromethyl methyl ether	.1
Chrysene (commercially manufactured)	.1
3,3'-Dichlorobenzidine	.1
4-Dimethylaminoazobenzene	.1
Dimethyl carbamoyl chloride	.1
Ethylene dibromide	.1
Hexamethyl phosphoramide	.1
α-Naphthylamine	.1
β-Naphthylamine	.1
4-Nitrodiphenyl	.1
N-Nitrosodimethylamine	.1
N-Phenyl-β-naphthylamin	.1
Propane sultone	.1
o-Tolidine	.1

§ 72.402 Class 2 carcinogens.

Exposure to liquids, solids, or gases containing class 2 carcinogens in concentrations that exceed those listed in Table C–2 shall be controlled by implementation of the following requirements. Exposure to class 2 carcinogens that have PELs on Table B–1 shall also meet the requirements of § 72.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(a) The mine operator shall establish a restricted area where a class 2 carcinogen is processed, used, packaged, handled, or stored.

(b) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing persons of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(d) The restricted area shall be controlled by engineering controls and administrative measures to prevent contamination of nonrestricted areas.

(e) The introduction or removal of any equipment, material, or other items to or from restricted areas shall be done in a manner that does not contaminate nonrestricted areas.

(f) Containers of class 2 carcinogens or materials contaminated by them shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(g) Class 2 carcinogens shall be processed or used in an isolated system, closed system, laboratory-type hood, or in any system that offers equivalent protection against entry of the substances into a restricted or nonrestricted area.

(h) At the beginning of each shift, prior to entering a restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(i) Prior to exiting a restricted area, miners shall remove and leave protective clothing and equipment at the point of exit. At the last exit of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination and disposal.

(j) Miners shall wash hands, forearms, face and neck at each exit from a restricted area close to the point of exit and before engaging in other activities.

(k) Miners shall shower after the last exit of the day.

(l) Written decontamination, disposal, and emergency procedures shall be developed and implemented for the restricted area and process.

(m) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(n) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in maintenance on contaminated equipment, decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 2 carcinogens being used and the decontamination and emergency procedures to be followed.

TABLE C–2.—CLASS 2 CARCINOGENS

	Concentration, percent (weight or volume)
Carbon tetrachloride	.1
Ethylenimine	.1
4,4'-Methylene bis(2-chloroaniline)	.1
β-Propiolactone	.1
Vinyl chloride	.1

§ 72.403 Class 3 carcinogens.

Exposure to liquids, solids, or gases containing class 3 carcinogens in concentrations that exceed those listed in Table C–3 shall be controlled by implementation of the following requirements. Exposure to class 3 carcinogens that have PELs on Table B–1 shall also meet the requirements of § 72.100 of this part. Rotation of workers shall not be used to comply with the PEL.

(a) The mine operator shall establish a restricted area where a class 3 carcinogen is found to be above the PEL or STEL or may be anticipated to be above the PEL or STEL.

(b) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing persons of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area or in any area where these items may come into direct contact with the carcinogen.

(d) The restricted area shall be controlled by engineering and administrative measures.

(e) The introduction or removal of any equipment, material, or other items to or from restricted areas, or equipment materials, or other items contaminated with the carcinogen, shall be done in a manner that does not contaminate nonrestricted areas.

(f) Containers of class 3 carcinogens or materials contaminated by them shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(g) For emergency control activities and where direct contact with the carcinogen is possible, miners shall be provided with and wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and

BEST COPY AVAILABLE

pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(h) Prior to the end of the shift and after completion of emergency control activities or any work involving direct contact with the carcinogen, miners shall place protective clothing and equipment in impervious containers for purposes of decontamination and disposal.

(i) After completion of emergency control activities or any work involving direct contact with the carcinogen, miners shall wash hands, forearms, faces and neck before engaging in other activities and shower at the end of the shift.

(j) Written decontamination, disposal, and emergency procedures shall be developed and implemented for the restricted area and process.

(k) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(l) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in maintenance on contaminated equipment, decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 3 carcinogens being used and the decontamination and emergency procedures to be followed.

§ 72.404 Class 4 carcinogens.

Exposure to liquids, solids, or gases containing class 4 carcinogens in concentrations exceeding those listed in Table C-4 or a process listed in Table C-4 shall be controlled by implementation of the following requirements. Exposure to class 4 carcinogens that have PELs on Table B-1 shall also meet the requirements of § 72.100 of this part. Rotation of workers shall not be used to comply with te PEL.

(a) The area where a class 4 carcinogen is processed, packaged, used, handled, or stored shall be restricted to essential personnel.

(b) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instructions shall be posted informing miners of the procedures that must be followed when entering or leaving the restricted area.

(c) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(d) At the beginning of each shift, prior to entering the restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as smocks, coveralls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, and other appropriate personal protection.

(e) Prior to exiting a restricted area, miners shall remove and leave protective clothing and equipment at the point of exit. At the last exit of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination and disposal.

(f) Miners shall wash hands, forearms, face and neck at each exit from a restricted area close to the point of exit and before engaging in other activities.

(g) Miners shall shower upon the last exit of the day.

(h) Containers of class 4 carcinogens shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(i) Written decontamination, disposal and emergency procedures shall be developed and implemented for the restricted area and process.

(j) At least once every 12 months, the mine operator shall monitor to evaluate the continued effectiveness of controls and decontamination procedures, using appropriate instrumentation and methods.

(k) Prior to initial assignment and at least once every 12 months, miners required to enter the restricted area or who are involved in decontamination, disposal, and emergency response shall receive training on the risks and hazards of the class 4 carcinogens being used and the decontamination and emergency procedures to be followed.

§ 72.405 Asbestos construction work.

Exposure to asbestos resulting from asbestos construction shall be controlled by implementation of the following requirements. Exposure to asbestos in these situations shall also meet the requirements of § 72.100 of this part. Rotation of workers shall not be used to comply with the PEL. For purposes of this section, asbestos construction work means construction work such as demolition or salvage of structures where asbestos is present; installation, removal, or encapsulation of asbestos and materials containing greater than 0.1 percent asbestos; spill and emergency cleanup of asbestos and material containing greater than 0.1 percent asbestos; transportation, disposal, storage or containment of asbestos or materials containing greater than 0.1 percent asbestos on the site or location at which construction activities are performed.

(a) The operator shall designate a person to be responsible for the asbestos construction work who will have authority to take prompt corrective action to eliminate hazards. This person shall have had comprehensive training on the hazards of asbestos and asbestos construction work, such as a course conducted by an EPA Asbestos Training Center, or be a certified industrial hygienist (C.I.H.) certified by the

American Board of Industrial Hygiene, or be certified for asbestos construction work by a state program.

(b) The area where asbestos construction work is being done shall be restricted to essential personnel.

(c) Entrances to the restricted area shall be posted with signs stating the nature of the hazard. Appropriate instrucitons shall be posted informing miners of the procedures that must be followed when entering or leaving the restricted area.

(d) Storage or consumption of food, beverages, smoking products, tobacco products, or products for chewing and application of cosmetics shall not be permitted in the restricted area.

(e) At the beginning of each shift, prior to entering a restricted area, miners shall be provided with and wear clean, full-body protective clothing (such as converalls, or long-sleeved shirts and pants), work shoes or shoe covers, gloves, head covers, and other appropriate personal protection.

(f) Prior to existing a restricted area, miners shall remove and leave protective clothing and equipment at the point of exit. At the last exit of the day, miners shall place clothing and equipment in impervious containers at the point of exit for purposes of decontamination or disposal.

(g) Miners shall shower immediately after each exit.

(h)(1) Whenever feasible, the miner operator shall establish negative-pressure enclosures before beginning removal, demolition, or renovation operations.

(2) For small-scale, short-duration activities involving removal of asbestos-containing insulation on pipes, removal of entire and intact asbestos-insulated pipes or structures, and replacement of electrical conduits through or near asbestos-containing material, glove bags and wet methods may be used instead of negative-pressure enclosures.

(i) Daily monitoring shall be conducted in the restricted area if the exposure exceeds the PEL or could reasonably be expected to exceed the PEL. When all workers within a restricted area are equipped with supplied-air respirators operated in the positive-pressure mode, daily monitoring is not required.

(j) Written decontamination, disposal and emergency procedures shall be developed and implemented for the restricted area and process.

(k) Prior to initial assignment and at least once every 12 months, persons required to enter the restricted areas or who are involved in decontamination, disposal, and emergency response shall receive training on the risks and hazards of asbestos and asbestos construction work, as well as the decontamination, disposal, and emergency procedures to be followed.

(l) The mine operator shall notify MSHA at least 20 days prior to beginning asbestos construction work involving—

(1) At least 80 linear meters (260 linear feet) of asbestos or material containing greater than 0.1 percent asbestos on pipes; or

(2) At least 15 square meters (160 square feet) of asbestos or material containing greater than 0.1 percent asbestos on other facility components.

(m) Containers of asbestos and materials containing greater than 0.1 percent asbestos shall be clearly marked and their contents identified. The containers shall be stored in a manner that prevents contamination of restricted or nonrestricted areas.

(n) The introduction or removal of any equipment, material, or other items to or from the restricted area shall be done in a manner that does not contaminate nonrestricted areas.

§ 72.450 Medical surveillance program.

(a) *Establishment.* The mine operator shall develop and implement a written medical surveillance program that shall make available medical examinations to miners who are working with or will be assigned to work with a chemical or process listed on Table C-5. The medical examination shall be provided at the operator's cost and at a reasonable time and place.

(b) *Medical examinations.* (1) Under the medical surveillance program, a medical examination by a licensed physician shall be made available to miners—

(i) Prior to initial assignment;

(ii) At least once every 12 months; and

(iii) At any time a miner is exposed to any carcinogen listed on Table C-5 as a result of an emergency.

(2) The operator shall provide the examining physician with the following information:

(i) The names of chemicals to be used.

(ii) Description of the work to be performed by the miner.

(iii) Duration and frequency of chemical usage.

(iv) Environmental conditions of the intended worksite.

(v) Type of personal protective equipment to be worn by the miner.

(vi) Relevant information from any previous medical examinations of the affected miner that is in the operator's possession.

(3) The mine operator shall require the physician to submit a written report of the miner's condition to the operator. The mine operator shall instruct the physician not to reveal orally, or in the written evaluation, any specific findings or diagnoses unrelated to the miner's exposure to carcinogens.

(4) The mine operator shall inform any miner who refuses to have the medical examination of the possible health consequences of such refusal and shall obtain a signed statement from the miner indicating that the miner understands the risk involved in the refusal to be examined.

(c) *Medical transfer.* (1) Upon notification from the physician that a miner's medical examination shows evidence that the miner has developed cancer or any material impairment of health or functional capacity due to occupational exposure to a carcinogen listed on Table C-5, the miner shall be given the option to work in an area of the mine where there is no exposure to the carcinogen. The operator shall notify the miner in writing of eligibility to exercise the option of medical transfer.

(2) When a miner requests to transfer, the mine operator shall notify the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203, within 15 calendar days from receipt by the operator of the miner's request for transfer. The operator's notice to the Administrator shall include the miner's name, occupation and assignment of new duties including the scheduled date of transfer.

(3) When a miner elects to transfer, the transfer shall take place on or before the 21st calendar day following receipt by the operator of the miner's request. The mine operator shall transfer the miner to an existing position at the same mine. If the miner agrees in writing, the operator may transfer the miner to a different mine.

(4) Any miner transferred under this section shall—

(i) Continue to receive compensation at no less than the regular rate of pay for a miner in the classification held by that miner immediately prior to the transfer.

(ii) Receive wage increases based upon the new work classification.

(d) *Recordkeeping.* (1) The mine operator shall maintain a record of the medical evaluation conducted for each miner. These records shall be kept for the duration of the miner's employment plus 30 years.

(2) Upon request, the operator shall give access to the miner's medical records required by this section to the miner or, with the miner's written consent, to the miner's designated representative. Access shall also be given to authorized representatives of

the Secretary of Labor and the Secretary of the Department of Health and Human Services. Upon termination of employment, miners shall be given a copy of their medical evaluation records. Copies of records shall be provided without cost.

(3) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator. The successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records, the operator shall notify all affected miners of their rights of access to records at least 3 months prior to disposal of the records.

Subpart D—Respiratory Protection

§ 72.500 Respiratory protection program.

When respiratory protection is required by this part, written standard operating procedures shall be developed and implemented that include the requirements of this section.

(a) Only respirators approved under 30 CFR Part 11 shall be used. Respirators shall be maintained in approved condition.

(b) Respirators shall be selected according to the nature of the hazard, the criteria in Tables D–1, D–2 and D–3, the manufacturer's limitations on the respirator, and the characteristics of the work environment, which includes the exposure levels, the period of time the respiratory protection will be worn, and work activities of the employees.

(c) Respirators shall be inspected before each use and after cleaning, sanitizing, and maintenance. Emergency-use respirators shall be inspected monthly with a record kept of the last inspection.

(d) Respirator wearers shall be provided with a clean and sanitized respirator each day. Respirators shall be cleaned and sanitized prior to use by another person. Emergency-use respirators shall be cleaned and sanitized promptly after each use.

(e) Respirators shall be stored in a manner that protects them from damage or contamination. Respirators stored for emergency use shall be accessible to persons who may need to use them.

(f) For respirators with tight-fitting facepieces, a qualitative or quantitative respirator fit test that has been shown by scientific data to be capable of indicating the adequacy of the fit shall be conducted initially and at least once every 12 months thereafter. Respirators failing to provide a satisfactory fit shall not be used. For respirators fitted quantitatively, a minimum ratio of 100 must be obtained. The maximum assigned protection factor allowed for qualitatively-fitted respirators is 10, with the exception of disposable dust/mist respirators which is limited to 5. For respirators fitted quantitatively the assigned protection factor is one-tenth the measured ratio but no greater than the maximum assigned protection factor listed in Tables D–2 and D–3.

(g) A record of the latest fit test for each respirator wearer shall be kept for 1 year or until the next fit test. The record shall include the date the fit test was made, the respirator wearer's name, and the make, model, and size of the respirators tested for which a satisfactory fit was obtained. When quantitative fit testing is conducted, the protection factor assigned to each respirator wearer and tested respirator shall be included in the record.

(h) For respirators with tight-fitting facepieces, negative- and positive-pressure sealing tests or equivalent qualitative sealing tests shall be conducted prior to use. Respirators failing to provide a satisfactory seal shall not be used.

(i) Respirators shall not be used when facial hair comes between the sealing surface of the respirator facepiece and the face.

(j) Respirator wearers, supervisors, and persons issuing or maintaining respirators shall be trained initially and at least once every 12 months thereafter in the selection, use, and maintenance of respiratory devices. The mine operator and the person trained shall both certify that the training was conducted.

(k) When compressors or blowers are used to provide respirable air, they shall be constructed and located to prevent entry of contaminated air into the air supply system. Compressors shall be equipped with in-line air purifying sorbent beds or filters to ensure breathing air quality. Oil-lubricated compressors shall be equipped with a carbon monoxide or high-temperature alarm.

(l) When supplied air, compressed air, or oxygen is provided for respiration, it shall meet the requirements of 30 CFR part 11.

(m) Compressed oxygen shall not be used in atmosphere-supplying respirators or in open-circuit, self-contained breathing apparatus that have previously used compressed air.

TABLE D-1.—OXYGEN-DEFICIENT ATMOSPHERES

Altitude (ft.)	Oxygen-deficient atmospheres	Oxygen-deficient IDLH atmospheres
0–3,000	19.5	16
3,001–4,000	19.5	16.4
4,001–5,000	19.5	17.1
5,001–6,000	19.5	17.8
6,001–7,000	19.5	18.5
7,001–8,000	19.5	19.3
Above 8,000 ft. to 14,000 ft.		19.5

TABLE D-2.—AIR-PURIFYING RESPIRATORS [1]

	Assigned maximum protection factor
Half mask or quarter facepiece	10
Full facepiece	50
Disposable, dust/mist	5
Powered air-purifying:	
Tight-fitting full facepiece	250
Tight-fitting half mask [2]	50
Loose-fitting hood or helmet	25

[1] Air-purifying respirators may not be used in oxygen-deficient or IDLH atmospheres. Air-purifying respirators used for particulate protection against carcinogens shall be equipped with high-efficiency filters.

[2] Only full-facepiece respirators are to be used in contaminant concentrations that produce eye irritation.

TABLE D-3.—ATMOSPHERE-SUPPLYING RESPIRATORS

	Assigned maximum protection factor
Supplied-Air Respirator (SAR) [1]	
Negative pressure (demand):	
Half mask	10
Full facepiece	50
Continuous flow:	
Hood or helmet	25
Half mask	50
Full facepiece	250
Pressure demand:	
Half mask	1,000
Full facepiece	1,000
Combination full facepiece: Pressure demand SAR with auxiliary self-contained air supply	Greater than 1,000, and IDLH, or unknown concentrations.
Self-Contained Breathing Apparatus (SCBA) [2]	
Demand (except for apparatus approved for mine rescue)	50
Demand—approved for mine rescue	Greater than 1,000, and IDLH, or unknown concentrations.
Pressure demand	Greater than 1,000 and IDLH or unknown concentrations.

[1] Any atmosphere-supplying respirator may be used in an oxygen-deficient atmosphere where the oxygen content is below the level listed for an oxygen-deficient atmosphere but above the level listed for oxygen-deficient IDLH atmospheres in Table D–1.

[2] Only a full-facepiece pressure-demand SCBA, combination full-facepiece pressure-demand SAR with auxiliary self-contained air supply or SCBA approved for mine rescue may be used in unknown IDLH or oxygen-deficient IDLH atmospheres listed in Table D–1.

§ 72.550 Medical surveillance program.

(a) *Establishment.* The mine operator shall develop and implement a written medical surveillance program that shall require miners who are or will be assigned to work in an area requiring respiratory protection to receive a medical examination. The medical examination shall be provided at the operator's cost and at a reasonable time and place.

(b) *Medical examinations.* (1) Under the medical surveillance program, miners shall be examined by a licensed physician—

(i) Prior to initial assignment;

(ii) At least once during the period listed in Table D–4; and

(iii) At any time the miner experiences difficulty breathing while being fitted for, or while using, a respirator.

(2) The operator shall provide the examining physician with the following information:

(i) The type of respiratory protection to be used.

(ii) Description of the work effort required.

(iii) Duration and frequency of usage.

(iv) The type of work performed, including any special responsibilities that could affect the safety of other miners, such as firefighting or rescue efforts.

(v) Any special environmental conditions, such as heat or work in confined spaces.

(vi) Relevant additional requirements for protective clothing and equipment.

(vii) Anticipated exposure levels.

(3) The mine operator shall require the physician to submit a written report of the miner's condition to the operator. The mine operator shall instruct the physician not to reveal orally, or in the written evaluation, any specific findings or diagnoses unrelated to the miner's respirator use.

(c) *Medical transfer.* (1) Upon notification from the physician that a miner's medical examination shows evidence that the miner is unable to wear a respirator, the miner shall be transferred to work in an area of the mine where respiratory protection is not required.

(2) When a miner must be transferred under this section, the mine operator shall notify the Administrator, Metal and Nonmetal Mine Safety and Health, MSHA, 4015 Wilson Boulevard, Arlington, Virginia 22203, within 15 calendar days from receipt of the physician's evaluation, that a miner will be transferred. The operator's notice to the Administrator shall include the miner's name, occupation and assignment of new duties including the scheduled date of transfer.

(3) The miner's transfer shall be on or before the 21st calendar day following receipt of the physician's evaluation. The mine operator shall transfer the miner to an existing position at the same mine. If the miner agrees in writing, the operator may transfer the miner to a different mine.

(4) Any miner transferred under this section shall—

(i) Continue to receive compensation at no less than the regular rate of pay for a miner in the classification held by that miner immediately prior to the transfer.

(ii) Receive wage increases based upon the new work classification.

(d) *Recordkeeping.* (1) The mine operator shall maintain a record of the medical evaluation conducted for each miner. These records shall be kept by the operator for 5 years.

(2) Upon request, the operator shall give access to the miner's medical records required by this section to the miner or, with the miner's written consent, to the miner's designated representative. Access shall also be given to authorized representatives of the Secretary of Labor and the Secretary of the Department of Health and Human Services. Upon termination of employment, miners shall be given a copy of their medical evaluation records. Copies of records shall be provided without cost.

(3) Whenever a mine operator is ceasing to do business, the operator shall transfer all records subject to this section to the successor operator. The successor operator shall receive and maintain these records for the period required by this section. Whenever an operator is ceasing to do business and there is no successor operator to receive and maintain the records, the operator shall notify all affected miners of their rights of access to records at least 3 months prior to disposal of the records.

TABLE D-4.—FREQUENCY OF MEDICAL EXAMINATIONS FOR RESPIRATOR USE

	Worker age (years)		
	<35	35–45	>45
Most working conditions requiring respirators.	Every 5 years.	Every 2 years.	Annually.
Strenuous work conditions with SCBA.	Every 3 years.	Every 18 months.	Annually.

Subpart E—Miscellaneous

§ 72.600 Prohibited areas for food and beverages.

No one shall be allowed to consume or store food or beverages in a toilet room or in any area where the food or beverages could be contaminated by a hazardous substance.

§ 72.610 Abrasive Blasting.

(a) *Surface areas.* When an abrasive blasting operation is performed and silica sand or other materials containing more than 1 percent quartz are used as an abrasive substance, all exposed miners shall use supplied-air respirators approved for abrasive blasting in accordance with § 72.500 or the operation shall be performed in a totally enclosed device with the person outside the device.

(b) *Underground areas of underground mines.* Silica sand or other materials containing more than 1 percent quartz shall not be used as an abrasive substance in abrasive blasting.

§ 72.620 Drill dust control at surface mines and surface areas of underground mines.

Holes shall be collared and drilled wet, or other effective dust-control measures shall be used when drilling non-water-soluble material. Effective dust-control measures shall be used when drilling water-soluble materials.

§ 72.630 Drill dust control at underground areas of underground mines.

(a) Dust resulting from drilling in rock shall be controlled by use of permissible dust collectors, or by water, or water with a wetting agent, or by ventilation, or by any other method or device approved by the Secretary that is as effective in controlling the dust.

(b) *Dust collectors.* Dust collectors shall be maintained in permissible and operating condition. Dust collectors approved under Part 33—Dust Collectors for Use in Connection with Rock Drilling in Coal Mines of this title or under Bureau of Mines Schedule 25B are permissible dust collectors for the purpose of this section.

(c) *Water control.* Water used to control dust from drilling rock shall be applied through a hollow drill steel or stem or by the flooding of vertical drill holes in the floor.

(d) *Ventilation control.* To adequately control dust from drilling rock, the air current shall be so directed that the dust is readily dispersed and carried away from the drill operator or any other miners in the area.

Appendix A—Nonmandatory—Work Practices and Engineering Controls for Major Asbestos Removal, Renovation and Demolition Operations

This is a nonmandatory appendix designed to provide guidelines to assist employers in complying with the requirements of § 72.405. Specifically, this appendix describes the equipment, methods, and procedures that should be used in major asbestos-removal projects conducted to abate a recognized asbestos hazard or in preparation for building renovation or demolition. These projects require the construction of negative-pressure temporary enclosures to contain the asbestos material and to prevent the exposure of bystanders and other workers at the worksite. Paragraph (h) of § 72.405 of the standard requires that whenever feasible, the mine operator must establish negative-pressure enclosures before beginning asbestos removal, demolition, or renovation operations. The operator should also be aware that, when conducting asbestos-removal projects, enclosures may be required under the National Emissions Standards for Hazardous Air Pollutants (NESHAPS), 40 CFR part 61, subpart M, or EPA regulations under the Clean Water Act.

Construction of a negative-pressure enclosure is a simple but time-consuming process that requires careful preparation and execution; however, if the procedures below are followed, contractors should be assured of achieving a temporary barricade that will protect workers and others outside the enclosure from exposure to asbestos and minimize to the extent possible the exposure of asbestos workers inside the barrier as well.

The equipment and materials required to construct these barriers are readily available and easily installed and used. In addition to an enclosure around the removal site, the standard requires that workers leave their work clothes at the point of exit and shower immediately after each exit. A recommended facility is described below. The steps in the proces of preparing the asbestos-removal site, building the enclosures, constructing hygiene facilities, removing the asbestos-containing material, and restoring the site include:

(1) Planning the removal project;
(2) Procuring the necessary materials and equipment;
(3) Preparing the work area;
(4) Removing the asbestos-containing material;
(5) Cleaning the work area; and
(6) Disposing of the asbestos-containing waste.

Planning the Removal Project

The planning of an asbestos-removal project is critical to completing the project safely and cost-effectively. A written asbestos-removal plan should be prepared that describes the equipment and procedures that will be used throughout the project. The asbestos abatement plan will aid not only in executing the project but also in complying with the reporting requirements of the USEPA asbestos regulations (40 CFR Part 61, subpart M), which call for specific information such as a description of control methods and control equipment to be used and the disposal sites the contractor proposes to use to dispose of the asbestos-containing materials.

The asbestos abatement plan should contain the following information:

- A physical description of the work area;
- A description of the approximate amount of material to be removed;
- A schedule for turning off and sealing existing ventilation systems;
- Personnel hygiene procedures;
- Labeling procedures;
- A description of personal protective equipment and clothing to be worn by workers;
- A description of the local exhaust ventilation systems to be used;
- A description of work practices to be observed by workers;
- A description of the methods to be used to remove the asbestos-containing material;
- The wetting agent to be used;
- A description of the sealant to be used at the end of the project;
- An air-monitoring plan;
- A description of the method to be used to transport waste materials; and
- The location of the dump site.

Materials and Equipment Necessary for Asbestos Removal

Although individual asbestos-removal projects vary in terms of the equipment required to accomplish the removal of the material, some equipment and materials are common to most asbestos-removal operations. Equipment and materials that should be available at the beginning of each project are (1) rolls of polyethylene sheeting (2) rolls of gray duct tape or clear plastic tape; (3) HEPA-filtered vacuum(s); (4) HEPA-filtered portable ventilation systems; (5) a wetting agent; (6) an airless sprayer; (7) a portable shower unit; (8) appropriate respirators; (9) disposable coveralls; (10) signs and labels; (11) preprinted disposal bags; and (12) a manometer or pressure gauge.

Rolls of Polyethylene Plastic and Tape. Rolls of polyethylene plastic (6 mil in thickness) should be available to construct the asbestos-removal enclosure and to seal windows, doors, ventilation systems, wall penetrations, and ceilings and floors in the work area. Gray duct tape or clear plastic tape should be used to seal the edges of the plastic and to seal any holes in the plastic enclosure. Polyethylene plastic sheeting can be purchased in rolls up to 20 feet in width and up to 100 feet in length.

HEPA-Filtered Vacuum. A HEPA-filtered vacuum is essential for cleaning the work area after the asbestos has been removed. Such vacuums are designed to be used with a HEPA (High-Efficiency Particulate Air) filter, which is capable of removing 99.97 percent of the asbestos particles from the air. Various sizes and capacities of HEPA vacuums are available. All of these models are portable, and all have long hoses capable of reaching out-of-the-way places, such as areas above ceiling tiles and behind pipes.

Exhaust Air Filtration System. A portable ventilation system is necessary to create a negative pressure within the asbestos-removal enclosure. Such units are equipped with a HEPA filter and are designed to exhaust and clean the air inside the enclosure before exhausting it to the outside of the enclosure. The number and capacity of units required to ventilate an enclosure depend on the size of the area to be ventilated.

Wetting Agents. Wetting agents (surfactants) are added to water (which is then called amended water) and used to soak asbestos-containing materials; amended water penetrates more effectively than plain water and permits more thorough soaking of the asbestos-containing materials. Wetting the asbestos-containing material reduces the number of fibers that will break free and become airborne when the asbestos-containing material is handled or otherwise disturbed. Asbestos-containing materials should be thoroughly soaked before removal is attempted; the dislodged material should feel spongy to the touch. Wetting agents are generally prepared by mixing 1 to 3 ounces of wetting agent to 5 gallons of water.

One type of asbestos, amosite, is relatively resistant to soaking, either with plain or amended water. The work practices of choice when working with amosite-containing material are to soak in the material as much as possible and then to bag it for disposal immediately after removal, so that the material has no time to dry and be ground into smaller particles that are more likely to liberate airborne asbestos.

In a very limited number of situations, it may not be possible to wet the asbestos-containing material before removing it. Examples of such rare situations are: (1) Removal of asbestos material from a "live" electrical box that was over-sprayed with the material when the rest of the area was sprayed with asbestos-containing coating; and (2) removal of asbestos-containing insulation from a live steam pipe. In both of these situations, the preferred approach would be to turn off the electricity or steam, to permit wet-removal methods to be used. However, where removal work must be performed during working hours (that is, when normal operations cannot be disrupted), the asbestos-containing material must be removed dry. Immediate bagging is then the only method of minimizing the amount of airborne asbestos generated.

Airless Sprayer. Airless sprayers are used to apply amended water to asbestos-containing materials. Airless sprayers allow the amended water to be applied in a fine spray that minimizes the release of asbestos fibers by reducing the impact of the spray on the materials to be removed. Airless sprayers are inexpensive and readily available.

Portable Shower. Unless the site has available a permanent shower facility that is contiguous to the removal area, a portable shower system is necessary to permit workers to clean themselves after exposure to asbestos and to remove any asbestos contamination from their hair and bodies. Taking a shower prevents workers from leaving the work area with asbestos on their clothes and thus prevents the spread of asbestos contamination to areas outside the asbestos-removal area. This measure also protects members of the families of asbestos workers from possible exposure to asbestos. Showers should be supplied with warm water and a drain. A shower water filtration system to filter asbestos fibers from the shower water is recommended. Portable shower units are readily available, inexpensive, and easy to install and transport.

Respirator. Workers involved in asbestos-removal projects should be provided with appropriate NIOSH-approved respirators. Selection of the appropriate respirator should be based on the concentration of asbestos fibers in the work area. If the concentration of asbestos fibers is unknown, workers should be provided with respirators that will provide protection against the highest concentration of asbestos fibers that can reasonably be expected to exist in the work area. For most work within an enclosure, workers should wear half-mask dual-filter cartridge respirators. Disposable face mask respirators (single-use) should not be used to protect employees from exposure to asbestos fibers.

Disposable Coveralls. Workers involved in asbestos-removal operations should be provided with disposable impervious coverall that are equipped with head and foot covers. The coveralls has a zipper front and elastic wrists and ankles.

Signs and Labels. Before work begins, a supply of signs to demarcate the entrance to the work area should be obtained. The required labels are also commercially available as press-on labels and preprinted on the 6-milpolyethylene plastic bags used to dispose of asbestos-containing waste material.

Preparing the Work Area

Preparation for constructing negative-pressure enclosures should begin with the removal of all movable objects from the work area (for example, desks, chair, rugs, and light fixtures), to ensure that these objects do not become contaminated. When movable objects are contaminated or suspected of being contaminated, they should be vacuumed with a HEPA vacuum and cleaned with amended water, unless they are made of material that will be damaged by the wetting agent; wiping with plain water is recommended in those cases where amended water will damage the object. Before the asbestos-removal work begins, objects that cannot be removed from the work area should be covered with a 6-mil thick polyethylene plastic sheeting that is securely taped with duct tape or plastic tape to achieve an airtight seal around the object.

Constructing the Enclosure

When all objects have either been removed from the work area or covered with plastic, all penetrations of the floor, walls, and ceiling should be sealed with 6-mil polyethylene plastic and tape to prevent airborne asbestos from escaping into areas outside the work area or from lodging in cracks around the penetrations. Penetrations that require sealing are typically found around electrical conduits, telephone wires, and water-supply and drain pipes. A single entrance to be used for access and egress to the work area should be selected, and all other doors and windows should be sealed with tape or be covered with 6-mil polyethylene plastic sheeting and securely taped. Covering windows and unnecessary doors with a layer of polyethylene before covering the walls provides a second layer of protection and saves time in installation because it reduces the number of edges that must be cut and taped. All other surfaces such as support columns, ledges, pipes, and other surfaces should also be covered with polyethylene plastic sheeting and taped before the walls themselves are completely covered with sheeting.

Next a thin layer of spray adhesive should be sprayed along the top of all walls surrounding the enclosed work area, close to the wall-ceiling interface, and a layer of polyethylene plastic sheeting should be stuck to this adhesive and taped. The entire inside surfaces of all wall areas are covered in this manner, and the sheeting over the walls is extended across the floor area until it meets in the center of the area, where it is taped to form a single layer of material encasing the entire room except for the ceiling. A final layer of plastic sheeting is then laid across the plastic-covered floor area and up the walls to a level of 2 feet or so; this layer provides a second protective layer of plastic sheeting over the floor, which can then be removed and disposed of easily after the asbestos-containing material that has dropped to the floor has been bagged and removed.

Building Hygiene and Decontamination Facilities

The standard requires that personal protective equipment be left at the point of exit and the person shower immediately. In addition the movement of equipment, material, and other items to and from the restricted area must be done in a manner that does not contaminate the restricted or nonrestricted areas. This is usually accomplished by the construction of hygiene and decontamination facilities that consist of—

(1) A clean change room;
(2) A shower; and
(3) An equipment room.

The clean change room is an area in which workers remove their street clothes and don their respirators and disposable protective clothing. The clean room should have hooks on the wall or be equipped with lockers for the storage of workers' clothing and personal articles. Extra disposable coveralls and towels can also be stored in the clean change room.

The shower should be contiguous with both the clean and dirty change rooms and should be used by all workers leaving the work area. The shower should also be used to clean asbestos-contaminated equipment and materials, such as the outside of asbestos waste bags and hand tools used in the removal process.

The equipment room (also called the dirty change room) is the area where workers remove their protective coveralls and where equipment that is to be used in the work area can be stored. The equipment room should be lined with 6-mil thick polyethylene plastic sheeting in the same way as was done in the work-area enclosure. Two layers of 6-mil polyethylene plastic sheeting that are not taped together form a double flap or barrier between the equipment room and the work area and between the shower and the clean change room.

When feasible, the clean change room, shower, and equipment room should be contiguous and adjacent to the negative-pressure enclosure surrounding the removal area. In an overwhelming number of cases, hygiene facilities can be built contiguous to the negative-pressure enclosure. In some cases, however, hygiene facilities may have to be located on another floor of the building where removal of asbestos-containing materials is taking place. In these instances, the hygiene facilities can in effect be made to be contiguous to the work area by constructing a polyethylene plastic "tunnel" from the work area to the hygiene facilities. Such a tunnel can be made even in cases where the hygiene facilities are located several floors above or below the work area; the tunnel begins with a double-flap door at the enclosure, extends through the exit from the floor, continues down the necessary number of flights of stairs and goes through a double-flap entrance to the hygiene facilities which have been prepared as described above. The tunnel is constructed of 2-inch by 4-inch lumber or aluminum struts and covered with 6-mil thick polyethylene plastic sheeting.

In the rare instances when there is not enough space to permit any hygiene facilities to be built at the work site, workers should be directed to change into a clean disposable worksuit immediately after exiting the enclosure (without removing their respirators) and to proceed immediately to the shower.

The clean room, shower, and equipment room must be sealed completely to ensure that the sole source of air flow through these areas originates from uncontaminated areas outside the asbestos-removal, demolition, or renovation enclosure. The shower must be drained properly after each use to ensure that contaminated water is not released to uncontaminated areas. If waste is inadvertently released, it should be cleaned up as soon as possible to prevent any asbestos in the water from drying and becoming airborne in areas outside the work area.

Establishing Negative Pressure Within the Enclosure

After construction of the enclosure is completed, ventilation systems should be installed to create a negative pressure within the enclosure with respect to the area outside the enclosure. Such ventilation systems must be equipped with HEPA filters to prevent the release of asbestos fibers to the environment outside the enclosure and should be operated 24 hours per day during the entire project until the final cleanup is completed and the results of final air samples are received from the laboratory. A sufficient amount of air should be exhausted to create a pressure of −0.02 inches of water within the enclosure with respect to the area outside the enclosure.

These ventilation systems should exhaust the HEPA-filtered clean air outside the building in which the asbestos removal, demolition, or renovation is taking place. If access to the outside is not available, the ventilation system can exhaust the HEPA-filtered asbestos-free air to an area within the building that is as far away as possible from the enclosure. Care should be taken to ensure that the clean air is released either to an asbestos-free area or in such a way as not to disturb any asbestos-containing materials.

A manometer or pressure gauge for measuring the negative pressure within the enclosure should be installed and should be monitored frequently throughout all work shifts during which asbestos removal, demolition, or renovation takes place. Several types of manometers and pressure gauges are available for this purpose.

All asbestos-removal, renovation, and demolition operations should have a program for monitoring the concentration of airborne asbestos and worker exposure to asbestos. Area samples should be collected inside the enclosure (approximately four samples for 5000 square feet of enclosure area). At least two samples should be collected outside the work area, one at the entrance to the clean change room and one at the exhaust of the portable ventilation system. In addition, several breathing-zone samples should be collected from those workers who can reasonably be expected to have the highest potential exposure to asbestos. Removing Asbestos Materials.

It is recommended that a competent person be designated to—

(1) Set up the enclosure;

(2) Ensure the integrity of the enclosure;

(3) Control entry to and exit from the enclosure;

(4) Supervise all exposure monitoring required;

(5) Ensure the use of personal protective clothing and equipment;

(6) Ensure that workers are trained in the use of engineering controls, work practices, and personal protective equipment;

(7) Ensure the use of hygiene facilities and the observance of proper decontamination procedures; and

(8) Ensure that engineering controls are functioning properly.

The competent person will generally be a Certified Industrial Hygienist, an industrial hygienist with training and experience in the handling of asbestos, or a person who has such training and experience as a result of on-the-job training and experience.

Ensuring the integrity of the enclosure is accomplished by inspecting the enclosure before asbestos-removal work begins and prior to each workshift throughout the entire period work is being conducted in the enclosure. The inspection should be conducted by locating all areas where air might escape from the enclosure; this is best accomplished by running a hand over all seams in the plastic enclosure to ensure that no seams are ripped and the tape is securely in place.

The competent person should also ensure the unauthorized personnel do not enter the enclosure and that all workers who enter the enclosure use the hygiene facilities and observe the proper decontamination procedures (described below).

Proper work practices are necessary during asbestos removal, demolition, and renovation to ensure that the concentration of asbestos fibers inside the enclosure remains as low as possible. One of the most important work practices is to wet the asbestos-containing material before it is disturbed. After the asbestos-containing material is thoroughly wetted, it should be removed by scraping (as in the case of sprayed-on or troweled-on ceiling material) or removed by cutting the metal bands or wire mesh that support the asbestos-containing material on boilers or pipes. Any residues that remains on the surface of the object from which asbestos is being removed should be wire-brushed and wet-wiped.

Bagging asbestos waste material promptly after its removal is another work practice control that is effective in reducing the airborne concentration of asbestos within the enclosure. Whenever possible, the asbestos should be removed and placed directly into bags for disposal rather than dropping the material to the floor and picking up all of the material when removal is complete. If a significant amount of time elapses between the time that the material is removed and the time it is bagged, the asbestos material is likely to dry out and generate asbestos-laden dust when it is disturbed by people working within the enclosure. Any asbestos-contaminated supplies and equipment that cannot be contaminated should be disposed of in prelabeled bags; items in this category include plastic sheeting, disposable work clothing, respirator cartridges, and contaminated wash water.

A checklist is one of the most effective methods of ensuring adequate surveillance of the integrity of the asbestos-removal enclosure. Such a checklist is shown in Figure A–1. Filling out the checklist at the beginning of each shift in which asbestos removal is being performed will serve to document that all the necessary precautions will be taken during the asbestos-removal work. The checklist contains entries for ensuring that—

- The work area enclosure is complete;
- The negative-pressure system is in operation;
- Necessary signs and labels are used;
- Appropriate work practices are used;
- Necessary protective clothing and equipment are used; and
- Appropriate decontamination procedures are being followed.

Cleaning the Work Area

After all of the asbestos-containing material is removed and bagged, the entire work area should be cleaned until it is free of all visible asbestos dust. All surfaces from which asbestos has been removed should be cleaned by wire-brushing the surfaces, HEPA vacuuming these surfaces, and wiping them with amended water. The inside of the plastic enclosure should be vacuumed with a HEPA vacuum and wet-wiped until there is no visible dust in the enclosure. Particular attention should be given to small horizontal surfaces such as pipes, electrical conduits, lights, and support tracks for drop ceilings. All such surfaces should be free of visible dust before the final air samples are collected.

Additional sampling should be conducted inside the enclosure after the cleanup of the work area has been completed. Approximately four area samples should be collected for each 5,000 square feet of enclosure area. The enclosure should not be dismantled until the final samples show asbestos concentrations of less than 0.1 f/cc. EPA recommends that a clearance level of 0.01 f/cc be achieved before cleanup is considered complete.

A clearance checklist is an effective method of ensuring that all surfaces are adequately cleaned and the enclosure is ready to be dismantled. Figure A–2 shows a checklist that can be used during the final inspection phase of asbestos-abatement, removal, or renovation operations.

Appendix B—Nonmandatory Medical Evaluation Procedures for Respirator Use

This appendix contains recommended elements that should be taken into account during the performance of the required medical evaluation for respirator use. These elements should be evaluated in taking the medical history and performing the medical examination. However, the specific nature of the medical evaluation and the extent of testing performed are left for the responsible physician to determine. This recommended list of elements to be considered is not meant to limit the physician to the testing procedures recommended. The examining physician is free to perform additional tests, if necessary, to determine a person's ability to wear a respirator.

(a) The medical history should include the following:

(1) Previously diagnosed diseases, particularly cardiovascular or respiratory diseases.

(2) Problems associated with breathing during normal work activities.

(3) Past problems with respirator use.

(4) Past and current usage of medication.

(5) Any known physical conditions that may interfere with respirator use.

(6) Previous occupations.

(7) Use of medications whose side effects might affect cardiopulmonary fitness.

(b) The medical examination should assess the following:

(1) Hearing ability. This should be sufficient to ensure communication and response to instructions and alarm systems.

(2) Pulmonary function testing including spirometry for FEV_1 and FVC. Presence and degree of restrictive or obstructive disease or perfusion disorders. In interpreting spirometry, if the FVC is less than 80 percent or the FEV_1 is less than 70 percent, restriction from respirator use should be considered.

(3) Cardiovascular system. Evidence of symptomatic coronary artery disease, significant arrhythmias, occurrence of frequent premature ventricular contraction (PVCs) with elevated pulse rates or uncontrolled hypertension symptoms.

(4) Endocrine system. Conditions that may result in sudden loss of consciousness or response capability.

(5) Neurological system. Inability to perform coordinated movements and conditions affecting response and consciousness.

(6) Psychological condition. Claustrophobia, severe anxiety.

(7) Miscellaneous conditions specific to the work situation. Skin conditions where occlusive materials may result in symptoms or aggravation of a preexisting dermatitis.

(8) Exercise stress. For these workers who use a self-contained breathing apparatus or rebreather-type respirator under strenuous work conditions, or in emergencies, particularly in fire and rescue operations.

Appendix C—Nonmandatory Fit Testing Protocols

I. Isoamyl Acetate Protocol

(a) *Odor threshold screening.* The odor threshold screening test, performed without wearing a respirator, is intended to determine if the individual tested can detect the odor of isoamyl acetate.

(1) Three 1 liter glass jars with metal lids are required.

(2) Odor-free water (for example, distilled or spring water) at approximately 25 degrees C shall be used for the solutions.

(3) The isoamyl acetate (IAA) (also known as isopentyl acetate) stock solution is prepared by adding 1 cc of pure IAA to 800 cc of odor-free water in a 1 liter jar and shaking for 30 seconds. A new solution shall be prepared at least weekly.

(4) The screening test shall be conducted in a room separate from the room used for actual fit testing. The two rooms shall be well ventilated but shall not be connected to the same recirculating ventilation system.

(5) The odor-test solution is prepared in a second jar by placing 0.4 cc of the stock solution into 500 cc of odor-free water using a clean dropper or pipette. The solution shall be shaken for 30 seconds and allowed to stand for 2 to 3 minutes so that the IAA concentration above the liquid may reach equilibrium. This solution shall be used for only 1 day.

(6) A test blank shall be prepared in a third jar by adding 500 cc of odor-free water.

(7) The odor test and test blank jars shall be labeled 1 and 2 for jar identification. Labels shall be placed on the lids so they can be periodically peeled, dried off and switched to maintain the integrity of the test.

(8) The following instruction shall be typed on a card and placed on the table in front of the two test jars (that is, 1 and 2): "The purpose of this test is to determine if you can smell banana oil at a low concentration. The two bottles in front of you contain water. One of these bottles also contains a small amount of banana oil. Be sure the covers are on tight, then shake each bottle for two seconds. Unscrew the lid of each bottle, one at a time, and sniff at the mouth of the bottle. Indicate to the test conductor which bottle contains banana oil."

(9) The mixtures used in the IAA odor detection test shall be prepared in an area separate from where the test is performed, in order to prevent olfactory fatigue in the subject.

(10) If the test subject is unable to correctly identify the jar containing the odor-test solution, the IAA qualitative fit test shall not be performed.

(11) If the test subject correctly identifies the jar containing the odor-test solution, the test subject may proceed to respirator selection and fit testing.

(b) *Isoamyl acetate fit test.* (1) The fit-test chamber shall be similar to a clear 55-gallon drum liner suspended inverted over a 2-foot diameter frame so that the top of the chamber is about 6 inches above the test subject's head. The inside top center of the chamber shall have a small hook attached.

(2) Each respirator used for the fitting and fit testing shall be equipped with organic vapor cartridges or offer protection against organic vapors. The cartridges or masks shall be changed at least weekly.

(3) After selecting, donning, and properly adjusting a respirator, the test subject shall wear it to the fit-testing room. This room shall be separate from the room used for odor threshold screening and respirator selection, and shall be well ventilated, as by an exhaust fan or lab hood, to prevent general room contamination.

(4) A copy of the test exercises and any prepared text from which the subject is to read shall be taped to the inside of the test chamber. The tests shall include the following:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that the subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(vi) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those tests environments such as shroud-type QLFT units that prohibit bending at the waist.

(5) Upon entering the test chamber, the test subject shall be given a 6-inch by 5-inch piece of paper towel, or other porous, absorbent, single-ply material, folded in half and wetted with 0.75 cc of pure IAA. The test subject shall hang the wet towel on the hook at the top of the chamber.

(6) Allow 2 minutes for the IAA test concentration to stabilize before starting the fit-test exercises. This would be an appropriate time to talk with the test subject; to explain the fit test, the importance of cooperation, and the purpose for the head exercises; or to demonstrate some of the exercises.

(7) If at any time during the test, the subject detects the banana-like odor of IAA, the test has failed. The subject shall quickly exit from the test chamber and leave the test area to avoid olfactory fatigue.

(8) If the test has failed, the subject shall return to the selection room and remove the respirator, repeat the odor-sensitivity test, select and put on another respirator, return to the test chamber and again begin the procedure described in (4) (i) through (vii) above. The process continues until a respirator that fits well has been found. Should the odor-sensitivity test be failed, the subject shall wait about 5 minutes before retesting. Odor sensitivity will usually have returned by this time.

(9) When a respirator is found that passes the test, its efficiency shall be demonstrated for the subject by having the subject break the face seal and take a breath before exiting the chamber.

(10) When the test subject leaves the chamber, the subject shall remove the saturated towel and return it to the person conducting the test. To keep the test area from becoming contaminated, the used towels shall be kept in a self-sealing bag so there is no significant IAA concentration build-up in the test chamber during subsequent tests.

II. Saccharin Solution Aerosol Protocol

The saccharin solution aerosol QLFT protocol is the only currently available, validated test protocol for use with particulate disposable dust respirators not equipped with high-efficiency filters. The entire screening and testing procedure shall be explained to the test subject prior to the conduct of the screening test.

(a) *Taste threshold screening.* The saccharin taste threshold screening, performed without wearing a respirator, is intended to determine whether the individual being tested can detect the taste of saccharin.

(1) During threshold screening as well as during fit testing, subjects shall wear an enclosure about the head and shoulders that is approximately 12 inches in diameter by 14 inches tall with at least the front portion clear and that allows free movements of the head when a respirator is worn. An enclosure substantially similar to the 3M hood assembly, parts # FT 14 and # FT 15 combined, is adequate.

(2) The test enclosure shall have a ¾-inch hole in front of the test subject's nose and mouth area to accommodate the nebulizer nozzle.

(3) The test subject shall don the test enclosure. Throughout the threshold screening test, the test subject shall breathe with the mouth wide open and the tongue extended.

(4) Using a DeVilbiss Model 40 Inhalation Medication Nebulizer the test conductor shall spray the threshold check solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the fit-test-solution nebulizer.

(5) The threshold check solution consists of 0.83 grams of sodium saccharin USP in 1 cc of warm water. It can be prepared by putting 1 cc of the fit-test solution (see (b)(5) below) in 100 cc of distilled water.

(6) To produce the aerosol, the nebulizer bulb is firmly squeezed so that it collapses completely, then released and allowed to fully expand.

(7) Ten squeezes are repeated rapidly and then the test subject is asked whether the saccharin can be tasted.

(8) If the first response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(9) If the second response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(10) The test conductor will take note of the number of squeezes required to solicit a taste response.

(11) If the saccharin is not tasted after 30 squeezes (step 10), the test subject may not perform the saccharin fit test.

(12) If a taste response is elicited, the test subject shall be asked to take note of the taste for reference in the fit test.

(13) Correct use of the nebulizer means that approximately 1 cc of liquid is used at a time in a the nebulizer body.

(14) The nebulizer shall be thoroughly rinsed in water, shaken dry, and refilled at least each morning and afternoon or at least every four hours.

(b) *Saccharin solution aerosol fit test procedure.* (1) The test subject may not eat, drink (except plain water), or chew gum for 15 minutes before the test.

(2) The fit test uses the same enclosure described in (a) above.

(3) The test subject shall don the enclosure while wearing the respirator selected. Respirators shall be properly adjusted and equipped with particulate filters.

(4) A second DeVilbiss Model 40 Inhalation Medication Nebulizer is used to spray the fit-test solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the screening test solution nebulizer.

(5) The fit-test solution is prepared by adding 83 grams of sodium saccharin to 100 cc of warm water.

(6) As before, the test subject shall breathe through the wide open mouth with tongue extended.

(7) The nebulizer is inserted into the hole in the front of the enclosure and the fit-test solution is sprayed into the enclosure using the same number of squeezes required to elicit a taste response in the screening test.

(8) After generating the aerosol, the test subject shall be instructed to perform the following:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(vi) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those tests environments such as shroud-type QLFT units that prohibit bending at the waist.

(9) Every 30 seconds the aerosol concentration shall be replenished using one-half the number of squeezes as initially.

(10) The test subject shall indicate to the test conductor if at any time during the fit test the taste of saccharin is detected.

(11) If the taste of saccharin is detected, the fit is deemed unsatisfactory and a different respirator shall be tried.

III. Irritant Fume Protocol

(a) *Screening procedures.* (1) The respirator to be tested shall be equipped with high-efficiency particulate air (HEPA) filters.

(2) The test subject shall be allowed to smell a weak concentration of the irritant smoke before the respirator is donned to become familiar with its characteristic odor and to determine if the individual is responsive to the smoke.

(b) *Irritant fume fit-test procedures.* (1) Break both ends of a ventilation smoke tube containing stannic oxychloride, such as the MSA part No. 5445, or equivalent. Attach one end of the smoke tube to a low-flow air pump set to deliver 200 milliliters per minute.

(2) Advise the test subject that the smoke can be irritating to the eyes and instruct the subject to keep the eyes closed while the test is performed.

(3) The test conductor shall direct the stream of irritant smoke from the smoke tube towards the face seal area of the test subject. The test conductor shall begin at least 12 inches from the facepiece and gradually move to within 1 inch, moving around the whole perimeter of the mask. Alternatively, the test may be conducted in a tent as described in the isoamyl fit-test protocol. The irritant smoke should be introduced through a small hole in the tent until a light, visible concentration of irritant smoke is observed.

Throughout the test, additional smoke should be introduced to maintain the concentration.

(4) The following exercises shall be performed by the test subject while the respirator seal is being challenged by the smoke:

(i) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(ii) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution against hyperventilation.

(iii) Turning head side to side. Standing in place, the subject shall slowly turn the head from side to side between the extreme positions of each side. The head shall be held at each extreme momentarily so that subject can inhale at each side.

(iv) Moving head up and down. Standing in place, the subject shall slowly move the head up and down. The subject shall be instructed to inhale in the up position (that is, when looking toward the ceiling).

(v) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage, count backward from 100, or recite a memorized poem or song.

(vi) Grimace. The test subject shall grimace by smiling or frowning.

(vii) Bending over. The test subject shall bend at the waist as if to touch the toes. Jogging in place shall be substituted for this exercise in those test environments such as shroud-type QLFT units that prohibit bending at the waist.

(5) Each test subject passing the smoke test without evidence of a response shall be given a sensitivity check of the smoke from the same tube once the respirator has been removed to determine whether the person reacts to the smoke. Failure to evoke a response shall void the fit test.

(6) The fit test shall be performed in a location with exhaust ventilation sufficient to prevent general contamination of the testing area by the test agent.

PART 75—[AMENDED]

G. It is proposed to amend 30 CFR part 75 as follows:

1. The authority citation for part 75 is revised to read as follows:

Authority: 30 U.S.C. 801–961.

§ 75.301–2 [Amended]

2. Section 75.301–2 is removed.

PART 90—[AMENDED]

H. It is proposed to amend 30 CFR part 90 as follows:

1. The authority citation for part 90 is revised to read as follows:

Authority: 30 U.S.C. 811 and 813(g).

2. A new § 90.302 is added to subpart D to read as follows:

§ 90.302 Respiratory protection; respirable dust.

Respiratory equipment approved for protection against respirable dust under 30 CFR part 11 shall be provided to and properly worn by all persons exposed to concentrations of respirable dust in excess of the levels required to be maintained under this part 90. Use of respirators shall not be substituted for environmental control measures in active workings. Use of respirators under this section shall be in accordance with Subpart D—Respiratory Protection of part 72 of this chapter.

National Register of Historic Places Annual Update of Properties Removed and Determined Eligible

The National Register of Historic Places is the official list of the Nation's cultural resources worthy of preservation. Properties listed in the National Register include districts, sites, buildings, structures, and objects that are significant in American history, architecture, archeology, engineering, and culture. Authorized under the National Historic Preservation Act of 1966, as amended (80 Stat. 915, 16 U.S.C. 470 et seq.), the National Register is part of a national program to coordinate and support public and private efforts to identify, evaluate, and protect our historic and archeological resources. The National Register is administered by the National Park Service under the Secretary of the Interior.

It is the purpose of this notice, through publication of the information included herein, to apprise the public, as well as governmental agencies, associations and all other organizations and individuals interested in historic preservation, of the properties removed from the National Register and determined eligible for the National Register between October 1, 1987 and September 30, 1988.

A cumulative list of the more than 50,000 properties listed in the National Register is available through the American Association of State and Local History, 172 Second Avenue North, Nashville, TN 37201.

For more information contact the National Register at (202) 343–5726 or write to the National Register Reference Desk at the following address: US Department of the Interior, National Park Service, Interagency Resources Division, National Register of Historic Places, P.O. Box 37127, Washington, DC 20013–7127.

James M. Ridenour,

Director, National Park Service.

Dated: July 20, 1989.

Listed properties removed from the National Register.

West Central WV Community Action Assoc., Inc. (Downtown Parkersburg MRA), 804 Ann St., Parkersburg, 2/19/88, 82001794

Properties Determined Eligible for the National Register

The following properties were determined to be eligible in fiscal year 1988 for inclusion in the National Register of Historic Places. Most determinations of eligibility are made at the request of the concerned federal agency under the authority in section 2(b) and 1(3) of Executive Order 11593, and the National Historic Preservation Act of 1966, as amended, and on nominations for privately owned properties when the owner, or in the case of properties with multiple owners, a majority of owners, object to listing.

Historic properties that are determined to be eligible for inclusion in the National Register of Historic Places are entitled to protection pursuant to section 106 of the National Historic Preservation Act of 1966, as amended, and the procedures of the Advisory Council on Historic Preservation, 36 CFR Part 800. Before an agency of the federal government may undertake any project that may have an affect on such an eligible property, the Advisory Council on Historic Preservation will be given an opportunity to comment on the proposal.

Properties determined eligible for the National Register because of owner objections.

21 CFR Part 81

Provisional Listing of FD&C Red No. 3 in Cosmetics and Externally Applied Drugs and of Its Lakes in Food, Drugs, and Cosmetics; Postponement of Closing Date; Final Rule

---

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 81

[Docket No. 76N-0366]

Provisional Listing of FD&C Red No. 3 in Cosmetics and Externally Applied Drugs and of its Lakes in Food, Drugs, and Cosmetics; Postponement of Closing Date

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is postponing the closing date for the provisional listing of FD&C Red No. 3 for use in coloring cosmetics and externally applied drugs and of the lakes of this color additive for use in coloring food, drugs, and cosmetics. The new closing date for the provisional listing of this color additive will be October 30, 1989. This postponement will permit the uninterrupted use of this color additive and its lakes while FDA prepares appropriate **Federal Register** documents to announce the agency's decision on the regulatory status of this color additive and its lakes.

DATES: Effective August 29, 1989; the new closing date for FD&C Red No. 3 and its lakes will be October 30, 1989.

FOR FURTHER INFORMATION CONTACT: Gerad L. McCowin, Center for Food Safety and Applied Nutrition (HFF-330), Food and Drug Administration, 200 C Street SW., Washington, DC 20204, 202-472-5676.

SUPPLEMENTARY INFORMATION: Under title II of the Color Additive Amendments of 1960 (the transitional provisions) (Pub. L. 86-618, sec. 203 (21 U.S.C. 376, note)), FDA is authorized to postpone the closing date of the provisional listing of a color additive. The standard for issuing such postponements is well established: "Such postponements must be consistent with the public health, and the Commissioner must judge that the scientific investigations are going forward in good faith and will be completed as soon as reasonably practicable." (*McIlwain* v. *Hayes*, 690 F. 2d 1041, 1047 (D.C. Cir. 1982) and *Public Citizen* v. *Young*, 831 F. 2d 1108, 1122 (D.C. Cir. 1987)).

In the **Federal Register** of August 30, 1988 (53 FR 33147), FDA proposed to postpone the closing date for FD&C Red No. 3. FDA proposed the postponement to allow the agency time to complete its evaluation of new data submitted by the Certified Color Manufacturers' Association (CCMA). The postponement was intended to allow the agency to complete its evaluation of the sale and use data on FD&C Red No. 3, to make a final decision with respect to the status of FD&C Red No. 3 under the color additive amendments, and to prepare the appropriate **Federal Register** documents for the regulation of this color additive. In the **Federal Register** of October 28, 1988 (53 FR 43685), FDA published a final rule to establish a closing date for FD&C Red No. 3 of June 30, 1989.

Thereafter, in the **Federal Register** of June 30, 1989 (54 FR 27646), FDA published a final rule postponing the June 30, 1989, closing date for the provisional listing of FD&C Red No. 3 for use in coloring cosmetics and externally applied drugs and of the lakes of this color additive for use in coloring food, drugs, and cosmetics. That final rule established a new closing date of August 29, 1989. FDA postponed the June 30, 1989, closing date to August 29, 1989, to provide the agency with sufficient time to prepare the **Federal Register** documents setting forth the agency's decision on the regulatory status of the color additive and its lakes.

Due to the complexity of the issues to be addressed in resolving the regulatory status of FD&C Red No. 3 and its lakes, the agency needs additional time to finalize the **Federal Register** documents articulating the agency's decision. Accordingly, FDA is now postponing the closing date for FD&C Red No. 3 and its lakes to October 30, 1989, by publication of this final rule. Accordingly, the order set forth below would amend 21 CFR 81.1(a) and 81.27(d) to postpone the closing date to October 30, 1989, to provide sufficient time for the agency to take final action in this matter.

The agency believes that postponement of the closing date for the provisionally listed uses of FD&C Red No. 3 and its lakes is appropriate and consistent with the standard for issuing such postponements. In particular, FDA believes that the continued use of these color additives for an additional period not to exceed 60 days will not pose a hazard to the public health. To the extent that there are risks from the use of FD&C Red No. 3 and its lakes, these risks result from chronic exposure to the color additive. Thus, a postponement of the closing date of no more than 60 days will not have any measurable effect on the public health. In addition, the agency has completed its review of the scientific data and will complete the **Federal Register** documents announcing the agency's decision as soon as practicable. These actions represent the final steps of the agency's evaluation of the investigations on the safety of the provisionally listed uses of FD&C Red No. 3. Accordingly, this brief postponement of the closing date for FD&C Red No. 3 and its lakes is consistent with the standard articulated in *McIlwain* v. *Hayes*, supra, and *Public Citizen* v. *Young*, supra.

The agency has determined under 21 CFR 25.24(a)(8) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

FDA has determined that extending the provisional listing of these color additives requires no change in the current industry practice concerning the manufacture or use of these ingredients.

Therefore, FDA certifies, in accordance with section 605(b) of the Regulatory Flexibility Act, that no significant economic impact on a substantial number of small entities would derive from this action. Further, the economic effects of this final rule have been analyzed and it has been determined that it is not a major rule as defined in Executive Order 12291.

List of Subjects in 21 CFR Part 81

Color additives, Cosmetics, Drugs.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR Part 81 is amended as follows:

PART 81—GENERAL SPECIFICATIONS AND GENERAL RESTRICTIONS FOR PROVISIONAL COLOR ADDITIVES FOR USE IN FOODS, DRUGS, AND COSMETICS

1. The authority citation for 21 CFR Part 81 continues to read as follows:

Authority: Secs. 701, 706, 52 Stat. 1055-1056 as amended, 74 Stat. 399-407 as amended (21 U.S.C. 371, 376); Title II, Pub. L. 86-618; sec. 203, 74 Stat. 404-407 (21 U.S.C. 376, note); 21 CFR 5.10.

§ 81.1 [Amended]

2. Section 81.1 Provisional lists of color additives is amended in the table of paragraph (a) by revising the closing date, both places it appears, for the entry "FD&C Red No. 3" to read "October 30, 1989".

§ 81.27 [Amended]

3. Section 81.27 Conditions of provisional listing is amended in the table, appearing in the introductory text of paragraph (d), by revising the closing date for the entry "FD&C Red No. 3" to read "October 30, 1989".

Dated: August 25, 1989.

Frank E. Young,

Commissioner of Food and Drugs.

Department of Energy

Office of the Secretary

Public Hearings to Solicit Views From Public Officials and the General Public on the Development of a National Energy Strategy; Notice

DEPARTMENT OF ENERGY

Office of the Secretary

Public Hearings to Solicit Views From Public Officials and the General Public on the Development of a National Energy Strategy

AGENCY: Office of the Secretary, DOE.

ACTION: Notice of Meetings to invite public officials and the general public to provide comments on the development of a National Energy Strategy.

SUMMARY: This is the fifth in a series of public hearings being conducted throughout the country by the Department of Energy soliciting comments from interested parties on a wide range of energy issues and recommended solutions.

DATES: The public hearing is scheduled for September 8, 1989, from 9:00 a.m. to 5:30 p.m., at the Kentucky Center for the Arts, 5 River Front Plaza, Louisville, Kentucky. Individuals interested in testifying at this hearing should contact William H. Hatch, Office of Policy, Planning and Analysis, Department of Energy at (202) 586-4767 no later than 4:00 p.m., Friday, September 1, 1989. Persons wishing to submit testimony for the record in conjunction with this hearing should forward written comments to William H. Hatch, Office of Policy, Planning and Analysis, Department of Energy, Forrestal Building, Room 7H-034, 1000 Independence Avenue SW., Washington, DC 20585. All testimony received will be compiled and made available to the public.

FOR FURTHER INFORMATION CONTACT: For further information, please write or call William H. Hatch, Office of Policy, Planning and Analysis, Department of Energy, Forrestal Building, Room 7H-034, 1000 Independence Avenue, SW, Washington, DC 20585, (202) 586-4767.

Vito Stagliano,

Acting Deputy Under Secretary, Office of Policy, Planning and Analysis, U.S. Department of Energy.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's **List of Public Laws.**

Last List August 22, 1989

CFR CHECKLIST

This checklist, prepared by the Office of the Federal Register, is published weekly. It is arranged in the order of CFR titles, prices, and revision dates.

An asterisk (*) precedes each entry that has been issued since last week and which is now available for sale at the Government Printing Office.

New units issued during the week are announced on the back cover of the daily **Federal Register** as they become available.

A checklist of current CFR volumes comprising a complete CFR set, also appears in the latest issue of the LSA (List of CFR Sections Affected), which is revised monthly.

The annual rate for subscription to all revised volumes is $620.00 domestic, $155.00 additional for foreign mailing.

Order from Superintendent of Documents, Government Printing Office, Washington, DC 20402. Charge orders (VISA, MasterCard, or GPO Deposit Account) may be telephoned to the GPO order desk at **(202) 783-3238** from 8:00 a.m. to 4:00 p.m. eastern time, Monday—Friday (except holidays).

Title	Price	Revision Date

[1] Because Title 3 is an annual compilation, this volume and all previous volumes should be retained as a permanent reference source.

[2] No amendments to this volume were promulgated during the period Jan. 1, 1988 to Dec. 31, 1988. The CFR volume issued January 1, 1988, should be retained.

[3] No amendments to this volume were promulgated during the period Jan. 1, 1987 to Dec. 31, 1988. The CFR volume issued January 1, 1987, should be retained.

[4] The July 1, 1985 edition of 32 CFR Parts 1–189 contains a note only for Parts 1–39 inclusive. For the full text of the Defense Acquisition Regulations in Parts 1–39, consult the three CFR volumes issued as of July 1, 1984, containing those parts.

[5] No amendments to this volume were promulgated during the period July 1, 1986 to June 30, 1988. The CFR volume issued as of July 1, 1986, should be retained.

[6] The July 1, 1985 edition of 41 CFR Chapters 1–100 contains a note only for Chapters 1 to 49 inclusive. For the full text of procurement regulations in Chapters 1 to 49, consult the eleven CFR volumes issued as of July 1, 1984 containing those chapters.

Public Papers

Herbert Hoover
Harry S Truman
Dwight D. Eisenhower
John F. Kennedy

Briefings on How To Use the Federal Register
For information on briefings in Washington, DC, and Atlanta, GA, see announcement on the inside cover of this issue.

BEST COPY AVAILABLE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

ATLANTA, GA

WHEN: September 20; at 9:00 a.m.
WHERE: Room 808, 75 Spring Street, SW.

Rules and Regulations

Federal Register
Vol. 54, No. 167
Wednesday, August 30, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 917

[Docket No. FV-89-058FR]

Pears, Plums and Peaches Grown in California; Modification of Pack Requirements for Plums for the 1989 Season

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Final rule.

SUMMARY: The Department is adopting as a final rule the provisions of an interim final rule which relaxed pack requirements established for California plums. The interim final rule authorized an additional container size for the 1989 season. The continued relaxation permits the shipment of plums packed in 24-pound as well as 28-pound net weight, loose-filled or tight-filled packages for the 1989 season. This smaller container provides handlers with additional marketing flexibility during the 1989 marketing year.

DATES: This final rule becomes effective August 30, 1989.

FOR FURTHER INFORMATION CONTACT: George J. Kelhart, Marketing Order Administration Branch, F&V, AMS, Room 2525-S, P.O. Box 96456, Washington, D.C. 20090-6456; telephone (202) 475-3919.

SUPPLEMENTARY INFORMATION: This final rule is issued under Marketing Agreement and Marketing Order No. 917 [7 CFR part 917], both as amended, regulating the handling of fresh pears, plums and peaches grown in California, hereinafter referred to as the order. The agreement and order are effective under the Agricultural Marketing Agreement Act of 1937, as amended [7 U.S.C. 601-674], hereinafter referred to as the Act.

This final rule has been reviewed under Executive Order 12291 and Departmental Regulation 1512-1, and has been determined to be a "non-major" rule under criteria contained therein.

Pursuant to requirements set forth in the Regulatory Flexibility Act (RFA), the Administrator of the Agricultural Marketing Service (AMS) has considered the economic impact of this action on small entities.

The purpose of the FRA is to fit regulatory actions to the scale of business subject to such actions in order that small businesses will not be unduly or disproportionately burdened. Marketing orders issued pursuant to the Act, and rules issued thereunder, are unique in that they are brought about through group action of essentially small entities acting on their own behalf. Thus, both statutes have small entity orientation and compatability.

There are approximately 390 handlers of plums subject to regulation under the order (7 CFR part 917), and there are approximately 1,500 producers in the regulated areas. Small agricultural producers have been defined by the Small Business Administration (13 CFR 121.2) as those having gross annual revenues for the last three years of less than $500,000. Small agricultural firms are defined as those whose gross annual receipts are less than $3,500,000. The majority of handlers and producers of California plums may be classified as small entities.

Shipments of California plums are regulated by container and pack under Plum Regulation 17 [7 CFR 917.454]. Based on an interim final rule published in the **Federal Register** on June 9, 1989 (54 FR 24667), an additional container size was authorized for the 1989 season. That container holds 24 pounds, net weight, of plums. Interested persons were invited to submit comments to the interim final rule until July 10, 1989. Four comments were received favoring the interim rule from: Mr. Clifford A. Kemper, an attorney representing Gerawan Co., Inc., a plum producer/handler in Reedley, California; Mr. Dan J. Gerawan, of Gerawan Co., Inc., Mr. Jay Liotta, Head Produce Buyer for the Grand Union Company in Wayne, New Jersey; and Mr. James A. Moody, Coordinator of the Farmers Alliance for Improved Regulation, in Washington, D.C. No comments were received opposing the rule.

This final rule is based on information provided by the Plum Commodity Committee (committee) from comments received, and other available information.

Inspected shipments of California plums for the 1988 season totalled approximately 15,250,000 28-pound equivalent packages, and were marketed primarily in the fresh market. Inspected shipments of plums during the 1989 season are expected to total slightly more than 14 million 28-pound equivalent packages.

Paragraph (a)(5) of § 917.454 specifies that each package or container of loose-filled or tight-filled plums other than bulk bin containers, master containers of consumer packages, and individual consumer packages shall bear on one outside end in plain sight and in plain letters, the words "28 pounds net weight." Because these regulations do not change substantially from season to season, they have been issued on a continuing basis subject to amendment, modification, or suspension as approved by the Secretary.

In meetings on May 3, and May 24, 1989, the committee considered a request from a handler to test market plums packed in 24-pound net weight, volume-filled containers which were 5¾ inches deep. The handler indicated that a market existed for plums sold in these containers. The 28-pound net weight containers currently in use are generally 6½ inches deep. The 24-pound container is the same length and width as the larger container and is used for shipping plums packed in molded forms (tray-packs). According to the handler, an individual buyer preferred the smaller containers, volume filled, because the buyer could ripen and display the fruit without moving the fruit from packing to display containers. Thus, handling costs were reduced. The buyer also contended that, because some peaches and nectarines were packed in the smaller containers, similar use of smaller containers for plums enhanced the display of summer fruit in the buyer's stores and thus increased sales.

At both meetings, some committee members opposed the use of the smaller 24-pound net weight container because they believed such containers could cause confusion in the marketplace. They believed this would defeat the purpose of having one standard 28-pound net weight container. Also,

---

previous research showed that less fruit

above for the 1989 season would not

Pursuant to 5 U.S.C. 553, it is also

"Notice of Expiration of Insurance," and

Federal action significantly affecting the

NATIONAL AERONAUTICS AND

previous research showed that less fruit bruising occurred in the 28-pound net weight container. In addition, some members believed that approval of this handler's request would set a precedent and could require approval of future requests for different net-weight containers. Further, it was indicated that the 5¾ inch deep containers would limit the handler to using smaller sized fruit because larger fruit would either not fit in the small container or would be bruised during packaging or shipment. Other members indicated that the request to market fruit in a 24-pound net weight container should be approved if sales of fruit could be increased. One member was of the opinion that the use of a 24-pound net weight container would not cause confusion in the marketplace. It was suggested that information on the 24-pound pack was needed from other retailers.

A representative of the handler who requested the use of the 24-pound net weight container attended the May 24, 1989, meeting of the committee, and a representative of the retailer who wished to purchase fruit in that container attended both the May 3 and 24, 1989 meetings. The handler indicated that the 24-pound net weight container would be used only in shipments to the one buyer. The handler further indicated that the quantity expected to be shipped would be approximately 1 percent of total industry plum shipments during the 1989 season. Thus, the handler and retailer both felt that there was little possibility of confusion in the marketplace caused by the use of another weight container. Most members agreed that additional marketing research on the 24-pound net weight container would be helpful in making a recommendation on the use of that shipping container in the future. The committee voted to authorize a study of the marketing effects of the smaller containers and of buyer interest before shipments were authorized. At both meetings, the committee voted to not recommend the use of the 24-pound net weight container.

The Department carefully considered the votes of the committee, the differing viewpoints of the individual committee members, and other information. The Department believed, and continues to believe, that handlers should be permitted to take advantage of marketing outlets which desire 24-pound net weight containers of plums during the 1989 season, while the committee conducts its study evaluating the effects of using such containers. Moreover, the Department believed that the limited use of the smaller container as discussed above for the 1989 season would not disrupt the market.

The Department also believes that continued approval of the 24-pound net weight container for the remainder of the 1989–90 season will not necessarily result in additional handler requests for different sized containers with net weights other than 24 and 28 pounds. The 1989 season is more than 50 percent completed and a proliferation of handler requests for other sized or weight containers has not resulted. The four commenters favoring relaxation of the container requirements agreed that the action would reduce handling costs, reduce bruising and shrinkage of the plums marketed, and not cause confusion in the marketplace. Mr. Moody further indicated that markets, handlers, sellers, and consumers would benefit from the widest possible diversity and choice of containers.

The interim final rule adopted the relaxed container requirements on an experimental basis for the 1989 season. Mr. Kemper requested that the relaxation be issued on a continuing basis. However, the Department believes that the committee should evaluate the market effects of and buyer interest in the 24-pound container and then decide if recommendation of such a relaxation is warranted on a continuing basis. Such evaluation by the committee should be conducted at the conclusion of the 1989 shipping season. Any positive recommendations, including recommendations that the regulation be effective on a continuing basis, will be considered at that time.

In view of the above, it is the Department's view that the continued application of this change in container requirements for the remainder of the 1989 season will provide additional marketing opportunities and should not disrupt the marketplace. Thus, the revision of paragraph (a)(5) of § 917.454, allowing the shipment of plums in 24-pound net weight, volume-filled containers for the 1989 marketing season should continue in effect.

Based on available information, the Administrator of the AMS has determined that this final rule will not have a significant economic impact on a substantial number of small entities.

After consideration of all relevant information presented, including the committee's recommendation, the comments received, and other information, it is found that the modification of the container requirements, as hereinafter set forth, will tend to effectuate the declared policy of the Act.

Pursuant to 5 U.S.C. 553, it is also found and determined that good cause exists for not postponing the effective date of this action until 30 days after publication in the **Federal Register** because: (1) Shipments of the 1989/90 plum crop are more than 50 percent complete; (2) this action gives handlers the opportunity to use a smaller net-weight container to meet buyer preferences for the remainder of the 1989 season; (3) this action adopts, without change, the interim final rule in effect since June 5, 1989 (54 FR 24668); and (4) no useful purpose would be served by delaying the effective date of the changed requirements.

List of Subjects in 7 CFR Part 917

California, Marketing agreements and orders, Peaches, Pears, Plums.

For the reasons set forth in the preamble, 7 CFR part 917 is amended as follows:

Note: This section will not appear in the *Code of Federal Regulations.*

PART 917—FRESH PEARS, PLUMS AND PEACHES GROWN IN CALIFORNIA

1. The authority citation for 7 CFR part 917 continues to read as follows:

Authority: Secs. 1–19, 48 Stat. 31, as amended; 7 U.S.C. 601–674.

2. Accordingly, the interim final rule amending the provisions of 7 CFR part 917, published in the **Federal Register** on June 9, 1989 (54 FR 24667–24668), is adopted as a final rule.

Dated: August 25, 1989.

William J. Doyle,

Acting Deputy Director, Fruit and Vegetable Division.

[FR Doc. 89–20429 Filed 8–29–89; 8:45 am]

BILLING CODE 3410–02–M

Farmers Home Administration

7 CFR Part 1806

Elimination of Obsolete Insurance Expiration Notice Forms

AGENCY: Farmers Home Administration, USDA.

ACTION: Final rule.

SUMMARY: The Farmers Home Administration (FmHA) is amending its Real Property Insurance regulation. FmHA recently appointed a taskforce to evaluate all of the Agency's forms and make recommendations for elimination of unnecessary and/or obsolete forms. Two of the forms recommended for elimination are Form FmHA 426–3, "Notice of Expiration of Insurance," and Form FmHA 426–7, "Insurance Binder." The intended effect of this action is to remove references to these forms in FmHA's regulations.

EFFECTIVE DATE: August 30, 1989.

FOR FURTHER INFORMATION CONTACT: Robin H. Peston, Loan Specialist, Single Family Housing Servicing and Property Management Division, Farmers Home Administration, USDA, Room 5313, Washington, DC 20250. Telephone (202) 382–1452.

SUPPLEMENTARY INFORMATION:

Classification

This final rule has been reviewed under USDA procedures established in Departmental Regulation 1512–1 which implements Executive Order 12291, and since this action has no impact on FmHA borrowers or other members of the public, it has been determined to be exempt from those requirements because it involves only internal agency management. It is the policy of this Department that rules relating to public property, loans, grants, benefits, or contracts shall be published for comment notwithstanding the exemption in 5 U.S.C. 553 with respect to such rules. This action, however, is not published for proposed rulemaking since it involves internal agency management and publication for comment is unnecessary.

Programs Affected

These changes affect the following FmHA programs as listed in the Catalog of Federal Domestic Assistance:

10.404 Emergency Loans
10.405 Farm Labor Housing Loans and Grants
10.407 Farm Ownership Loans
10.410 Low Income Housing Loans (Section 502 Rural Housing Loans)
10.415 Rural Rental Housing Loans
10.416 Soil and Water Loans

Intergovernmental Consultation

This activity, for obvious reasons, is not listed in the Catalog of Federal Domestic Assistance. However, the following programs of which the activity is a part are subject to the provisions of Executive Order 12372, which requires intergovernmental consultation with State and local officials:

10.405 Farm Labor Housing Loans
10.415 Rural Rental Housing Loans
10.416 Soil and Water Loans

Environmental Impact Statement

This document has been reviewed in accordance with 7 CFR Part 1940, Subpart G, "Environmental Program." It is the determination of FmHA that this action does not constitute a major Federal action significantly affecting the quality of the human environment, and in accordance with the National Environmental Policy Act of 1969 (Pub. L. 91–190), an Environmental Impact Statement is not required.

List of Subjects in 7 CFR Part 1806

Insurance, Loan programs—agriculture, Real property insurance, Rural areas.

Accordingly, FmHA amends Chapter XVIII, Title 7, Code of Federal Regulations is amended to read as follows:

PART 1806—INSURANCE

1. The authority citation for Part 1806 continues to read as follows:

Authority: 7 U.S.C. 1989; 42 U.S.C. 1480; 5 U.S.C. 301; 7 CFR 2.23 and 2.70.

Subpart A—Real Property Insurance

§ 1806.2 [Amended]

2. Section 1806.2(b)(4) is amended by removing the second sentence beginning with "Form FmHA 426–7."

3. Section 1806.4 is amended by revising the introductory text of paragraph (a)(2) to read as follows:

§ 1806.4 Examining and general servicing of insurance.

(a) * * *

(2) *Expiration Records and Notices.* After the insurance has been accepted, the expiration date will be inserted on Form FmHA 1905–1, "Management System Card—Individual," or Form FmHA 1905–6, "Management System Card—Individual (Rural Housing Only)," or Form FmHA 1905–10, "Management System Card—Association or Organization," or Form 1905–12, "Monthly Expirations," as provided in FmHA Instruction 1905–A for servicing the renewal of insurance.

* * * * *

§ 1806.4 [Amended]

4. Section 1806.4(a)(2)(i) is amended by removing the last sentence beginning with "Form FmHA 426–3."

Exhibit B of Subpart A [Removed]

5. Exhibit B of Subpart A is removed.

Dated: July 19, 1989.

Neal Sox Johnson,

Acting Administrator, Farmers Home Administration.

[FR Doc. 89–20572 Filed 8–29–89; 8:45 am]

BILLING CODE 3410–07–M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1232

RIN 2700—AA78

Care and Use of Animals in the Conduct of NASA Activities

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Interim final rule with request for comment.

SUMMARY: This rule establishes NASA policy, responsibilities, procedures, and authority for the care and use of vertebrate animal subjects in the conduct of NASA activities. The purpose is to assure the proper and humane care and use of animal subjects involved in NASA activities.

DATE: Effective: August 30, 1989. Comments must be submitted on or before October 30, 1989.

ADDRESS: Comments may be mailed to the Life Sciences Division, Code EB, NASA Headquarters, Washington, DC 20546. Comments received may be inspected in room 112, FB 10B, between 8:00 a.m. and 4:30 p.m.

FOR FURTHER INFORMATION CONTACT: Dr. Thora Halstead 202–453–1527.

SUPPLEMENTARY INFORMATION: Enactment of new laws with new and expanded provisions regulating the care and use of animal subjects in research, increased public awareness and concern for the care and use of animal subjects in research, and the unique environment of space in which some NASA research is conducted dictate that NASA develop a specific written policy with regard to the care and use of animal subjects in NASA facilities and NASA-sponsored research.

The policies described here have been created to develop a policy specific to NASA's unique needs and to be in concordance with provisions of the Animal Welfare Act, as amended (7 U.S.C. 2131 et seq.), as implemented in 9 CFR Subchapter A Parts 1, 2, 3, and 4, and also follow guidelines of the Public Health Service Policy on Humane Care and Use of Laboratory Animals, guidelines developed to ensure compliance with the animal welfare provisions of the Health Research Extension Act of 1985. Policy, procedures, authority, reporting requirements, and provisions for dealing with noncompliance are included in this rule.

This rule incorporates appropriate changes from comments received from the reviewing NASA Headquarters

Office and NASA Field Installations and the Office of Protection from Research Risks, National Institutes of Health. Comments of interested persons with respect to implementation and interpretation of the relevant laws, rules, and guidelines and the implementation and management procedures described in this rule will be taken into consideration before taking final action on the rule.

This regulation does not constitute a major rule for the purpose of Executive Order 12291, and is not subject to the Regulatory Flexibility Act, 5 U.S.C. 601–612, since it will not exert a significant economic impact on a substantial number of small entities.

List of Subjects in 14 CFR Part 1232

Animal welfare, Animal housing, Research facilities, Humane animal handling, Humane animal research, Institutional animal care and use committees, Adequate veterinary care.

Title 14 of the Code of Federal Regulations is amended by adding Part 1232 to read as follows:

PART 1232—CARE AND USE OF ANIMALS IN THE CONDUCT OF NASA ACTIVITIES

Sec.
1232.100 Scope.
1232.101 Applicability.
1232.102 Policy.
1232.103 Definitions.
1232.104 Implementation procedures by non-NASA institutions.
1232.105 Implementation procedures by NASA field installations.
1232.106 Management authority and responsibility.
1232.107 Sanctions.

Authority: 42 U.S.C. Sec. 2451; Pub. L. 89–544, as amended; 7 U.S.C. Sec. 2131; 39 U.S.C. Sec. 3001; 9 CFR Subchapter A Parts 1, 2, 3, and 4; and Pub. L. 99–158, Sec. 495.

§ 1232.100 Scope.

This rule establishes the policy, implementation procedures, and management authority and responsibility for the care and use of vertebrate animals (hereinafter referred to as "animal subjects") in the conduct of NASA activities.

§ 1232.101 Applicability.

This rule applies to NASA Headquarters and NASA field installations and will be followed in all activities using animal subjects that are supported by NASA, conducted in NASA facilities, aircraft, or spacecraft, or which involve NASA to any degree. All activities using animal subjects conducted under a contract, grant, cooperative agreement, memorandum of understanding, or joint endeavor agreement entered into by NASA and another Government agency, private entity, non-Federal public entity, or foreign entity are included within the scope of this rule.

§ 1232.102 Policy.

(a) It is NASA policy to require its laboratories and the institutions performing NASA-supported activities using animal subjects to comply with the Animal Welfare Act of 1966 (Pub. L. 89–544), as amended (Pub. L. 91–579, Pub. L. 94–279, and Pub. L. 99–198), 7 U.S.C. 2131 et seq., and 39 U.S.C. 3001, and with the regulations promulgated thereunder by the Secretary of Agriculture (9 CFR Subchapter A Parts 1, 2, 3, and 4) pertaining to the care, handling, and treatment of animal subjects held or used for research, testing, teaching, or other activities supported by the Federal government. Investigators shall follow the guidelines described in the National Institutes of Health (NIH) Publication No. 85–23 (Rev. 1985), "Guide for the Care and Use of Laboratory Animals" (the Guide) or subsequent revisions. Attention is called to the U.S. Government "Principles for the Utilization and Care of Vertebrate Animals Used in Testing, Research, and Training" on pp. 81–83 of the Guide. In order to implement these guidelines and principles, investigators will comply with the revised Public Health Service (PHS) Policy on Humane Care and Use of Laboratory Animals (hereinafter referred to as PHS Policy) effective November 1, 1986.[1]

(b) This rule authorizes NASA to have the same authority for NASA-supported programs as that delegated to PHS by the PHS Policy, including the functions and responsibilities of the Animal Care and Use Committees (ACUC's).

(c) All research supported by NASA that involves activities using animal subjects shall be conducted under protocols that conform to this rule and that are reviewed and approved as prescribed in this rule.

§ 1232.103 Definitions.

The following definitions of terms comply with the PHS Policy and apply to the conduct of all NASA activities related to the care and use of animal subjects.

(a) "Activity" includes research, testing of hardware for animal use, flight experimentation, and any other tasks involving the use of animal subjects.

(b) "Animal" is any live vertebrate animal.

(c) "Animal Care and Use Committee" (ACUC) is the committee established at each institution and NASA field installation involved in research with animal subjects. It is responsible for evaluating the care and use of animal subjects at the facility and for ensuring that the care and use of animal subjects at the facility is in compliance with this rule and PHS Policy.

(d) "Authorized NASA Official" is the Director, Life Sciences Division, NASA Headquarters, or designee, who is the NASA Administrator's representative and is responsible for all NASA activities involving animal subjects. This individual is responsible for implementation of the provisions of this rule and for ensuring that agency programs involving animal subjects comply fully with all applicable laws, regulations, and guidelines.

(e) "Field Installation Director" is the Director of a NASA Field Installation, or designee, who is the institutional official responsible for the care and use of animal subjects in research conducted at that field installation and for ensuring compliance with this rule at that field installation.

(f) "Investigator" is any person who uses or proposes to use live animal subjects in NASA-supported activities, e.g., receives funds, salaries, or support under a grant, award, agreement, contract, or direct employment by NASA, or the use of any NASA facilities, aircraft, or spacecraft for the purpose of carrying out research, tests, or experiments using animal subjects.

(g) "PHS Assurance" is a document prepared by an awardee institution assuring its compliance with PHS Policy.

(h) "Research of Flight Program Manager" is the NASA Headquarters manager of each program in which NASA has a manifest interest.

(i) "Supported" pertains to activities either funded in part or in whole by NASA or an approved activity that is not funded by NASA but that utilizes NASA facilities, including spacecraft and aircraft.

(j) "Veterinarian" is the NASA attending veterinarian, a person who has graduated from a veterinary school accredited by the American Veterinary Medical Association's Council on Education or has a certificate issued by the American Veterinary Medical Association's Education Commission for Foreign Veterinary Graduates, has received training and/or experience in the care and management of the species being attended, and who has direct or delegated authority and responsibility for activities involving animal subjects at the NASA field installation.

---

[1] Available from the Office of Protection from Research Risks (OPRR), National Institutes of Health, 9000 Rockville Pike, Bldg. 31, Room 5B59, Bethesda, MD 20892, Telephone 301–496–7005.

§ 1232.104 Implementation procedures by non-NASA institutions.

(a) Proposal Information. No animal subjects may be utilized unless a proposal justifying and describing their use is submitted to NASA for approval. The required proposal information is outlined in the PHS Policy (IV.D.1.a.-e.).

(b) Proposal Approval by the Institutional ACUC. Before a proposal for research involving the use of animal subjects will be considered for NASA support, the NASA Headquarters Research or Flight Program Manager must receive a statement that the research has been reviewed in accordance with the PHS Policy (IV.C.) and approved by the appropriate ACUC at the participating institution.

(c) Proposal Approval for Flight Experiments. In addition to the institution's ACUC review, activities involving animal subjects to be flown on NASA spacecraft will be subject to review and approval by the Ames Research Center (ARC) ACUC. The ARC ACUC will submit each evaluation report to the ARC Director who will transmit the report with his/her recommendation to the Authorized NASA Official, NASA Headquarters. Animal activities to be flown onboard NASA manned spacecraft may also be subject to review by the Human Research Policy and Procedures Committee (HRPPC) at the Johnson Space Center (JSC). Animal activities utilizing the facilities of any NASA field installation are also subject to approval of that field installation's ACUC (§ 1232.105(d)).

(d) Institutions with PHS Assurance on File. The institution, by an approved or provisionally acceptable Assurance on file at the NIH Office for Protection from Research Risks (OPRR), Department of Health and Human Services (HHS), assures NASA that it will comply with the PHS Policy. The Assurance file number must be included in the research proposal submitted to NASA.

(e) Institutions with no PHS Assurance on File. Proposals from institutions without an approved Assurance on file with the NIH OPRR will first be peer-reviewed for scientific merit. If the proposed research is deemed worthy of support, NASA will arrange for a special Assurance to be negotiated by the Director, Life Sciences Division, NASA Headquarters. The arrangements for a special Assurance review by NIH should be undertaken in consultation with the NASA representative to the Interagency Research Animal Committee (IRAC) and will be handled on a case-by-case basis.

(f) Foreign institutions must comply with the PHS Policy (see Section II Of PHS Policy) and this rule before being supported by NASA for any activities involving animal subjects.

§ 1232.105 Implementation procedures by NASA field installations.

(a) *Proposal Information.* The information required for proposals involving the use of animal subjects is identical to that described in § 1232.104(a).

(b) *Proposal Approval by the NASA ACUC.* Before a proposal for research involving the use of animal subjects will be considered for NASA support, the NASA Headquarters Research or Flight Program Manager must receive a statement that the research has been reviewed in accordance with PHS Policy (IV.C.) and approved by the ACUC at the appropriate field installation.

(c) *Proposal Approval for Flight Experiments.* In addition to the Field Installation ACUC review, activities involving animal subjects to be flown on NASA spacecraft will be subject to review and approval by the ARC ACUC. The ARC ACUC will submit each evalaution report to the ARC Director who will transmit the report with his/her recommendation to the Authorized NASA Official, NASA Headquarters. Animal activities to be flown onboard NASA manned spacecraft may also be subject to review by the HRPPC at JSC.

(d) *Approval for Use of Field Installation Facilities.* The NASA Field Installation ACUC will review and approve or disapprove those parts of proposals that call for the use of their facilities to conduct any activity involving animal subjects (e.g., Kennedy Space Center or ARC Dryden facilities used to support experiments using animal subjects). The ACUC will submit each evaluation report to the Field Installation Director who will transmit the report with his/her recommendation to the Authorized NASA Official, NASA Headquarters.

(e) *NASA Animal Care and Use Committees.* (1) The Director of each NASA Field installation that is involved in animal research activities will establish an ACUC to ensure compliance with the policies and provisions of this rule. The membership of the ACUC shall be in accordance with PHS Policy.

(2) The NASA Field Installation ACUC's will review and approve or disapprove all proposals using animal subjects. In accordance with the PHS Policy (IV.C.), the ACUC will submit each report to the Field Installation Director who will, upon request, transmit the report with his/her recommendation to the Authorized NASA Official, NASA Headquarters.

(3) NASA ACUC's have the authority to approve, disapprove, or require changes to be made in those components of proposals involving the care and use of animal subjects that are submitted by NASA investigators. All decisions shall be based on the response of a majority of a quorum of the members. A minority opinion including abstentions should be recorded; this record should include a justification for the opinion.

(4) The ACUC shall conduct continuing review of proposals at appropriate intervals as determined by the ACUC, but not less than once every 3 years.

(5) Proposals that have been approved by the ACUC may be subject to further appropriate review by the Authorized NASA Official, NASA Headquarters. However, the official may not approve those sections of a proposal related to the care and use of animal subjects if they have not been approved by the ACUC.

(6) Once experimental procedures are approved, no substantial changes can be made unless a formal request with appropriate justification for such a request is submitted to and approved by the appropriate ACUC. If the experiment involves exposure of the flight crew to the animal subjects, the HRPPC at JSC must review and approve the proposed modifications. Copies of ACUC approval of the proposed modifications shall be submitted to the Field Installation Director who will, upon request, transmit the report to the Authorized NASA Official, NASA Headquarters.

(7) Other functions of the field installation ACUC include:

(i) Reviewing at least once every 6 months the field installation's program for humane care and use of animals, using the Guide as a basis for evaluation;

(ii) Inspecting at least once every 6 months all of the field installation's animal facilities (including satellite facilities), using the Guide as a basis for evaluation;

(iii) Preparing reports of the ACUC evaluations conducted as required by § 1232.105 (e)(7)(i) and (ii), and submitting the reports to the Field Installation Director. (Note: the reports shall be updated at least once every 6 months upon completion of the required semiannual evaluations and shall be maintained by the field installation and made available to the Authorized NASA Official upon request. The reports must contain a description of the nature and extent of the field installation's adherence to the Guide and this rule and must identify specifically any departures from the provisions of the Guide and this rule, and must state the reasons for each departure. The reports must distinguish significant deficiencies from minor deficiencies. A significant deficiency is one which, consistent with PHS Policy, and, in the judgment of the ACUC and the Field Installation Director, is or may be a threat to the health or safety of the animals. If program or facility deficiencies are noted, the reports must contain a reasonable and specific plan and schedule for correcting each deficiency.)

(iv) Reviewing concerns involving the care and use of animals at the field installation;

(v) Making recommendations to the Field Installation Director regarding any aspect of the field installation's animal program, facilities, or personnel training.

(f) *NASA Assurances.* Each NASA field installation involved in activities using animal subjects must assure that its programs and facilities have been evaluated and accredited by the American Association for the Accreditation of Laboratory Animal Care (AAALAC). Written assurance of compliance with the provisions of the PHS Policy and this rule is also required from NASA field installations involved in animal activities before approval of any such activity. This Assurance should follow the sample PHS Assurance format shown on pages 19–28 of the PHS Policy and must be submitted by the Field Installation Director to the Authorized NASA Official. The Assurance is subject to renewal every 5 years.

(g) *Recordkeeping Requirements.* (1) Each NASA field installation involved in activities using animal subjects shall maintain:

(i) An Assurance of compliance with PHS Policy and this rule (§ 1232.105 (f));

(ii) Minutes of ACUC meetings, including records of attendance, activities of the committee, and committee deliberations;

(iii) Records of applications, proposals, and proposed significant changes in the care and use of animals and whether ACUC approval was given or withheld;

(iv) Records of semiannual ACUC reports and recommendations (including minority views) as forwarded to the Field Installation Director;

(v) Records of AAALAC accreditation; and

(vi) The Field Installation's Animal Users Guide and Animal Care Facility Management Manual. The Field Installation Animal Users Guide and Animal Care Facility Management Manual should be revised at appropriate intervals.

(2) All records shall be maintained for at least 3 years; records that relate directly to applications, proposals, and proposed significant changes in ongoing activities reviewed and approved by the ACUC shall be maintained for the duration of the activity and for an additional 3 years after completion of the activity. All records shall be furnished upon request to the Authorized NASA Official.

(h) *Reporting Requirements.* For each NASA field installation involved in activities using animal subjects:

(1) Statements of ACUC approval of research proposals, ACUC evaluation reports of flight experiment proposals and of experiment proposals utilizing field installation facilities, and the field installation's Assurance of compliance shall be submitted in the manner prescribed in § 1232.104 (c) and § 1232.105 (b) (c) (d) and (f).

(2) At least once every 12 months, the ACUC, through the Field Installation Director, shall report in writing to the Authorized NASA Official:

(i) Any change in the field installation's program or facilities that would affect the AAALAC accreditation status;

(ii) Any change in the description of the field installation's program for animal care and use;

(iii) Any changes in the ACUC membership;

(iv) Notice of the dates that the ACUC conducted its semiannual evaluations of the field installation's program and facilities and submitted the evaluations to the Field Installation Director;

(v) A statement that the field installation has no changes to report as specified in § 1232.105 (h) (2) (i) (ii) or (iii) of this rule, if there are no changes.

(3) The ACUC, through the Field Installation Director, shall promptly provide the Authorized NASA Official with a full explanation of the circumstances and actions taken with respect to:

(i) Any serious or continuing noncompliance with this rule and PHS Policy;

(ii) Any serious deviation from the provisions of the Guide; or

(iii) Any suspension of an activity by the ACUC.

(4) Reports filed under § 1232.105 (h) of this rule shall include any minority views filed by members of the ACUC.

(5) A copy of the U.S. Department of Agriculture (USDA) Annual Report will be furnished to the Authorized NASA Official.

§ 1232.106 Management authority and responsibility.

(a) *Authorized NASA Official.* The Authorized NASA Official is the NASA Administrator's representative and is responsible for all NASA activities involving animal subjects. This individual is responsible for implementation of the provisions of this rule and for ensuring that agency programs involving animal subjects comply fully with all applicable laws, regulations, and guidelines.

(b) *Field Installation Director.* The Field Installation Director is responsible for and has the authority to:

(1) Sign the field installation's Assurance, making a commitment on behalf of the field installation that the requirements of the PHS Policy and this rule will be met in all field installation activities involving animal subjects;

(2) Create and oversee the functioning of the field installation ACUC;

(3) Decide and administer sanctions in cases of noncompliance with this rule;

(4) Fulfill the reporting requirements assigned to this individual in § 1232.105 (h); and

(5) Sign the annual USDA report.

(c) *NASA Field Installation(s) ACUC Responsibility.* Each NASA Field Installation ACUC is responsible to its Field Installation Director for the activities described in § 1232.104(c) and § 1232.105 (b) (c) (d) (e) and (h).

(d) *Research or Flight Program Manager Responsibility.* The Research or Flight Program Manager is responsible for ascertaining the presence of the required PHS Assurance file number for proposals involving animal subjects received from non-NASA institutions, and a statement of ACUC review and approval of all NASA and non-NASA proposals involving animal subjects. No awards for activities involving animal subjects can be made without this documentation [see § 1232.104 (b) and (d) and § 1232.105(b)].

(e) *NASA Veterinarian(s) Responsibility.* NASA veterinarian(s) have direct or delegated authority and responsibility for activities involving animal subjects at their field installation. Such authority and responsibilities shall include recommending approval or disapproval of procedures involving animal subjects as a member of the ACUC, continual monitoring of these activities, surveillance of the health and condition of animal subjects, and reporting any observed deviations from approved procedures involving animal subjects to the Field Installation Director and the ACUC. In the case of deviation from

ACUC-approved practices or procedures, the veterinarian shall have the authority to immediately halt such procedures until they are reviewed and resolved by the ACUC. In cases of a conflict concerning animal usage by an investigator that cannot be resolved between him/her and the veterinarian, the matter may be brought to the attention of the Field Installation ACUC for review and recommendation for action as set forth in this rule. Whereas the performance of the veterinarian's duties can be delegated to other qualified individuals, the ultimate responsibility rests with the veterinarian. This responsibility extends not only to the Animal Care Facility (ACF), but also to other locations where animal subjects are used.

Other specific areas of responsibility and authority vested in the veterinarian are:

(1) *Entry of personnel into the ACF.* The veterinarian has the responsibility to develop access procedures to the ACF and submit them to the ACUC for approval.

(2) *Personnel Training.* The veterinarian will participate in the training of personnel in the handling of animal subjects and in specimen sampling procedures.

(3) *Animal Training.* The veterinarian will monitor all schedules and procedures involving the training and acclimation of animal subjects.

(4) *Surgery and Surgical Procedures.* The veterinarian will monitor all surgical procedures and verify that the principles of the Guide with regard to aseptic surgery are employed. Post-surgical recovery procedures are included. If necessary, training will be provided by the veterinarian to bring procedures conducted by investigators to the level of these standards.

(5) *Veterinary Medical and Engineering Procedures.* The veterinarian will monitor all veterinary medical and engineering procedures performed on animal subjects and verify their appropriateness. The veterinarian will actively participate in identifying and/or establishing the design requirements and adequacy of animal facilities for ground and spaceflight-related activities.

(f) *NASA Representative to the Interagency Research Animal Committee (IRAC).* The NASA representative to the IRAC will obtain information of all cases in which an institution's Assurance has been revoked by the PHS. The NASA IRAC representative will notify NASA ACUC's, Field Installation Directors, the Authorized NASA Official, and all Headquarters Research and Flight Program Managers so that they can determine which NASA awards involving the use of animal subjects are affected and can take appropriate sanctions.

§ 1232.107 Sanctions.

(a) *Non-NASA Institutions.* Principal investigators not employed by NASA whose activities are supported by NASA but whose activities using animal subjects are restricted to non-NASA facilities shall be subject to the control of their institution's ACUC and responsible institutional official. Notification of noncompliance with this rule shall be made either as described in § 1232.106(f) or by the non-NASA institution to the Director of the NASA Field Installation through which the activity has been supported and to the Authorized NASA Official. Any continued noncompliance may be caused for termination of funding or support.

(b) *NASA Field Installations.* (1) Inappropriate procedures on animal subjects by NASA principal investigators shall be halted by the NASA Field Installation Veterinarian or line management and brought to the attention of the ACUC if the issue cannot be immediately resolved. The ACUC will review the activity and report any noncompliance with this rule to the Field Installation Director. Principal investigators not employed by NASA, whose activities using animal subjects are performed in NASA facilities, aircraft, or spacecraft, are subject to similar action. Such noncompliance will be cause for sanctions. The principal investigator can contest, in writing, these decisions to the ACUC.

(2) The ACUC as the agent of the Field Installation Director may suspend an activity that it previously approved if it determines that the activity is not being conducted in accordance with applicable provisions of the Animal Welfare Act, the Guide, PHS Policy requirements, or this rule.

(3) Any suspension or termination of approval will include a statement of the reasons for the action and will be promptly reported to the principal investigator and the appropriate Field Installation Director. In the case of investigators from non-NASA institutions, notification should be sent to the investigator, the appropriate institution, and the Director of the Field Installation through which the activity has been supported. If the ACUC suspends an activity involving animal subjects, the Field Installation Director in consultation with the ACUC shall review the reasons for suspension, take appropriate corrective action, and report that action with a full explanation to the Authorized NASA Official, NASA Headquarters. If an ACUC recommends disapproval suspension, termination, or conditional approval of an activity, the principal investigator will be given the opportunity to ask for reconsideration of the decision in person and/or in writing to the appropriate NASA ACUC.

(4) If, after notification of the Field Installation Director and an opportunity for correction, such deficiencies or deviations remain uncorrected, the ACUC will notify (in writing) the Authorized NASA Official, NASA Headquarters, who is then responsible for all corrective action to be taken.

Richard H. Truly,

Administrator.

August 22, 1989.

[FR Doc. 89-20318 Filed 8-29-89; 8:45 am]

BILLING CODE 7510-01-M

RAILROAD RETIREMENT BOARD

20 CFR Ch. II

Appeals Procedures

AGENCY: Railroad Retirement Board.

ACTION: Final rule.

SUMMARY: The Railroad Retirement Board (Board) amends 20 CFR Chapter II to remove the title "referee" wherever it appears and to add in its place the title "hearings officer", and to remove the title "referee's" wherever it appears and to add in its place the title "hearings officer's". This action is being taken as a result of a reclassification of positions, and should eliminate any confusion which could arise from the existence of the title "referee" in 20 CFR Chapter II, and the use of the amended title "hearings officer" in the Board's correspondence with the public.

EFFECTIVE DATE: This final rule is effective August 30, 1989.

FOR FURTHER INFORMATION CONTACT: Thomas W. Sadler, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611, (312) 751–4513 (FTS) 386–4513.

SUPPLEMENTARY INFORMATION: This amendment is being made to remove the title "referee", as that term is used throughout the Board's regulations, and to add the title "hearings officer" wherever it appears in 20 CFR Chapter II. The title change resulted from a reclassification of the referees' positions in the Board's Bureau of Hearings and Appeals. Since the term "referee" (and its possessive "referee's") appears in several sections of 20 CFR Chapter II,

some sections of which may not require

ADDRESSES: Written objections to the

some sections of which may not require amendment for any other purpose, this amendment is intended to eliminate any confusion which could arise on the part of the public. It should be noted, however, that for purposes of the Board's regulations, the terms "referee" and "hearings officer" (and their possessive tenses) may be considered synonymous; the use of one term n lieu of the other would have no legal effect.

The Board has determined that this is not a major rule for purposes of Executive Order 12291. Therefore no regulatory impact analysis is required by the Regulatory Flexibility Act (5 U.S.C. 601–611). For purposes of the collection of information within the meaning of the Paperwork Reduction Act of 1980, this nomenclature change will have no legal effect.

CHAPTER II—RAILROAD RETIREMENT BOARD

Under the authority provided in 45 U.S.C. 231f(b)(5) and 362(b), Chapter II, Title 20 of the Code of Federal Regulations is amended as follows:

1. Remove the title "referee" wherever it appears and add in its place the title "hearings officer".

2. Remove the title "referee's" wherever it appears and add in its place the title "hearings officer's".

Dated: August 23, 1989.

By authority of the Board.

Beatrice Ezerski,

Secretary to the Board.

BILLING CODE 7905-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 177

[Docket No. 89F–0427]

Indirect Food Additives: Polymers

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to raise the limitation on the maximum absorbed dose of radiation that may be used to produce molecular crosslinking of ethylene-vinyl acetate copolymers. This action is in response to a petition filed by Cryovac Division of W.R. Grace & Co.

DATES: Effective August 30, 1989; written objections and requests for a hearing by September 29, 1989.

ADDRESSES: Written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Laura M. Tarantino, Center for Food Safety and Applied Nutrition (HFF–330), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5740.

SUPPLEMENTARY INFORMATION: In a notice published in the Federal Register of January 6, 1989 (54 FR 483), FDA announced that a food additive petition (FAP 9M4117) had been filed by Cryovac Division of W.R. Grace & Co., P.O. Box 464, Duncan, SC 29334, proposing that § 177.1350 *Ethylene-vinyl acetate copolymers* (21 CFR 177.1350) be amended by raising the limitation in paragraphs (d)(1) and (d)(3) on the maximum absorbed dose of radiation that may be used to produce molecular crosslinking of ethylene-vinyl acetate copolymers.

FDA has evaluated data in the petition and other relevant material. The agency concludes that the proposed increase in the permitted maximum absorbed dose of ionizing radiation from 8 to 15 megarads is safe, and that the regulations should be amended as set forth below. The agency is also revising the wording in § 177.1350 (d)(1), (d)(3), and (e)(1) to describe the permitted radiation dose by the Système International unit of measurement for absorbed dose of radiation (Gray), as well as by the previously used unit (rad).

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person. As provided in 21 CFR 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has carefully considered the potential environmental effects of this action. FDA has concluded that the action will not have a significant impact on the human environment and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding, contained in an environmental assessment, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this regulation may at any time on or before September 29, 1989 file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 177

Food additives, Food packaging.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR part 177 is amended as follows:

PART 177—INDIRECT FOOD ADDITIVES: POLYMERS

1. The authority citation for 21 CFR Part 177 continues to read as follows:

Authority: Secs. 201(s), 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348); 21 CFR 5.10 and 5.61.

2. Section 177.1350 is amended by revising paragraphs (d)(1), (d)(3), and (e)(1) to read as follows:

§ 177.1350 Ethylene-vinyl acetate copolymers.

* * * * *

(d) * * *

(1) Electron beam source of ionizing radiation at a maximum energy of 3 million electron volts: Maximum absorbed dose not to exceed 150 kiloGray (15 megarads).

* * * * *

(3) The ethylene-vinyl acetate copolymer films may be further

irradiated in accordance with the provisions of paragraph (e)(1) of this section: *Provided,* That the total accumulated radiation dose from both electron beam and gamma ray radiation does not exceed 150 kiloGray (15 megarads).

(e) * * *

(1) Gamma photons emitted from a cobalt–60 sealed source in the dose range of 5–50 kiloGray (0.5–5.0 megarads).

* * * * *

Dated: August 18, 1989.

Fred R. Shank,

Acting Director, Center for Food Safety and Applied Nutrition.

[FR Doc. 89–20353 Filed 8–29–89; 8:45 am]

BILLING CODE 4160-01-M

---

21 CFR Part 178

[Docket No. 87F–0269]

Indirect Food Additives, Adjuvants, Production Aids, and Sanitizers

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of 5-[(2,3-dihydro-6-methyl-2-oxo-1*H*-benzimidazol-5-yl)azo]-2,4,6(1*H*, 3*H*, 5*H*)-pyrimidinetrione as a colorant in all polymers. This action responds to a petition filed by Ciba-Geigy Corp.

DATES: Effective August 30, 1989; written objections and requests for a hearing by September 29, 1989.

ADDRESSES: Written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Richard H. White, Center for Food Safety and Applied Nutrition (HFF–335), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5690.

SUPPLEMENTARY INFORMATION: In a notice published in the Federal Register of September 17, 1987 (52 FR 35143), FDA announced that a food additive petition (FAP 7B4016) had been filed by Ciba-Geigy Corp., Three Skyline Dr., Hawthorne, NY 10532, proposing that § 178.3297 *Colorants for polymers* (21 CFR 178.3297) be amended to provide for the safe use of 5-[(2,3-dihydro-6-methyl-2-oxo-1*H*-benzimidazol-5-yl)azo]-2,4,6(1*H*, 3*H*, 5*H*)-pyrimidinetrione as a colorant in all polymers.

FDA has evaluated data in the petition and other relevant material. The agency concludes that the proposed food additive use is safe, and that the regulation in 21 CFR 178.3297 should be amended in paragraph (e) as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in 21 CFR 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

The agency has carefully considered the potential environmental effects of this action. FDA has concluded that the action will not have a significant impact on the human environment, and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding, contained in an environmental assessment, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this regulation may at any time on or before September 29, 1989 file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 178

Food additives, Food packaging.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs and redelegated to the Director, Center for Food Safety and Applied Nutrition, 21 CFR Part 178 is amended as follows:

PART 178—INDIRECT FOOD ADDITIVES: ADJUVANTS, PRODUCTION AIDS, AND SANITIZERS

1. The authority citation for 21 CFR Part 178 continues to read as follows:

Authority: Secs. 201(s), 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348); 21 CFR 5.10 and 5.61.

2. Section 178.3297 is amended in paragraph (e) by alphabetically adding a new entry in the table to read as follows:

§ 178.3297 Colorants for polymers.

* * * * *

(e) * * *

Substances	Limitations
5-[(2,3-Dihydro-6-methyl-2-oxo-1*H*-benzimidazol-5-yl)azo]-2,4,6(1*H*, 3*H*, 5*H*)-pyrimidinetrione (CAS Reg. No. 72102-84-2).	For use at levels not to exceed 1 percent by weight of polymers. The finished articles are to contact food only under conditions of use B through H described in Table 2 of § 176.170(c) of this chapter.

BILLING CODE 4160-01-M

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

29 CFR Part 1601

706 Agencies; Designation of Texas Commission on Human Rights

AGENCY: Equal Employment Opportunity Commission.

ACTION: Final rule.

SUMMARY: The Equal Employment Opportunity Commission amends its regulations on certified designated 706 agencies. Publication of this amendment effectuates the designation of the Texas Commission on Human Rights as a certified 706 Agency.

EFFECTIVE DATE: August 30, 1989.

FOR FURTHER INFORMATION CONTACT:

Festival. The event will be held on the

33 CFR Part 165

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33

ADDRESSES: Written objections may be

observable-effect level (NOEL) of 20

FOR FURTHER INFORMATION CONTACT: Valentina Jackson, Equal Employment Opportunity Commission, Office of Program Operations, Systemic Investigations and Individual Compliance Programs, State and Local Branch, 1801 L Street, NW., Room 8060, Washington, DC 20507, Telephone 202/663-4892.

SUPPLEMENTARY INFORMATION: The Commission has determined that the Texas Commission on Human Rights meets the eligibility criteria for certification of a designated 706 agency as established in 29 CFR § 1601.75(b). In accordance with 29 CFR § 1601.75(c), the Commission hereby amends the list of certified designated 706 agencies to include the Texas Commission. Publication of this amendment to § 1601.80 effectuates the designation of the following agency as a certified 706 agency: Texas Commission on Human Rights.

List of Subjects in 29 CFR Part 1601

Administrative practice and procedure, Equal employment opportunity, Intergovernment relations.

Accordingly, 29 CFR part 1601 is amended as follows:

PART 1601—[AMENDED]

1. The authority citation for part 1601 continues to read as follows:

Authority: 42 U.S.C. 2000 e to 2000 e–17.

§ 1601.80 [Amended]

2. Section 1601.80 is amended by adding the Texas Commission on Human Rights in alphabetical order.

Signed at Washington, DC this 22nd day of August, 1989, for the Commission.

James H. Troy,

Director, Office of Program Operations.

BILLING CODE 6570-06-M

DEPARTMENT OF TRANSPORTATION

Coast Guard

33 CFR Part 100

[CGD 05–89–82]

Special Local Regulations for Marine Events; Hampton Bay Days Festival; Hampton River, Hampton, VA

AGENCY: Coast Guard, DOT.

ACTION: Notice of Implementation of 33 CFR 100.508

SUMMARY: This notice implements 33 CFR 100.508 (53 FR 35089; September 9, 1988) for the Hampton Bay Days Festival. The event will be held on the Hampton River. The special local regulations are necessary to control vessel traffic in the immediate vicinity of this event. The effect will be to restrict general navigation in the regulated area for the safety of spectators and participants.

EFFECTIVE DATES: The regulations in 33 CFR 100.508 are effective for the following periods: 3:30 p.m. to 8:30 p.m., September 8, 1989. 9:00 a.m. to 11:30 p.m., September 9, 1989. 12:00 Noon to 3:00 p.m., September 10, 1989.

FOR FURTHER INFORMATION CONTACT: Mr. Billy J. Stephenson, Chief, Boating Affairs Branch, Fifth Coast Guard District, 431 Crawford Street, Portsmouth, Virginia 23704–5004 (804) 398-6204.

SUPPLEMENTARY INFORMATION:

Drafting Information: The drafters of this notice are Billy J. Stephenson, project officer, Chief, Boating Affairs Branch, Boating Safety Division, Fifth Coast Guard District, and Lieutenant Commander Robin K. Kutz, project attorney, Fifth Coast Guard District Legal Staff.

Discussion of Regulations: Bay Days, Inc. submitted an application on June 12, 1989 to hold the Hampton Bay Days Festival on September 8, 9, and 10, 1989. The marine portion of the festival will consist of a parade of boats, water ski shows, and various type boat races. There will also be a fireworks display launched from within the regulated area. The regulations in 33 CFR 100.508 govern the activities of the Hampton Bay Days Festival held on the Hampton River, in and around downtown Hampton, Virginia. Implementation of 33 CFR 100.508 also implements as special anchorage areas the spectator anchorages designated in that section for use by vessels during the event. Vessels less than 20 meters long may anchor in these areas without displaying the anchor lights and shapes required by Inland Navigation Rule 30 (33 USC 2030(g)).

Since these regulations were specifically established to enhance the safety of the participants in and spectators of the marine portions of the Hampton Bay Days Festival the regulations are hereby implemented. This notice also will appear in the Fifth District Local Notice to Mariners.

Date: August 17, 1989.

P.A. Welling,

Rear Admiral, U.S. Coast Guard Commander, Fifth Coast Guard District.

[FR Doc. 89–20447 Filed 8–29–89; 8:45 am]

BILLING CODE 4910-14-M

---

33 CFR Part 165

[Regulation 09–10]

COTP Los Angeles/Long Beach, CA; Safety Zone Regulations

AGENCY: Coast Guard, DOT.

ACTION: Emergency rule.

SUMMARY: The Coast Guard is establishing a safety zone of the navigable waters in the Ports of Los Angeles/Long Beach within a 1000 yard radius seaward of the breakwater around vessels in approximate position 33–43N, 118–12.5W for filming of the movie Hunt for Red October.

The zone is needed to protect boating traffic transiting the near by area. Entry into this zone is prohibited unless authorized by the Captain of the Port.

EFFECTIVE DATES: This regulation becomes effective at 0800, 18 August 1989. It terminates at 2400, 2 September 1989.

FOR FURTHER INFORMATION CONTACT: Lt R.L. Booth at (213) 499–5580.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 553, a notice of proposed rule making was not published for this regulation and it is being made effective in less than 30 days after Federal Regulation publication. Publishing an NPRM and delaying its effective date would be contrary to the public interest since immediate action is needed to prevent potential damage to the boating traffic transiting the near by area.

Drafting Information

The drafters of this regulation are Lt R.L. Booth, project officer for the Captain of the Port, and LCDR G.R. Wheatly, project attorney, Eleventh Coast Guard District Legal Office.

Discussion of Regulation

The event requiring this regulation will occur between 0800, 18 August 1989 and 2400, 2 September 1989. This safety zone is necessary to ensure the safety of boating traffic transiting the near by area.

List of Subjects in 33 CFR Part 165

Harbors Marine Safety, Navigation (water), Security measures, Vessels, Waterways.

Regulation

In consideration of the foregoing, subpart C of part 165 of title 33, Code of Federal Regulations, is amended as follows:

1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 50 U.S.C. 191; 33 CFR 1.05–1(g), 6.04–1, 6.04–6 and 160.5, 49 CFR 1.46.

2. A new § 165.T1199 is added to read as follows:

§ 165.T1199 Safety zone.

In the navigable waters in position 33–43N, 118–12.5W.

(a) *Location.* The following area is a safety zone: The navigable waters seaward of the breakwater within a 1000 yard radius of approximate position 33–43N, 118–12.5W around the vessels engaged in the filming of the movie The Hunt for Red October.

(b) *Effective Date:* This regulation becomes effective on 18 August 1989 at 0800. It terminates on 2 September 1989 at 2400.

(c) *Regulations.* In accordance with the general regulations in § 165.23 of this part, no vessel may enter, remain in, or transit the Safety Zone without the permission of the Captain of the Port.

Dated: August 16, 1989.

C.T. Desmond,

Commander, U.S. Coast Guard, Captain Of The Port, Los Angeles/Long Beach.

[FR Doc. 89–20446 Filed 8–29–89; 8:45 am]

BILLING CODE 4910-14-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 180 and 186

[8F3629, 8F3678, 8H5555/R1036; FRL 3636-6]

Tolerances for 2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexene-1-one

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes tolerances for the combined residues of the herbicide 2-[1-(ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexene-1-one and its metabolites containing the 2-cyclohexene-1-one moiety, calculated as parent, in or on the raw agricultural commodities (RACs) bulb vegetables at 1.0 part per million (ppm), and pome fruits at 0.2 ppm, and the animal feed commodity apple pomace (wet and dry) at 0.8 ppm. These regulations were requested by BASF Wyandotte Corp. and establish the maximum permissible level for residues of the herbicide in or on these RACs and the animal feed commodity.

EFFECTIVE DATE: August 30, 1989.

ADDRESSES: Written objections may be submitted to the: Hearing Clerk (A–110), Environmental Protection Agency, Rm. 3708, 401 M St., SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Robert J. Taylor, Product Manager (PM) 25, Registration Division (H7505C), Office of Pesticide Programs, Environmental Protection Agency, Rm. 243, CM 2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703)-557–1800.

SUPPLEMENTARY INFORMATION: EPA issued notices in the Federal Register that announced that BASF Wyandotte Corp., P.O. Box 181, 100 Cherry Hill Rd., Parsippany, NJ 07054, proposed amending 40 CFR 180.412 and 21 CFR Part 561 by establishing tolerances for the combined residues of the herbicide 2-[1-(ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexene-1-one and its metabolites containing the 2-cyclohexene-1-one moiety (calculated as parent) in or on the following RACs and animal feed commodity.

Pesticide/food additive petition number	Crops	Parts per million (ppm)	FEDERAL REGISTER citation
8F3629	Pome fruits.	0.2	May 25, 1988 (53 FR 18897)
8H5555	Dry pomace.	0.8	May 25, 1988 (53 FR 18897)
8F3678	Onions	1.0	Oct. 12, 1988
	Garlic	1.0	(53 FR 37983)

No comments were received in response to the notices of filing.

The Agency subsequently issued a notice, published in the Federal Register of June 29, 1988 (53 FR 24688), redesignating 21 CFR Part 561 as 40 CFR Part 186 and assigning this chemical as 40 CFR 186.2800. The petitioner subsequently revised Food Additive Petition No. 8H5555 and Pesticide Petition No. 8F3678 by submitting revised Section F's to reword dry pomace as apple pomace (wet and dry) and onions and garlic as bulb vegetables. Because there is no potential increase to humans from these revisions, no period of public comment is needed.

The data submitted in the petition and other relevant material have been evaluated. The toxicology data listed below were considered in support of these tolerances.

1. Several acute toxicology studies placing technical sethoxydim in Toxicity Categories III and IV.

2. A subchronic feeding study in dogs fed dosages of 0, 2, 20, and 200 milligrams per kilogram of body weight per day (mg/kg bwt/day) with a no-observable-effect level (NOEL) of 20 mg/kg/day based on liver effects and nonspecific anemia at 200 mg/kg/day.

3. A 1-year feeding study with dogs fed dosages of 0, 8.86/9.41, 17.5/19.9, and 110/129 mg/kg/day (males/females) with a NOEL of 8.86/9.41 mg/kg (males/females) based on equivocal anemia in males at 17.5/19.9 mg/kg/day (males/females).

4. A 2-year chronic feeding/oncogenicity study with mice fed dosages of 0, 6, 18, 54, and 162 mg/kg/day with no oncogenic effects observed under the conditions of the study at dose levels up to and including 162 mg/kg/day (highest dose tested (HDT)) and a systemic NOEL of 18 mg/kg/day based on nonneoplastic liver lesions at 54 mg/kg/day.

5. A 2-year chronic feeding/oncogenicity study with rats fed dosages of 0, 2, 6, and 18 mg/kg/day (HDT) with no oncogenic effects observed under the conditions of the study at dose levels up to and including 18 mg/kg/day (HDT) and a systemic NOEL greater than or equal to 18 mg/kg/day.

6. A teratology study in rats fed dosages of 0, 40, 100, and 250 mg/kg/day with no teratogenic effects occurring at 250 mg/kg/day (HDT) and a maternal NOEL of 40 mg/kg/day based on significantly decreased adrenal weight at 100 mg/kg/day.

7. A teratology study in rabbits fed dosages of 0, 40, 160, and 480 mg/kg/day with a teratogenic NOEL of 160 mg/kg/day based on an increased number of a variety of random effects including skeletal and visceral abnormalties, reduced fetal weight, and changes in male/female ratios, considered due to extreme toxicity in dams and a maternal NOEL of 160 mg/kg/day based on severe weight loss, deaths, abortions, and reduction in the number of litters and viable fetuses at 480 mg/kg/day (HDT).

8. Mutagenic studies including a host-mediated assay (mouse) with *S. typhimurium*, negative at 2.5 grams (g)/kg/day of chemical, and recombinant assay and forward mutations in *B. subtilis*, *E. coli*, and *S. typhimurium* (all negative at concentrations of the chemical up to 100 percent).

The acceptable daily intake (ADI), based on a 1-year feeding study in dogs (NOEL = 8.86 mg/kg bwt/day) and using a hundredfold safety factor is calculated to be 0.09 mg/kg/day. The theoretical maximum residue contribution (TMRC) for published tolerances is 0.19566 mg/kg/day. The current action will contribute 0.000293 mg/kg/day to the TMRC and will utilize 0.3 percent of the ADI. Published

OL 54 SS 167 AG 30 989 MI

tolerances utilize 21.7 percent of the ADI.

Data lacking are a repeat of a rat primary hepatocyte unscheduled DNA synthesis assay on a hydroxylated plant metabolite of the parent compound. The company has been notified of this deficiency and has agreed to repeat the study.

The pesticide is useful for the purposes for which these tolerances are sought. The nature of the residue is adequately understood for the purpose of establishing the tolerances. Adequate analytical methodology (gas chromatography using sulfur-specific flame photometric detection) is available for enforcement purposes. The method is listed in the *Pesticide Analytical Manual* (PAM II) as Method I. There are currently no actions pending against the registration of this chemical. Any secondary residues occurring in meat, milk, poultry, and eggs will be covered by existing tolerances on these commodities.

Based on the above information considered by the Agency, it is concluded that the tolerances established by amending 40 CFR Parts 180 and 186 will protect the public health. The tolerances are therefore established as set forth below.

Any person adversely affected by this regulation may, within 30 days after the date of publication in the **Federal Register**, file written objections with the Hearing Clerk (address above). Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are legally sufficient to justify the relief sought.

The Office of Management and Budget (OMB) has exempted this regulation from OMB requirements of Executive Order 12291 pursuant to section 8(b) of that Order.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96-354, 94 Stat. 1164, 5 U.S.C. 601-612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950). (Sec. 408(b)(2), 68 Stat. 512 (21 U.S.C. 346a(d)(2)).)

List of Subjects in 40 CFR Parts 180 and 186

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements, Animal feeds.

Dated: August 16, 1989.

Douglas D. Campt,

Director, Office of Pesticide Programs.

Therefore, chapter I of Title 40 of the Code of Federal Regulations is amended as follows:

PART 180—[AMENDED]

1. In Part 180:

a. The authority citation for Part 180 is amended as follows:

Authority: 21 U.S.C. 346a and 371.

b. In § 180.412(a), by adding and alphabetically inserting entries for the following raw agricultural commodities, to read as follows:

§ 180.412 2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexene-1-one; tolerance for residues.

* * * * *

Commodities	Parts per million
* * * *	*
Bulb vegetables	1.0
* * * *	*
Pome fruits	0.2
* * * *	*

PART 186—[AMENDED]

2. In part 186:

a. The authority citation for Part 186 continues to read as follows:

Authority: 21 U.S.C. 348.

b. In § 186.2800, by adding and alphabetically inserting in the list of commodities the following entry, to read as follows:

§ 186.2800 2-[1-(Ethoxyimino)butyl]-5-[2-(ethylthio)propyl]-3-hydroxy-2-cyclohexene-1-one.

* * * * *

Commodities	Parts per million
* * * *	*
Apple pomace, wet and dry	0.8
* * * *	*

BILLING CODE 6560-50-M

DEPARTMENT OF TRANSPORTATION

Research and Special Programs Administration

49 CFR Part 173

[Docket No. HM-201B; Amdt. No. 173-215]

RIN 2137-AB39

Shippers; Use of Tank Car Tanks with Localized Reductions in Shell Thickness

AGENCY: Research and Special Programs Administration (RSPA), DOT.

ACTION: Final rule; Further extension of effective date.

SUMMARY: RSPA is further extending the effective date of a final rule published in the **Federal Register** (54 FR 8336) on February 28, 1989, under Docket No. HM-201B, Amendment No. 173-208, from September 1, 1989 to January 1, 1990. This action is necessary to allow RSPA and the Federal Railroad Administration (FRA) more time to review several petitions for reconsideration which were received in response to the final rule.

EFFECTIVE DATES: January 1, 1990. However, compliance with Amendment No. 173-208 is authorized as of March 30, 1989.

FOR FURTHER INFORMATION CONTACT: Marilyn E. Morris, Standards Division (DHM-10), Office of Hazardous Materials Transportation, RSPA, DOT, 400 7th Street SW., Washington, DC 20590, (202) 366-4488.

SUPPLEMENTARY INFORMATION: On February 28, 1989, RSPA published a final rule (Docket No. HM-201B; Amdt. No. 173-208; 54 FR 8336) concerning the use of tank cars which have localized reductions in shell thickness due to repairs. RSPA has received 13 petitions for reconsideration as a result of that final rule. This action, which extends the effective date of the final rule, is necessary because RSPA finds it impracticable to take action and respond to certain issues discussed in the petitions within the 90 day period mentioned in 49 CFR 106.37(b) or within the period of the earlier time extension of effective date, published in the May 15, 1989 **Federal Register** (Docket HM-201B; Amdt. 173-211; 54 FR 20856), which extended the effective date from June 1, 1989, to September 1, 1989.

The extension of the effective date of Amendment Nos. 173-208 to January 1, 1990, will allow additional time for RSPA and FRA to consider and review the technical data made available by the petitioners following publication of the

final rule on February 28, 1989, examine the issues raised in the petitions for reconsideration and to prepare an appropriate response. In the interim, voluntary compliance with provisions of the final rule is authorized.

Issued in Washington, DC on August 25, 1989, under authority delegated in 49 CFR part 1.

Douglas B. Ham,

Acting Administrator.

BILLING CODE 4910-60-M

Federal Railroad Administration

49 CFR Part 219

[FRA Docket No. RSOR-6, Notice No. 23]

RIN 2130-AA43

Alcohol/Drug Regulations: Availability of Random Drug Testing Implementation Guidance

AGENCY: Federal Railroad Administration (FRA), DOT.

ACTION: Notice of availability of guidance for submittal and implementation of random drug testing programs.

SUMMARY: FRA announces the availability of guidance for implementation of random drug testing requirements. The materials explain the criteria for review of random testing programs and include questions and answers relating to random testing. Individual copies are available on request from the Office of Safety, FRA.

ADDRESS: Office of Safety Enforcement (RRS-10), FRA, Washington, DC 20590.

FOR FURTHER INFORMATION CONTACT: Dr. Sam Holley, Alcohol & Drug Program Manager (RRS-10), Office of Safety Enforcement, FRA, Washington, DC 20590 (Telephone: (202) 366-0501).

SUPPLEMENTARY INFORMATION: On November 21, 1988, FRA published in the **Federal Register** a final rule (53 FR 47102) making certain amendments to its regulations on control of alcohol and drug use in railroad operations (49 CFR Part 219). The amendments included requirements that railroads submit and implement random drug testing programs. On May 23, 1989, FRA published in the **Federal Register** a revised compliance schedule for the new requirements (54 FR 22284). The requirements pertinent to random drug testing may be summarized as follows:

Class I Freight Railroads	
Amtrak and commuter railroads:	
Programs due	Oct. 2, 1989.
Begin random testing	Jan. 16, 1990.
Class II Railroads	
Programs due	April 2, 1990.
Begin random testing	July 2, 1990.
Class III Railroads	
Programs due	July 2, 1990.
Begin random testing	Nov. 1, 1990.

Since issuance of the random drug testing requirements, FRA staff has assisted the railroads in identifying issues through industry meetings, informal contacts and distribution of a working paper. This communication has helped FRA and the railroads identify a number of formal and practical issues that railroads will need to address in their programs. FRA has now prepared guidance for preparation of random testing programs consisting of criteria for approval of random testing programs (describing the regulatory criteria and information that should be included in each program) and a set of questions and answers representative of those that have arisen since issuance of the regulatory requirements. Individual copies are available without charge from the address set forth above. Requesters should refer to "Random Drug Testing Implementation Guidance."

Issued in Washington, DC on August 24, 1989.

Gilbert E. Carmichael,

Federal Railroad Administrator.

BILLING CODE 4910-06-M

National Highway Traffic Safety Administration

49 CFR Part 580

RIN 2127-AC42

[Docket No. 87-09; Notice 10]

Odometer Disclosure Requirements

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final rule.

SUMMARY: This final rule clarifies the responsibilities imposed on all parties in conjunction with the disclosure of odometer mileage information when transfering ownership of motor vehicles. It clarifies the definitions of transferor and transferee in situations where a person acts as an agent for the transferor or transferee. In addition, this rule requires a transferee to return to his transferor a signed copy of the odometer disclosure statement that he received from the transferor. This rule also provides that to be valid, title reassignment documents must be issued by a State. Finally, this rule expands the circumstances in which a secure power of attorney form issued by the State may be used to make the required odometer disclosure to include situations in which the title has been lost. The power of attorney would authorize the transferee to restate exactly the mileage on the title document on the transferor's behalf. When such vehicles are resold, this rule allows a transferee to use the same power of attorney form to authorize his transferor to sign the disclosure on the title document on behalf of the transfee.

DATES: The portion of § 580.4 concerning the power of attorney form, § 580.5(h), § 580.6(c) and §§ 580.13, 580.14, 580.15, and 580.16 are effective August 30, 1989. All other sections become effective September 29, 1989.

SUPPLEMENTARY INFORMATION:

Background

To implement the Truth in Mileage Act of 1986, Public Law 99-579, and to make some needed changes in the Federal odometer regulations, the National Highway Traffic Safety Administration (NHTSA) published a notice of proposed rulemaking (NPRM) on July 17, 1987. 52 FR 27022 (1987). The agency received numerous comments on the NPRM representing the opinions of new and used car dealers, auto auctions, leasing companies, State motor vehicle administrators, and enforcement and consumer protection agencies. Each of the comments was considered, and a final rule was published on August 5, 1988. 53 FR 29464 (1988).

The agency received seven petitions for reconsideration of the August 1988 final rule. These petitions requested that NHTSA reconsider the provisions of the final rule that: (1) Prohibit a person from signing the odometer disclosure statement as both the transferor and transferee in the same transaction; (2) define "transferor" and "transferee"; (3) define "secure printing process"; (4) concern the language included on the odometer disclosure statement; and (5) require dealers and distributors to retain, for five years, a fully completed and signed copy of every odometer disclosure statement, including the transferee's signature, that they issue and receive.

In response to the petitions for reconsideration, NHTSA published two notices in the **Federal Register** on March 8, 1989. In granting certain aspects of those petitions, NHTSA issued an NPRM, 54 FR 9858 (1989), that proposed to clarify the definitions "transferor" and "transferee," require the transferee to retrun a completed disclosure statement to his transferor, and require that, to be valid, title reassignment documents must be issued by a State. Other aspects of the petitions for reconsideration were denied. 54 FR 9816 (1989).

While the petitions for reconsideration were pending before the agency, Congress enacted the Pipeline Safety Reauthorization Act of 1988 (PSRA), Public Law 100–561 (October 31, 1988). Section 401 of the PSRA, which amends section 408(d)(1) of the Motor Vehicle Information and Cost Savings Act (MVICSA), 15 U.S.C. 1988(d)(1), authorizes the use of powers of attorney in connection with the required mileage disclosure under certain circumstances. The new law directs the agency to prescribe the form and content of the power of attorney/disclosure document and to establish reasonable conditions for its use by the transferor "consistent with this Act and the need to facilitate enforcement thereof." It also requires NHTSA's rule to provide for the retention of a copy of the power of attorney by the person exercising it and to ensure that the person granted the power of attorney completes the disclosure on the title consistent with the disclosure on the power of attorney form. Finally, the statute provides that the original power of attorney form must be submitted back to the state by the person exercising the power of attorney.

To implement these provisions, NHTSA issued an interim final rule/request for comments on March 8, 1989. 54 FR 9809 (1989). The interim final rule permits, in limited instances when the title is physically held by a lienholder, an individual to sign the odometer disclosure as both transferor and transferee through the use of a secure power of attorney form, issued by a State. When such vehicles are resold, the interim final rule allows a transferee to use the same power of attorney form to authorize his transferor to sign the disclosure on the title document on his behalf.

The March 1989 Notice of Proposed Rulemaking

Definitions

To clarify that the liability for issuing a false odometer disclosure statement could be placed on a person acting as an agent for the owner of the vehicle, in an NPRM, published on July 17, 1987, NHTSA proposed to amend the definition of "transferor" to include the agent of the transferor who transfers the ownership of another and the definition of "transferee" to include an agent of the transferee who accepts transfer of ownership in a motor vehicle. 52 FR 27023 (1987). The definitions were adopted as proposed. 53 FR 29464 (1988).

The National Auto Auction Association (NAAA) and the National Independent Automobile Dealers Association (NIADA) requested NHTSA to reconsider these definitions. NAAA and NIADA suggested that the definitions should be expressly limited to the principal or agent who signs the required disclosure on behalf of the owner. Because the suggestions of NAAA and NIADA were consistent with NHTSA's intention to clarify that the liability for issuing a false statement could be placed on the person acting as an agent for the owner of a vehicle, in the March 1989 NPRM we proposed to amend the portions of the definitions of transferor and transferee concerning the transferor's and transferee's agents. We proposed to define "transferor" to include the transferor's agent who signs any odometer disclosure statement on behalf of the transferor. Similarly, we proposed to define "transferee" to include the transferee's agent who signs any odometer disclosure statement on behalf of the transferee.

We have received four comments on the proposed changes to the definitions. The Delaware Department of Public Safety, Division of Motor Vehicles (Delaware), and the National Automobile Dealers Association (NADA) agree with the proposed definitions. The National Vehicle Leasing Association (NVLA) "urge(s) NHTSA to provide that only one transferor need provide an odometer disclosure statement to a transferee." Furthermore, NVLA requests that NHTSA amend the definitions to read "or" in lieu of "and" and to amend § 580.5(c), which requires "each" transferor to make a disclosure. The National Consumer Law Center (NCLC) recommends that the agency retain the definitions contained in the 1988 final rule. It believes that the proposed definitions create a "gaping loophole" and explains its position by reference to the following scenario:

> [A] manager of an incorporated dealership or auction engaged in making false disclosures need only have another employee such as an office clerk sign the disclosure statements to avoid liability. The manager could argue that he or she was not a transferor under the first part of the new definition because the manager had no "ownership." The manager would then argue that the second part of the definition also did not apply because while he or she was admittedly an agent and it had been proven that he or she was responsible for a false disclosure, the manager did not "sign" the disclosure statement.

Therefore, NCLC suggests that the definitions be amended to include any person who, as agent, "causes to be" made or signed an odometer disclosure statement.

To assist those involved in the transfers of vehicles to more fully understand the requirements of the law and the proposed definitions, in the preamble to the March 1989 NPRM, we addressed several different scenarios and explained which parties are transferors. As noted in the scenarios, the person who actually signs the disclosure statement may depend upon the relationship between the parties. It is not NHTSA's intention to require that the transferee receive multiple disclosure statements. Therefore, we have adopted NVLA's suggestion and amended § 580.5(c) to state that only one transferor need disclose the mileage to the transferee. However, we have not adopted NVLA's suggestion to amend the definitions to read in the disjunctive as opposed to the conjunctive. If more than one party is, in fact, the transferor, the relationship between the parties determines who issues the odometer disclosure statement.

We have not adopted the proposal of the NCLC. Sections 412 and 413 of the MVICSA, 15 U.S.C. 1990b and 1990c, include as persons covered by the requirements of that Act, a person who "causes to be done" any act. The manager who "caused" the other employee to sign the disclosure statement would be in violation of statute for causing the employee, as transferor or transferee, to violate another section of the MVICSA or NHTSA's regulations. Therefore, the regulatory definitions do not need to be expanded to protect against the scenario described by the NCLC, and the original purpose of the amended definition, to close "loopholes which have limited the Government's ability to prosecute certain violations of the odometer laws because of ambiguity in the definitions", 53 FR 29465 (1988), has been met.

Record Retention

In response to a petition for reconsideration of the August 1988 final rule submitted by the National Association of Fleet Administrators, Inc. (NAFA), in the March 1989 NPRM, we proposed to place a new requirement

upon a transferee. In addition to signing the disclosure and printing his or her name, the transferee would be required to return a copy of the signed odometer disclosure statement to his or her transferor. We anticipated that this provision would ensure that transferees who obtain the title from their long-distance transferors will return a copy of the completed disclosure statement to their transferors and that these long-distance transferors will thus be able to retain the signed odometer disclosure statement, as required by § 580.8(a).

Delaware, NADA, NAFA, and NVLA support this proposal. Because we received no comments in opposition to our proposal, it is adopted as proposed.

We note that, with regard to the transferee's obligation to return a completed odometer disclosure statement, NVLA also asserts that "it is vitally important that the regulation indicate that a transferor who has sent the odometer disclosure statement to the transferee, requested that the transferee sign the statement and return a copy to the transferor and informed the transferee of potential liability for failure to return the copy should be protected against having violated the regulation in the event that the transferee does not return the copy." Therefore, NLVA suggests that § 580.8, which concerns the dealers retention requirements, be amended.

NHTSA specifically considered and rejected a similar suggestion proposed by NAFA and the PHH Group, Inc. in their petitions for reconsideration of the August 1988 final rule. As noted in the preamble to the August 1988 final rule and the March 1989 NPRM which granted, in part, those petitions, we stated that pursuant to 15 U.S.C. 1990b, in exercising its enforcement discretion NHTSA must take into account the nature, circumstances, extent, and gravity of a violation and that we cannot provide a complete listing of the circumstances in which failure to retain the required documents will be excused. We continue to believe that it would be inappropriate to include, in the regulation, what constitutes a "good faith effort" to retain the completed odometer disclosure statement. NVLA requests that we do just that by adopting its suggestion and, therefore, its request is denied.

Security of Reassignment Documents

In the March 1989 NPRM, we proposed to amend § 580.4 concerning the security of reassignment documents. Specifically, we proposed to require that in addition to being set forth by a secure printing process, reassignment documents will not be valid unless they are issued by a State. Delaware and NADA support this proposal. The American Association of Motor Vehicle Administrators (AAMVA) states that this requirement is "consistent with the language of the 1988 amendment to the Truth in Mileage Act and NHTSA's final rule which requires that secure powers of attorney be issued by the jurisdictions." AAMVA notes that some States will phase out the use of separate reassignment forms and others may contract with third-party agents for printing, issuing, and controlling secure reassignment documents. No one has commented in opposition to the proposal, and it is adopted in this final rule.

Exemptions

After publication of the August 1988 final rule, NHTSA was asked whether the lessee of a vehicle having a gross vehicle weight rating (GVWR) of more than 16,000 pounds or of a vehicle that is ten years old or older must furnish to his lessor a written statement regarding the vehicle's mileage. Because the lessor, when transferring a vehicle with a GVWR of more than 16,000 pounds or a vehicle ten years old or older, is not required to give his transferee an odometer disclosure statement, we could see no reason to require a lessee of any of these types of vehicles, or of any vehicles that are not self-propelled, to give their lessor a written statement concerning the vehicle's mileage. Accordingly, NHTSA proposed to amend § 580.6 to exempt the lessees of certain vehicles from the odometer disclosure requirements of § 580.7. Likewise, NHTSA proposed to exempt the lessors of certain vehicles from the notification requirements of § 580.7. The agency received no comments on this proposal and, accordingly, it is adopted as proposed.

The March 1989 Interim Final Rule

Security of Powers of Attorney

The PSRA provides that "consistent with the purposes of this Act and the need to facilitate enforcement thereof," if a State permits their use, power of attorney forms shall be "set forth by means of a secure printing process (or other secure process)." To implement this requirement, the interim final rule revised § 580.4, which concerns the security of title documents and reassignment documents, to require power of attorney forms to meet the security critieria applicable to reassignment documents. The August 1988 Final Rule requires that reassignment documents be set forth by "a secure process," not necessarily the same secure process used to secure title documents. The Delaware DMV commented that secure forms will entail some costs to the States, but did not oppose the provision. This aspect of the interim final rule is retained in this final rule.

Signature of Same Person as Transferor and Transferee

Since the PSRA has the effect of allowing a person to sign an odometer disclosure statement on the title as both the transferor and transferee in specified cicumstances, the interim final rule amended § 580.5(h), which prohibited a person from signing an odometer disclosure statement as both the transferor and transferee in the same transaction. This amendment to § 580.5(h) permits a person to sign an odometer disclosure statement as both the transferor and transferee if the requirements of §§ 580.13 and 580.14, which NHTSA also added in the interim final rule, have been met. No commenters opposed this amendment and it is retained in the final rule.

Elements of the Power of Attorney Form

Under § 580.13 of the interim final rule, if permitted by State law, a transferor whose motor vehicle title document is physically held by a lienholder may give his transferee a power of attorney for the purpose of making the mileage disclosure on the title document. The power of attorney must be on part A of a secure form issued by a State and must contain a space for the transferor to disclose the mileage. The disclosure required to be made by the transferor to the transferee on the power of attorney form parallels the disclosure required to be made on the title by § 580.5. In addition, when such vehicles are resold, § 580.14 of the interim final rule provides that if State law permits, the subsequent purchaser may, on part B the same form, give his power of attorney to his transferor to acknowledge the transferor's mileage disclosure. The power of attorney must also contain a space in part B for the transferor to disclose the mileage. The disclosure required to be made by the transferor to the transferee on part B of the power of attorney form also parallels the disclosure requried to be made on the title by § 580.5.

Section 580.15 of the interim final rule provides that the power of attorney form must also contain a certification in part C of the form, to be completed by the person exercising the power of attorney, that he has reviewed the title and that no discrepancies exist. While the rule sets forth the information which must be

BEST COPY AVAILABLE

disclosed, and the form must be separated in to parts A, B and C, each State is free to organize, in each part, the information required by the rule in any way it wishes. While the language of the required certification has been clarified, these aspects of the interim final rule are otherwise retained in this final rule.

Submission of Power of Attorney Form to the State

The PSRA provides that the "original [of the power of attorney form shall] be submitted back to the State by the person granted such power of attorney." In conformity with this requirement, and to ensure appropriate enforcement of the odometer disclosure requirements, § 580.13(f) of the interim final rule required the transferee to submit the original power of attorney form to the State that issued it with an application for title and the transferor's title. In the preamble, NHTSA identified two ways in which this might be accomplished. The transferee could submit the power of attorney form after selling the vehicle, with the old title and his purchaser's title application, provided his purchaser (and the State) permits him to apply for title on behalf of the purchaser. Alternatively, the transferee could apply for title in his own name and submit the secure power of attorney form and his transferor's title with that application.

NHTSA received several comments in opposition to this provision of the rule. These comments assert that when the subsequent purchaser is another dealer, particularly an out-of-state wholesale dealer, under the law of most states, the initial dealer (transferee) would have to adopt the second alternative and retitle vehicles in his own name. This so-called "retitling requirement," it is argued, is a misinterpretation of the statute and will "disrupt existing commercial practices" of dealers, who would otherwise reassign the old title but will now have to apply for a title themselves, and for the States, who will have to process increased numbers of title applications.

NHTSA agrees that some dealers will have to retitle in their own names, although NHTSA disagrees that it has misinterpreted the statute to "require" retitling. Rather, given our experience with State titling procedures, these appear to be the only viable methods to preserve the integrity of the paper trail and conform to the requirements of the statute.

Moreover, we do not agree that any retitling that becomes necessary will present a significant burden to dealers or to States. First, a majority of all vehicles taken in trade will not have to be retitled in the dealer's name. Second, and perhaps more important, retitling will not prevent cars from being promptly resold. In a majority of states, a vehicle may be sold without the title being present. Thus, standard commercial practice in many places has traditionally been for vehicles to be sold without the title present and for the title to "catch up" with the vehicle at a later point. Any retitling necessitated by this rule will not disturb this practice. The only difference is that the "new" title will be reassigned instead of the "old" title. At most it will add a small amount of time required for the title to "catch up" with the vehicle because dealers can often secure titles to vehicles in their own names within a day or two through existing dealer retitling arrangements with State departments of motor vehicles.

Even in the States that do require the title to be present before sale, retitling should not cause significant disruption of existing practices because dealers must already wait for the title to arrive from the lienholder, or for reissued titles to be sent from the State before they can resell vehicles. Any retitling in the dealer's name will only extend briefly the period the dealer must wait before he can resell. Thus, although there will be some retitling costs and some costs associated with delay, these costs will not be unduly burdensome. Further, in most instances, retitling will not interfere with the standard flow of commerce because vehicles will continue to be sold pending arrival of the title, as they have been in the past.

Commenters have suggested alternatives to the ones we have presented. However, these cannot be adopted because they would be inconsistent with the statute. For example, NIADA, NADA and the Iowa Department of Transportation each proposed that the dealer granted power of attorney not be required to submit the original power of attorney form back to the issuing State. They suggested that the dealer should, instead, be allowed to reassign title and the dealer/person next applying for title should be allowed to submit the form back to the issuing State. This proposal cannot be adopted because the PSRA clearly requires "the *original* [secure power of attorney form] to be submitted back to the State *by the person granted such power of attorney.*" (Emphasis added.)

Alternatively, NADA has suggested allowing the original power of attorney to be submitted with the application for title in the new titling State, whether or not that State was the issuing State. Under such an arrangement, NADA suggests that the persons granted the power of attorney could attach the original power of attorney to the old title and note or stamp "POA" in the reassignment block. There are several problems with this alternative. First, to do so would be in contravention of the statute. Not only would the dealer who exercised the power of attorney not be returning the form, but the form would not be going "back" to the issuing State. NADA has attempted to read the statute to allow for the return of the form to any State. However, we do not believe that the statutory language requiring the secure power of attorney form be issued by "the State" and "submitted back to the State" is susceptible of that interpretation. Rather, it is clear that Congress intended the secure power of attorney form to be returned to the same State that issued it by the person who was granted and exercised the power of attorney.

Moreover, submission of the power of attorney form to a State other than the one that had issued it would jeopardize the integrity of the paper trail. In contrast to the issuing State, another State would be less familiar with the forms, and therefore less likely to detect improperly completed or fraudulently submitted forms. Although certain information must be disclosed, and the power of attorney form must be organized into parts A, B, and C, each State is free to organize, in each part, the information required by the rule in any way it wishes. States may also add information or incorporate other things into the power of attorney forms. Allowing a State to receive another State's power of attorney forms would also interfere with the issuing State's ability to control the forms because the issuing State would not know whether, or to where, its forms were being returned.

It has also been suggested that the dealer be allowd to file the power of attorney form with the issuing State, either absent any other documentation or with a copy of the reassigned title that has been passed to a buyer. If the person granted power of attorney were not required to submit the power of attorney to the State with the application for title and the transferor's title, enforcement of the anti-fraud provisions of the law would be hampered. First, the integrity of the paper trail would be at risk because subsequent transferors could discard the power of attorney, forge a new one, and alter the mileage on the title. (We recognize that even with securely printed titles, some alterations have been, and may continue to be, undetected upon initial review by State Departments of Motor Vehicles.)

Additionally, the paper trail would be jeopardized if the person granted the power of attorney submitted only the power of attorney form and no title documents, particularly if the vehicle were sold to an out-of-state buyer. The title would be in one State and the power of attorney form in another; they could not easily be compared. This would create problems similar to those experienced with the current use of separate odometer statements.

Allowing the power of attorney form to be filed with the issuing State separately, even along with a copy of the reassigned original title, would also make retention of the form less likely. The States currently retain copies of all title applications and accompanying materials. Separately submitted documents are frequently disposed of by the States. Thus, if the power of attorney form is part of a title application package, a copy of the form, independent of the dealer and customer copies, will exist. Having this independent source of documentation will aid in enforcement, for although a dealer would face penalties for failure to retain the secure power of attorney form as required by § 580.8, an unscrupulous dealer might choose to face that penalty rather than risk retaining damaging paperwork. The State's records would provide the evidence to catch such an unscrupulous dealer. Further rulemaking on this issue might be appropriate if, in the future, it is determined that the States had adopted adequate methods to retain power of attorney forms submitted without title applications.

NADA has also suggested that "NHTSA also may want to consider a requirement that states which receive out-of-state power of attorney forms as part of title applications either return those forms to the states of issuance or, more reasonably, make copies available to the states of issuance upon request." This suggestion suffers from the same drawbacks as the other suggestions discussed above. First, any arrangement in which the power of attorney form is submitted to any State other than the issuing state, or is submitted to the issuing state by someone other than the person who exercised the power of attorney is inconsistent with the PSRA. Second, under this proposed arrangement, the record retention problem would continue to exist because the issuing state would be receiving the power of attorney form separately from any application for title. As discussed above, this represents an unjustified risk to enforcement.

Availability of Secure Powers of Attorney

Although the PSRA explicitly authorizes the use of powers of attorney to disclose odometer information only when the title is "physically held by a lienholder," during the floor debate in the House of Representatives, Rep. Dingell stated that he expected NHTSA to examine other situations in which the use of a power of attorney to disclose odometer information might be appropriate. *See* 134 Cong. Rec. H10080 (daily ed. Oct. 12, 1988). In response to this direction, NHTSA has considered other such instances. To facilitate commercial practices in situations where a power of attorney was used at the time the vehicle was sold to the dealer, the interim final rule authorized use of the same power of attorney form for the dealer's sale of the vehicle. Thus, § 580.14 permits, if allowed by State law, a transferee under these circumstances to give his power of attorney to his transferor (i.e., the dealer) for the purpose of reviewing title documents and any reassignment documents to determine whether there are any mileage discrepancies and, if there are no mileage discrepancies, to sign the title, acknowledging the disclosure. This power of attorney must include a disclosure from the transferor to the transferee that parallels the disclosure required to be made by the transferor to the transferee on the title document. In addition, the appointment of the transferor as the transferee's attorney-in-fact must be made on part B of the same secure power of attorney form, issued by the State, upon which the transferor was appointed the attorney-in-fact by his transferor pursuant to § 580.13. This enables purchasers to examine the previously issued power of attorney for mileage disclosure alterations, erasures or other marks, and to learn the name of the prior owner without the additional cost of a title search.

NADA and NIADA submitted comments (supported also by NAAA) criticizing the fact that the interim final rule does not allow for the use of secure powers of attorney in situations where the customer's title is not present because the customer has lost or misplaced the title. NADA and NIADA contend that this aspect of the interim final rule will cause a disruption to standard business practices because the title replacement process takes too long. When the title is replaced, it is usually mailed to the dealer, thereby requiring a return trip by the customer to make the disclosure. Moreover, even if the replacement title is mailed to the previous owner, after making the disclosure, he or she will either have to return to the dealer or send the title back to the dealer by mail. Further, NADA and NIADA maintain that the legislative history of the PSRA demonstrates Congress' intention that the use of secure powers of attorney be extended to cover lost title situations.

We do not agree that it was Congress' manifest intent that secure powers of attorney be available in lost title situations. Nevertheless, we have determined that the security of the power of attorney forms, combined with the control that the States plan to exercise over the forms, will serve to counteract the increased opportunity for fraud that will arise from allowing the use of powers of attorney in lost title situations. We are, therefore, adopting NADA's and NIADA's suggestion. This final rule allows, if State law permits, a secure power of attorney to be used for the purpose of odometer disclosure where the title is not present because it has been lost by the person to whom it was issued by the State. In order for a power of attorney to be used in the lost title situation, the transferee (i.e., the dealer) must apply for the duplicate title on behalf of the transferor. Under these conditions, the powers of attorney will be available to facilitate consumer vehicle sales transactions, but will not be available in other than consumer sales transactions where the risk of fraud is considerably greater. If experience demonstrates that this use of powers of attorney does lead to additional odometer fraud, we may decide to revise this expansion of authority.

NVLA submitted comments regarding another aspect of the limited availability of secure powers of attorney. NVLA expressed concern that, as written, the regulation prevents leasing companies, acting as transferors, from using powers of attorney to acknowledge for their purchasers the mileage disclosures they make, even when the leasing companies titles are held by their lienholders. The inability to use a power of attorney in this situation, NVLA argues, presents a problem because the "buyer may live a great distance from the lessor's place of business" and that the buyer would face a "significant hardship" in appearing to sign the lessor's disclosure on the title.

NVLA suggests that the rule be amended to permit the use of a secure power of attorney whenever the title is held by "a lienholder", rather than by the transferor's lienholder. Second, NVLA suggests allowing part B of the secure power of attorney form to be used, without the completion of part A.

OL
54
SS
1
6
7
AG
30
989
UMI

Under this proposal, part A would contain only the vehicle information when the form is used for the part B power of attorney only. Finally, NVLA suggests requiring the secure power of attorney form for which part A is not completed be returned to the State with an appliciation for title. These suggestions are not adopted. NVLA seems to misapprehend the intended use of secure powers of attorney under the rule. Further, the "solution" suggested by NVLA would not appear to remedy the perceived problem.

Use of a secure power of attorney was never intended in the situation where a leasing company (or other business) is seeking to sell a vehicle it owns; neither is such use necessary. The availability of a secure power of attorney is intended to facilitate consumer vehicle transactions. Often the consumer car owner is unable to present his title at the time of the sale of the vehicle because the title is held by the consumer's lienholder and the consumer cannot satisfy the lien by himself; the power of attorney arrangement enables the consumer to sell the vehicle to the dealer, who can pay off the lien, and allows the dealer to complete the required odometer disclosure on the title when the title arrives without bringing the consumer back into the transaction either through use of the mails or by having the consumer return to the dealership in person. The legislative history of the Pipeline Safety Reauthorization Act reinforces this intention: "The amendment * * * specifically refers to situations where a vehicle's title, because of financing, is held by a lienholder, such as a bank, and not the consumer. In such cases, the consumer cannot fill the mileage because he or she does not physically hold the title." (Remarks of Rep. Dingell, 134 Cong. Rec. H10079 (daily ed. Oct. 12, 1988)).

In the case of a leasing company, the leasing company would itself be paying off the lien, not the buyer. Thus, even if the title was not present at the time of sale, after the leasing company received the title from its lienholder, the company could make the disclosure, mail it to the buyer, have the buyer sign it and mail a copy back to the leasing company. Thus, no power of attorney is necessary.

Although nowhere explicitly stating so, NVLA seems concerned about the mailing of required paperwork. With the establishment in this final rule of penalties of the transferee's failure to return required paperwork, this concern should be ameliorated. Moreover, any problem presented by mailing titles would also occur when mailing the secure power of attorney form. Even under NVLA's proposal, in order for the buyer to see the leasing company's disclosure on the secure power of attorney form and to sign the power of attorney, either the buyer would have to appear at the lessor's place of business or the lessor would have to mail the form to the buyer and rely on the buyer to complete his portion of the form and mail it back. NVLA does not explain how this situation differs from having the buyer appear to sign the title, or mailing the title to the buyer, nor how the use of a power of attorney would be less burdensome. Moreover, even if NHTSA were to allow the use of secure powers of attorney where the leasing company's title was held by its lienholder, the "problem" NVLA complains of would still exist where the title was not being held by a lienholder, but by the leasing company itself. NVLA does not suggest that the use of a secure power of attorney be allowed where the leasing company already has the title to the vehicle it is selling.

In addition, NHTSA is concerned about the increased risk to enforcement resulting from extending the availability of powers of attorney to transactions like the ones outlined by NVLA. Any use of a power of attorney increases the possibility of fraud and entails some additional risk to enforcement efforts. NHTSA does not believe that the increased possibility for fraud is warranted in this situation, particularly because the use of a power of attorney in this situation would not significantly facilitate transactions that are otherwise impeded.

The Certification Requirement

To ensure that a person who exercises a power of attorney, whether under § 580.13 or both §§ 580.13 and 380.14, is fully aware of his obligations and his liability for any action that is inconsistent with the power of attorney, the interim final rule required, under § 580.15, that the person exercising the power of attorney complete, on part C of the secure power of attorney form issued by the State, a certification that he has "reviewed the title and any reassignment documents for mileage discrepancies and that no discrepancies exist." Pursuant to § 580.15(b), any mileage discrepancies would void the power of attorney.

NADA and NIADA have both objected to this certification requirement. Both groups have asserted that the requirement is neither required nor intended under the statute, and that NHTSA was, therefore, without authority to institute it. We disagree. Section 401 of the PSRA directs NHTSA to impose by rule "reasonable conditions" on the use of powers of attorney. Moreover, the statute provides that NHTSA's rules must be "consistent with the purposes of [the Cost Savings] Act and the need to facilitate enforcement thereof." The Truth in Mileage Act requries that the odometer disclosure appear on the title to enable consumers to see these disclosures on titles and the chain of ownership of the vehicle. The use of a power of attorney, although commercially useful, interferes with that aspect of the Truth in Mileage Act because, when using the secure power of attorney form, the dealer is the only person who actually gets to see the title. The certification requirement will facilitate enforcement, without imposing a significant burden on dealers, and is appropriate to carry out Congress' intention to protect the interests of consumers in connection with motor vehicle sales transactions.

Substantively, NADA's comments reflect a concern, shared by NIADA that "the certification provision * * * appears to impose a wholly new responsibility, that is, to review and attest to the validity of prior disclosures." It has never been NHTSA's intent that this certification requirement place new liabilities on dealers. Further, the dealers are not expected to verify or attest to the validity of prior disclosures. Rather, under the certification requirement, dealers must check the title and compare the disclosure on the power of attorney against the mileage on the title for discrepancies between the disclosures.

NADA points out that current common law and statutory duties already require the dealer to act in a lawful manner and that accepting and/or submitting to the State paperwork that contained discrepancies would currently subject the dealer to liability under the MVICSA and many State laws. We agree. The certification requirement is not intended to create liabilities beyond those already existing, but rather to discourage the dealer from passing on to his buyer a false disclosure received from his transferor on the secure power of attorney form, by encouraging the dealer to "look twice" before acting.

Upon reflection, we have concluded that the current language in part C of the power of attorney form requiring the dealer to certify that "there are no indications of mileage discrepancies" may not have clearly reflected our intent. Accordingly, we have decided to adopt, with minor modification, a proposal submitted by NADA and NIADA in their June 14, 1989, supplemental comments to change the language of the certification. This final rule amends § 580.15 to provide that a person who exercises a power of attorney under §§ 580.13 and 580.14 must complete a certification that he has disclosed the mileage on the title document consistent with the mileage disclosed to him on the power of attorney form and that he has examined the title and the mileage disclosure made on the title pursuant to the power of attorney is greater than the mileage previously stated on the title.

The certification we are requiring differs from the NADA/NIADA proposal in three minor respects. First, consistent with the terms of existing § 580.15 and the purposes of the certification requirement, part C will provide that the dealer has reviewed any reassignment documents that are attached to the title as well as the title itself. Second, we are requiring that the person exercising the power of attorney certify that the mileage he enters on the title "is higher" than the mileage already appearing on the title, rather than, as was proposed, "appears higher." The number entered on the title either will or will not be higher than the mileage disclosed on the power of attorney form; thus, "appears" is not appropriate. Finally, we are requiring the person exercising the power of attorney to make his certification "upon examination" of the title, rather than "upon normal visual examination." We consider the term "examination" in this context to be self-defining. Moreover, the term "normal" is vague and its use would only likely cause confusion among dealers as to what constitutes a "normal" examination.

We are aware that at least one State has begun printing secure power of attorney forms with a part C that contains the language of the certification required under the interim final rule. Since we view the amendments to part C made in this final rule as a clarification of our prior rule, rather than a substantive change, in order to avoid hardship to that State, and any others that may have already invested in secure power of attorney forms, NHTSA will construe the certification on those forms as carrying the same meaning as if they were worded as required under this final rule. However, to avoid any possible confusion, we urge those States to switch to the current language as soon as possible.

It has been suggested that the certification requirement is most fitting to the "second sale" situation where the subsequent purchaser's only link to the title will be the dealer. We think there is merit to this argument. Thus, in this final rule, we are amending § 580.15 to provide that the certification requirement will apply only when the dealer is exercising a power of attorney for both the "first sale" and "second sale" customers, as provided for in §§ 580.13 and 580.14. If the title is present at the time of the second sale, the purchaser will be able to review the title himself to assure that the mileage is entered in accordance with the initial transferor's power of attorney and is higher than the mileage appearing on the title and reassignment documents. (As a practical matter, the mileage entered by the dealer could never be lower than the mileage already on the title, since if the power of attorney set forth a lower mileage, it would void the power of attorney, and the dealer would not be authorized to sign the disclosure on behalf of the transferor.)

Section 580.15(b) of the interim final rule provides that any mileage discrepancies void the power of attorney. NADA and NIADA have suggested that "mistakes by a grantee" should not void the power of attorney. However, we continue to believe that this provision is vital; if the mileage appearing on the title (or reassignment documents) is greater than the mileage disclosed by the first sale transferor on the power of attorney form, or if the title disclosure does not exactly match the disclosure on the power of attorney, the power of attorney should not be used to pass on inaccurate information. It is immaterial whether the discrepancy occurs through design or mistake, or whether it is caused by the grantor, grantee, or someone else. The power of attorney is voided by the existence of a discrepancy, not by an action causing a discrepancy. For these reasons, the suggestion that grantee mistakes should not void the power of attorney is rejected.

Transferee Access to Previous Title and Power of Attorney Documents

Under § 580.14(h) of the interim final rule, if the transferee who is granted a power of attorney from his transferor applies for title in his own name, the transferee must show his purchaser, upon his purchaser's request, a copy of the previous owner's title, including the odometer disclosure completed on behalf of the previous owner, and a copy of the power of attorney form completed by the previous owner. Similarly, under § 580.14(g) of the interim final rule, if a second-sale purchaser decides not to appoint his transferor (i.e., the dealer) as his attorney-in-fact pursuant to § 580.14, the transferor must show his purchaser a copy of the previous owner's title and a copy of the power of attorney form completed by the previous owner. No one commented in opposition to these provisions and they are retained in the final rule. However, for organizational clarity, these provisions have been separated out of § 580.14, and appear, renumbered, as now §§ 580.16(a) and 580.16(b).

Record Retention

Section 401 of the PSRA requires NHTSA's rules to provide for the retention of the power of attorney form. The interim final rule amended § 580.8, which concerns odometer disclosure statement retention, by adding a new paragraph (c). Under this paragraph, motor vehicle dealers and distributors who are assigned a power of attorney by their transferors are required to retain, for five years, a photostat, carbon, or other facsimile copy of each power of attorney they receive. These documents must be retained at the primary place of business of the dealer or distributor in an order that is appropriate with business requirements and that permits systematic retrieval. This paragraph is consistent with the retention requirements of the August 1988 final rule that is applicable to dealers, distributors, and lessors. Like the August rule, the storage provision of this amendment is phrased broadly to include any media by which information may be stored, provided there is no loss of information. No one has commented in opposition to this retention requirement, and it is retained unchanged in this final rule.

Miscellaneous Matters

In addition to the matters discussed above, some minor changes to the language of §§ 580.13, 580.14, and 580.15 have been made. The purpose of these changes is merely to simplify or clarify the text of the rule. No alterations of rights or duties, except to the extent already discussed above, are intended.

AAMVA asked NHTSA to provide clarification on the use of secure powers of attorney in two situations. The first question presented is whether or not the power of attorney provisions apply to the practice of "floor planning." ("Floor planning" is a practice by which a financial institution will physically hold a title as security for financing, without formally filing or recording a security interest, on a vehicle offered for sale by a dealer.) This "floor planning" arrangement does not qualify for use of the power of attorney. The PSRA allows for the use of a secure power of attorney in cases where "a transferor to whom

OL
54
SS
1
6
7
AG
30
989
MI

title to a motor vehicle has been issued by a State" does not have the title because the title is being physically held by the lienholder. Thus, because the dealer is not the person to whom the title was issued by the State, the dealer may not use a power of attorney form for purposes of mileage disclosure under these circumstances. Moreover, even in situations in which a dealer has retitled a vehicle in his own name prior to surrendering the title under a "floor planning" arrangement use of a power of attorney is not available, because the financial institution is not considered a lienholder because no formal lien has been filed and recorded with the State. Because NHTSA believes that the statutory language clearly enough settles this matter, adding qualifying language on "floor planning" to the final rule, as AAMVA has suggested, is not considered appropriate.

The second situation about which AAMVA is seeking clarification is where the lending institution that financed the vehicle's purchase is located in a state that requires the lienholder to hold the title as security, but the vehicle is registered in a different state, which allows the owner, rather than the lienholder to hold the title. Under the PSRA, the availability of secure powers of attorney is always subject to State permission. States that choose to make secure powers of attorney available for transactions in which a consumer's title is unavailable because it is held by an out-of-state lienholder may do so. In States that choose not to allow the use of a secure power of attorney, in some or all circumstances, a transferor not in possession of his or her title at the time of sale will have to return to the dealership to sign the title when it is received, or else complete the transaction by mail.

NAAA submitted comments concerning the implications of the general prohibition on the same person signing as transferor and transferee in the same transaction for auto auctions in so-called "chain-of-title" states. In most states, auto auctions are brokers between buyers and sellers, facilitating sales between interested parties. As part of the service auctions provide, many auctions regularly act as agents under a power of attorney for their sellers to complete the necessary paperwork accompanying the sale, including making the required odometer disclosure. In Arizona, California and Colorado, however, auctions have been required by law to appear in the "chain of title." In these states, NAAA notes, "auctions simultaneously take a reassignment from the seller and give a reassignment to the buyer", thereby appearing, however briefly, to own the vehicle. Hence, under the rule, in these states the seller must disclose the mileage to the auction and the auction must execute a separate disclosure to the buyer. Furthermore, the auction is prevented under § 580.6(h) from using the seller's power of attorney to make the disclosure for the seller to the auction and then signing the disclosure as transferee.

The NAAA has appealed to NHTSA to amend § 580.6 to include an exemption from the disclosure requirement for auctions which are required by State law to take reassignment from the seller and give it to the buyer, provided that the selling customer makes a disclosure to the buyer, who acknowledges it as required. NHTSA declines to adopt the suggestion of the NAAA. We understand NAAA's concerns; however, we consider the problem faced by auctions in the "chain-of-title" States essentially one to be worked out by those States and the affected auctions. We are concerned that a proliferation of exemptions to the regulatory requirements will inhibit enforcement of the statute. Therefore, NHTSA considers the creation of another category of exempted transferors inappropriate.

Finally, the Florida DMV expressed concern that the sample secure power of attorney form appearing at appendix E of the interim final rule does not empower the attorney-in-fact to actually transfer ownership of the vehicle, and that another form will be required. The sample form at appendix E represents only the minimum acceptable elements of a power of attorney for the purpose of mileage disclosure. Nothing in the interim final rule, or this final rule, prevents a State from including a space on the power of attorney form for a grant of power of attorney for the purpose of transferring title.

Federalism Assessment

In adopting the PSRA, Congress apparently found that limiting the use of powers of attorney in connection with mileage disclosure could cause an undue burden on dealers and consumers. To resolve the problem and alleviate the potential costs for dealers and consumers, the new law specifies that power of attorney may be used in certain circumstances, if otherwise permitted by State law. This final rule does not impose any requirements upon the States other than those imposed by the law. Nevertheless, this action has been analyzed in accordance with the principles and criteria contained in Executive Order 12612, and it has been determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment. The States may decide not to allow the use of powers of attorney in connection with mileage disclosure and, therefore, would not be required to print conforming forms. Those States that choose to allow the use of powers of attorney will incur some costs from processing applications, maintaining records and issuing new titles resulting from the requirement that the power of attorney form be returned to the State along with a title application. However, as the States may decide not to allow the use of powers of attorney in connection with mileage disclosure, they would not be required to incur these costs. Additionally, while it is estimated that the final rule would result in additional costs to the States for printing secure title reassignment documents and power of attorney forms, the cost to each State is minimal and could easily be recouped from those who are applying for the forms.

Effective Date

Under section 553(d) of the Administrative Procedures Act, 5 U.S.C. 553(d), a substantive rule may become effective before thirty days after its publication where it relieves a restriction, or as otherwise provided for by the agency for good cause. The sections that are immediately effective are those dealing with powers of attorney. These sections, although subject to the alterations discussed herein, were already effective. Moreover, the substantive changes relieve restrictions on the use of powers of attorney and, therefore, may be made effective upon publication.

Regulatory Impacts

A. Costs and Benefits to Dealers, States, and Consumers

When it issued the interim final rule, NHTSA determined that it is neither "major" within the meaning of Executive Order 12291, nor "significant" within the Department of Transportation regulatory policies and procedures. The changes made in the interim final rule do not modify that determination. Similarly, we find that this rule is not significant. A preliminary regulatory evaluation of the impacts of the interim final rule was prepared and placed in Docket 87–09 Notice 9 at that time. A final regulatory evaluation of the impacts of this final rule has also been prepared and placed in the docket. Any interested person

may obtain a copy of these regulatory evaluations by writing to the NHTSA Docket Section, 400 Seventh Street SW., Washington, DC 20590, or by calling the Docket Section at (202) 366–4949.

The August 1988 final rule requires that reassignments be securely printed or otherwise set forth by a secure process. This rule merely requires that these documents be issued by a State. NHTSA estimates the cost of producing secure reassignments to be $1,720,000 to States, dealers, and distributors. NHTSA estimates the costs of controlling reassignment forms to be $1,500,000 to the States. In addition, NHTSA estimates the costs of copying and mailing titles containing the odometer disclosure to be $900,000. With regard to secure powers of attorney, if all States choose to adopt secure powers of attorney systems, they would incur estimated initial development costs totalling $8,700,000 and estimated recurring annual costs of $6,800,000. The net costs to dealers are estimated to be between $7,600,000 and $12,400,000. Although NHTSA estimates that dealers and States will incur higher costs under this final rule than under the interim final rule, NHTSA also estimates that this final rule will result in greater costs savings for consumers than would have been achieved under the interim final rule.

B. Small Business Impacts

The agency has also considered the impacts of this rule in relation to the Regulatory Flexibility Act. I certify that this rule will not have a significant economic impact on a substantial number of small entities. Small businesses (dealers) will need to spend the same time executing each form as large businesses (dealers). It is not possible to minimize this burden. However, since these small entities will make fewer sales than large businesses, they will spend less time on these forms. Furthermore, while the States may charge dealers for these secure power of attorney forms, the estimated cost of these documents is minimal. Accordingly, no regulatory flexibility analysis has been prepared.

C. Environmental Impacts

NHTSA has considered the environmental implications of this rule, in accordance with the National Environmental Policy Act, and determined that it will not significantly affect the human environment. Accordingly, an environmental impact statement has not been prepared.

D. Paperwork Reduction Act

The Office of Management and Budget (OMB) approved NHTSA's information collection requirements associated with the August 1988 rule that require consumers, dealers, distributors, lessors, and auction companies to disclose and/or retain odometer disclosure information. (OMB #2127–0047). The interim final rule expanded the scope of those information collection requirements, as that term is defined by OMB in 5 CFR part 1320, to include transferors who authorize their transferees to exactly restate the mileage disclosure on the title as they have disclosed it on a power of attorney form issued by the State. It also expanded the scope of the requirements to include transferees who use a secure power of attorney to authorize their transferors to review the title for discrepancies and acknowledge mileage disclosures on their behalf. Finally, the interim final rule expanded the scope of the information collection requirements to include dealers and distributors who retain a copy of the secure power of attorney form. NHTSA submitted the interim final rule to OMB for approval. However, while that approval was pending, NHTSA became aware that there were errors in that submission, as well as in the prior, approved submission. Therefore, NHTSA has submitted a revision to correct these errors. Finally, this rule has been submitted to OMB for its approval pursuant to the requirements of the Paperwork Reduction Act, 44 U.S.C. 3501, *et seq.* Comments on the information collection requirements associated with this final rule should be submitted to Office of Management and Budget, Office of Regulatory Affairs, Washington, DC 20503, Attention: Desk Officer for NHTSA. It is requested that comments sent to OMB also be sent to the NHTSA rulemaking docket for this final rule.

In consideration of the foregoing, 49 CFR part 580 is amended as follows:

PART 580—[AMENDED]

1. The authority citation for part 580 continues to read as follows:

Authority: 15 U.S.C. 1988; delegations of authority at 49 CFR 1.50(f) and 501.8(e)(1).

2. In § 580.3, the definitions of "transferor" and "transferee" are revised to read as follows:

§ 580.3 Definitions.

* * * * *

Transferee means any person to whom ownership of a motor vehicle is transferred, by purchase, gift, or any means other than by the creation of a security interest, and any person who, as agent, signs an odometer disclosure statement for the transferee.

Transferor means any person who transfers his ownership of a motor vehicle by sale, gift, or any means other than by the creation of a security interest, and any person who, as agent, signs an odometer disclosure statement for the transferor.

3. Section 580.4 is revised to read as follows:

§ 580.4 Security of title documents and power of attorney forms.

Each title shall be set forth by means of a secure printing process or other secure process. In addition, power of attorney forms issued pursuant to §§ 580.13 and 580.14 and documents which are used to reassign the title shall be issued by the State and shall be set forth by a secure process.

4. Section 580.5 is amended by revising paragraphs (c), (f) and (h) to read as follows:

§ 580.5 Disclosure of odometer information.

* * * * *

(c) In connection with the transfer of ownership of a motor vehicle, each transferor shall disclose the mileage to the transferee in writing on the title or on the document being used to reassign the title. This written disclosure must be signed by the transferor, including the printed name. In connection with the transfer of ownership of a motor vehicle in which more than one person is a transferor, only one transferor need sign the written disclosure. In addition to the signature and printed name of the transferor, the written disclosure must contain the following information:

(1) The odometer reading at the time of transfer (not to include tenths of miles);

(2) The date of transfer;

(3) The transferor's name and current address;

(4) The transferee's name and current address; and

(5) The identity of the vehicle, including its make, model, year, and body type, and its vehicle identification number.

* * * * *

(f) The transferee shall sign the disclosure statement, print his name, and return a copy to his transferor.

* * * * *

(h) No person shall sign an odometer disclosure statement as both the transferor and transferee in the same transaction, unless permitted by §§ 580.13 or 580.14.

VOL 54 ISS 167 AG 30 1989 UMI

5. Section 580.6 is amended by revising the introductory text and paragraph (a) and by adding a paragraph (c) to read as follows:

§ 580.6 Exemptions.

Notwithstanding the requirements of §§ 580.5 and 580.7:

(a) A transferor or a lessee of any of the following motor vehicles need not disclose the vehicle's odometer mileage:

(1) A vehicle having a Gross Vehicle Weight Rating, as defined in § 571.3 of this title, of more than 16,000 pounds;

(2) A vehicle that is not self-propelled;

(3) A vehicle that is ten years old or older; or

(4) A vehicle sold directly by the manufacturer to any agency of the United States in conformity with contractual specifications.

* * * * *

(c) A lessor of any of the vehicles listed in paragraph (a) of this section need not notify the lessee of any of these vehicles of the disclosure requirements of § 580.7.

6. Section 580.8 is amended by revising paragraph (c) to read as follows:

§ 580.8 Odometer disclosure statement retention.

* * * * *

(c) Dealers and distributors of motor vehicles who are granted a power of attorney by their transferor pursuant to § 580.13, or by their transferee pursuant to § 580.14, shall retain for five years a photostat, carbon, or other facsimile copy of each power of attorney that they receive. They shall retain all powers of attorney at their primary place of business in an order that is appropriate to business requirements and that permits systematic retrieval.

7. Section 580.13 is revised to read as follows:

§ 580.13 Disclosure of odometer information by power of attorney.

(a) If the transferor's title is physically held by a lienholder, or if the transferor to whom the title was issued by the State has lost his title and the transferee obtains a duplicate title on behalf of the transferor, and if otherwise permitted by State law, the transferor may give a power of attorney to his transferee for the purpose of mileage disclosure. The power of attorney shall be on a form issued by the State to the transferee that is set forth by means of a secure printing process or other secure process, and shall contain, in part A, a space for the information required to be disclosed under paragraphs (b), (c), (d), and (e) of this section. If a State permits the use of a power of attorney in the situation described in § 580.14(a), the form must also contain, in part B, a space for the information required to be disclosed under § 580.14, and, in part C, a space for the certification required to be made under § 580.15.

(b) In connection with the transfer of ownership of a motor vehicle, each transferor to whom a title was issued by the State whose title is physically held by a lienholder or whose title has been lost, and who elects to give his transferee a power of attorney for the purpose of mileage disclosure, must appoint the transferee his attorney-in-fact for the purpose of mileage disclosure and disclose the mileage on the power of attorney form issued by the State. This written disclosure must be signed by the transferor, including the printed name, and contain the following information:

(1) The odometer reading at the time of transfer (not to include tenths of miles);

(2) The date of transfer;

(3) The transferor's name and current address;

(4) The transferee's name and current address; and

(5) The identity of the vehicle, including its make, model year, body type and vehicle identification number.

(c) In addition to the information provided under paragraph (b) of this section, the power of attorney form shall refer to the Federal odometer law and state that providing false information or the failure of the person granted the power of attorney to submit the form to the State may result in fines and/or imprisonment. Reference may also be made to applicable State law.

(d) In addition to the information provided under paragraphs (b) and (c) of this section:

(1) The transferor shall certify that to the best of his knowledge the odometer reading reflects the actual mileage; or

(2) If the transferor knows that the odometer reading reflects mileage in excess of the designed mechanical odometer limit, he shall include a statement to that effect; or

(3) If the transferor knows that the odometer reading differs from the mileage and the difference is greater than that caused by a calibration error, he shall include a statement that the odometer reading does not reflect the actual mileage and should not be relied upon. This statement shall also include a warning notice to alert the transferee that a discrepancy exists between the odometer reading and the actual mileage.

(e) The transferee shall sign the power of attorney form, print his name, and return a copy of the power of attorney form to the transferor.

(f) Upon receipt of the transferor's title, the transferee shall complete the space for mileage disclosure on the title exactly as the mileage was disclosed by the transferor on the power of attorney form. The transferee shall submit the original power of attorney form to the State that issued it, with the application for new title and the transferor's title. If the mileage disclosed on the power of attorney form is higher than the mileage appearing on the title, the power of attorney is void and the dealer shall not complete the mileage disclosure on the title.

8. Section § 580.14 is revised to read as follows:

§ 580.14 Power of attorney to review title documents and acknowledge disclosure.

(a) In circumstances where part A of a secure power of attorney form has been used pursuant to § 580.13 of this part, and if otherwise permitted by State law, a transferee may give a power of attorney to his transferor to review the title and any reassignment documents for mileage discrepancies, and if no discrepancies are found, to acknowledge disclosure on the title. The power of attorney shall be on part B of the form referred to in § 580.13(a), which shall contain a space for the information required to be disclosed under paragraphs (b), (c), (d), and (e) of this section and, in part C, a space for the certification required to be made under § 580.15.

(b) The power of attorney must include a mileage disclosure from the transferor to the transferee and must be signed by the transferor, including the printed name, and contain the following information:

(1) The odometer reading at the time of transfer (not to include tenths of miles);

(2) The date of transfer;

(3) The transferor's name and current address;

(4) The transferee's name and current address; and

(5) The identity of the vehicle, including its make, model year, body type and vehicle identification number.

(c) In addition to the information provided under paragraph (b) of this section, the power of attorney form shall refer to the Federal odometer law and state that providing false information or the failure of the person granted the power of attorney to submit the form to the State may result in fines and/or imprisonment. Reference may also be made to applicable State law.

(d) In addition to the information provided under paragraphs (b) and (c) of this section:

(1) The transferor shall certify that to the best of his knowledge the odometer reading reflects the actual mileage;

(2) If the transferor knows that the odometer reading reflects mileage in excess of the designed mechanical odometer limit, he shall include a statement to that effect; or

(3) If the transferor knows that the odometer reading differs from the mileage and the difference is greater than that caused by a calibration error, he shall include a statement that the odometer reading does not reflect the actual mileage and should not be relied upon. This statement shall also include a warning notice to alert the transferee that a discrepancy exists between the odometer reading and the actual mileage.

(e) The transferee shall sign the power of attorney form, and print his name.

(f) The transferor shall give a copy of the power of attorney form to his transferee.

9. Section 580.15, the section heading and paragraphs (a) and (b) are revised are to read as follows:

§ 580.15 Certification by person exercising powers of attorney.

(a) A person who exercises a power of attorney under both §§ 580.13 and 580.14 must complete a certification that he has disclosed on the title document the mileage as it was provided to him on the power of attorney form, and that upon examination of the title and any reassignment documents, the mileage disclosure he has made on the title pursuant to the power of attorney is greater than that previously stated on the title and reassignment documents. This certification shall be under part C of the same form as the powers of attorney executed under §§ 580.13 and 580.14 and shall include:

(1) The signature and printed name of the person exercising the power of attorney;

(2) The address of the person exercising the power of attorney; and

(3) The date of the certification.

(b) If the mileage reflected by the transferor on the power of attorney is less than that previously stated on the title and any reassignment documents, the power of attorney shall be void.

10. Section 580.16 is added to read as follows:

§ 580.16 Access of transferee to prior title and power of attorney documents.

(a) In circumstances in which a power of attorney has been used pursuant to § 580.13 of this part, if a subsequent transferee elects to return to is transferor to sign the disclosure on the title when the transferor obtains the title and does not give his transferor a power of attorney to review the title and reassignment documents, upon the transferee's request, the transferor shall show to the transferee a copy of the power of attorney that he received from his transferor.

(b) Upon request of a purchaser, a transferor who was granted a power of attorney by his transferor and who holds the title to the vehicle in his own name, must show to the purchaser the copy of the previous owner's title and the power of attorney form.

11. The warning and part C, Certification, of the sample power of attorney form in appendix E are amended to read as follows:

Appendix E—Power of Attorney Disclosure Form

Warning: This form may be used only when title is physically held by lienholder or has been lost. This form must be submitted to the state by the person exercising powers of attorney. Failure to do so may result in fines and/or imprisonment.

* * * * *

Part C. Certification (To Be Completed When parts A and B Have Been Used)

I, ________________, (person exercising above powers of attorney, Print), hereby certify that the mileage I have disclosed on the title document is consistent with that provided to me in the above power of attorney. Further, upon examination of the title and any reassignment documents for the vehicle described above, the mileage diclosure I have made on the title pursuant to the power of attorney is greater than that previously stated on the title and reassignment documents. This certification is not intended to create, nor does it create any new or additional liability under Federal or State law.

Proposed Rules

Federal Register
Vol. 54, No. 167
Wednesday, August 30, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Federal Crop Insurance Corporation

7 CFR Part 401

[Amdt. 42; Doc. No. 7314S]

General Crop Insurance Regulations; Corn Endorsement

AGENCY: Federal Crop Insurance Corporation, USDA.

ACTION: Withdrawal of Notice of Proposed Rulemaking.

SUMMARY: The Federal Crop Insurance Corporation (FCIC) publishes this notice for the purpose of withdrawing a Notice of Proposed Rulemaking (NPRM) amending the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1990 crop year, by revising and reissuing the Corn Endorsement (7 CFR § 401.111). FCIC has determined that insufficient time remains in which to publish a final rule revising and reissuing the Corn Endorsement.

FOR FURTHER INFORMATION CONTACT: Peter F. Cole, Secretary, Federal Crop Insurance Corporation, U.S. Department of Agriculture, Washington, DC, 20250, telephone (202) 447–3325.

SUPPLEMENTARY INFORMATION: On Monday, January 23, 1989, FCIC published a Notice of Proposed Rulemaking in the **Federal Register** at 53 FR 3040 which proposed to revise and reissue the Corn Endorsement under the General Crop Insurance Regulations (7 CFR Part 401), effective for the 1990 crop year.

In order for the Corn Endorsement to be effective for the 1990 crop year, it would be necessary to publish a final rule by December 31, 1989. There is not sufficient time in which to publish such a final rule and to file these regulations in the service offices by the required date.

For the reasons stated above, FCIC has determined that the rule published at 53 FR 3040 is hereby withdrawn.

Done in Washington, DC on August 18, 1989.

John Marshall,
Manager, Federal Crop Insurance Corporation.

BILLING CODE 3410–08–M

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

14 CFR Part 1260

Changes to NASA Grant and Cooperative Agreement Handbook

AGENCY: National Aeronautics and Space Administration (NASA).

ACTION: Notice of proposed rulemaking.

SUMMARY: The Grant and Cooperative Agreement Handbook (GCAHB) is amended to (1) require General Counsel review of deviations to the Handbook, (2) clarify award instrument selection criteria, (3) provide coverage for program income, and (4) revise the patent rights requirements to conform to Department of Commerce regulations.

DATE: Comments are due not later than September 29, 1989.

ADDRESS: Comments should be addressed to: W. A. Greene, Chief, Regulations Development Branch, Procurement Policy Division (Code HP), Office of Procurement, NASA, Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: W. A. Greene, Telephone: (202) 453–8923.

SUPPLEMENTARY INFORMATION:

Background

The GCAHB contains NASA regulations for the award and administration of grants and cooperative agreements, including NASA implementing instructions for applicable statutes, Executive Orders, OMB Circulars and other documents of general applicability. *Ad hoc* exceptions to these regulations, where suitably justified, may be granted by the Assistant Administrator for Procurement through the deviation process at 14 CFR 1260.106. Upon recommendation of the NASA Inspector General, legal review is added as a prerequisite for a deviation (Item 4). As the bulk of the requests for deviations deal with proper use of the grant instrument, the regulations describing the selection process have been clarified and modified to explicitly exercise the substantive authority of Public Law 97–258 to award grants and cooperative agreements for research (basic and applied) and research related efforts, such as conferences but excluding "travel grants" or "equipment grants," per se (Items 5–7). The provisions of OMB Circular A–110 on program income are implemented for use, if required, with grant-supported conferences (Items 15, 16a). The coverage on patent rights is simplified and revised for consistency with Federal Acquisition Circular (FAC) 84–46, issued May 8, 1989, which implements a Department of Commerce patent regulation that appeared in the **Federal Register** (52 FR 8552) of March 18, 1987 (Items 9, 16, 17), while administrative arrangements are clarified (Item 17, Exhibit G, paragraphs (f) (5) and (1)). Items 10 and 12–14 consist of internal NASA procedural changes, while Items 2, 3, 8, and 11 are minor corrections.

Impact

This proposed rule has been reviewed by the Office of Management and Budget (OMB) under the provisions of Executive Order 12291. NASA certifies that these changes will not have a significant economic affect on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). This proposed rule does not impose any new reporting or recordkeeping requirements subject to the Paperwork Reduction Act of 1980, nor does it substantially modify requirements associated with current OMB approval numbers 2700–0045 and 2700–0048.

List of Subjects in 14 CFR Part 1260

Grants.

S. J. Evans,
Assistant Administrator for Procurement.

PART 1260—[AMENDED]

1. The authority citation for 14 CFR part 1260 continues to read as follows:

Authority: Pub. L. 97–258, 31 U.S.C. 6301 et seq.

Subpart 1260.1—General

§ 1260.103 [Amended]

2. In § 1260.103, in the first sentence, the phrase "NASA policy directives," is

removed; the word "complete" is removed, and the word "detailed" is added in its place.

§ 1260.105 [Amended]

3. In paragraph (d), the word "Notice" is removed, and the words "Information Circular" are added in its place.

§ 1260.106 [Amended]

4. Section 1260.106 is amended as set forth below:

a. Paragraph (a)(9) is added to read as follows:

(a) * * *

(9) Any other action described elsewhere in this Handbook as a deviation.

* * * * *

b. In paragraph (b), the period is removed after the word "representative", and the phrase "after review by Office of General Counsel." is added at the end of the paragraph.

c. In paragraph (c), introductory text, the phrase "reviewed by local counsel," is added between the words "be" and "signed".

§ 1260.109 [Amended]

5. In § 1260.109, paragraph (d) is added to read as follows:

* * * * *

(d) Grants and cooperative agreements shall not be used as legal instruments when the primary purpose of the award is to pay the costs of travel ("Travel Grant") or for the purchase of equipment or supplies ("Equipment Grant"). (This restriction does not preclude otherwise allowable expenditures for travel, equipment or supplies in support of awards made pursuant to para. 1260.203.)

Subpart 2—Basic Policies

§ 1260.201 [Amended]

6. Section 1260.201 is amended as set forth below:

a. In paragraph (a), introductory text, the phrase "required basic research" is removed, and the phrase "required research and research related activities" is added in its place.

b. In paragraph (a)(1), the word "basic" is removed.

§ 1260.203 [Amended]

7. Section 1260.203 is amended as set forth below:

a. In paragraph (a)(1), the sentence "Instrument selection will be made on the basis of this paragraph 203, rather than on direct local interpretation of Public Law 97–258." is removed, and the following is added in its place: "As a matter of policy, NASA's use of grants, grant regulations and administrative procedures are tailored to educational institutions. Therefore, instrument selection will be made on the basis of this para. 1260.203, which accommodates both statute and policy, rather than any additional local interpretation of Public Law 97–258."

b. In paragraph (a)(3), the following sentence is added at the end of the paragraph: "A proposed award which exhibits the general characteristics set forth in para. 1260.203(b)(1) meets the above-described statutory criteria for use of the grant instrument."

c. In paragraph (b) introductory text, the second sentence, beginning "Research grants * * *" and the third sentence, beginning "Any exceptions * * *" are removed, and the following text is added in their place: "Research grants and cooperative agreements may be awarded only to nonprofit institutions of higher education or to nonprofit organizations whose primary purpose is the conduct of scientific research to support research or research-related efforts. Conferences which clearly relate to and have potential for contributing to NASA research interests are considered to be research-related. Research in any academic discipline bearing on NASA research interests normally will qualify as research-related; however, advise of counsel should be sought in unusual situations (see § 1260.301(c)). Similarly, in instances where use of the grant instrument and organizational eligibility does not clearly require a deviation, but where unusual project activities or organizational attributes are evident, advice of local counsel should be obtained. "Travel Grants" or "Equipment Grants" are not authorized as research-related. Award of grants or cooperative agreements to types of organizations or for purposes other than set forth in this § 1260.203(b) requires a deviation (see § 1260.106)."

d. In paragraph (b)(1)(i), the semicolon is removed, a comma is added in its place, and the words "and attempts to determine and exploit the potential of scientific discoveries or improvements in technology, materials, processes, methods, devices, or techniques and advance the state of the art." are added to complete the sentence.

e. Paragraph (b)(1)(vii) is added to read as follows:

* * * * *

(b) * * *

(1) * * *

(vii) The effort is research or research-related.

§ 1260.204 [Amended]

8. Section 1260.204 is amended as set forth below:

a. In paragraph (a), the abbreviation "NPD" is revised to read "NMI".

b. In paragraph (b), the letter "E" is revised to read "EPM–20".

9. Section 1260.209 is revised to read as follows:

§ 1260.209 Property rights in inventions.

(a) The disposition of rights in inventions made by small business firms and nonprofit organizations under contracts, grants and cooperative agreements (including subcontracts thereunder) for the performance of experimental, developmental or research work funded in whole or in part by NASA is governed by Chapter 18 of Title 35, United States Code (Pub. L. 95–517, Pub. L. 98–620). The disposition of rights to inventions made by other than a small business firm or nonprofit organization under contracts, grants or cooperative agreements (including subcontracts thereunder) in the performance of experimental, developmental, research, design or engineering work for NASA is governed by section 305 of the National Aeronautics and Space Act of 1958, as amended (42 U.S.C. 2457), and to the extent consistent with that law the Presidential Memorandum on Government Patent Policy to the Heads of Executive Departments and Agencies dated February 18, 1983, and Section 1(b)(4) of Executive Order 12591, dated April 10, 1987. The implementation of the requirements of Chapter 18 of title 35, United States Code for grants and cooperative agreements is set forth in 37 CFR 401. The implementation of the National Aeronautics and Space Act of 1958, as amended, is set forth in NASA FAR Supplement 18–27.373 (48 CFR 1827.373).

(b) In accordance with paragraph (a) of this section, Exhibit G, which is the clause required by 37 CFR 401.414 customized for NASA pursuant to 37 CFR 401.5, shall be included in all grants and cooperative agreements entered into with a nonprofit organization under the Handbook unless either:

(1) The grantee is not located in the United States or does not have a place of business located in the United States or is subject to the control of a foreign government; or

(2) The grantee is not a nonprofit organization or an alternate provision is to be used in accordance with 37 CFR 401.3.

If the circumstances in paragraph(b)(1) of this section exist, the clause "INVENTION REPORTING AND RIGHTS—FOREIGN" in NASA FAR Supplement 18–52.227–85 (48 CFR 1852.227–85) (suitably tailored to

OL
54
SS
1
6
7
AG
30
989
MI

identify the parties and the instrument) may be used as a special condition unless in consultation with installation Patent Counsel, a different provision would be more appropriate. A deviation is not required in this situation. If, in accordance with paragraph (b)(2) of this section, the grantee is not a nonprofit organization or an alternate provision is to be used, a deviation, including concurrence by installation Patent Counsel, is required.

(c) Reports required pursuant to § 1260.409(b) of this Handbook shall be submitted to the grants officer, with a copy to the installation Patent Counsel.

§ 1260.210 [Amended]

10. Section 1260.210 is revised to read as follows:

§ 1260.210 Debarment and suspension; and drug-free workplace.

Grants officers shall follow the procedures in NMI 5101.31, Delegation of Authority—Debarment and Suspension Under Grants, Cooperative Agreements and Other Nonprocurement Transactions; and Requirements for a Drug-Free Workplace (Grants), in implementation of 14 CFR 1265. Before making an award, the grants officer shall ensure that the participant's status has been verified (14 CFR 1265.505 (d) and (e)) and the certification requirements at 14 CFR 1265.510 and 14 CFR 1265.630 have been met. If the required certifications have not been submitted with the proposal, the grants officer shall obtain them before proceeding. However, NASA shall not require any particular form or format. Installations shall not impose local requirements for general submission of certifications with solicited or unsolicited proposals (except as may be otherwise authorized by this Handbook).

Subpart 3—Award of Grants and Cooperative Agreements

§ 1260.302 [Amended]

11. In § 1260.302 the words "no longer" are removed, and the word "not" is added in their place.

§ 1260.305 [Amended]

12. In § 1260.305, paragraph (b)(2), after the phrase "Third year $______," the sentence beginning "It is the responsibility * * *" is revised to read as follows:

> It is the responsibility of the awardee to request such continued support by submitting a brief proposal.

13. In § 1260.30, paragraph (a)(2) is revised to read as follows:

§ 1260.306 Numbering of instruments.

(a) * * *

(2) Sequential numbers for new Training (NGT) and Facilities (NGF) grants, if the award is otherwise authorized, are assigned by the Office of External Relations, Educational Affairs Division (Code XE).

* * * * *

14. Paragraph (b) is revised to read as follows:

§ 1260.307 Distribution of grants, cooperative agreements, and grant supplements.

* * * * *

(b) One copy, plus a copy of the grantee's proposal, will be furnished to the NASA Scientific and Technical Information Facility, P.O. Box 8757, BWI Airport, MD 21240. Attn: Acquisitions.

15. Section 1260.310 is added to read as follows.

§ 1260.310 Program income.

For conferences and awards in which there is high potential for the generation of income (other than royalties from patents or copyrights), the following special condition may be used (except with institutions participating in the Federal Demonstration Project):

PROGRAM INCOME (JUNE 1989)

> Program income shall be retained by the grantee and shall be * * *
>
> [Complete the sentence with one of the following phrases, as appropriate:
>
> * * * added to funds already committed to the project and used to further project objectives.
>
> * * * used to finance the non-Federal share of the program.
>
> * * * deducted from the total project costs in determining the net costs on which NASA's share of costs will be based.]

Subpart 4—Research Grant and Cooperative Agreement Provisions

§ 1260.420 [Amended]

16. Section 1260.420 is amended as set forth below:

a. In paragraph (b), the first item in the list of clauses is revised to read "INVENTION REPORTING AND RIGHTS—FOREIGN, prescribed at para. 1260.209(b)." and the following item is added at the end of the list of clauses:

PROGRAM INCOME, prescribed at para. 1260.310.

b. Para. (h) is added to read as follows:

(h) The following provision shall be appended, as a special condition, to all grants and cooperative agreements (pending revisions to para. 1260.409 and NASA Form 1463A, Provisions for Research Grants and Cooperative Agreements):

PATENT RIGHTS—CORRECT CITATIONS (JUNE 1989)

In the NASA Provisions for Research Grants and Cooperative Agreements (NASA Form 1463A), the correct statutory citations in the "Patent Rights—Retention by Grantee" provision are "Chapter 18 Title 35, United States Code (Pub. L. 96-517, Pub. L. 98-620)."

17. Exhibit G is revised to read as follows:

EXHIBIT G—PATENT RIGHTS—RETENTION BY THE GRANTEE (JUNE 1989)

(a) Definitions.

(1) "Invention" means any invention or discovery which is or may be patentable or otherwise protectable under Title 35 of the United States Code, or any novel variety of plant which is or may be protected under the Plant Variety Protection Act (7 U.S.C. 2321, et seq.).

(2) "Subject Invention" means any invention of the Grantee conceived or first actually reduced to practice in the performance of work under this grant, provided that in the case of a variety of plant, the date of determination (as defined in section 4(d) of the Plant Variety Protection Act, 7 U.S.C. 2401(d), must also occur during the period of the grant performance.

(3) "Practical Application" means to manufacture in the case of a composition or product, to practice in the case of a process or method, or to operate in the case of a machine or system; and, in each case, under such conditions as to establish that the invention is being utilized and that its benefits are, to the extent permitted by law or Government regulations, available to the public on reasonable terms.

(4) "Made" when used in relation to any invention means the conception or first actual reduction to practice of such invention.

(5) "Small Business Firm" means a domestic small business concern as defined at Section 2 of Pub. L. 85-536 (15 U.S.C. 632) and implementing regulations of the Administrator of the Small Business Administration. For the purpose of this Exhibit G, the size standards for small business concerns involved in Government procurement, and subcontracting at 13 C.F.R. 121.3-8 and 13 C.F.R. 121.3-12, respectively, will be used.

(6) "Nonprofit Organization" means a university or other institution of higher education or an organization of the type described in Section 501(c)(3) of the Internal Revenue Code of 1954 (26 U.S.C. 501(c)) and exempt from taxation under section 501(a) of the Internal Revenue Code (26 U.S.C. 501(a)) or any nonprofit scientific or educational organization qualified under a state nonprofit organization statute.

(b) Allocation of Principal Rights. The Grantee may retain the entire right, title, and interest throughout the world to each Subject Invention subject to the provisions of this Exhibit G and 35 U.S.C. 203. With respect to any Subject Invention in which the Grantee retains title, the Federal Government shall have a nonexclusive, non-transferable, irrevocable, paid-up license to practice or have practiced for or on behalf of the United

States the Subject Invention throughout the world.

(c) Invention Disclosure, Election of Title, and Filing of Patent Applications by Grantee.

(1) The Grantee will disclose each Subject Invention to NASA within 2 months after the inventor discloses it in writing to Grantee personnel responsible for patent matters. The disclosure to NASA shall be in the form of a written report and shall identify the grant under which the invention was made and the inventor(s). It shall be sufficiently complete in technical detail to convey a clear understanding, to the extent known at the time of the disclosure, of the nature, purpose, operation, and the physical, chemical, biological, or electrical characteristics of the invention. The disclosure shall also identify any publication, on sale or public use of the invention and whether a manuscript describing the invention has been submitted for publication and, if so, whether it has been accepted for publication at the time of disclosure. In addition, after disclosure to NASA, the Grantee will promptly notify NASA of the acceptance of any manuscript describing the invention for the publication or of any on sale or public use planned by the Grantee.

(2) The Grantee will elect in writing whether or not to retain title to any such invention by notifying NASA within 2 years of disclosure to NASA. However, in any case where publication, on sale or public use has initiated the one year statutory period wherein valid patent protection can still be obtained in the United States, the period for election of title may be shortened by NASA to a date that is no more than 60 days prior to the end of the statutory period.

(3) The Grantee will file its initial patent application on a Subject Invention to which it elects to retain title within 1 year after election of title or, if earlier, prior to the end of any statutory period wherein valid patent protection can be obtained in the United States after publication, on sale, or public use. The Grantee will file patent applications in additional countries or international patent offices within either 10 months of the corresponding initial patent application or 6 months from the date permission is granted by the Commissioner of Patents and Trademarks to file foreign patent applications where such filing has been prohibited by a Secrecy Order.

(4) Requests for extension of the time for disclosure, election, and filing under subparagraphs (1), (2), and (3) may, at the discretion of NASA, be granted.

(d) Conditions When the Government May Obtain Title. The Grantee will convey to NASA, upon written request, title to any Subject Invention:

(1) If the Grantee fails to disclose or elect the Subject Invention within the times specified in (c) above, or elects not to retain title; provided, that NASA may only request title within 60 days after learning of the failure of the Grantee to disclose or elect within the specified times.

(2) In those countries in which the Grantee fails to file patent applications within the times specified in paragraph (c) of this Exhibit G; provided, however, that if the Grantee has filed a patent application in a country after the times specified in paragraph (c) of this Exhibit G, but prior to its receipt of the written request of NASA, the Grantee shall continue to retain title in that country.

(3) In any country in which the Grantee decides not to continue the prosecution of any application for, to pay the maintenance fees on, or defend in reexamination or opposition proceeding on, a patent on a Subject Invention.

(e) Minimum Rights to Grantee and Protection of Grantee Right to File.

(1) The Grantee will retain a nonexclusive, royalty-free license throughout the world in each Subject Invention to which the Government obtains title, except if the Grantee fails to disclose the Subject Invention within the times specified in paragraph (c) of this Exhibit G. The Grantee's license extends to its domestic subsidiary and affiliates, if any, within the corporate structure of which the Grantee is a party and includes the right to grant sublicenses of the same scope to the extent the Grantee was legally obligated to do so at the time the grant was awarded. The license is transferable only with the approval of NASA, except when transferred to the successor of that part of the Grantee's business to which the invention pertains.

(2) The Grantee's domestic license may be revoked or modified by NASA to the extent necessary to achieve expeditious practical application of the Subject Invention pursuant to an application for an exclusive license submitted in accordance with section 1245.210 of the NASA regulation, Licensing of NASA Inventions, 14 C.F.R. 1245.2. This license will not be revoked in that field of use or the geographical areas in which the Grantee has achieved practical application and continues to make the benefits of the invention reasonably accessible to the public. The license in any foreign country may be revoked or modified at the discretion of NASA to the extent the Grantee, its licensees, or its domestic subsidiaries or affiliates have failed to achieve practical application in that foreign country.

(3) Before revocation or modification of the license, NASA will furnish the Grantee a written notice of its intention to revoke or modify the license, and the Grantee will be allowed 30 days (or such time as may be authorized by NASA for good cause shown by the Grantee) after the notice to show cause why the license should not be revoked or modified. The Grantee has the right to appeal, in accordance with 14 CFR 1245.210, any decision concerning the revocation or modification of the license.

(f) Grantee Action to Protect the Government's Interest.

(1) The Grantee agrees to execute or to have executed and promptly deliver to NASA all instruments necessary to (i) establish or confirm the rights the Government has throughout the world in those Subject Inventions to which the Grantee elects to retain title, and (ii) convey title to NASA when requested under paragraph (d) of this Exhibit G, and to enable the Government to obtain patent protection throughout the world in that Subject Invention.

(2) The Grantee agrees to require, by written agreement, its employees, other than clerical and nontechnical employees, to disclose promptly in writing to personnel identified as responsible for the administration of patent matters and in a format suggested by the Grantee each Subject Invention made under grant in order that the Grantee can comply with the disclosure provisions of paragraph (c) of this Exhibit G, and to execute all papers necessary to file patent applications on Subject Inventions and to establish the Government's rights in the Subject Inventions. This disclosure format should require, as a minimum, the information required by subparagraph (c)(1) of this Exhibit G. The Grantee shall instruct such employees through employee agreements or other suitable educational programs on the importance of reporting inventions in sufficient time to permit the filing of patent applications prior to U.S. or foreign statutory bars.

(3) The Grantee will notify NASA of any decision not to continue the prosecution of a patent application, pay maintenance fees, or defend in a reexamination or opposition proceeding on a patent, in any country, not less than 30 days before the expiration of the response period required by the relevant patent office.

(4) The Grantee agrees to include, within the specification of any United States patent application and any patent issuing thereon covering a Subject Invention, the following statement: "This invention was made with Government support under (identify the grant) awarded by NASA. The Government has certain rights in this invention."

(5) The Grantee shall include a list of all Subject Inventions required to be disclosed during the preceding year in the renewal proposal or annual status report, and a complete list (or a negative statement) for the entire award period shall be included in the final report.

(g) *Subcontracts.* (1) The Grantee will include this Exhibit G, suitably modified to identify the parties, in all subcontracts, regardless of tier, for experimental, developmental, or research work to be performed by a small business firm or nonprofit organization. The subcontractor will retain all rights provided for the Grantee in this Exhibit G, and the Grantee will not, as part of the consideration for awarding the subcontract, obtain rights in the subcontractor's Subject Inventions.

(2) The Grantee will include in all other subcontracts, regardless of tier, for experimental, developmental, research, design or engineering work the patent rights clause as required by NASA FAR Supplement 1827.373(b).

(3) In the case of subcontracts, at any tier, when the prime award with NASA was a contract (but not a grant or cooperative agreement), NASA, subcontractor, and the contractor agree that the mutual obligations of the parties created by this Exhibit G constitute a contract between the subcontractor and NASA with respect to those matters covered by this Exhibit G; provided, however, that nothing in this paragraph is intended to confer any jurisdiction under the Contract Disputes Act

---

in connection with proceedings under

Exhibit G has not been obtained or waived or

Dated: August 17, 1989.

in connection with proceedings under paragraph (j) of this Exhibit G.

(h) *Reporting on utilization of subject inventions.* The Grantee agrees to submit, on request, periodic reports no more frequently than annually on the utilization of a Subject Invention or on efforts at obtaining such utilization that are being made by the Grantee or its licensees or assignees. Such reports shall include information regarding the status of development, date of first commercial sale or use, gross royalties received by the Grantee, and such other data and information as NASA may reasonably specify. The Grantee also agrees to provide additional reports as may be requested by NASA in connection with any march-in proceeding undertaken by NASA in accordance with paragraph (j) of this Exhibit G. As required by 35 U.S.C. 202(c)(5), NASA agrees it will not disclose such information to persons outside the Government without permission of the Grantee.

(i) *Preference for United States industry.* Notwithstanding any other provision of this Exhibit G, the Grantee agrees that neither it nor any assignee will grant to any person the exclusive right to use or sell any Subject Invention in the United States unless such person agrees that any products embodying the Subject Invention or produced through the use of the Subject Invention will be manufactured substantially in the United States. However, in individual cases, the requirement for such an agreement may be waived by NASA upon a showing by the Grantee or its assignee that reasonable but unsuccessful efforts have been made to grant licenses on similar terms to potential licensees that would be likely to manufacture substantially in the United States or that under the circumstances domestic manufacture is not commercially feasible.

(j) *March-in Rights.* The Grantee agrees that with respect to any Subject Invention in which it has acquired title, NASA has the right in accordance with the procedures established by NASA which are consistent with 37 CFR 401.6, Exercise of March-in Rights, to require the Grantee, an assignee, or exclusive licensee of a Subject Invention to grant a non-exclusive, partially exclusive, or exclusive license in any field of use to a responsible applicant or applicants, upon terms that are reasonable under the circumstances, and if the Grantee, assignee, or exclusive licensee refuses such a request NASA has the right to grant such a license itself if NASA determines that:

(1) Such action is necessary because the Grantee or assignee has not taken, or is not expected to take, within a reasonable time, effective steps to achieve practical application of the Subject Invention in such field of use;

(2) Such action is necessary to alleviate health or safety needs which are not reasonably satisfied by the Grantee, assignee, or their licensees;

(3) Such action is necessary to meet requirements for public use specified by Federal regulations, and such requirements are not reasonably satisfied by the Grantee, assignee, or licensees; or

(4) Such action is necessary because the agreement required by paragraph (i) of this Exhibit G has not been obtained or waived or because a licensee of the exclusive right to use or sell any Subject Invention in the United States is in breach of such agreement.

(k) *Special provisions for grants with nonprofit organizations.* If the Grantee is a nonprofit organization, it agrees that:

(1) Rights to a Subject Invention in the United States may not be assigned without the approval of NASA, except where such assignment is made to an organization which has as one of its primary functions the management of inventions, provided that such assignee will be subject to the same provisions as the Grantee;

(2) The Grantee will share royalties collected on a Subject Invention with the inventor including NASA coinventors (when NASA deems it appropriate) when the Subject Invention is assigned in accordance with 35 U.S.C. 202(e) and 37 CFR 401.10;

(3) The balance of any royalties or income earned by the Grantee with respect to Subject Inventions, after payment of expenses (including payments to inventors) incidental to the administration of Subject Inventions, will be utilized for the support of scientific research or education; and

(4) It will make efforts that are reasonable under the circumstances to attract licensees of subject inventions that are small business firms, and that it will give a preference to a small business firm when licensing a subject invention if the Grantee determines that the small business firm has a plan or proposal for marketing the invention which, if executed, is equally as likely to bring the invention to practical application as any plans or proposals from applicants that are not small business firms; provided, that the Grantee is also satisfied that the small business firm has the capability and resources to carry out its plan or proposal. The decision whether to give a preference in any specific case will be at the discretion of the Grantee. However, the Grantee agrees that the Secretary of Commerce may review the Grantee's licensing program and decisions regarding small business applicants, and the Grantee will negotiate changes to its licensing policies, procedures, or practices with the Secretary of Commerce when the Secretary's review discloses that the Grantee could take reasonable steps to more effectively implement the requirements of this subparagraph (k)(4).

(l) *Communications.* A copy of all submissions or requests required by this Exhibit G, plus a copy of any reports, manuscripts, publications or similar material bearing on patent matters, shall be sent to the installation Patent Counsel in addition to any other submission requirements in the Grant provisions. If any reports contain information describing a "Subject Invention" for which the Grantee has elected or may elect title, NASA will use reasonable efforts to delay public release by NASA or publication by NASA in a NASA technical series, for six months from the date of receipt, in order for a patent application to be filed, provided that the Grantee identify the information and the "Subject Invention" to which it relates at the time of submittal. If required by the grants officer, the Grantee shall provide the filing date, serial number and title, a copy of the patent application, and a patent number and issue date for any Subject Invention in any country in which the Grantee has applied for patents.

BILLING CODE 7510-01-M

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

30 CFR Part 916

Abandoned Mine Land Reclamation Program

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSMRE), Interior.

ACTION: Proposed rule; Public Comment Period and Opportunity for Public Hearing on Proposed Amendment.

SUMMARY: OSMRE is announcing receipt of a proposed amendment to the Kansas Abandoned Mine Land Reclamation (AMLR) Plan (hereinafter, the "Kansas Plan") under the Surface Mining Control and Reclamation Act of 1977 (SMCRA), 30 U.S.C. Sections 1201 *et seq.* The proposed amendment pertains to eligible lands and waters, project evaluation, rights of entry, liens, appraisals on private lands, project ranking and selection, organizational structure, and public participation.

This notice sets forth the times and locations that the Kansas Plan and proposed amendment to that plan are available for public inspection, the comment period during which interested persons may submit written comments on the proposed amendment, and the procedures that will be followed regarding the public hearing, if one is requested.

DATES: Written comments must be received by 4 p.m., September 29, 1989. If requested, a public hearing on the proposed amendment will be held on September 24, 1989. Requests to present oral testimony at the hearing must be received on or before 4:00 p.m., on September 14, 1989.

ADDRESSES: Written comments should be mailed or hand delivered to Mr. William J. Kovacic at the address listed below.

Copies of the Kansas Plan, the proposed amendment, and all written comments received in response to this notice will be available for public review at the addresses listed below during normal business hours, Monday through Friday, excluding holidays. Each requestor may receive one free copy of

the proposed amendment by contacting OSMRE's Kansas City Field Office.

Mr. William J. Kovacic, Director, Kansas City Field Office, Office of Surface Mining Reclamation and Enforcement, 1103 Grand Avenue, Room 502, Kansas City, MO 64106, Telephone: (816) 374–6405

Kansas Department of Health and Environment, Mining Section, Bureau of Environmental Quality, Shirk Hall, 4th Floor, 1501 S. Joplin, P.O. Box 1418, Pittsburg, KS 66762, Telephone: (316) 231–8615.

FOR FURTHER INFORMATION CONTACT: Mr. William J. Kovacic, Director, Kansas City Field Office, at the address or telephone number listed in "ADDRESSES."

SUPPLEMENTARY INFORMATION:

I. Background

On February 1, 1982, the Secretary of the Interior conditionally approved the Kansas AMLR program. General background information, including the Secretary's findings, the disposition of comments, and the conditions of approval of the Kansas AMLR program can be found in the June 3, 1983, Federal Register (48 FR 24876).

II. Proposed Amendment

By letter dated June 29, 1989, and pursuant to SMCRA, Kansas submitted part of a proposed amendment to its plan (Administrative Record No. AML–KS–129). Kansas submitted the proposed amendment at its own initiative. Kansas proposes to rescind and replace portions of the regulations within Kansas Administrative Regulations (K.A.R.) at K.A.R. Chapter 47, Article 16. The regulations that Kansas proposes to amend are: K.A.R. 47–16–1, Eligible Lands and Waters; K.A.R. 47–16–2, Reclamation Project Evaluation; K.A.R. 47–16–4, Entry for Studies or Exploration; K.A.R. 47–16–5, Entry and Consent to Reclaim; K.A.R. 47–16–6, Liens; K.A.R. 47–16–7, Appraisals; and K.A.R. 47–16–8, Satisfaction of Liens.

By letter dated July 26, 1989, Kansas submitted, pursuant to SMCRA, the rest of a proposed amendment to its plan (Administrative Record No. AML–KS–135). Kansas proposes to revise State policies and procedures regarding project ranking and selection, organizational structure, and public participation in the AMLR program.

III. Public Comment Procedures

In accordance with the provisions of 30 CFR 732.17(h), OSMRE is seeking comments on whether the proposed amendment satisfies the applicable program approval criteria of 30 CFR 732.15. If the amendment is approved, it will become part of the Kansas AMLR Plan.

Written Comments

Written comments should be specific, pertain only to the issues proposed in this rulemaking, and include explanations in support of the commenter's recommendations. Comments received after the time indicated under "DATES" or at locations other than the Kansas City Field Office will not necessarily be considered in the final rulemaking, or included in the administrative record.

Public Hearing

Persons wishing to testify at the public hearing should contact the person listed under "FOR FURTHER INFORMATION CONTACT" by 4:00 p.m., c.d.t on September 14, 1989. The location and time of the hearing will be announced to those persons requesting the hearing. If no one requests an opportunity to testify at the public hearing, the hearing will not be held.

Filing of a written statement at the time of the hearing is requested as it will greatly assist the transcriber. Submission of written statements in advance of the hearing will allow OSMRE officials to prepare adequate responses and appropriate questions.

The public hearing will start on the specified date and will continue until all persons scheduled to testify have been heard. Persons in the audience who have not been scheduled to testify, and who wish to do so, will be heard following those who have been scheduled. The hearing will end after all persons scheduled to testify and persons present in the audience who wish to testify have been heard.

Public Meeting

If only one person requests an opportunity to testify at a hearing, a public meeting, rather than a public hearing, may be held. Persons wishing to meet with OSMRE representatives to discuss the proposed amendment may request a meeting by contacting the person listed under "FOR FURTHER INFORMATION CONTACT." All such meetings will be open to the public and, if possible, notices of such meetings will be posted at the locations listed under "ADDRESSES." A written summary of each meeting will be made a part of the administrative record.

RIN 2115–AA53

Maneuvering Performance Standards for U.S. Flag Vessels

AGENCY: Coast Guard, DOT.

ACTION: Withdrawal of proposed rule.

SUMMARY: This action withdraws an advance notice of proposed rulemaking published in the **Federal Register** on September 14, 1981 (46 FR 45651) and the supplemental advance notice of proposed rulemaking published in the **Federal Register** on July 17, 1984 (49 FR 28893). These proposals are associated with development of maneuvering performance standards for U.S. vessels.

After evaluation of a series of projects and unsuccessful attempts at the International Maritime Organization (IMO) to achieve maneuverability standards recognized internationally, the Coast Guard has concluded that maneuvering standards cannot be developed at the present time. Work in the area of maneuverability regulations will continue after generally accepted criteria have been established at the IMO.

DATES: The ANPRM is withdrawn as of August 30, 1989.

FOR FURTHER INFORMATION CONTACT: Dr. Volf Asinovsky, Office of Marine Safety, Security and Environmental Protection, U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC. 20593–0001, Telephone: (202) 267–2987.

SUPPLEMENTARY INFORMATION:

Background

Maneuvering standards are needed for the ship design industry as well as for ship operators. Without such standards there is no guarantee that maneuvering performance will receive the consideration that the Coast Guard feels is necessary during design. In the design process, maneuverability may be sacrificed for reduction of design and construction costs. Also, due to a lack of maneuverability regulations, analysis of casualties involving rammings, groundings, and collisions seldom questions a vessel's maneuverability, but instead focuses on operator error.

On September 14, 1981 the Coast Guard published in the **Federal Register** (46 FR 45631) an Advance Notice of Proposed Rulemaking (ANPRM). This ANPRM solicited public comments and suggestions on a proposal to develop ship maneuvering performance standards and regulations for evaluation of maneuvering and stopping characteristics of new U.S. flag vessels. The ANPRM suggested a rating system for maneuverability and announced the Coast Guard's intention to develop a standard to address maneuverability of new U.S. vessels. The ANPRM offered neither criteria for the evaluation of maneuverability nor the numerical values of such criteria. The intent of the ANPRM was to solicit suggestions on the criteria and norms maneuverability from the maritime industry.

A Supplemental Advance Notice of Proposed Rulemaking (SANPRM) was published on July 17, 1984 (49 CFR 28893). The SANPRM informed the public that the Coast Guard intended to postpone the development of maneuverability regulations until the International Maritime Organization (IMO) developed recommendations on maneuvering standards. This approach was based on public comments and suggestions in response to the ANPRM of September 14, 1981. It took into account the IMO plan for the development of maneuvering standards.

Coordination of efforts with IMO is a logical approach. In doing so, the requirements applied to U.S. flag vessels would be similar to the requirements applied to the ships of other administrations.

At the time of the SANPRM, IMO had started work in the area of maneuverability standards. An Ad Hoc Working Group had been established at IMO for coordination of the maneuverability studies and "Draft Interim Guidelines for Estimating Maneuvering Performance in Ship Design" (dated 2 April 1984) had been developed. Because of these events, it was reasonable to anticipate that IMO would complete development of maneuvering standards in the near future.

In the years following publication of the SANPRM, the Coast Guard participated in and carefully tracked the developments associated with ship maneuverability at the IMO Ship Design and Equipment Subcommittee. However, development of ship maneuvering standards was not completed as originally anticipated. IMO has yet to agree on a basis for maneuvering standards.

Development of maneuverability criteria is a very complicated technical task which cannot be quickly accomplished. The difficulty in establishing international consensus criteria at IMO is a reflection of the problem's complexity.

Significant research is needed prior to determining the appropriate parameters of maneuverability to be considered in establishment of the criteria and determination of minimum acceptable values of these criteria for different vessel types. Therefore the Coast Guard has concluded that a rulemaking for maneuvering standards is premature.

Withdrawal

The proposed rules were considered "nonsignificant" under the Department of Transportation Order No. 2100.5 entitled "Policies and Procedures for Simplification, Analysis and Review of Regulations." There are no known adverse consequences associated with terminating the proposal.

For the reason stated above, this rulemaking is hereby withdrawn.

August 25, 1989.

J.D. Sipes,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Safety, Security and Environmental Protection.

BILLING CODE 4910-14-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[PP 6E3409/P84; FRL 3636–7]

Pesticide Tolerance for Terbufos

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes that the tolerance established for the combined residues of the insecticide/nematicide terbufos and its cholinesterase-inhibiting metabolites in or on the raw agricultural commodity (RAC) bananas be converted to permanent status. This proposed regulation to establish a maximum permissible level for residues of the insecticide-nematicide in or on the commodity was requested by the American Cyanamide Co.

DATE: Comments, identified by the document control number [PP 6E409/P484], must be received on or before September 29, 1989.

ADDRESS: Written comments, identified by the document control number [PP 6E3409/P484], should be submitted to: Information Services Branch, Program Management and Support Division (TS–757C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person, bring comments to: Rm. 246, CM No. 2, 1921 Jefferson Davis Highway, Arlington, VA 22202.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR Part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: William H. Miller, Product Manager (PM) 16, Registration Division, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location and telephone number: Rm. 222, CM No. 2, 1921 Jefferson Davis Highway, Arlington, VA 22202, (703)–557–2600.

SUPPLEMENTARY INFORMATION: EPA issued a rule in the **Federal Register** of April 27, 1988 (53 FR 15401), which announced its decision to establish a temporary tolerance for residues of the pesticide terbufos on bananas for a period extending to April 27, 1990. The Agency limted the period of time that the regulation was to be in effect because of the lack of a teratology study in a second species.

The American Cyanamid Co., P.O. Box 400, Princeton, NJ 08540, has submitted an amendment to pesticide petition (PP) 6E409 by submitting the missing teratology study and by requesting that EPA, pursuant to section 408(d)(1) of the Federal Food, Drug, and Cosmetic Act, propose the establishment of a permanent tolerance for the combined residues of the insecticide/nematicide terbufos (S-[[(1,1-dimethylethyl)thio]methy]-O,O-diethyl phosphorodithioate) and its cholinesterase-inhibiting metabolites in or on the RAC bananas at 0.025 part per million (ppm).

The data submitted in the petition and other relevant material have been evaluated. The pesticide is considered useful for the purposes for which the tolerance is sought. The toxicological data considered in support of the proposed tolerance include:

1. A 1-year dog feeding study with a lowest-observable-effect level (LOEL) of 0.015 milligram/kilogram/day (mg/kg/day) based on the inhibition of plasma cholinesterase activity.
2. A 4-week dog plasma cholinesterase study with a no-observable-effect level (NOEL) of 0.00125 mg/kg/day based on the inhibition of plasma cholinesterase activity.
3. A 1-year rat feeding study with a no-observable-effect level (NOEL) of 0.5 ppm (0.025 mg/kg) based on the inhibition of plasma and brain cholinesterase activity.
4. An 18-month mouse oncogenicity study with no oncogenic effects observed at dosage levels up to and including 12.0 ppm (1.8 mg/kg/day), which was the highest level tested.
5. A 2-year rat oncogenicity study with no oncogenic effects observed at doses up to and including 2.0 ppm (0.10 mg/kg/day).
6. A three-generation rat reproduction study with a NOEL of 0.25 ppm (0.0125 mg/kg) for reproductive effects.
7. A rat teratology study with a NOEL of 0.1 mg/kg/day for development toxicity.
8. A rabbit teratology study with a NOEL of 0.25 mg/kg/day for developmental toxicity.
9. An acute delayed neurotoxicity study in chickens, which was negative for neurotoxic effects under the conditions of the study (highest dose tested was 40 mg/kg).
10. Several mutagenicity tests which were all negative. These include a dominant lethal study in rats; an acute in vivo cytogenic assay in rats; an Ames test including metabolic activation; a DNA repair chromosomal aberration (CHO cells); CHO/GHPRT mutation assay; and a rat hepatocyte culture/DNA repair test.

Based on the plasma cholinesterase inhibition (ChE) NOEL as defined in a 4-week dog study (0.00125 mg/kg/day) and using a safety factor of 10, the acceptable daily intake (ADI) for humans is 0.000125 mg/kg/day.

The current established tolerances (including the tolerance for bananas) for residues of terbufos and its cholinesterase-inhibiting metabolites result in a theoretical maximum contribution (TMRC) of 0.000052 mg/kg/day and utilize 41.946 percent of the ADI. No feed items are involved; therefore, it is expected that no secondary residues in meat, milk, poultry, and eggs will result from the use of the pesticide on bananas.

The metabolism of the insecticide/nematicide is adequately understood, and an analytical method, gas chromatography with a flame photometric detector, is available in the *Pesticide Analytical Manual,* Vol. II (PAM II), for enforcement purposes.

There are no regulatory actions pending against continued registration of the insecticide, and no other considerations are involved in establishing the tolerance.

The pesticide is considered useful for the purpose for which the tolerance is sought. Based on the above information and data, the Agency concludes that the establishment of the regulation would protect the public health. Therefore, it is proposed that 40 CFR 180.352 be amended as set forth below.

Interested persons are invited to submit written comments on the proposed regulation. Comments must bear a notation indicating the document control number [PP 6E3409/P484]. All written comments filed in response to this petition will be available in the Program Management and Support Division, at the address given above from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96–354, 94 Stat. 1164, 5 U.S.C. 601–612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Recording and recordkeeping requirements.

Dated: August 11, 1989.

Anne E. Lindsay,

Director, Registration Division, Office of Pesticide Programs.

Therefore, it is proposed that 40 CFR Part 180 be amended as follows:

PART 180—[AMENDED]

1. The authority citation for Part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

2. Section 180.352 is amended in paragraph (a) by adding and alphabetically inserting an entry for bananas and by removing paragraph (b) and designating it "[Reserved]" to read as follows:

§ 180.352 Terbufos; tolerances for residues.

(a) * * *

Commodities	Parts per million
* * * *	*
Bananas	0.025
* * * *	*

(b) [Reserved]

40 CFR Part 186

[OPP–300199; FRL–3635–1]

Captan; Proposed Revocation of Feed Additive Regulation

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes to revoke the feed additive tolerance for residues of the fungicide captan on corn seed remaining after detreatment to reduce captan residues resulting from the intended use of captan as a seed protectant. This proposed action is being initiated by EPA because data required and requested by EPA to support the continuation of the feed additive regulation have not been submitted.

DATES: Written comments, identified by the document control number [OPP–300199], must be received on or before October 30, 1989.

ADDRESSES: By mail, submit comments to: Public Docket and Freedom of Information Section, Field Operations Division (H–7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

In person, deliver comments to: Rm. 246, CM #2, 1921 Jefferson Davis Highway, Arlington, VA.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as

"Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in Rm. 246 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: Patricia Critchlow, Registration Division (H-7505C), Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Office location and telephone number: Registration Support Branch, Rm. 716, CM #2, 1921 Jefferson Davis Highway, Arlington, VA, (703)-557-1606.

SUPPLEMENTARY INFORMATION: In the Federal Register of November 6, 1981 (46 FR 55091), EPA issued a final rule that established a feed additive regulation (21 CFR 561.65, subsequently recodified as 40 CFR 186.500 in the Federal Register of June 29, 1988 (53 FR 24666)) for residues of the fungicide captan on corn seed at 100 ppm, remaining after detreatment of corn seed to reduce pesticide residues resulting from the intended use of captan as a seed protectant. The establishment of this regulation allowed the sale and use of the detreated captan-treated corn seed, after washing or roasting to reduce captan residues, as a cattle or swine feed up to 14 days prior to slaughter.

In March 1986, EPA issued a Registration Standard which stated, among other things, that the Agency had reevaluated the use of treated seed corn for feed use for cattle and hogs and expected to take action, in approximately a year, to revoke the feed additive regulation that permits the feed use of detreated captan-treated seed corn, unless certain concerns were resolved, as follows:

1. Residue chemistry data were needed for detreated captan-treated corn seed which had been treated at maximum label dosage and held in storage for various time periods ranging from 3 to 18 months.

2. An acceptable method for informing corn seed treaters and corn seed distributors of acceptable methods for detreating captan-treated corn seed must be proposed.

3. An acceptable handling procedure for captan-treated seed corn (to be detreated) to assure that there are no other pesticides on the seed must be proposed.

The captan feed additive regulation does not identify permitted methods for detreating the captan-treated corn seed although the Federal Register notice which established this regulation mentioned washing and roasting, thereby implying that these were acceptable methods. However, the Agency has inadequate data to support either washing or roasting when the maximum registered dosage of captan has been applied, and has no acceptable residue data to support the roasting detreatment method at any dosage or period of storage.

The data required to support the feed additive regulation have not been submitted. Therefore, EPA now proposes to revoke the feed additive tolerance for residues of captan remaining in corn seed which has been treated with captan seed protectant and subsequently subjected to a detreatment process to remove excess residues. If residue data to fulfill the requirements of the Registration Standard are submitted during the comment period of this proposed rule, the Agency will review the data before taking final action.

Interested persons are invited to submit written comments on this proposal to revoke the feed additive tolerance listed in 40 CFR 186.500 for residues of captan in detreated corn seed. Comments must bear a notation indicating the document control number, [OPP-300198]. Three copies of the comments should be submitted to facilitate the work of the Agency and of others interested in reviewing the comments. All written comments filed pursuant to this proposal will be available for public inspection in Rm. 246, CM #2, 1921 Jefferson Davis Highway, Arlington, VA, between 8 a.m. and 4 p.m., Monday through Friday, except legal holidays.

In order to satisfy requirements for analysis as specified by Executive Order 12291 and the Regulatory Flexibility Act, the Agency has analyzed the costs and benefits of this proposal. This analysis is available for public inspection in Rm. 246, at the address given above.

Executive Order 12291

Under Executive Order 12291, the Agency must determine whether a proposed regulatory action is "major" and therefore subject to the requirements of a Regulatory Impact Analysis. The Agency has determined that this proposed rule is not a major regulatory action, i.e., it will not have an annual effect on the economy of at least $100 million, will not cause a major increase in prices, and will not have a significant adverse effect on competition or the ability of U.S. enterprises to compete with foreign enterprises.

This proposed rule has been reviewed by the Office of Management and Budget as required by E.O. 12291.

Regulatory Flexibility Act

This proposed rule has been reviewed under the Regulatory Flexibility Act of 1980 (Pub. L. 96-354; 94 Stat. 1164, 5 U.S.C. 601 *et seq.*), and it has been determined that it will not have a significant economic impact on a substantial number of small businesses, small governments, or small organizations.

This regulatory action is intended to remove the existing authorization to use detreated captan-treated corn seed, with residues of captan not exceeding 100 ppm after detreatment to reduce such residues, as feed for cattle and hogs. Registrations of captan products do not expressly permit captan-treated seed corn to be detreated nor, after such detreatment, to be sold and/or used for cattle and hog feed; therefore, revocation of the feed additive regulation will have no effect on registered captan products or their labeling.

The primary economic impact expected from the revocation will be the cost to the seed industry of disposal of obsolete or excess captan-treated corn seed via some method other than pesticide detreatment and subsequent sale of the detreated corn seed for use as animal feed. Total seed corn sales currently represent about $1 billion annually. An increase in costs of $32 million, which represents the high estimate of possible increased costs, represents about 3 percent of the value of seed sales. If the seed industry absorbs these costs, a 3-percent reduction in total sales would be significant, but it would be unlikely to put any seed firm out of business. The seed corn industry has recently survived a decrease in total sales of about 15 percent, without any loss of seed firms, owing to the implementation of the 1985 Farm Bill, which took out of production about 15 percent of corn acres.

Accordingly, I certify that this regulatory action does not require a separate regulatory flexibility analysis under the Regulatory Flexibility Act.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 32

[CC Docket 89-360; FCC 89-271]

Common Carrier Services; Uniform System of Accounts for Telecommunications Companies

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: The Commission is proposing to amend part 32 of its rules to incorporate the liability method of accounting for income taxes into the Uniform System of Accounts for Telecommunications Companies. This action will bring the method of accounting for income taxes in the System of Accounts in line with the generally accepted method of accounting for income taxes prescribed for the American business community.

DATES: Comments are due on or before September 18, 1989 and reply comments are due on or before October 3, 1989.

ADDRESSES: Federal Communications Commission, Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: John T. Curry, Accounting Systems Branch, Accounting and Audits Division, Common Carrier Bureau, (202) 634-1861.

SUPPLEMENTARY INFORMATION: This is a summary of the Commission's Notice of Proposed Rulemaking adopted August 4, 1989 and released August 18, 1989.

The full text of this Notice of Proposed Rulemaking is available for inspection and copying during normal business hours in the FCC Dockets Branch (Room 230), 1919 M Street, NW., Washington, DC. The complete text of this Notice of Proposed Rulemaking may also be purchased from the Commission's copy contractor, International Transcription Services, Inc., (202) 857-3800, 2100 M Street, NW., Suite 140, Washington, DC 20037.

Summary of Notice of Proposed Rulemaking

In this Notice of Proposed Rulemaking the Commission is proposing changes to Part 32 to incorporate the new accounting procedures for income taxes prescribed in Statement of Financial Accounting Standards No. 96 (SFAS-96) and to establish new accounts that would properly implement those procedures.

Currently, Part 32 of the Commission's rules requires carriers to use the generally accepted method of accounting for income taxes that was established by Accounting Principles Board Opinion No. 11, Accounting for Income Taxes (APB Opinion No. 11). APB Opinion No. 11 prescribed the deferral method of accounting for the tax effects of tax timing differences. Tax timing differences occur when items of revenue or expense are recognized in different accounting periods for tax return purposes than for book purposes. Under the deferral method, the effects of timing differences are determined initially on the basis of tax rates in effect at the time the differences originate, and are not adjusted for subsequent changes in tax rates.

In December 1987, the FASB promulgated SFAS-96, which superseded APB Opinion No. 11. SFAS-96 prescribes the liability method of accounting for income taxes. Under the liability method, business entities estimate the future tax liability or future tax benefit that will occur as a result of differing tax and book treatment of temporary differences. The term temporary difference, as it is used in SFAS-96, would include items previously described as timing differences pursuant to APB Opinion No. 11, as well as other items the tax effects of which have never been accounted for under the deferral method.

In implementing SFAS-96, it will be necessary to adjust deferred tax balances for several factors. The major adjustments will result from the recording of the effects of (1) timing differences previousy flowed through; (2) changes in the tax rate prescribed by the Tax Reform Act of 1986; and (3) basis differences caused by unamortized investment tax credit balances.

This Notice of Proposed Rulemaking tentatively concludes that the changes in income tax accounting required by SFAS-96 can be adopted for the telecommunications industry in such a way as to make tax accounts maintained for regulatory purposes comparable to those shown in published financial statements without any impact on revenue requirements, with one possible exception. This exception would be with respect to excess deferred taxes resulting from a tax rate change which are not protected by Section 203(e) of the Tax Reform Act of 1986. For the unprotected excess deferred taxes, this Notice of Proposed Rulemaking proposes to reduce tax expenses in the year of implementation since SFAS-96 requires excess deferred taxes to be reflected in income at the time of adoption.

To incorporate the liability method of accounting for income taxes prescribed by SFAS-96 into Part 32 of the Commission's rules, this Notice of Proposed Rulemaking would add four new accounts to the Uniform System of Accounts. The new accounts are Account 1437, Recoverable tax liabilities (a regulatory asset account); Account 4341, Net noncurrent deferred tax liability adjustments; Account 4361, Deferred regulatory liability (a regulatory liability account); and Account 7251, Deferred tax liability adjustments-net. These new accounts would be employed to reflect the adjustments to deferred tax balances that are necessary as a result of adopting SFAS-96.

Finally, the Commission proposes that these four accounts be excluded from the rate base and net income determinations for regulatory purposes except for the unprotected excess deferred taxes previously mentioned. This approach would avoid adding new complexities to the rate base and net income determinations and would not subject the new accounts to the Commission's joint cost or separations rules.

Paperwork Reduction Act

The proposal contained herein has been analyzed with respect to the Paperwork Reduction Act of 1980 and found to impose a new or modified information collection requirement on the public. Implementation of any new or modified requirement will be subject to approval by the Office of Management and Budget as prescribed in the Act.

Regulatory Flexibility Act

We certify that the Regulatory Flexibility Act is not applicable to the rule changes we are proposing in this

§ 32.4340 Net noncurrent deferred

related to nonoperating temporary

DEPARTMENT OF THE INTERIOR

proceeding. In accordance with the provisions of Section 605 of that Act, a copy of this certification will be sent to the Chief Counsel for Advocacy of the Small Business Administration at the time of publication of this Notice in the Federal Register. As part of our analysis of the proposal described in this Order, however, this Commission has considered the impact of the proposal on small telephone companies, *i.e.*, those serving 50,000 or fewer access lines. The action proposed herein would have a beneficial economic impact on all such telephone companies because their tax accounts for regulatory purposes would be comparable to those shown in their published financial statements.

Ordering Clauses

Accordingly, *It is ordered*, That pursuant to sections 1, 4(i), 4(j), 201–205, 218, 220, and 403 of the Communications Act of 1934, as amended, 47 USC sections 151, 154(i), 154(j), 201–205, 218, 220 and 403 and section 553 of the Administrative Procedure Act, 5 USC Sec. 553, notice is hereby given of proposed amendments to part 32 of this Commission's Rules, 47 CFR part 32 as shown below. We hereby give notice that in reaching our decisions in this proceeding we will not necessarily be limited to the comments and reply comments that may be filed, and that we may utilize other information, analyses, and reports, provided that in each such case a copy of the material relied upon will be associated with the record of this proceeding.

It is further ordered, that interested persons may file comments on the specific proposals discussed in this *Notice* on or before September 18, 1989. Reply comments shall be filed on or before October 3, 1989. In accordance with the provisions of § 1.419 of this Commission's Rules and Regulations, 47 CFR Section 1.419, an original and five (5) copies of all comments shall be furnished to the Commission. Copies of the comments will be available for public inspection in the Commission's Docket Reference Room, 1919 M Street, NW., Washington, DC.

It is further ordered, That the Secretary shall serve a copy of this Notice of Proposed Rulemaking on state regulatory commissions.

Secretary.

Rule Changes

Part 32, Chapter 1 of Title 47, Code of Federal Regulations, is proposed to be amended as follows:

1. The authority citation for part 32 would continue to read as follows:

Authority: Secs. 4(i), 4(j) and 220 as amended; 47 U.S.C. 154(i), 154(j), and 220 unless otherwise noted.

2. Section 32.22 would be amended by revising paragraphs (a), (d) and (f) and removing and reserving paragraph (c) to read as follows:

§ 32.22 Comprehensive interperiod tax allocation.

(a) Companies shall apply interperiod tax allocation (tax normalization) to all book/tax temporary differences which would be considered material for published financial report purposes. Furthermore, companies shall also apply interperiod tax allocation if any item or group of similar items when aggregated would yield debit or credit entries which exceed or would exceed 5 percent of the gross deferred income tax expense debits or credits during any calendar year over the life of the temporary difference. The tax effects of book/tax temporary differences shall be normalized and the deferrals shall be included in the following accounts:

4100 Net Current Deferred Operating Income Taxes
4110 Net Current Deferred Nonoperating Income Taxes
4340 Net Current Deferred Operating Income Taxes
4350 Net Noncurrent Deferred Nonoperating Income Taxes

* * * * *

(c) [Reserved]

(d) The records supporting the activity in the deferred income tax accounts shall be maintained in sufficient detail to identify the nature of the specific temporary differences giving rise to both the debits and credits to the individual accounts.

* * * * *

(f) The tax differentials to be normalized as indicated herein shall also encompass the additional effect of state and local income tax changes on Federal income taxes produced by the provision for deferred state and local income taxes for book/tax temproary differences related to such income taxes.

* * * * *

3. Section 32.103 would be amended to add account 1437 to the list of accounts to read as follows:

§ 32.103 Balance sheet accounts for other than regulated-fixed assets to be maintained.

BALANCE SHEET ACCOUNTS

Account title	Class A account	Class B account
* * *	*	*
Recoverable tax liabilities	1437	1437
* * *	*	*

4. Section 32.1437 would be added to read as follows:

§ 32.1437 Recoverable tax liabilities.

This account shall include amounts of probable future revenue for the recovery of future increases in taxes payable.

5. Section 32.4000 would be amended to add accounts 4341 and 4361 to the list of accounts and the introductory text of § 32.4000 is republished to read as follows:

§ 32.4000 Instructions for balance sheet accounts—liabilities and stockholders' equity.

Liabilities and Stockholders' Equity Accounts to be Maintained by Class A and Class B telephone companies:

Account title	Class A account	Class B account
* * *	*	*
Net noncurrent deferred tax liability adjustments	4341	4341
* * *	*	*
Deferred regulatory liability	4361	4361
* * *	*	*

6. Section 32.4100 paragraph (d) would be revised to read as follows:

§ 32.4100 Net Current deferred operating income taxes.

* * * * *

(d) The classifiation of deferred income taxes as current or noncurrent shall be based on the expected turnaround of the temporary difference.

* * * * *

7. Section 32.4110 paragraph (g) would be revised to read as follows:

§ 32.4110 Net current deferred nonoperating income taxes.

* * * * *

(g) The classification of deferred income taxes as current or noncurrent shall be based on the expected turnaround of the temporary differences.

* * * * *

8. Section 32.4340 paragraphs (a) and (d) would be revised to read as follows:

§ 32.4340 Net noncurrent deferred operating income taxes.

(a) This account shall include the balance of income tax expense related to noncurrent items for regulated operations which have been deferred to later periods as a result of comprehensive interperiod tax allocation related to temporary differnces that arise from regulated operations.

* * * * *

(d) The classification of deferred income taxes as current or noncurrent shall be based on the expected turnaround of the temporary difference.

* * * * *

9. Section 32.4341 would be added to read as follows:

§ 32.4341 Net noncurrent deferred tax liability adjustments.

(a) This account shall include the noncurrent portion of deferred income tax charges and credits pertaining to Accounts 1437, Recoverable Tax Liabilities, 4361 Deferred Regulatory Liability and 7521 Deferred Tax Liability Adjustments-Net.

(b) This account shall be used to record adjustments to the accumulated deferred tax liabilities recorded in Account 4100 for:

(1) Tax effects of temporary differences accounted for under the flow-through method or treated as permanent differences prior to January 1, 1989.

(2) Reclassifications attributable to changes in tax rates prior to January 1, 1989.

(3) The tax effects of carryforward net operating losses and carryforward investment tax credits expected to reduce future taxes payable that are reported in published financial statements.

(4) Reversals of the tax effects of carryforward net operating losses and carryforward investment tax credits previously recorded in this account at the time they become recognized as reductions in current taxable income and current taxes payable on tax returns.

10. Section 32.4350 paragraphs (a) and (g) would be revised to read as follows:

§ 32.4350 Net noncurrent deferred nonoperating income taxes.

(a) This account shall include the balance of income tax expense (Federal, state and local) that has been deferred to later periods as a result of comprehensive interperiod allocation related to nonoperating temporary differences.

* * * * *

(g) The classification of deferred income taxes as current or noncurrent shall be based on the expected turneround of the temporary difference.

* * * * *

11. Section 32.4361 would be added to read as follows:

§ 32.4361 Deferred regulatory liability.

This account shall include amounts of probable future revenue reductions attributable to future decreases in taxes payable. As reductions occur, amounts recorded in this account shall be reduced with a debit entry and a credit entry to Account 4341, Net Noncurrent Deferred tax Liability Adjustments.

12. Section 32.6999 paragraph (b) would be amended to add account 7251 to the other income accounts listing to read as follows:

§ 32.6999 General.

* * * * *

(b) Other Income Accounts Listing.

Account title	Class A account	Class B account
* * *	*	*
Deferred tax liability adjustments-net	7251	7251
* * *	*	*

13. Section 32.7251 would be added to read as follows:

§ 32.7251 Deferred tax liability adjustment—net.

(a) This account shall be credited to record the tax effects of carryforward net operating losses and carryforward investment tax credits expected to reduce future taxes payable that have been debited to Account 4341, Net Noncurrent Deferred Tax Liability Adjustments.

(b) This account shall be debited for reversals of the tax effects of carryforward net operating losses and carryforward investment tax credits expected to reduce future taxes payable that have been debited to Account 4341, Net Noncurrent Deferred Tax Liability Adjustments.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Proposed Rule To Determine the Pallid Sturgeon To Be an Endangered Species

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: The Service proposes to determine the pallid sturgeon (*Scaphirhynchus albus*) to be an endangered species under the authority of the Endangered Species Act (Act) of 1973, as amended. The pallid sturgeon is a large fish known only to occur in the Missouri River, the Mississippi River downstream of the Missouri River, and the lower Yellowstone River. The species is threatened through habitat modification and apparent lack of reproduction. Numbers of fish reported have declined dramatically in the last two decades. Past commercial utilization likely exceeded biological recruitment. Pollution may be a problem over much of its range, and significant hybridization has been documented. Listing would provide protection for preservation of the species. The Fish and Wildlife Service (Service) is requesting data and comments from interested parties on this proposal.

DATES: Comments from all interested parties must be received by October 30, 1989. Public hearing requests must be received by October 16, 1989.

ADDRESSES: Comments and materials concerning this proposal should be sent to the Missouri River Coordinator, Fish and Wildlife Enhancement, U.S. Fish and Wildlife Service, P.O. Box 986, Pierre, South Dakota 57501. Comments and materials received will be available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Dr. Kent D. Keenlyne, Missouri River Coordinator, at the above address, telephone (605) 224–8693.

SUPPLEMENTARY INFORMATION:

Background

The pallid sturgeon was first described by S.A. Forbes and R.E. Richardson in 1905 from nine specimens collected from the Mississippi River near Grafton, Illinois, in June 1904

BEST COPY AVAILABLE

regulatory mechanisms do not presently

problems for the fish in this and other

habitat will be addressed through the

(Forbes and Richardson 19DS). Known locally as the white sturgeon, they named it *Parascaphirhynchus albus* and suggested it be considered as its own genus. Later classifications, however, placed it in the genus *Scaphirhynchus* where it has remained (Bailey and Cross 1954).

The pallid sturgeon has a flattened, shovel-shaped snout; long, slender, and completely armored caudal peduncle; and lacks a spiracle (Smith 1979). The principal features distinguishing the pallid sturgeon from the darker shovelnose sturgeon are the absence of bony plates on the belly, 24 or more anal fin rays, 37 or more dorsal fin rays, and inner barbels under the snout are much shorter than outer barbels with the inner barbels less than six times the length of the head (Pflieger 1975). As with other sturgeon, the mouth is toothless, protrusible, and far under the snout while the skeletal structure is primarily cartilaginous (Gilbraith et al. 1988). It is one of the largest fish found in the Missouri-Mississippi River drainage with specimens approaching 39 kilograms (85 pounds) being reported (Gilbraith et al. 1988).

Pallid sturgeons require large, turbid, free-flowing riverine habitat with rocky or sandy substrate (Gilbraith et al. 1988). They are well adapted to life on the bottom and inhabit areas of swifter water than does the related but smaller shovelnose sturgeon (Forbes and Richardson 1909; Carlson et al. 1985).

The range of the pallid sturgeon is primarily the Missouri River and the Mississippi River downstream of its junction with the Missouri River (Gilbraith et al. 1988). Sightings have been reported from the mouth of the Mississippi to the mouth of the Missouri (1,860 kilometers or 1,154 miles), from the mouth of the Missouri to Fort Benton, Montana (3,330 kilometers or 2,065 miles), and in the lower 320 kilometers (200 miles) of the Yellowstone River. Sightings have occasionally come from near the mouths of large tributaries to the Mississippi River (Big Sunflower River and the St. Francis River) and Missouri River (Kansas River and Platte River); however, these are rare and may be due to the fish utilizing unusual flow conditions (Cross 1967). The total length of its range is approximately 5,725 kilometers (3,550 miles) of river.

A review of the literature shows a sharp decline in pallid sturgeon observations over the range of the species and especially so in the Missouri River from Gavins Point Dam to the Fort Peck Dam. In the 1960's, 500 observations were made (i.e., an average of 50 per year); in the 1970's, 209 observations (i.e., an average of 21 per year); and in the 1980's, 56 observations (an average of about 6 per year) over the entire 5,725 kilometers (3,550 miles) of range. The decline of the species appears to correspond with expanded commercial harvest while, during the same time, recruitment began to fail. The decline, however, also follows the extensive developments of the 1950's and 1960's of the Missouri and Mississippi Rivers. Deacon et al. (1979), Kallemeyn (1983), and Gilbraith et al. (1988) all attribute the decline, either directly or indirectly, to habitat modification. Factors include physical blocking of normal movement patterns of the fish by construction of the big dams; alteration of water quality and temperature; alteration of flows which may affect reproduction, timing of reproduction, or food sources; alteration of previous spawning habitats; reduction of habitat diversity; and reduced productivity of the river systems.

Dr. Michael D. Zagata, on behalf of the National Audubon Society, petitioned the Service to list the pallid sturgeon as "threatened" in an April 17, 1978, letter. The Service responded that the petitioner did not supply sufficient substantial evidence of the threats to permit it to move directly on the petition and informed the petitioner that it was gathering status data on this and several other species. On December 30, 1982, the Service included the pallid sturgeon in a notice of review published in the **Federal Register** (47 FR 58456). This notice addressed vertebrate species that were currently under review for listing as endangered or threatened, and indicated that substantial information was available to support the biological appropriateness of proposing to list this species as endangered or threatened. On June 16, 1988, a petition was received by the Service from the Dakotah Chapter of the Sierra Club requesting that the pallid sturgeon be listed as an endangered species throughout its range. A positive finding on this petition was made in September 1988 and subsequently published by the Service in the February 23, 1989, **Federal Register** (54 FR 7813). This notice stated that the petition was accepted and that the Service had one year from the date that the petition was received to publish its findings in the **Federal Register**. This proposal constitutes the final finding for the petitioned action.

Summary of Factors Affecting the Species

Section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR Part 424) promulgated to implement the listing provisions of the Act set forth the procedures for adding species to the Federal Lists. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in Section 4(a)(1). These factors and their application to the pallid sturgeon (*Scaphirhynchus albus*) are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* Alteration of habitat has been a major factor in the decline of this species. Approximately 51 percent of its range has been channelized, 28 percent impounded, and the remaining 21 percent affected by upstream impoundments and altered flow regimes. All of these factors have adversely affected the fish by blocking movements to spawning and/or feeding areas, destroying spawning areas, altering conditions or flows of potential remaining spawning areas, reducing food sources or the ability to obtain food, or altering remaining substrates and conditions necessary for the fish's survival. Of the approximately 5,725 kilometers (3,550 miles) of former habitat for the pallid, virtually all of it has been drastically modified in one manner or another.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* Since it was not described as a separate species until 1905, many of the early reports of sturgeon catches during the heyday of commercial fishing in the late 1800's, during which time many of the sturgeon populations were severely reduced, likely grouped it with the lake or shovelnose sturgeon. During the early years of the upper Missouri reservoirs (1950's and 1960's), pallid sturgeon were relatively common and were harvested commercially in both South Dakota (Gasaway 1970) and North Dakota (Carufel 1953) where they were locally called "lake" sturgeon. During this same period, however, researchers began to notice that they were unable to find reproduction of the species, even though large adults were still present (Beckman and Elrod 1971; June 1976; and Walburg 1977). By 1988, 11 of the 13 states which represent its range had classified it as a species of concern under their various programs (Gilbraith et al. 1988).

The pallid sturgeon is considered a fine eating fish, and the roe is suitable for caviar. Its large size makes it a desirable trophy sport fish (Gilbraith et al. 1988).

C. *Disease or predation.* No information is available regarding diseases of the pallid sturgeon. We are not aware of specific disease or predation problems.

D. *The inadequacy of existing regulatory mechanisms.* Adequate

regulatory mechanisms do not presently exist to protect the fish and especially so when considering that most of its range constitutes interjurisdictional waters or is connected to interstate waters. The species is presently not classified under the State listing programs in Arkansas or Mississippi and presumably may be harvested. Kentucky still allows harvest of the species. Sturgeon over 16 pounds (presumed to be a pallid sturgeon if over that weight) must be released in Montana, and sturgeon over 36 inches long (presumed to be a pallid sturgeon if longer than that length) must be released in North Dakota.

Weight and length provisions, however, do not protect young or smaller pallid sturgeons. Pallid sturgeons must be released in Iowa, Kansas, Missouri, Nebraska, and South Dakota (Gilbraith et al. 1988).

E. *Other natural or manmade factors affecting its continued existence.* Although more information is needed, pollution is a likely threat to the species over much of its range. Various fish harvest and consumption advisories exist or have existed as a result of manmade pollution from near Kansas City, Missouri, to the mouth of the Mississippi, which represents about 45 percent of the pallid sturgeon's range. Like other sturgeons, the pallid sturgeon is an opportunistic feeder that feeds on aquatic insects, crustaceans, mollusks, annelids, eggs of other fish, and sometimes other fish. Although utilizing aquatic insects, the pallid is noted as having a high incidence of fish in its diet also (Cross 1967; Kallemeyn 1983; and Carlson et al. 1985). Being a bottom feeder of aquatic forms, one would expect it to be exposed to various pollutants, if present.

Inability to document pallid sturgeon reproduction in recent years has been previously noted. Gilbraith et al. (1988) indicate that there has been no documented reproduction in a decade.

Gilbraith et al. (1988) indicate that male pallids mature at age three or four years. In extensive sturgeon studies in the late 1970's, Carlson et al. (1985) found that hybridization had occurred between the pallid sturgeon in Missouri and the much more abundant shovelnose sturgeon. In two years of study (1978 and 1979), only 11 pallid sturgeon and 12 hybrids were found. The study area comprised approximately 25 percent of the entire range of the pallid sturgeon. The small number of pallids found, the low frequency of reproduction, and the apparent lack of recruitment in the species, plus the high rate of hybridization over a significant portion of its range portends serious problems for the fish in this and other areas as well if the same phenomenon has or is occurring elsewhere in similar habitat situations.

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by this species in determining to propose this rule. Based on this evaluation, the preferred action is to list the pallid sturgeon as an endangered species without critical habitat. The habitat of the species has been altered through damming, channelization, altered and/or degraded water quality, and altered flows to the detriment of the fish. Past harvest for commercial purposes may have surpassed replenishment capability. Commercial harvest of sturgeon may still pose a threat in certain areas of its range. Existing regulations are inadequate to protect the species from further decline. Pollution may be a serious threat over a significant portion of its range, and hybridization is a known threat. Threatened status is not appropriate because *Scaphirhynchus albus* is in danger of extinction throughout its range due to the apparent lack of recruitment of the species for over 15 years, and current habitat threats which have brought the species to this low level are not likely to be modified to benefit the species without protection under the Act. For reasons given below, critical habitat is not proposed.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that, to the maximum extent prudent and determinable, the Secretary propose critical habitat at the time the species is proposed to be endangered or threatened. The Service finds that designation of critical habitat is not presently determinable or prudent for this species. Critical habitat cannot be determined at this time due to the paucity of information on the species life requisites and the wide dispersal of limited sighting records in recent years. Moreover, even if it could be determined, it may not be prudent to identify critical habitat to the public. As noted in Factor "B" of the "Summary of Factors Affecting the Species," the pallid sturgeon is a large sturgeon and might be sought by sport fishermen as a trophy specimen. Furthermore, sturgeon roe may be harvested as caviar. Publication of critical habitat maps and descriptions in the **Federal Register** could negatively impact the species by stimulating interest in the pallid sturgeon, making it more vulnerable to take, and increasing enforcement problems. Protection of this species' habitat will be addressed through the recovery process and through the Section 7 jeopardy standard. Therefore, the Service does not propose to determine critical habitat for the pallid sturgeon at this time.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices.

Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. The protection required of Federal agencies and the prohibitions against taking and harm are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR Part 402. Section 7(a)(4) requires Federal agencies to confer informally with the Service on any action that is likely to jeopardize the continued existence of a proposed species or result in destruction or adverse modification of proposed critical habitat. If a species is listed subsequently, section 7(a)(2) requires Federal agencies to insure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of such a species or destroy or adversely modify its critical habitat. If a Federal action may adversely affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service. Being found primarily in navigable waters of the United States and in areas of considerable Federal land ownership interests, consultation procedures could play a significant role in improving the welfare of the pallid sturgeon.

The Act and implementing regulations found at 50 CFR 17.21 set forth a series of general prohibitions and exceptions that apply to all endangered wildlife. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to take (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, or collect, or to attempt any of these), import or export, ship in interstate commerce in the course of commercial activity, or sell or offer for sale in interstate or foreign commerce any listed species. It also is illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken illegally. Certain exceptions apply to agents of the Service and State conservation agencies.

Permits may be issued to carry out otherwise prohibited activities involving endangered wildlife species under certain circumstances. Regulations governing permits are at 50 CFR 17.22 and 17.23. Such permits are available for scientific purposes, to enhance the propagation or survival of the species, and/or for incidental take in connection with otherwise lawful activities. In some instances, permits may be issued for a specified time to relieve undue economic hardship that would be suffered if such relief were not available. With respect to *Scaphirhynchus albus*, it is anticipated that few, if any, trade permits would ever be sought or issued, since the species is not common in the wild and is unknown in cultivation for roe.

Public Comments Solicited

The Service intends that any final action resulting from this proposal will be as accurate and as effective as possible. Therefore, comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning any aspect of this proposed rule are hereby solicited. Comments particularly are sought concerning the following:

(1) Biological, commercial trade, or other relevant data concerning any threat (or lack thereof) to this species;

(2) The location of any additional populations of this species and the reason why any habitat should or should not be determined to be critical habitat as provided by Section 4 of the Act;

(3) Additional information concerning the range, distribution, and population size of this species; and

(4) Current or planned activities in the subject area and their possible impacts on this species.

Final promulgation of the regulation on this species will take into consideration the comments and any additional information received by the Service. Such communications may lead to adoption of a final regulation that differs from this proposal.

The Endangered Species Act provides for a public hearing on this proposal, if requested. Requests must be filed within 45 days of the date of publication of the proposal. Such requests must be made in writing and be addressed to the Regional Director, U.S. Fish and Wildlife Service, P.O. Box 25486, Denver Federal Center, Denver, Colorado 80225.

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under the authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to Section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

50 CFR Part 17

Endangered and Threatened Wildlife and Plants; Proposed Endangered Status for the Lower Keys Rabbit and Threatened Status for the Squirrel Chimney Cave Shrimp

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: The Service proposes to determine the Lower Keys rabbit (*Sylvilagus palustris hefneri*) to be an endangered species and the Squirrel Chimney cave shrimp (*Palaemonetes cummingi*) to be a threatened species pursuant to the Endangered Species Act of 1973, as amended (Act). These species are found only in Florida. The Lower Keys rabbit is restricted to a few keys in Monroe County and is endangered by loss of wetlands to residential development. The Squirrel Chimney cave shrimp is restricted to one site in Alachua County, Florida. It is threatened by potential development. This proposal, if made final, would implement the protection and recovery provisions afforded by the Act for these species. The Service seeks data and comments from the public on this proposal.

DATES: Comments from all interested parties must be received by October 30, 1989. Public hearing requests must be received by October 16, 1989.

ADDRESSES: Comments and materials concerning this proposal should be sent to Field Supervisor, Jacksonville Field Office, U.S. Fish and Wildlife Service, 3100 University Boulevard South, Suite 120, Jacksonville, Florida 32216. Comments and materials received will be available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: David J. Wesley, Field Supervisor, at the above address (telephone 904/791-2580 or FTS 946-2580).

SUPPLEMENTARY INFORMATION:

Background

The Lower Keys rabbit (*Sylvilagus palustris hefneri*) is an island subspecies of the widespread marsh rabbit. The subspecies was described by Lazell in 1984, based on a specimen from Sugarloaf Key, Monroe County, Florida (Lazell 1984). The Lower Keys rabbit measures about 40 centimeters (16 inches) in total length and has brownish fur dorsally and gray fur ventrally. It differs from the marsh rabbit of peninsular Florida (*Sylvilagus palustris paludicola*) principally in skull characters.

In recent times, the Lower Keys rabbit was found on at least ten of the Lower Keys, but may now be extirpated from five of these. The rabbit does not occur east of the Seven Mile Bridge; it is replaced in the Upper Keys by the subspecies *Sylvilagus palustris paludicola*. The Lower Keys rabbit is restricted to marshes, ranging from saline to fresh water. Salt marshes in the area are typically vegetated with fringerush (*Fimbrystylis* sp.), buttonwood (*Conocarpus erectus*), cordgrass (*Spartina alterniflora*), saltwort (*Batis maritima*), glasswort (*Salicornia virginica*), sawgrass (*Cladium jamaicense*), and sea oxeye (*Borrichia frutescens*). Fresh water marshes support cattail (*Typha latifolia*), sedges (*Cyperus* sp.), and sawgrass. Marshes are very limited in the Lower Keys, since mangroves occupy many coastal areas and interior fresh water habitat is scarce. Known localities for the Lower Keys rabbit are on Federal (National Key Deer Refuge, Key West Naval Air Station), State (Florida Department of Transportation), and private lands. The primary cause of the decline of the Lower Keys rabbit is the filling of wetlands for residential, commercial, and military purposes.

The species was considered a category 2 species in the Service's notice of review published in the **Federal Register** of September 18, 1985 (50 FR 37958), and also in the notice of review published in the **Federal Register** of January 6, 1989 (54 FR 554), indicating that listing was possibly appropriate.

The Service was petitioned to list the Lower Keys rabbit as an endangered species by Ms. Joel Beardsley in a letter received April 17, 1985. Section 4(b)(3)(B) of the Endangered Species Act of 1973, as amended in 1982, requires that for any such listing petition containing substantial information, a finding be made within 12 months of receipt of the petition. The Service made a finding that the petition presented substantial information and that the requested action may be warranted on August 30, 1985 (50 FR 35272). Subsequent 1-year findings for 1986 (51 FR 29673; August 20, 1986), 1987 (53 FR 25512; July 7, 1988), and 1988 (53 FR 31723; August 19, 1988) were that the petition was warranted but precluded by other listing activities. In April 1989 the Service made a final finding, based on additional status survey information, that listing of the species was warranted. Publication of the present proposal implements that finding.

The Squirrel Chimney cave shrimp (*Palaemonetes cummingi*), a decapod crustacean of the family Palaemonidae, was described by Chase in 1954. It measures about 30 millimeters (1.2 inches) in total length and is transparent. The body and eyes are unpigmented, and the eyes are reduced in size in comparison to surface-dwelling species of *Palaemonetes*. The Squirrel Chimney cave shrimp (also known as the Florida cave shrimp) is restricted to Squirrel Chimney, a sinkhole near Gainesville, Alachua County, Florida. The site is privately owned. Squirrel Chimney is a small sinkhole which leads to a flooded cave system over 30 meters (100 feet) deep. Several other cave-dwelling invertebrates are found in Squirrel Chimney: McLane's cave crayfish (*Troglocambarus maclanei*), the light-fleeing crayfish (*Procambarus lucifugus*), the pallid cave crayfish (*Procambarus pallidus*) (a category 2 candidate for Federal listing), and Hobb's cave amphipod (*Crangonyx hobbsi*). The site supports one of the richest cave invertebrate faunas in the United States. In 1983, the site was proposed for recognition as a National Natural Landmark, but the National Park Service has not yet taken final action on the proposal.

The Squirrel Chimney cave shrimp is considered threatened by the Florida Committee on Rare and Endangered Plants and Animals, while the other four species are considered species of special concern. The Squirrel Chimney cave shrimp was classified a category 2 species in the Service's May 22, 1984, invertebrate review notice (49 FR 21664), and also in the animal notice of review published January 6, 1989 (54 FR 554). It is threatened by potential residential development and changes in land use.

Summary of Factors Affecting the Species

Section 4(a)(1) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and regulations (50 CFR Part 424) promulgated to implement the listing provisions of the Act set forth the procedures for adding species to the Federal Lists. A species may be determined to be an endangered or threatened species due to one or more of the five factors described in Section 4(a)(1). These factors and their application to the Lower Keys rabbit (*Sylvilagus palustris hefneri*) and the

Squirrel Chimney cave shrimp (*Palaemonetes cummingi*) are as follows:

A. *The present or threatened destruction, modification, or curtailment of its habitat or range.* (1) Lower Keys rabbit—This species probably originally occurred in suitable habitat throughout the larger Lower Florida Keys. Lazell (1984) reported the rabbit from Lower Sugarloaf, Geiger, Saddlebunch, Boca Chica, and Big Pine Keys. He documented 13 sites from these keys (records in Florida Natural Areas Inventory, Tallahassee, Florida). Based on interviews with local residents, he believes that the species also formerly occurred on Cudjoe, Ramrod, Middle Torch, Big Torch, and Key West Keys, but has been extirpated at these sites (J.D. Lazell, The Conservation Agency, *in litt.*, 1985). Lazell (*in litt.* 1985) also provided a rough population estimate, based on pellet counts, of 259 remaining Lower Keys rabbits. Based on interviews with local residents, he believed that the Lower Keys rabbit had been locally common as recently as the 1950's.

The Refuge Manager of the Service's National Wildlife Refuge Complex in the Florida Keys (Key Deer, Key West, and Great White Heron) reviewed the annual reports of that station for information on the Lower Keys rabbit (*in litt.* 1986). The rabbit was known to be present on Refuge lands on Boca Chica, Saddlebunch, and Big Pine Keys, but not on the smaller, outer keys of these refuges. The species was not considered abundant, and was believed to be restricted to keys with available fresh water. Only a few rabbits have been seen since 1984. Howe (1988) surveyed Lazell's 13 sites, as well as additional areas, in a status survey funded by the Service and carried out by the Florida Game and Fresh Water Fish Commission. He found rabbits at 12 locations (one additional site was found following the conclusion of his survey), while they appear to have been extirpated from 4 or possibly 5 previously known sites (Howe, personal communication). Filling for development or road construction has resulted in the destruction of the rabbit's habitat at these sites. Only 6 of the 13 remaining known sites are secure from development. The species may also be extirpated from Saddlebunch Key, where most of the habitat has been destroyed. Howe estimates that 200–400 Lower Keys rabbits remain on Sugarloaf, Welles, Annette, Boca Chica, Big Pine, and Hopkins Keys in small, scattered populations.

(2) Squirrel Chimney cave shrimp—This species is known from only one sinkhole. Any detrimental change to the sinkhole or the underlying aquifer has the potential to adversely affect or even cause the extinction of the species. The property surrounding the sinkhole is currently oak hammock and pine plantation, but it may be developed for residential use (single-family houses) in the foreseeable future. The property is in an actively developing area on the outskirts of Gainesville. Septic tanks and the use of pesticides and herbicides associated with residential development have the potential to degrade water quality in the aquifer, and human activities in the vicinity of the sinkhole could damage the vegetation in and around the sink. Forestry practices have the potential to damage the sinkhole through erosion or pesticides. The current property owners intend to give The Nature Conservancy the first option to purchase the land around the sinkhole, but even if this site is acquired, the sinkhole will remain vulnerable to development in the near vicinity.

B. *Overutilization for commercial, recreational, scientific, or educational purposes.* The Lower Keys rabbit was actively hunted in the past (Lazell 1985), but it is not known whether such activity continues. The current small population size and limited distribution of this animal would make any hunting a serious threat. The Squirrel Chimney cave shrimp is restricted to one small site that could be seriously damaged by a single act of vandalism.

C. *Disease or predation.* The Lower Keys rabbit is vulnerable to predation by feral house cats, which are common on the Lower Keys. Mammalian predators such as cats are not native to the Lower Keys, and wildlife there, as on many islands, may not be well adapted to withstanding such predation. Disease or predation are not known to be affecting the Squirrel Chimney cave shrimp.

D. *The inadequacy of existing regulatory mechanisms.* No existing regulatory mechanisms apply to the Lower Keys rabbit or the Squirrel Chimney cave shrimp.

E. *Other natural or manmade factors affecting its continued existance.* The Lower Keys rabbit occurs in small, disjunct populations which may persist only due to migration among colonies. The continuing urbanization of the Lower Keys makes such movements increasingly difficult. Other natural or manmade factors are not known to be affecting the Squirrel Chimney cave shrimp.

The Service has carefully assessed the best scientific and commercial information available regarding the past, present, and future threats faced by these species in determining to propose this rule. Based on this evaluation, the preferred action is to list the Lower Keys rabbit as an endangered species and the Squirrel Chimney cave shrimp as a threatened species. The Lower Keys rabbit is in danger of extinction throughout a significant portion, if not all, of its range. While not in immediate danger of extinction, the Squirrel Chimney cave shrimp is likely to become an endangered species in the foreseeable future.

Critical Habitat

Section 4(a)(3) of the Act, as amended, requires that to the maximum extent prudent and determinable, the Secretary designate any habitat of a species which is considered to be critical habitat at the time the species is determined to be endangered or threatened. The Service finds that designation of critical habitat is not prudent for the Lower Keys rabbit or the Squirrel Chimney cave shrimp. Publication of critical habitat maps for the Lower Keys rabbit could result in hunting or poaching of this species in its few remaining sites. Federal agencies with Lower Keys rabbits on their properties have been notified. If the rabbit is listed as an endangered species, their activities will be subject to Section 7 of the Act, as discussed under "Available Conservation Measures."

The Squirrel Chimney cave shrimp is restricted to a single known locality that could easily be damaged by vandalism (see factor "B." above). The private landowners do not desire visitors at the site. No Federal activities are known or anticipated at the site.

Publication of critical habitat descriptions would make both species more vulnerable to take or vandalism. For the above reasons, the Service has concluded that designation of critical habitat is not prudent for the Lower Keys rabbit or the Squirrel Chimney cave shrimp. All involved parties and land owners will be notified of the location and the importance of protecting the habitat of these species. Protection will be addressed through the recovery process and through the Section 7 jeopardy standard.

Available Conservation Measures

Conservation measures provided to species listed as endangered or threatened under the Endangered Species Act include recognition, recovery actions, requirements for Federal protection, and prohibitions against certain practices. Recognition through listing encourages and results in conservation actions by Federal, State, and private agencies, groups, and individuals. The Endangered Species Act provides for possible land acquisition and cooperation with the States and requires that recovery actions be carried out for all listed species. Such actions are initiated by the Service following listing. The protection required of Federal agencies and the prohibitions against taking and harm are discussed, in part, below.

Section 7(a) of the Act, as amended, requires Federal agencies to evaluate their actions with respect to any species that is proposed or listed as endangered or threatened, and with respect to its critical habitat, if any is being designated. Regulations implementing this interagency cooperation provision of the Act are codified at 50 CFR Part 402. Section 7(a)(4) requires Federal agencies to confer informally with the Service on any action that is likely to jeopardize the continued existence of a proposed species or result in destruction or adverse modification of proposed critical habitat. If a species is listed subsequently, Section 7(a)(2) requires Federal agencies to ensure that activities they authorize, fund, or carry out are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat. If a Federal action may affect a listed species or its critical habitat, the responsible Federal agency must enter into formal consultation with the Service. For the Lower Keys rabbit, affected Federal agencies are the U.S Navy and the U.S. Army Corps of Engineers. The rabbit occurs on Key West Naval Air Station, and the Corps has jurisdiction over some of the wetlands used by the rabbit through its permitting authority pursuant to Section 404 of the Clean Water Act. The Navy currently anticipates no conflicts with its mission on Key West Naval Air Station. The Corps must now evaluate wetland permit applications for potential effects on the Lower Keys rabbit. If appropriate, the Corps must confer with the Service concerning the Lower Keys rabbit. Wetland permitting in some areas may become more restrictive.

No Federal agency involvement is anticipated for the Squirrel Chimney cave shrimp.

The Act and its implementing regulations found at 50 CFR 17.21 and 17.31 set forth a series of general trade prohibitions and exceptions that apply to endangered and threatened wildlife. These prohibitions, in part, make it illegal for any person subject to the jurisdiction of the United States to take (includes harass, harm, pursue, hunt, shoot, wound, kill, trap, or collect; or to attempt any of these), import or export, ship in interstate commerce in the course of commercial activity, or sell or offer for sale in interstate or foreign commerce any listed species. It is also illegal to possess, sell, deliver, carry, transport, or ship any such wildlife that has been taken illegally. Certain exceptions apply to agents of the Service and State conservation agencies.

Permits may be issued to carry out otherwise prohibited activities involving endangered and threatened wildlife species under certain circumstances. Regulations governing permits are at 50 CFR 17.22, 17.23, and 17.32. Such permits are available for scientific purposes, to enhance the propagation or survival of the species, and/or for incidental take in connection with otherwise lawful activities. For threatened species, there are also permits for zoological exhibition, educational purposes, or for special purposes consistent with the purposes of the Act.

Public Comments Solicited

The Service intends that any final action resulting from this proposal will be accurate and as effective as possible. Therefore, any comments or suggestions from the public, other concerned governmental agencies, the scientific community, industry, or any other interested party concerning any aspect of this proposal are hereby solicited. Comments particularly are sought concerning:

(1) Biological, commercial trade, or other relevant data covering any threat (or lack thereof) to these species;

(2) The location of any additional populations of these species and the reasons why any habitat should or should not be determined to be critical habitat as provided by section 4 of the Act;

(3) Additional information concerning the range and distribution of these species;

(4) Current or planned activities in the subject area and their possible impacts on these species.

Final promulgation of the regulations on these species will take into consideration the comments and any additional information received by the Service, and such communications may lead to adoption of final regulations that differ from this proposal.

The Endangered Species Act provides for a public hearing on this proposal, if requested. Requests must be filed within 45 days of the date of the proposal. Such requests must be made in writing to the Field Supervisor (see Addresses section).

National Environmental Policy Act

The Fish and Wildlife Service has determined that an Environmental Assessment, as defined under the authority of the National Environmental Policy Act of 1969, need not be prepared in connection with regulations adopted pursuant to Section 4(a) of the Endangered Species Act of 1973, as amended. A notice outlining the Service's reasons for this determination was published in the **Federal Register** on October 25, 1983 (48 FR 49244).

BILLING CODE 4310-55-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 650

Atlantic Sea Scallop Fishery

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of availability of an amendment to a fishery management plan and request for comments.

SUMMARY: NOAA issues this notice that the New England Fishery Management Council (Council) has submitted Amendment 3 (Amendment) to the Fishery Management Plan for Atlantic Sea Scallops (FMP) for review by the Secretary of Commerce. Written comments are invited from the public. Copies of Amendment 3 may be obtained from the address below.

DATE: Comments on the Amendment should be submitted on or before October 23, 1989.

ADDRESS: All comments should be sent to Richard Roe, Regional Director, National Marine Fisheries Service, One Blackburn Drive, Gloucester, MA 01930. Clearly mark the outside of the envelope "Comments on Amendment 3 to the Sea Scallop FMP."

Copies of the Amendment are available upon request from Douglas G. Marshall, Executive Director, New England Fishery Management Council, Suntaug Office Park, 5 Broadway (Route 1), Saugus, MA 01906.

FOR FURTHER INFORMATION CONTACT: Patricia A. Kurkul, Resource Policy Analyst, (508) 281-9331.

SUPPLEMENTARY INFORMATION: The Magnuson Fishery Conservation and Management Act (Magnuson Act) (16 U.S.C. 1801 *et seq.*) requires that each regional fishery management council submit any fishery management plan or plan amendment it prepares to the Secretary of Commerce (Secretary) for review, approval and implementation. The Magnuson Act also requires that the Secretary, upon receiving the plan or amendment, immediately publish a notice of availability for public review and comment. The Secretary considers any public comments received in determining whether to approve the plan or amendment.

Amendment 3 would require all sea scallop dredge vessels, and all vessels landing more than 5 bushels (176.2 1) of sea scallops in the shell, to offload all fish (including sea scallops) within a 12-hour time window. In addition, the Amendment would require all other vessels landing more than 40 pounds (18.1 kg) of shucked scallops to offload all sea scallops within a specified offloading window. The proposed 12-hour offloading windows are as follows:

State of offloading	Period
ME, NH, NC, SC, GA & FL	7 a.m. to 7 p.m.
MA, RI & CT	5 a.m. to 5 p.m.
NY, NJ, DE, MD, VA & PA	6 a.m. to 6 p.m.

The purpose of this Amendment is to improve compliance with the meat-count/shell-height standards of the FMP by implementing a mandatory structure for the offloading of harvested sea scallops. Amendment 3 is also designed to enhance the efficiency and effectiveness of NMPS enforcement efforts in the Atlantic sea scallop fishery.

The windows cover different periods in different states where Atlantic sea scallops are offloaded, to accommodate industry practices, which vary by state. The windows would reduce by half the amount of time, during any day, within which scallops could lawfully be offloaded from any vessel subject to the offloading windows. Offloading outside an offloading window would constitute a separate violation of the regulations—regardless of the meat-count/shell-height measurements of the scallops being offloaded.

Regulations proposed by the Council to implement this Amendment are scheduled to be published within 15 days.

Authority: 16 U.S.C. 1801 *et seq.*

BILLING CODE 3510-22-M

---

50 CFR Part 651

RIN 0648-AC79

Northeast Multispecies Fishery

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of availability of an amendment to a fishery management plan and request for comments.

SUMMARY: NOAA issues this notice that the New England Fishery Management Council (Council) has submitted Amendment #3 (Amendment) to the Fishery Management Plan for the Northeast Multispecies Fishery (FMP) for review by the Secretary of Commerce. Written comments are invited from the public on the Amendment and associated documents.

DATE: Comments will be accepted until October 23, 1989.

ADDRESSES: All comments should be sent to Richard B. Roe, Regional Director, National Marine Fisheries Service, One Blackburn Drive, Gloucester, MA 01930. Clearly mark the outside of the envelope "Comments on Multispecies Amendment #3".

Copies of the Amendment, Environmental Assessment, and Regulatory Impact Review/Initial Regulatory Flexibility Analysis are available upon request from Douglas G. Marshall, Executive Director, New England Fishery Management Council, Suntaug Office Park, 5 Broadway (Route 1), Saugus, MA 01906.

FOR FURTHER INFORMATION CONTACT: Jack Terrill, Resource Policy Analyst, 508-281-9252.

SUPPLEMENTARY INFORMATION: This amendment was prepared under the provisions of the Magnuson Fishery Conservation and Management Act (Magnuson Act)(16 U.S.C. 1801 *et seq.*). The Magnuson Act requires that a council-prepared fishery management plan or amendment be submitted to the Secretary of Commerce (Secretary) for review and approval or disapproval. The Magnuson Act also requires that the Secretary, upon receiving the document, immediately publish a notice of its availability for public review and comment. This amendment proposes measures for managing the multispecies finfish fisheries in the Northwest Atlantic.

The purpose of the amendment is to enable the New England Fishery Management Council, its Multispecies Committee, NMFS, and other management agencies to respond in a timely manner to protect large concentrations of juvenile, sublegal, and spawning fish. Under this system, measures ranging from mesh size restrictions to limited closed areas could be implemented. This system is intended to: 1) Enhance age-at-entry controls to enable the FMP to achieve its objectives; 2) eliminate the need for the type of emergency actions which were most recently implemented in the Northeast Multispecies fishery; and 3) be able to respond to requests from the fishing industry for timely action in a way that improves the climate for cooperation and progress between the Council and the fishing industry.

Formal review by the Secretary began August 24, 1989, and proposed regulations for this amendment will be filed within 15 days for publication.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 24, 1989.

David S. Crestin,

Deputy Director, Office of Fishery Conservation and Management.

[Docket No. 90761-9161]

RIN 0648-AC82

Pacific Coast Groundfish Fishery

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Proposed rule.

SUMMARY: NOAA proposes two changes to the regulations implementing the fishery management plan for Pacific coast groundfish fisheries in the exclusive economic zone (3-200 nautical miles) off the coasts of Washington, Oregon, and California. The first change would require certain commercially caught groundfish species to be sorted prior to the first weighing after offloading. The second change would prohibit possession of unauthorized fixed gear on a fishing vessel. These changes would improve efficiency in enforcing fishing restrictions.

DATE: Comments on this proposed rule are invited until September 29, 1989.

ADDRESSES: Send comments to Rolland A. Schmitten, Director, Northwest Region, National Marine Fisheries Service, 7600 Sand Point Way NE, Bldg. 1, Seattle WA 98115; or E. Charles Fullerton, Director, Southwest Region, National Marine Fisheries Service, 300 South Ferry Street, Terminal Island CA 90731.

FOR FURTHER INFORMATION CONTACT: William L. Robinson at (206) 526-6140; or Rodney R. McInnis at (213) 514-6202.

SUPPLEMENTARY INFORMATION: Under the Magnuson Fishery Conservation and Management Act (Magnuson Act), a Fishery Management Plan for the Pacific Coast Groundfish Fishery off the coasts of Washington, Oregon, and California (FMP) was prepared by the Pacific Fishery Management Council (Council) and approved by the Secretary of Commerce (Secretary). Implementing regulations are codified at Parts 620 and 663 for the domestic fishery and at Part 611 for the foreign fishery.

The Council requested two changes in the implementing regulations in order to facilitate enforcement. These changes are discussed below.

Sorting. Trip limits restrict the amount of a particular species or group of species that may be landed by a vessel from a single fishing trip. Trip limits frequently are used to prolong the fishery for certain species, thus providing a year-round supply of groundfish to the market. They also are used to minimize or prevent waste and biological stress for those species that would be unavoidably caught, and thus discarded, after a quota is reached. They have been applied to landings of Pacific ocean perch, widow rockfish, sablefish, the deepwater complex (sablefish, Dover sole, arrowtooth flounder, and thornyheads), yellowtail rockfish, and the more than 70 species of rockfish in the *Sebastes* complex.

State and Federal enforcement officials advised the Council that enforcement is difficult when species with trip limits are not sorted before weighing by the processor. The problem is particularly acute when there are large loads of mixed species, some with trip limits and some without. Enforcement officers at the scene of the unloading must estimate the poundage of each trip limit species to determine whether a violation has occurred. If, in the judgment of the officer, a violation has occurred, the processor's operation must be interrupted while each species with a trip limit is sorted and weighed. This can take 6 to 8 hours and result in a temporary shut-down of the plant's operations.

The proposal that sorting be required will not substantially increase direct or indirect costs on the fishery as a whole. Although some fishermen may find sorting to be an inconvenience, sorting helps fishermen determine when to stop fishing on a particular species and is the only way for both fishermen and enforcement agents to verify compliance with the regulations. Most fishermen already sort their catch at sea or as fish are offloaded from the vessel. Also, because processors pay different prices for different species, those species routinely are sorted according to market categories before they are weighed. Market categories often are designated for species with trip limits. The State of Washington already has a regulation requiring species with trip limits to be sorted. A Federal regulation requiring sorting would not change operating procedures for fishermen and processors in that state. The States of Oregon and California plan to institute state sorting requirements concurrent with implementation of the Federal regulation.

The Council agreed that a sorting requirement is necessary to enhance enforcement and compliance, and to reduce disruption of processing operations. However, the Council also concluded that it was unnecessary to require sorting of a total delivery smaller than 3,000 pounds. Most trip limits, or trip frequency limits (which restrict the number of landings a vessel may make in a given time period), have not been applied below a certain level, usually 3,000 pounds or less, depending on the species involved.

Prohibiting possession of unauthorized fishing gear. The Council also recommended prohibiting possession of unauthorized fixed gear on commercial fixed gear fishing vessels. Fixed gear includes set nets, traps or pots, longlines, or commercial vertical hook-and-line gear. The definitions and regulations concerning legal fixed gear are found at 50 CFR 663.2 and 663.26 and may be modified under 50 CFR 663.25.

Presently, there is no prohibition on carrying unauthorized fixed gear, such as pots without biodegradable panels and longlines without proper marking, aboard any fishing vessel. Pulling and checking gear on the grounds by enforcement agents is time-consuming and can disrupt fishing operations. The Council's proposal was intended to facilitate enforcement by allowing enforcement agents to inspect fixed gear at the dock rather than at sea. The Council recommended that trawl vessels be exempt from this prohibition because they sometimes retrieve derelict fixed gear that does not comply with the regulations at § 663.26. Trawlers that encounter and retrieve derelict fixed gear must be able to retain it for the purpose of returning it to shore for disposal, as required by Annex V of the International Convention for the Prevention of Pollution from Ships, 1973 (Annex V of MARPOL 73/78), which prohibits the at-sea disposal of fishing gear.

NMFS, in its review of the Council's recommendation, has discovered that the Council unintentionally overlooked the fact that its recommendation might be contradictory to Annex V with regard to fixed gear vessels that also occasionally become entangled with illegal, derelict fixed gear at sea. The Council's recommendation would prohibit possession of such gear by fixed gear vessels, whereas Annex V would necessitate bringing it to shore for disposal. Furthermore, the recommendation might appear to some to discriminate against fixed gear vessels because it does not prohibit the retention of illegal fixed gear aboard other types of commercial fishing vessels such as trawlers.

Therefore, to accomplish the intent of the Council's recommendation, NMFS has revised the proposal so that the possession of illegal fixed gear is prohibited onboard all commercial fishing vessels unless such gear is the gear of another vessel which has been retrieved at sea, in which case such gear must be made inoperable or be stowed in a manner not capable of being fished. Thus all commercial fishing vessels would be able to retain, for the purpose of disposal on shore, derelict fixed gear retrieved at sea, consistent with Annex V. NMFS also intends that any vessel bound for Alaska with fixed gear onboard be exempt from this prohibition, unless the vessel also fishes for groundfish off the coasts of Washington, Oregon, or California during the same trip.

This prohibition also would not apply to the possession of unauthorized trawl gear. Authorized trawl gear differs according to the area fished and type of fishing operation. For example, legal mesh size varies depending on the type of trawl gear used (midwater, bottom, or roller trawl), and, for roller trawls, the area fished. Furthermore, fishermen are permitted to use midwater, bottom, or roller trawls during the same fishing trip. Therefore, a prohibition against possession of unauthorized trawl gear would be difficult to enforce, and moreover, could disrupt normal fishing operations.

Classification

This proposed rule is published under authority of section 305(g) of the Magnuson Act, 16 U.S.C. 1855(g), and was prepared at the request of the Council. The Assistant Administrator for Fisheries, NOAA, has determined that this proposed rule is necessary for the conservation and management of the Pacific coast groundfish fishery and that it is consistent with the Magnuson Act and other applicable law.

The Under Secretary, NOAA, before publishing a final rule, will take into account the data and comments received during the comment period.

The Assistant Administrator has determined that the proposed rule falls within a categorical exclusion from the requirements of the National Environmental Policy Act, 42 U.S.C. 4321 *et seq.*, under NOAA Directive 02-10, because it is routine (i.e., would not result in any significant change from the status quo) and because it has limited potential for effect on the human environment. A biological benefit would accrue from discouraging the use of unauthorized fixed gear because detection would be more likely with shoreside enforcement. In particular, pots without escape panels that are lost at sea continue fishing indefinitely. If use of such fixed gear is lessened, an unquantifiable benefit would result.

The Under Secretary has determined that it is not a major rule requiring a regulatory impact analysis under Executive Order 12291. The proposed action will not have a cumulative effect on the economy of $100 million or more nor will it result in a major increase in costs to consumers, industries, government agencies, or geographical regions. No significant adverse impacts are anticipated on competition, employment, investments, productivity, innovation, or competitiveness of U.S.-based enterprises.

The General Counsel of the Department of Commerce certified to the Small Business Administration that this proposed rule, if adopted, will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act, 5 U.S.C. 603 *et seq.* While few costs are expected from the action, enforcement benefits and more efficient procedures would result from these regulations. The proposed sorting requirement involves direct or indirect costs to the industry. However, the incremental cost of this regulation would be small, because many fishermen already sort their catch according to market categories or to monitor compliance with trip limits, deliveries below 3,000 pounds would be exempt, and the State of Washington already requires sorting. As a result, a regulatory flexibility analysis was not prepared.

This proposed rule does not contain a collection of information requirement for purposes of the Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*

This rule implements the FMP and amendments for which consistency determinations have previously been made under the Coastal Zone Management Act.

This rule does not contain policies with federalism implications sufficient to warrant preparation of a federalism assessment under Executive Order 12612.

List of Subjects in 50 CFR Part 663

Fisheries, Fishing, Foreign relations.

Dated: August 24, 1989.

James E. Douglas, Jr.,
Deputy Assistant Administrator For Fisheries, National Marine Fisheries Service.

PARTS 663—PACIFIC COAST GROUNDFISH FISHERY

For the reasons set forth in the preamble, 50 CFR Part 663 is proposed to be amended as follows:

1. The authority citation for 50 CFR Parts 663 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. In § 663.7, the introductory paragraph is revised to reference § 620.7, and paragraphs (l) and (m) are added as follows:

§ 663.7 Prohibitions.

In addition to the general prohibitions specified in § 620.7 of this chapter, it is unlawful for any person to:

* * * * *

(l) Fail to sort, prior to the first weighing after offloading, those groundfish species or species groups for which there is a trip limit, if the weight of the total delivery exceeds 3,000 pounds (round weight or round weight equivalent).

(m) Possess, deploy, haul, or carry onboard a fishing vessel subject to these regulations (50 CFR Part 663) a set net, trap or pot, longline, or commercial vertical hook-and-line that is not in compliance with the gear restrictions at § 663.26, unless such gear is the gear of another vessel that has been retrieved at sea and made inoperable or stowed in a manner not capable of being fished. The disposal at sea of such gear is prohibited by Annex V of the International Convention for the Prevention of Pollution From Ships, 1973 (Annex V of Marpol 73/78).

BILLING CODE 3510-22-M

Notices

Federal Register

---

timber stand regeneration, and road

for this EIS, will make a decision

DEPARTMENT OF COMMERCE

Notices

Federal Register
Vol. 54, No. 167
Wednesday, August 30, 1989

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Mex Mountain Timber Sales, Clearwater National Forest, Idaho County, Idaho; Intent To Prepare an Environmental Impact Statement

ACTION: Notice; intent to prepare an environmental impact statement.

SUMMARY: The Forest Service will analyze and disclose the environmental impacts of a proposal to harvest timber, regenerate harvested timber stands, reconstruct existing roads, and construct new roads in a portion of the Fish Creek drainage on the Lochsa Ranger District. The proposed action is located within a portion of the RARE II North Lochsa Face Roadless Area (#1307). An environmental impact statement will be prepared which will document the analysis. This EIS will tier to the Clearwater National Forest Land and Resource Managmeent Plan FEIS of September 1978, which provides overall guidance in achieving the desired future condition for the area. The primary purpose and goal of the proposed action is to help satisfy short-term demands for timber and maintain a continuous supply of timber for the future, while maintaining the high quality wildlife and fishery values of the study area.

To date, considerable scoping and analysis has been done in regard to the proposed action. During October of 1987, a letter of management intent was sent to the staff of the Clearwater National Forest, State agencies, the Nez Perce Indian Tribe, and other known local interest groups and individuals. Concurrently, notices were put in local and regional newspapers informing the public of the analysis, and seeking comment. In December 1988, an Interdisciplinary Team (IDT) was assigned to complete the analysis after receiving a number of comments during the initial scoping phase. In response to the identified issues and concerns, the IDT has so far described eight alternative management proposals for the study area. The Team has met with agencies and interest groups to explain the analysis process and the alternatives that have been developed. The Forest Service is now seeking further information and comments from Federal, State, local agencies, and other individuals or organizations who are interested in or affected by the proposed action. This additional input will be used in preparing the Draft EIS (DEIS). This process will include:

1. Identification of potential issues.
2. Identification of issues to be analyzed in depth.
3. Elimination of insignficant issues or those which have been covered by a relevant previous enviromental analysis.
4. Identification of additional reasonable alternatives.
5. Identification of potential enviromental effects of the alternatives.
6. Determination of potential cooperating agencies.

The agency invites written comments and suggestions on the issues and management opportunities for the area being analyzed.

DATE: Comments concerning the scope of the analysis should be received by September 31, 1989 to receive timely consideration in the preparation of the Draft EIS.

ADDRESS: Send written comments to Jon B. Bledsoe, District Ranger, Lochsa Ranger District, Rt. 1, Box 398, Kooskia, ID 83539.

FOR FURTHER INFORMATION CONTACT: Dennis Griffith, Mex Mountain Analysis Interdisciplinary Team Leader, or Jon B. Bledsoe, District Ranger, Lochsa Ranger District, Clearwater National Forest, (208–926–4275).

SUPPLEMENTARY INFORMATION: The analysis area in which the proposed management activities would occur consists of approximately 13,560 acreas of National Forest land in the northwest portion of the Fish Creek drainage on Lochsa Ranger District. The entire study area is located within the inventoried 113,662-acre North Lochsa Slope Roadless Area (#1307). The study area includes all or portions of: Sections 1, 2, 3, 4, and 10 of T.34N., R.7E.; Sections 13, 14, 15, 16, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 32, 33, 34, 35, and 36 of T.35N., R7E.; and Sections 19, 30, and 31 of T.35N., R.8E., Boise Meridian.

The Land and Resource Management Plan for the Clearwater National Forest provides the overall guidance for management activities in the potentially affected area through its goals, objectives, standards, guidelines and management area direction.

The areas of proposed timber harvest, regeneration, and associated road construction and reconstruction activities within the Mex Mountain analysis area are located in Plan management areas A6, C8S, and M2.

Management area A6 consists of a ½-mile wide corridor on either side of the Lewis and Clark National Historic Trail and the Lolo Motorway, a primitive road constructed in the mid-1930's. These cultural resources have national and regional significance, and the management goal for the corridor is to protect the intrinsic values of these resources, while providing opportunities for recreational activities oriented to traveling over them, understanding and appreciating the routes as historic travel routes across the Bitterroot Mountain range.

Management area C8S consists of lands by high value fishery streams, productive timberland, and key big-game summer range. The management goal for this area is maintenance of high quality fishery and wildlife values, while producing timber from the productive forest land.

Management area M2 consists of riparian areas including perennial streams, lakes, wetlands, and floodplains. It also includes the land within 100 feet from their margins. The management goal for these areas is to maintain them under the principles of multiple use as areas of special consideration, distinctive values, and integrated with adjacent management areas to the extent that water and other riparian-dependent resources are protected.

The analysis will consider a range of alternatives. One of these will be the "no-action" alternative in which timber harvest, timber stand regeneration, and road construction/reconstruction activities would not be implemented. Other alternatives will examine various levels and locations of timber harvest,

timber stand regeneration, and road construction/reconstruction activity. The various mixes of timber and non-timber resources values of each alternative will also be examined.

Under the alternatives that the Interdisciplinary Team has described to this point, up to 9.2 million board feet (MMBF) of timber could be harvested on 460 acres. Such an action would require the construction of 3.6 miles of new road and the reconstruction of 9 miles of existing road.

The EIS will disclose the environmental effects of alternative ways of implementing the Forest Plan. The Forest Service will analyze and document the direct, indirect, and cumulative environmental effects of the alternatives. In addition, the EIS will disclose the site specific mitigation measures and their effectiveness.

Public participation will be especially important at several points in the analysis. People are encouraged to visit with Forest Service officials at any time during the analysis and prior to the decision. However, two key time periods have been identified for receipt of formal comments on the analysis:

- Scoping period (now through September 31, 1989).
- Review of the Draft EIS in November 1989.

The U.S. Fish and Wildlife Service, Department of Interior, will be informally consulted throughout the analysis. To meet the requirements of the Endangered Species Act, the U.S. Fish and Wildlife Service will review the EIS and Biological Assessment and, if necessary, render a formal Biological Opinion of the effects on threatened and endangered species, including the grizzly bear and gray wolf.

Since the proposed action could affect cultural resources either listed on or eligible for listing on the National Historic Register, the consultation process established in Title 36, Code of Federal Regulations, Part 800.4, will be followed during the analysis.

The DEIS is expected to be filed with the Environemental Protection Agency (EPA) and available for public review by November 15, 1989. At that time, the EPA will publish a Notice of Availability of the DEIS in the **Federal Register**. After a 45-day public comment period, the comments received will be analyzed and considered by the Forest Service in the final Environmenal Impact Statement (FEIS). The FEIS is scheduled to be completed by February, 1990. The Forest Service will respond in the FEIS to the comments received on the DEIS. The District Ranger for the Lochsa Ranger District, Clearwater National Forest, Jon B. Bledsoe, who is the reponsible official for this EIS, will make a decision regarding this proposal considering the comments, responses, environmental consequences discussed in the FEIS and applicable laws, regulations, and policies. The decision and reasons for the decision will be documented in a Record of Decision.

The comment period on the draft environmental impact statement will be 45 days from the date the Environmental Protection Agency published the notice of availability in the **Federal Register**. The Forest Service believes it is important to give reviewers notice at this early stage of several court rulings related to public participation in the enviromental review process. First, reviewers of draft environmental impact statements must structure their participation in the environmental review of the proposal so that it is meaningful and alerts an agency to the reviewer's position and contentions. *Vermont Yankee Nuclear Power Corp. v. NRDC*, 435 U.S. 519, 553 (1978). Also, environmental objections that could be raised at the draft enviromental impact statement may be waived or dismissed by the courts. *Wisconsin Heritages, Inc. v. Harris*, 490 F. Supp. 1334, 1338 (E.D. Wis 1980). Because of these court rulings, it is very important that those interested in this proposed action participate by the close of the 45-day comment period so that substantive comments and objections are made available to the Forest Service at a time when it can be meaningfully consider them and respond to them in the final enviromental impact statment.

To assist the Forest Service in identifying and considering issues and concerns on the proposed action, comments on the draft enviromental impact statement should be as specific as possible. It is also helpful if comments refer to specific pages or chapters of the draft statement. Comments may also address the adequacy of the draft enviromental statement or the merits of the alternatives formulated and discussed in the statement (Reviewers may wish to refer to the Council on Environmental Quality Regulations for implementing the procedural provisions of the National Environmental Policy Act at 40 CFR 1503.3 in addressing these points.)

Dated: August 10, 1989.

Jon B. Bledsoe,

District Ranger, Lochsa Ranger District, Clearwater National Forest.

Bureau of Export Administration

Subcommittee on Export Administration of the President's Export Council; Closed Meeting

A closed meeting of the President's Export Council Subcommittee on Export Administration will be held Friday, September 15, 1989, 9 a.m. to 3 p.m., U.S. Department of Commerce, Herbert C. Hoover Building, Room 4830, 14th and Constitution Avenue NW., Washington, DC.

The Subcommittee provides advice on matters pertinent to those portions of the Export Administration Act, as amended, that deal with United States policies of encouraging trade with all countries with which the United States has diplomatic or trading relations, and of controlling trade for national security and foreign policy reasons.

Executive Session: 9 a.m.–3 p.m. Discussion of matters properly classified under Executive Order 12356 pertaining to the control of export for national security, foreign policy or short supply reasons under the Export Administration Amendments Act of 1979, as amended. The Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined on October 27, 1987, pursuant to section 10 (d) of the Federal Advisory Committee Act, as amended, that the series of meetings or portions of meetings of the Subcomittee, dealing with the classified materials listed in 5 U.S.C. 552b (c) (1) shall be exempt from the provisions relating to public meetings found in section 10 (a) (1) and (a) (3), of the Federal Advisory Committee Act. The remaining series of meetings or portions thereof will be open to the public. A copy of the Notice of Determination to close meetings or portions thereof is available for public inspection and copying in the Central Reference and Records Inspection Facility, Room 6628, U.S. Department of Commerce, Washington, DC.

For further information, contact Betty Ferrell, (202) 377-2583.

Dated: August 23, 1989.

James M. LeMunyon,

Deputy Assistant Secretary for Export Administration.

BILLING CODE 3510-DT-M

International Trade Administration

[C-549-804]

Initiation of Countervailing Duty Investigation: Certain Carbon Steel Butt-Weld Pipe Fittings From Thailand

AGENCY: Import Administration, International Trade Administration, Commerce.

ACTION: Notice.

SUMMARY: On the basis of a petition filed in proper form with the U.S. Department of Commerce, we are initiating a countervailing duty investigation to determine whether manufacturers, producers, or exporters in Thailand of carbon steel butt-weld pipe fittings (pipe fittings) as described in the "Scope of Investigation" section of this notice, receive benefits which constitute bounties or grants within the meaning of the countervailing duty law. If this investigation proceeds normally, we will make our preliminary determination on or before October 27, 1989.

EFFECTIVE DATE: August 30, 1989.

FOR FURTHER INFORMATION CONTACT: Carole Showers or Margot Paijmans, Office of Countervailing Investigations, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230; telephone: (202) 377–3217 and (202) 377–1442.

SUPPLEMENTARY INFORMATION:

The Petition

On August 3, 1989, we received a petition in proper form from the U.S. Butt-Weld Fittings Committee, filed on behalf of the U.S. industry producing carbon steel butt-weld pipe fittings. In compliance with the filing requirements of section 355.12 of the Commerce Regulations published in the **Federal Register** on March 28, 1989 (54 FR 12742) (to be codified at 19 CFR 355.12), the petition alleges that manufacturers, producers, or exporters of pipe fittings in Thailand receive, directly or indirectly, certain benefits which constitute bounties or grants within the meaning of section 303 of the Tariff Act of 1930, as amended (the Act).

Thailand is not a "country under the Agreement" within the meaning of section 701(b) of the Act, and the merchandise being investigated is dutiable. Therefore, section 303 (a)(1) and (b) of the Act apply to this investigation. Accordingly, petitioner is not required to allege that, and the U.S. International Trade Commission is not required to determine whether, imports of this product from Thailand materially injure, or threaten material injury to, a U.S. industry.

Petitioner has alleged that it has standing to file the petition. Specifically, petitioner has alleged that it is an interested party as defined under section 771(9)(E) of the Act and that it has filed the petition on behalf of the U.S. industry manufacturing the products that are subject to this investigation. If any interested party as described under paragraphs (C), (D), (E), or (F) of section 771(9) of the Act wishes to register support of or opposition to this petition, please file written notification with the Commerce official cited in the "For Further Information Contact" section of this notice.

Initiation of Investigation

Under section 702 (c) of the Act, we must make a determination on whether to initiate a countervailing duty proceeding within 20 days after a petition is filed. Section 702(b) of the Act requires the Department to initiate a countervailing duty proceeding whenever an interested party files a petition on behalf of an industry that: (1) Alleges the elements necessary for the imposition of a duty under section 701(a), and (2) is accompanied by information reasonably available to the petitioner supporting the allegations. We have examined the petition on pipe fittings from Thailand and have found that it meets these requirements. Therefore, we are initiating a countervailing duty investigation to determine whether manufacturers, producers, or exporters of pipe fittings in Thailand, as described in the "Scope of the Investigation" section of this notice, receive bounties or grants. If our investigation proceeds normally, we will make our preliminary determination on or before October 27, 1989.

Scope of Investigation

The United States has developed a system of tariff classification based on the international harmonized system of customs nomenclature. On January 1, 1989, the U.S. tariff schedules were fully converted to the *Harmonized Tariff Schedule* (HTS), as provided for in section 1201 *et seq.* of the Omnibus Trade and Competitiveness Act of 1988. All merchandise entered or withdrawn from warehouse for consumption on or after this date is classified solely according to the appropriate HTS subheading(s). The HTS subheadings are provided for convenience and Customs purposes. The written description remains dispositive as to the scope of the product coverage.

The product covered by this investigation is carbon steel butt-weld pipe fittings, having an inside diameter of less than 360 millimeters (fourteen inches), imported in either finished or unfinished form. These formed or forged pipe fittings are used to join sections in piping systems where conditions require permanent, welded connections, as distinguished from fittings based on other fastening methods (*e.g.*, threaded, grooved, or bolted fittings). The product is classified under subheading 7307.93.30 of the *Harmonized Tariff Schedule* (HTS) and were formerly classifiable under item 610.88.00 of the *Tariff Schedules of the United States Annotated* (TSUSA).

Allegations of Bounties or Grants.

Petitioner lists a number of practices by the Government of Thailand which allegedly confer bounties or grants on manufacturers, producers, or exporters of pipe fittings in Thailand. We are initiating an investigation of the following programs:

- Export Packing Credits
- Tax Certificates for Exports
- Electricity Discount for Exporters
- Rediscount of Industrial Bills
- Export Processing Zones
- International Trade Promotion Fund
- Investment Promotion Act

— Section 28: Import Duty and Tax Exemption for Machinery
— Section 31: Income Tax Exemption
— Section 33: Goodwill and Royalties Tax Exemption
— Section 34: Tax Deduction for Dividends
— Section 36(1): Import Duty and Tax Exemption on Raw and Essential Materials
— Section 36(2): Import Duty and Tax Exemption on Imports for Re-export
— Section 36(3): Import Duty and Tax Exemption on Products for Export
— Section 36(4): Tax Deduction on Income Resulting from Increased Exports

This notice is published pursuant to section 702(c)(2) of the Act.

Dated: August 22, 1989.

Eric I. Garfinkel,

Assistant Secretary for Import Administration.

[FR Doc. 89–20346 Filed 8–29–89; 8:45 am]

BILLING CODE 3510-DS-M

Notice of Petitions by Producing Firms for Determinations of Eligibility to Apply for Trade Adjustment Assistance

Petitions have been accepted for filing on the dates indicated from the following firms: (1) Big Front Manufacturing, Inc., 360 South Los Angeles Street, Los Angeles, California 900013, producer of formal wear: shirts, slacks, vests, bowties, handkerchiefs, suspenders and cumberbands (February 1, 1989); (2) United Uphostery Corporation, 1321 North Kraemer Blvd., Anaheim, California 92806, producer of upholstered sofas, chairs and tables (February 3, 1989); (3) Steffmar Industries, Inc., 8320 San Fernando Road & Reed Street, Sun Valley, California 91352, producer of pallet racks, carts, dollys and shelving systems (February 6, 1989); (4) Quantachome Corporation, 5 Aerial Way, Syosset, New York 11791, producer of microscan (February 7, 1989); (5) D'Andrea Manufacturing Company, Inc., 900 Shames Drive, Westbury, New York 11590, producer of carrying cases for musical instruments and picks (February 7, 1989); (6) Mann Edge Tool Company, P.O. Box 351, Lewistown, Pennsylvania 17044, producer of axe heads, punch bars, sledge hammers, mauls and wedges (February 7, 1989); (7) Tracy-Luckey Company, Inc., 110 N. Hicks Street, P.O. Box 188, Harlem, Georgia 30814–0850, processor of pecans (February 8, 1989); (8) Dixie Brewing Company, Inc., 2401 Tulane Avenue, New Orleans, Louisiana 70119, producer of beer (February 9, 1989); (9) Man-Sew Corporation, 6108 Sherwin Drive, Port Richey, Florida 34668, producer of industrial sewing machines, attachments and parts (February 21, 1989); (10) Fenpro, Inc., 2601 NW. Market Street, Seattle, Washington 98107, producer of aluminum framed windows (February 21, 1989); (11) Marx Manufacturing Corporation, 7000 Monroe Boulevard, Taylor, Michigan 48180, producer of stamped, metal parts for automobile bodies, steering and axle mechanisms and engines (February 21, 1989); (12) J.V. Box 362, Clay City, Illinois 62824, producer of crude oil (March 23, 1989); (35) Extex Garment Contractor, 407 East Pico Boulevard, Suite 803, Los Angeles, California 90015, producer of men's women's and children's shorts, skirts and shirts (March 24, 1989); (36) You & Me Naturally, Inc., 916 Kaamahu Street, Honolulu, Hawaii 96817, producer of women's dresses, skirts, blouses and pants (March 24, 1989); (37) Cornish Knitgoods Manufacturing Corporation, 121 Ingraham Street, Brooklyn, New York 11237, producer of women's sweaters and skirts (March 29, 1989); (38) Upholstery West, Inc., 245 West 6600 South, Midvale, Utah 84047, producer of upholstered automotive seats (March 31, 1989); (39) Hamtronics, Inc., 65 Moul Road, Hilton, New York 14468–9535, producer of two way radios (April 4, 1989); (40) Birchwood Manufacturing Company, 38 East Messenger Street, Rice Lake, Wisconsin 54868, producer of laminated wood golf club head blanks and hardwood veeners (April 5, 1989); (41) Glasway, Inc., 665 East Stony Road Lake Mills, Wisconsin 53551, producer of fiberglass pleasure boats (April 5, 1989); (42) M.H. Rhodes, Inc., 99 Thompson Road, Avon, Connecticut 06001, producer of timers and parking meters (April 6, 1989); (43) The Ullman Company, Inc., 250 Kennedy Drive, Hauppauge, New York 11788, producer of plastic dinnerware (April 6, 1989); (44) American Polarizers, Inc., 141 South 7th Street, Reading, Pennsylvania 19602, producer of clip on sunglasses, display screens, aircraft window screens and polarized film and graphics (April 6, 1989); (45) Santa Cruz Industries, 411 Swift Street, Santa Cruz, California 95060, producer of display units (April 6, 1989); (46) P-Craft Jewelry, 12 Dunham Street, Attleboro, Massachusetts 02703, producer of costume jewelry (April 7, 1989); (47) McCormick & Baxter Creosoting Co., 6900 North Edgewater Street, Portland, Oregon 97208, producer of treated poles and railroad ties (April 7, 1989); (48) Elchar Tool Specialist, Inc., 8857 Alexander Road, Batavia, New York 14020, producer of typewriter parts, electronic plugs, IUD's and wedding cake figurines (April 7, 1989); (49) Kay-Townes, Inc., P.O. Box 593, Rome, Georgia 30161, producer of T.V. antennas and amplifiers (April 10, 1989); (50) Carriage House Meat & Provision Company, Inc. 1131 Dayton Road, Ames, Iowa 50010, procesor of meat (April 10, 1989); (51) Monroe Timer Company, Inc.,

264 East Third Street, Mount Vernon,

York, producer of optical lenses and

sweaters and skirts (June 2, 1989); (84)

264 East Third Street, Mount Vernon, New York 10550, producer of automobile alarms, hood locks and parts and steering column collars (April 13, 1989); (52) Aetnacraft Industries, Inc., 69 Second Avenue, Brooklyn, New York 11215, producer of tubelar furniture frames and parts and display bases and parts (April 13, 1989); (53) Durham Manufacturing Co., Inc., P.O. Box 51, Ellaville, Georgia 31806, producer of dining room furniture, end tables, wall units and entertainment centers of wood (April 18, 1989); (54) Big Front Manufacturing, Inc., 360 South Los Angeles, Los Angeles, California 90013, producer of neckties, cummerbunds, handkerchiefs, shirts, vests, coats, skirts and slacks (April 14, 1989); (55) Milog, Inc., 9500 South 500 West #103, Sandy, Utah 84070, producer of computers for motor vehicles (April); (56) Fleet Line, Inc., 10950 S.W. Fifth Street, Unit 145, Beaverton, Oregon 97208, producer of container sealing machinery (May 1, 1989); (57) Personal Design Associates, 3015 South 300 West, Salt Lake City, Utah 84115, producer of picture frames and molding (May 2, 1989); (58) Rome Manufacturing Company, 208 East Second Avenue, P.O. Box 191, Rome, Georgia 30161, producer of men's pants (May 2, 1989); (59) Carleton Woolen Mills, Inc., P.O. Box 317, Winthrop, Maine 04364, producer of wool fabric (May 3, 1989); (60) Classic Elite Yarns, Inc., 12 Perkins Street, Lowell, Massachusetts 01854, producer of yarn (mohair and cotton blends) (May 5, 1989); (61) Victor-Balata Belting Company, 1118 South 25th Street, Easton, Pennsylvania 18042, producer of loop belting, vacuum hoses for swimming pools and air shafts, and machinery for the food industry (May 5, 1989); (62) Halifax Damask Mills, Inc., P.O. Box 1098, South Boston, Virginia 24592, producer of cotton damask tablecloths and napkins and woven cotton cloth (May 5, 1989); (63) Environmental Communications, Inc., 3150 Pullman Street, Costa Mesa, California 92626, producer of hybrid circuits and enclosures (May 8, 1989); (64) Durston Manufacturing Co., 1395 East Palomares Avenue, LaVerne, California 91750, producer of tool holders and racks, hand directed or controlled tools, non-electrical (May 8, 1989); (65) Lite Lab Corporation, 251 Elm Street, Buffalo, New York 14203, producer of lighting fixtures (May 8, 1989); (66) Electrografics International Corp., 1825 Stout Drive, Warminster, Pennsylvania 18974, producer of microlithographic equipment (May 8, 1989); (67) Triconic Laboratories, Inc., 7 Canal Street, Center Moriches, New York, producer of optical lenses and eyeglass frames (May 8, 1989); (68) The Mautner Company, Inc., 496 Nepperhan Avenue, Yonkers, New York 10701, producer of jewelry display cases and jewelry boxes (May 8, 1989); (69) Lewis Metal Stamping and Manufacturing Co., Inc., 333 Midland Avenue, Highland Park, Michigan 48203, producer of stamped metal brackets for automobile bodies and nonbody parts (May 8, 1989); (70) Northern Lights Enterprises, Inc., Andover Road, Wellsville, New York 14895, producer of candles (May 8, 1989); (71) City Tool & Die, Inc., of Lima, P.O. Box 1122, Lima, Ohio 45805, producer of stamped metal brackets for electric motors, air conditioning and refrigeration equipment and hot water heaters, automobile body parts, and other misc. stamped metal parts (May 10, 1989); (72) The Juvenile Shoe Corporation of America, P.O. Box 331, Aurora, Missouri 65605, producer of men's, women's & children's shoes (May 12, 1989); (73) Electro Physics Company, Inc., 3009 Central Avenue, Waukegan, Illinois 60085, producer of telephone monitoring systems and parts (May 12, 1989); (74) Brenner Paper Products Company, Inc., 66–31 Otts Road, Glendale, New York 11385, producer of envelopes (May 17, 1989); (75) Amtab Manufacturing Company, 1747 West Grand Avenue, Chicago, Illinois 60606, producer of folding wooden top tables with metal legs and fixed legs (May 18, 1989); (76) Cornish Knitgoods Manufacturing Corporation, 121 Ingraham Street, Brooklyn, New York 11237, producer of women's knit sweaters and skirts (May 18, 1989); (77) W.H. Autopilots, Inc., 655 NE. Northlake Place, Seattle, Washington, 98105, producer of autopilots (May 22, 1989); (78) Auto Accessories Manufacturing, Inc., P.O. Box 10044, New Liberia, Louisiana 70562, producer of arm and head rests for Volvos (May 24, 1989); (79) Slip-N-Snip, Inc., 1680 North 18th Avenue, Sweet Home, Oregon 97386, producer of scissors (May 24, 1989); (80) Proto Stamping Corporation, 811 Kaynyne Street, Redwood City, California 94063, producer of metal stamping parts for computers (May 30, 1989); (81) JBL International, Inc. (Paget Equipment Company Division), P.O. Box 369, Marshfield, Wisconsin 54449, producer of steel evaporator tanks and augers and conveyor belt platforms (June 1, 1989); (82) Tomco Manufacturing, Inc., 515 South Avenue E., Crowley, Louisiana 70526, producer of women's skirts, pants and shorts (June 2, 1989); (83) Beldoch Industries Corporation, 1411 Broadway, New York, New York 10018, producer of women's sweaters and skirts (June 2, 1989); (84) Rommark Handbags, Inc., C.P.O. Box 1130, Kingston, New York 12401, producer of handbags (June 2, 1989); (85) Jafan Corporation, 4627 East 50th Street, Vernon, California 90058, producer of wood office desks, credenzas, files and bookcases, beds, headboards, dressers, mirrors and nightstands (June 5, 1989); (86) Jacques deLoux, Inc., 220 N. Main Street, Sellersville, Pennsylvania 18960, producer of men's and women's sweaters (June 5, 1989); (87) San Diego Design, Inc., 9366 Abraham Way, Santee, California 92071, producer of cabinets and shelves of wood (June 6, 1989); (88) Brass Products Company, 3661 East Palmer, Detroit, Michigan 48211, producer of plug-type, shut-off values and cocks and threaded pipe fittings (June 6, 1989); (89) Farnsworth Woodworking, Inc., 9403 39th Avenue Court, S.W., Tacoma, Washington, 98499, producer of display cases (June 6, 1989); (90) Shaped Wire, Inc., 3655 East Illinois Avenue, St. Charles, Illinois 60174, producer of steel, aluminum and copper wire (June 7, 1989); (91) Concord, Inc., 2800 7th Avenue North, Fargo, North Dakota 58102, producer of pneumatic seekers and soil samplers (June 7, 1989); (92) Allegretti & Company, 9200 Mason Avenue, Chatsworth, California 91311, producer of trimmers, edgers, blowers, hedges and grinders (June 7, 1989); (93) Barnes/Sightmaster, Ltd., 6 Conduit Street, Lincoln, Rhode Island 02865, producer of dimensional fuses (June 8, 1989); (94) General Pneumatic Products Corporation, 11460 Dorsett Road, Maryland Heights, Missouri, 63043, producer of pneumatic rotary-type wrenches, sanders, grinders, hammers, drills and misc. pneumatic tools, accessories and parts (June 8, 1989); (95) L&S Products, Inc., 340 Jay Street, Coldwater, Michigan 49036, producer of garment display racks for retail stores (June 9, 1989); (96) Advance Lifts, Inc., 3537 Stern Avenue, St. Charles, Illinois 60174, producer of hydraulic scissors lifts (June 12, 1989); (97) Glomac Plastics, Inc., 432 North Franklin Street, Syracuse, New York 13204, producer of thermometer shells, keyboard for CRT's, trash cans and patio furniture of plastic (June 12, 1989); (98) Richards and West, Inc., 1255 University Avenue, Rochester, New York 14607, producer of rings, earrings and pendants (June 12, 1989); (99) T.K. Tool & Die, Inc., 2713 Kendall Road, Holly, New York 14470, producer of brackets, hinges, washers and gauges (June 12, 1989); (100) Auto Accessories, Inc., 3325 West Admiral Doyal Drive, New Iberia, Louisiana 70562, producer of arm rest and head rests (June 12, 1989);

(101) Hobe Cie, Ltd., 138 South Columbus Avenue, Mt. Vernon, New York 10553, producer of jewelry (June 12, 1989); (102) D.A.V. Corporation, 595 Berriman Street, Brooklyn, New York 11208, producer of laboratory counter tops, baking decks and electrical switching panels (June 12, 1989); (103) HBR Partnership, Ltd., 13915 South Main Street, Los Angeles, California 90061, producer of plumbing fixtures (June 13, 1989); (104) S&S Contract Furniture, Inc., Route 1, Box 173, Marquand, Missouri 63655, producer of wood furniture (June 15, 1989); (105) EPC Laboratories, Inc., 5 Electronics Avenue, Danvers, Massachusetts 01923, producer of graphic recorders, parts and consumables (June 19, 1989); (106) McCormick & Baxter Creosoting Company, 6900 North Edgewater Street, Portland, Oregon 97208, producer treated poles, railroad ties, etc. (June 20, 1989); (107) New England Manufacturing Company, Inc., 250 Canal Steet, Lawrence, Massachusetts 01840, producer of men's and women's raincoats and overcoats (June 22, 1989); (108) Enterprise Machine & Development Corporation, 100 Fernwood Avenue, New Castle, Delaware 19720, producer of air-texturing machines and air-jet manifolds (June 23, 1989); (109) Louisville Golf Company, Inc., 2801 Grassland Drive, Louisville, Kentucky 40299, producer of gold club wood turnings, and gold club heads (June 23, 1989); (110) Farr West Fashions, 294 Anna Street, Watsonville, California 95076, producer of women's sleepwear and underwear (June 23, 1989); (111) Burdett Apparel, Inc., 3550 South West Temple, Salt Lake City, Utah 84115, producer of men's, women's and children's cotton knit and woven tops, and men's and boy's swim trunks (June 26, 1989); (112) Visionetics Corporation, 57 Commerce Road, P.O. Box 5189, Brookfield, Connecticut 06804, producer of optical inspection systems (June 28, 1989); (113) Durkee-Atwood Company, 4079 Pepin Avenue, Red Wing, Minnesota 55066, producer of V-belts, automotive rubber belts, cellular and rubber sponges, rubber stripping and rubber radiator hoses (June 29, 1989); (114) Sterling Factories, Inc., 2250 Powell Avenue, Erie, Pennsylvania 16505, producer of aluminum railings and grilles (June 30, 1989); (115) Penaloza and Sons, Inc., 214 West Crockett, San Antonio, Texas 78205, producer of jewelry (July 3, 1989); (116) Electronic Interface Company, Inc., DBA Applied Engineering, 970 Lonus Street, San Jose, California 95126, producer of linear activators (July 6, 1989); (117) Western Leather Upholstering Co., Inc., 1535 Paloma Street, Los Angeles, California 90021, producer of office chairs (July 6, 1989); (118) Eaton Farm Products, Inc., Burbank Road, Sutton, Massachusetts 01527, producer of chocolate candy (July 6, 1989); (119) Oomphies, Inc., 5 Franklin Street, Lawrence, Massachusetts 01840, producer of casual shoes and slippers (July 6, 1989); (120) Polymers, Inc., P.O. Box 151, Middlebury, Vermont 05753, producer of synthetic fibers (July 7, 1989); (121) Vern's Machine Company, Inc., P.O. Box 63, Marion, New York 14505, producer of metal shafts and rollers (July 7, 1989); (122) Cordova, Inc., 42–08 College Point Boulevard, Flushing, New York 11352, producer of gold jewelry (July 7, 1989); (123) Victor-Balata Belting Company, 1118 South 25th Street, Easton, Pennsylvania 18042, producer of machinery belts and belting, industrial vacuuming hoses and food processing machinery (July 7, 1989); (124) Clinch Tite Corporation, P.O. Box 456, Sandy Lake, Pennsylvania 16145, producer of wood pallets (July 10, 1989); (125) CDA Manufacturing, Inc., 1005 Shoecraft Road, Webster, New York 14580, producer of blowers for permanent installation, retaining rings and coordinate machines (July 10, 1989); (126) Ketchum Manufacturing Company, Inc., 1928 E. River Drive, Lake Luzerne, New York 12846, producer of ID tags for livestock and poultry (July 10, 1989); (127) Manchester Manufacturers, Inc., P.O. Box 68, Manchester, Ohio 45144, producer of men's and women's trousers and sports accessories (July 14, 1989); (128) Quantum Data, 2111 Big Timber Road, Elgin, Illinois 60123, producer of color character generators and full graphic generators (July 17, 1989); (129) Griner Engineering, Inc., 2500 North Curry Pike, Bloomington, Indiana 48109, producer of turned parts for diesel automotive engines and gas turbines (July 18, 1989); (130) The Garron Corporation, 1820 East 48th Place, Los Angeles, California 90058, producer of women's skirts, shirts, tops and slacks (July 18, 1989); (131) Eastern Jewelry Manufacturing Company, Inc., 561 Broadway, New York, New York 10012, producer of precious and semi-precious jewelry (July 21, 1989).

The petitions were submitted pursuant to Section 251 of the Trade Act of 1974 (Public Law 93–618), as amended. Consequently, the United States Department of Commerce has initiated separate investigations to determine whether increased imports into the United States of articles like or directly competitive with those produced by each firm contributed importantly to total or partial separation of the firm's workers, or threat thereof, and to a decrease in sales or production of each petitioning firm.

Any party having a substantial interest in the proceedings may request a public hearing on the matter. A request for a hearing must be received by Certification Division, Officer of Trade Adjustment Assistance, Room 4015A, International Trade Administration, U.S. Department of Commerce, Washington, DC 20230, no later than the close of business of the tenth calendar day following the publication of this notice.

The Catalog of Federal Domestic Assistance official program number and title of the program under which these petitions are submitted is 11.309, Trade Adjustment Assistance. Inasfar as this notice involves petitions for the determination of eligibility under the Trade Act of 1974, the requirements of Office of Management and Budget Circular No. A–95 regarding review by clearinghouses do not apply.

Dated: August 24, 1989.

E.T. Baker,

Supervisory Eligibility Examiner, Certification Division, Office of Trade Adjustment Assistance.

University of California, et al.; Consolidated Decision on Applications for Duty-Free Entry of Scientific Instruments

This is a decision consolidated pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Public Law 89–651, 80 Stat. 897; 15 CFR 301). Related records can be viewed between 8:30 a.m. and 5:00 p.m. in Room 2841, U.S. Department of Commerce, 14th and Constitution Avenue NW., Washington, DC.

Docket Number: 89–161. *Applicant:* University of California, San Diego, CA 92121. *Instrument:* Stable Isotope Mass Spectrometer, Model Delta S. *Manufacturer:* Finnigan Corporation, West Germany. *Intended Use:* See notice at 54 FR 28458, July 6, 1989. *Reasons for this Decision:* The foreign instrument provides an automated multielement collector system with an internal precision of 0.006°/oo for CO_2 with a standard inlet.

Docket Number: 89–160. *Applicant:* Harvard University, Department of Earth and Planetary Sciences, Cambridge, MA 02138. *Instrument:* Mass Spectrometer, Model THQ. *Manufacturer:* Finnigan-MAT, West Germany. *Intended Use:* See notice at 54 FR 28458, July 6, 1989. *Reasons for this Decision:* The foreign instrument provides an automated multiple sample magazine (13 single, double or triple filament sample) and is capable of positive and negative ion counting.

Comments: None received. *Decision:* Approved. No instrument of equivalent scientific value to the foreign instrument, for such purposes as each is intended to be used, is being manufactured in the United States. The capability of each of the foreign instruments described above is pertinent to each applicant's intended purposes. We know of no intrument or apparatus being manufactured in the United States which is of equivalent scientific value to either of the foreign instruments.

Frank W. Creel,

Director, Statutory Import Programs Staff.

BILLING CODE 3510-DS-M

University of California, San Diego; Decision on Application for Duty-Free Entry of Scientific Instrument

This decision is made pursuant to Section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Public Law 89-651, 80 Stat. 897; 15 CFR 301). Related records can be viewed between 8:30 a.m. and 5:00 p.m. in Room 2841, U.S. Department of Commerce, 14th and Constitution Avenue NW., Washington, DC.

Docket Number: 88-061. *Applicant:* University of California, San Diego, La Jolla, CA 92093. *Instrument:* Radio Direction Finder, Model R-7DH. *Manufacturer:* Orion Electronics, Ltd., Canada. *Intended Use:* See notice at 53 FR 1811, January 22, 1988.

Comments: None received. *Decision:* Approved. No instrument of equivalent scientific value to the foreign instrument, for such purposes as it is intended to be used, is being manufactured in the United States. *Reasons:* The foreign article provides RDF operation at the upper end of the HF band; selected 6-channel crystal frequency control and high azimuth resolution. National Oceanic and Atmospheric Administration advises in its memorandum dated March 31, 1988 that (1) this capability is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign instrument for the applicant's intended use.

We know of no other instrument or apparatus of equivalent scientific value to the foreign instruments which is being manufactured in the United States.

Frank W. Creel,

Director, Statutory Import Programs Staff.

BILLING CODE 3510-DS-M

National Oceanic and Atmospheric Administration

Preliminary Determination To Approve Two Amendments to the Alaska Coastal Management Program

AGENCY: National Oceanic and Atmospheric Administration, National Ocean Service, Office of Ocean and Coastal Resource Management, Commerce.

ACTION: Notice of preliminary approval of amendments.

LOCATION: Northwest Arctic Borough, Alaska Bering Straits Coastal Resource Service Area, Alaska.

SUMMARY: The Office of Ocean and Coastal Resource Management (OCRM), National Ocean Service, National Oceanic and Atmospheric Administration (NOAA) received a request from the Alaska Coastal Management Program (ACMP) to incorporate the Northwest Arctic Borough Coastal Management Program (NWABCMP) and the Bering Straits Coastal Resource Service Area Coastal Management Program (BSCMP) into the ACMP. The State's request was made pursuant to section 306(g) of the Coastal Zone Management Act of 1972, as amended (CZMA), 16 U.S.C. 1455(g), and the regulations implementing the CZMA at 15 CFR 923.81. The NWABCMP and BSCMP create new coastal boundaries for the ACMP in their respective regions and establish goals and policies for activities taking place in the Northwest Arctic Borough and Bering Straits Coastal Resource Service Area. The NWABCMP and BSCMP follow the guidelines and standards for local program development set out in the ACMP. The NWABCMP will be administered by the Borough and the State. The BSCMP will be administered by the CRSA Board and the State.

The Director, OCRM, has reviewed the amendment requests and has made a preliminary determination that the ACMP will still constitute an approvable program and that the procedural requirements of section 306(c) of the CZMA have been met.

As both amendments were submitted at the same time and are similar in content and effect, a combined Environmental Assessment (EA) was prepared. The Director has determined that approval of the proposed changes does not constitute a major Federal action having a significant effect on the environment. Therefore, approval of the proposed amendments does not require an environmental impact statement pursuant to the National Environmental Policy Act of 1969, as amended. The Director's Preliminary Determination of Approvability, as well as the Finding of No Significant Impact (FONSI), and the EA are available at the address below.

Comments on the EA, FONSI, and the Preliminary Determination to approve the Alaska amendment request should be made within 30 days from the date of this notice. Address comments to: James P. Burgess, Chief, Coastal Programs Division, Office of Ocean and Coastal Resource Management, 1825 Connecticut Avenue NW., Washington, DC 20235 (202) 673-5158.

(Federal Domestic Assistance Catalog 11.419, Coastal Zone Management Program Administration)

Dated: August 24, 1989.

Thomas J. Maginnis,

Assistant Administrator for Ocean Services and Coastal Zone Management.

BILLING CODE 3510-08-M

DEPARTMENT OF DEFENSE

Public Information Collection Requirement Submitted to OMB for Review

The Department of Defense has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Action: Notice.

Title, Applicable Form, and Applicable OMB Control Number: Telecommunications Service Priority System—TSP Service Confirmation—Continuation; SF X031C; and No OMB Control Number.

Type of Request: New.

Average Burden Hours/Minutes Per Response: 90 minutes.

Frequency of Response: On Occasion.

Number of Respondents: 10.

Annual Burden Hours: 600.

Annual Responses: 400.

Needs and Uses: The Telecommunications Service Priority (TSP) System identifies leased telecommunications services vital to the National Security and Emergency Preparedness and provides the legal basis for vendor priority installation and restoration. Collected information is

used to make TSP assignments and maintain data base currency.

Affected Public: State or local governments, Businesses or other for-profit, Federal agencies or employees and Small business or organizations.

Frequency: Continuing.

Respondents Obligation: Required to obtain or retain a benefit.

OMB Desk Officer: Dr. J. Timothy Sprehe.

Written comments and recommendations on the proposed information collection should be sent to Dr. J. Timothy Sprehe at Office of Management and Budget, Desk Officer, Room 3235, New Executive Office Building, Washington, DC 20503.

DOD Clearance Officer: Ms. Pearl Rascoe-Harrison.

Written request for copies of the information collection proposal should be sent to Ms. Rascoe-Harrison, WHS/DIOR, 1215 Jefferson Davis Highway, Suite 1204, Arlington, Virginia 22202-4302.

Dated: August 24, 1989.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 3810-01-M

DEPARTMENT OF ENERGY

Financial Assistance Award Intent To Award Grant to Gas Desulfurization Corp.

AGENCY: U.S. Department of Energy.

ACTION: Notice of Unsolicited Assistance Award.

SUMMARY: The Department of Energy announces that pursuant to 10 CFR 600.14, it is making a financial assistance award based on an unsolicited application under Grant Number DE-FG01-89CE15443 to Gas Desulfurization Corporation to assist in the development of an invention entitled "A Method for the Use of Oxygen in Vacancies in Lanthanide Oxides to Increase Their Utilization for Desulfurization of Hot Fuel Gases." The technology is a process for removing sulfidic sulfur from hot fuel gas.

Scope: This grant will aid in the performance of a series of experiments using doped and undoped cerium oxide in an existing reactor to determine the rate and amount of absorption and desorption of sulfur and the effect of many regeneration cycles on the nature of the cerium oxide sorbent. Current technology consists of zinc ferrite and mixed metal oxide processes, which have regeneration problems and do not reduce sulfide levels in fuel gases to the desired 1–5 ppm. When these levels are exceeded before burning, the resulting stack of gases, which are laden with sulfur dioxide, are expensive to clean up. The National Institute of Standards and Technology (NIST) report cities calculations by the Georgia Institute of Technology that hot gases cleanup saves about 7 percent of the energy content of the fuel gas as compared with low-temperature washing. If this technology has been used when a U-GAS gasifier was used to process 2540 tons of coal per day, the 7 percent would have resulted in 270,000 barrels of crude oil or 65,000 tons of coal being saved annually.

Eligibility: Based on acceptance of an unsolicited application eligibility of this award is being limited to Gas Desulfurization Corporation. Mr. Williams G. Wilson, the inventor, is president of Gas Desulfurization Corporation, and has a B.S. degree in metallurgical engineering and has over 40 years experience with molybdenum and lanthaide metals.

The term of this grant shall be two years from the effective date of award.

FOR FURTHER INFORMATION CONTACT: U.S. Department of Energy, Office of Procurement Operations, ATTN: Rosemarie H. Marshall, MA-453.2, 1000 Independence Avenue SW., Washington, DC 20585.

Thomas S. Keefe,

BILLING CODE 6450-01-M

[Docket No. RP89-213-001]

Federal Energy Regulatory Commission

Black Marlin Pipeline Co.; Notice of Filing

August 23, 1989.

Take Notice that on August 17, 1989, Black Marlin Pipeline Company (Black Marlin), tendered for filing to become a part of Black Marlin's F.E.R.C. Gas Tariff, Original Volume No. 1:

Substitute 2nd Revised Sheet No. 215A

Substitute 2nd Revised Sheet No. 222

Black Marlin is submitting the above mentioned tariff sheets to correct an error in a portion of § 10.2 *Notice of Interruption* that was transferred to the wrong tariff sheet.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC, 20426, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). All such protests should be filed on or before August 30, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Project No. 2329-003 Maine]

Central Maine Power Co.; Availability of Environmental Assessment

August 23, 1989.

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission) regulations, 18 CFR part 380 (Order No. 486, 52 FR 47897), the Office of Hydropower Licensing (OHL) has reviewed the application requesting approval for nonproject use of lands and waters of the Wyman Hydroelectric Project on the Kennebec River. The staff has prepared an environmental assessment (EA) for the proposed action. In the EA, staff concludes that approval of the nonproject use of project lands and waters would not constitute a major federal action significantly affecting the quality of the human environment.

Copies of the EA are available for review in the Public Reference Branch, Room 1000, of the Commission's offices, located at 825 North Capitol Street NE., Washington, DC 20426.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket No. RP89-143-002]

Pacific Offshore Pipeline Co; Compliance Filing

August 23, 1989.

Take notice that on August 18, 1989, Pacific Offshore Pipeline Company (POPCO) filed certain revised tariff sheets to its FERC Gas Tariff, Original Volume 1, to be effective April 1, 1989.

Original Sheet No. 9
Original Sheet No. 10
Original Sheet No. 18
Original Sheet No. 18–A

POPCO states that this filing complies with the Letter Order of July 19, 1989.

POPCO states that a copy of this filing is being served on all parties of record in this proceeding and on all jurisdictional customers and the California Public Utilities Commission.

Any person desiring to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, N.E., Washington, D.C. 20426, in accordance with Rules 214 and 211 of the Commission's Rules of Practice and Procedure [18 CFR 385.214, 385.211 (1988)]. All such protests should be filed on or before Aug. 30, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Persons that are already parties to this proceeding need not file a motion to intervene in this matter. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

[FR Doc. 89–20364 Filed 8–29–89; 8:45 am]

BILLING CODE 6717-01-M

[Docket No. TO89-3-28-001]

Panhandle Eastern Pipe Line Co.; Notice of Proposed Changes in FERC Gas Tariff

August 23, 1989.

Take notice that Panhandle Eastern Pipe Line Company (Panhandle) on August 18, 1989, tendered for filing the following revised tariff sheets to its FERC Gas Tariff, Original Volume No. 1:

First Substitute Seventy-Third Revised Sheet No. 3–A

First Substitute Fiftieth Revised Sheet No. 3–B

The proposed effective date of these revised tariff sheets is September 1, 1989.

Panhandle states that on August 1, 1989 Panhandle filed with the Commission revised tariff sheets reflecting its quarterly PGA filing to be effective September 1, 1989 in the referenced docket. In that filing Panhandle stated that it had not reflected Trunkline Gas Company's (Trunkline) Interim Settlement Rates resulting from a Stipulation and Agreement in Docket No. RP88-180 which was pending Commission approval, but would make an appropriate filing should the Stipulation and Agreement become effective during the current period. On August 1, 1989, as further clarified by Letter Order dated August 10, 1989, the Commission accepted Trunkline's Interim Settlement Rates pursuant to the Stipulation and Agreement in Docket No. RP88-180. Therefore, these revised tariff sheets reflect utilization of Trunkline's revised demand charges pursuant to the aforementioned Stipulation and Agreement.

Panhandle states that copies of its filing have been served on all

BEST COPY AVAILABLE

jurisdictional customers and applicable state regulatory agencies.

Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, DC 20426, in accordance with § 385.214 and 385.211 of the Commission's Rules and Regulations. All such motions or protests should be filed on or before August 30, 1989. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection in the Public Reference Room.

Lois D. Cashell,

Secretary.

Office of Fossil Energy

[FE Docket No. 89-34-NG]

CMEX Energy, Inc.; Order Granting Authorization To Import and Export Natural Gas and Liquefied Natural Gas

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Order Granting Blanket Authorization to Import and Export Natural Gas and Liquefied Natural Gas.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy gives notice that it has issued an order granting CMEX Energy, Inc. (CMEX), blanket authorization to import and/or export natural gas and/or liquefied natural gas (LNG). The order, issued in FE Docket No. 89-34-NG, authorizes CMEX to import and/or export up to a total of 76 Bcf of natural gas and/or LNG over a two-year period beginning on the date of first delivery of imported or exported natural gas or LNG.

A copy of this order is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-9478. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

Indeck-Yerkes Energy Services, Inc., Conditional Order Granting a Long-Term Authorization To Import Natural Gas From Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Conditional Order Granting Authorization to Import Natural Gas.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice that it has issued a conditional order granting a long-term authorization to import natural gas from Canada to Indeck-Yerkes Energy Services, Inc. (Indeck-Yerkes). The conditional order, issued in FE Docket No. 89-21-NG, authorizes Indeck-Yerkes to import 4.5 Bcf per year of Canadian natural gas over a 15-year term to fuel a cogeneration facility to be built in Tonawanda, New York.

Final approval of this import is conditioned on DOE's completion of its responsibilities under the National Environmental Policy Act of 1969 and its reexamination at the time of this conditional order.

A copy of this conditional order is available for inspection and copying in the Natural Gas Division Docket Room, 3F-056, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-9478. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989

BILLING CODE 6450-01-M

[FE Docket No. 89-39-NG]

Northridge Petroleum Marketing, Inc., Application To Import and Export Natural Gas From and to Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Application for Long-term Authorization to Import Natural Gas from and Export Natural Gas to Canada.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice of receipt on June 26, 1989, as amended on August 8, 1989, of an application filed by Northridge Petroleum Marketing, Inc. (Northridge), requesting authorization to import up to 15,000 Mcf per day of natural gas purchased or produced in the Provinces of Alberta, British Columbia or Saskatchewan, Canada, and to export back into Canada equivalent volumes of gas for a term of nine years commencing November 1, 1989, upon delivery and sale of the gas to Union Gas Limited (Union) in the Province of Ontario, Canada. Northridge proposes to use existing facilities only and asserts that none of the volumes intended for Union would be sold in the U.S. under this proposed arrangement.

The application is filed under section 3 of the Natural Gas Act (NGA) and DOE Delegtion Order Nos. 0204-111 and 0204-127. Protests, motions to intervene, notices of intervention and written comments are invited.

DATE: Protests, motions to intervene or notices of intervention, as applicable, requests for additional procedures, and written comments are to be filed no later than September 29, 1989.

FOR FURTHER INFORMATION:

Tom Dukes, Office of Fuels Programs, Fossil Energy, U.S. Department of Energy, Forrestal Building, Room 3F-056, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-9590.

Diane Stubbs, Natural Gas and Mineral Leasing, Office of General Counsel, U.S. Department of Energy, Forrestal Building, Room 6E-042, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-6667.

SUPPLEMENTARY INFORMATION: Northridge is a Canadian corporation engaged in the marketing of crude oil, natural gas, and refined products, and, through a Canadian affiliate, in the production of crude oil and natural gas. Although Northridge sells gas primarily to U.S. distribution companies and end-users, the applicant also is engaged in direct sales, as evidenced here, to markets in eastern Canada.

Under Northridge's proposed long-term import/export arrangement, the gas would be transported in Canada by TransCanada Pipelines Limited (TransCanada) to a point on the international border near Emerson, Manitoba, where TransCanada's facilities interconnect with those of Great Lakes Transmission Company (Great Lakes). Great Lakes would then transport the gas to its interconnection with Michigan Consolidated Gas Company (MichCon) at Belle River Mills, Michigan. MichCon, in turn, would transport the gas to existing U.S.-Canadian border interconnections for export back into Canada and delivery to Union. On August 8, 1989, Northridge amended its application to eliminate as a possible alternate export route an interconnection between MichCon and the proposed St. Clair pipeline. Northridge anticipates MichCon would transport the gas to an existing interconnection of the facilities of Great Lakes and TransCanada at St. Clair, Michigan, but requests authority to use any existing facilities.

According to Northridge, although there would be no sale in the U.S. of gas imported under the authority requested in this proceeding, Northridge may sell volumes not taken by Union to purchasers in the United States on a short-term, interruptible basis under separate authority, including blanket import authority granted Northridge Petroleum Marketing U.S., Inc., Northridge's wholly-owned U.S. subsidiary, in DOE/ERA Opinion and Order No. 212, issued December 23, 1987, in Docket No. 87-57-NG.

In support of its application, Northridge asserts that its proposal would encourage competition and diversity of supply in the North American natural gas market, thereby benefitting the public and conforming to DOE policy goals. The applicant notes that a major reason that the Great Lakes pipeline was built to ensure that Canada has access to its own gas, i.e., from sources in western Canada to markets in eastern Canada.

This application will be reviewed pursuant to section 3 of the Natural Gas Act and the authority contained in DOE Delegation Order Nos. 0204-111 and 0204-127. The decision on whether the proposed arrangement is in the public interest will be based upon matters deemed to be appropriate by FE, including whether the arrangement is consistent with the DOE policy of promoting competition in the natural gas marketplace by allowing commercial parties to freely negotiate their own trade arrangements. In addition, since the long-term arrangement being considered in this proceeding concerns sales of Canadian gas to Canadian customers, DOE's focus relates to the potential domestic impact of transporting the Canadian gas through the U.S. pipeline facilities. Parties that may oppose this application should address the foregoing matters in their comments. All parties should be aware that if the requested import/export is approved, the authorization would be conditioned on the filing of quarterly reports providing by each month the volumes imported and exported.

NEPA Compliance

The DOE has determined that compliance with the National Environmental Policy Act (NEPA), 42 U.S.C. 4321, *et seq.*, can be accomplished by means of a categorical exclusion. On March 27, 1989, the DOE published in the **Federal Register** (54 FR 12472) a notice of amendments to its guidelines for compliance with NEPA. In that notice, the DOE added to its list of categorical exclusions the approval or disapproval of an import/export authorization for natural gas in cases not involving new construction. Application of the categorical exclusion in any particular case raises a rebuttable presumption that the DOE's action is not a major Federal action under NEPA. Unless the DOE receives comments indicating that the presumption does not or should not apply in this case, no further NEPA review will be conducted by the DOE.

Public Comment Procedures

In response to this notice, any person may file a protest, motion to intervene or notice of intervention, as applicable, and written comments. Any person wishing to become a party to the proceeding and to have the written comments considered as the basis for any decision on the application must, however, file a motion to intervene or notice of intervention, as applicable. The filing of a protest with respect to this application will not serve to make the protestant a party to the proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate procedural action to be taken on the application. All protests, motions to intervene, notices of intervention, and written comments must meet the requirements that are specified by the regulations in 10 CFR Part 590. Protests, motions to intervene, notices of intervention, requests for additional procedures, and written comments should be filed with the Office of Fuels Programs, Fossil Energy, Room EF-056, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585. They must be filed no later than 4:30 p.m., e.d.t. September 29, 1989.

A decisional record on the application will be developed through responses to this notice by parties, including the parties used as necessary to achieve a complete understanding of facts and issues. A party seeking intervention may request that additional presentation, a conference, or trial-type hearing. Any request to file additional written comments should explain why they are necessary. Any request for an oral presentation should identify the substantial question of fact, law, or policy at issue, show that it is material and relevant to a decision in the proceeding, and demonstrate why an oral presentation is needed. Any request for a conference should demonstrate why the conference would materially advance the proceeding. Any request for a trial-type hearing must show that there are actual issues genuinely in dispute that are relevant and material to a decision and that a trial-type hearing is necessary for a full and true disclosure of the facts.

If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final opinion and order may be issued based on the official record, including the application and responses filed by parties pursuant to this notice, in accordance with 10 CFR 590.316.

A copy of Northridge's application is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, at the above address. The docket room is open between the hours of 8:00 a.m., and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs Office of Fossil Energy.

BILLING CODE 6450-01-M

[FE Docket No. 89-35-NG]

Potomac Energy Corp.; Order Granting Blanket Authorization To Import Natural Gas From Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of Order Granting Blanket Authorization to Import Natural Gas from Canada.

SUMMARY: The Office of Fossil Energy of the Department of energy gives notice that it has issued an order granting Potomac Energy Corporation (Potomac Energy) blanket authorization to import natural gas. The order issued in FE Docket No. 89-35-NG authorizes Potomac Energy to import up to 75 Bcf of Canadian natural gas over a two-year term beginning on the date of first delivery.

A copy of this order is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, Forrestal Building, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-9478. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs Office of Fossil Energy.

ENVIRONMENTAL PROTECTION AGENCY

[FRL-3637-1]

Battlefield Parkway Site; Notice of Proposed Settlement

AGENCY: Environmental Protection Agency.

ACTION: Notice of proposed settlement.

SUMMARY: Under section 122(h) of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), The Environmental Protection Agency (EPA) has agreed to settle claims for past response costs at the Battlefield Parkway Site, Port Oglethorpe, Georgia with the United States Department of Defense. EPA will consider public comments on the proposed settlement for thirty days. EPA may withdraw from or modify the proposed settlement should such comments disclose facts or consideraitons which indicate the proposed settlement is inappropriate, improper or inadequate. Copies of the proposed settlement are available from: Ms. Carolyn McCall, Investigation Support Assistant, Investigation and Cost Recovery Unit, Site Investigaiton and Support Branch, Waste Management Division, U.S. EPA, Region IV. 345 Courtland Street NE., Atlanta, GA 30365. (404) 347-5059.

Written comments may be submitted to the person above by 30 days from date of publication.

Dated: August 17, 1989.

Patrick M. Tobin,

Director, Waste Management Division, EPA Region IV.

[FR Doc. 89-20440 Filed 8-29-89; 8:45 am]

BILLING CODE 6560-50-M

[OPTS-59273A; FRL-3637-2]

Certain Chemicals; Approval of a Test Marketing Exemption

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces EPA's approval of an application for test marketing exemption (TME) under section 5(h)(1) of the Toxic Substances Control Act (TSCA) and 40 CFR 720.38. EPA has designated this application as TME-89-19. The test marketing conditions are described below.

EFFECTIVE DATE: August 21, 1989.

FOR FURTHER INFORMATION CONTACT: Miriam G. Wiggins-Lewis, New Chemicals Branch, Chemical Control Division (TS-794), Office of Toxic Substances, Environmental Protection Agency, Room E-613, 401 M Street SW., Washington, DC 20460, (202) 382-2440.

SUPPLEMENTARY INFORMATION: Section 5(h)(1) of TSCA authorizes EPA to exempt persons from premanufacture notification (PMN) requirements and permit them to manufacture or import new chemical substances for test marketing purposes if the Agency finds that the manufacture, processing, distribution in commerce, use, and disposal of the substances for test marketing purposes will not present any unreasonable risk of injury to health or the environment. EPA may impose restrictions on test marketing activities and may modify or revoke a test marketing exemption upon receipt of new information which casts significant doubt on its finding that the test marketing activity will not present any unreasonable risk of injury.

EPA hereby approves TME-89-19. EPA has determined that test marketing of the new chemical substance described below, under the conditions set out in the TME application, and for the time period and restrictions specified below, will not present any unreasonable risk of injury to health or the environment. Production volume, use, and the number of customers must not exceed that specified in the application. All other conditions and restrictions described in the application and in this notice must be met.

The following additional restrictions apply to TME-89-19. A bill of lading accompanying each shipment must state that the use of the substance is restricted to that approved in the TME. In addition, the applicant shall maintain the following records until 5 years after the date they are created, and shall make them available for inspection or copying in accordance with section 11 of TSCA:

1. Records of the quantity of the TME substance produced and the date of manufacture.
2. Records of dates of the shipments of each customer and the quantities supplied in each shipment.
3. Copies of the bill of lading that accompanies each shipment of the TME substance.

TME-89-19

Date of Receipt: July 18, 1988.

Notice of Receipt: August 11, 1989 (54 FR 33071).

Applicant: Confidential.

Chemical: (G) Aminosilane.

Use: (G) Film Coating.

Production Volume: Confidential.

Number of Customers: Confidential.

Test Marketing Period: Six months, commencing on first day of manufacture.

Risk Assessment: EPA identified possible concerns for toxicity to aquatic organisms and for lung toxicity to workers; however, due to the low levels of environmental release and worker inhalation exposure, the test market substance will not present an unreasonable risk of injury to the environment or to human health.

The Agency reserves the right to rescind approval or modify the conditions and restrictions of an exemption should any new information that comes to its attention which casts significant doubt on its finding that the test marketing activities will not present any unreasonable risk of injury to health or the environment.

Dated: August 21, 1989.

John W. Melone,

Director, Chemical Control Division, Office of Toxic Substances.

Toxic and Hazardous Substances; Certain Chemicals Premanufacture Notices

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Statutory requirements for section 5(a)(1) premanufacture notices are discussed in the final rule published in the Federal Register of May 13, 1989 (48 FR 21722). This notice announces receipt of 40 such PMNs and provides a summary of each.

BILLING CODE 6560-50-M

[FRL-3636-9]

Proposed Determination To Restrict the Specification of Leonard Pond and Its Wetlands as Disposal Sites

AGENCY: Environmental Protection Agency.

ACTION: Notice.

SUMMARY: The Regional Administrator of EPA's Region I proposes to restrict the filling of Leonard Pond and its surrounding wetlands in Agawam, Massachusetts because he believes it could have an unacceptable adverse effect on wildlife. Section 404(c) of the Clean Water Act authorizes EPA to prohibit or restrict filling of wetlands and other waters of the United States whenever it determines, after notice and opportunity for public hearing, that the discharge of dredged or fill materials into such an area would have an unacceptable adverse effect on municipal water supplies, shellfish beds, fishery areas, wildlife, or recreation areas. EPA seeks comment on several aspects of the Regional Administrator's proposed determination described below.

DATES: Any interested party may comment on this proposal and/or request that a public hearing be held. All comments should be received at the address listed below on or before October 16, 1989. Should EPA decide to hold a public hearing on this issue, it will be announced at least 30 days in advance and the deadline for comments will be extended to 15 days from the date of the hearing.

ADDRESSES: Comments should be sent to Virginia Laszewski, Wetland Protection Section, U.S. Environmental Protection Agency, WPS-1900, JFK Federal Building, Boston, MA 02203-1911. Comments submitted to EPA and the record supporting this proposed determination may be reviewed at the same address; reasonable charges may be made for reproduction.

FOR FURTHER INFORMATION CONTACT: Pamela Shields, at the above address or at (617) 565-4421.

SUPPLEMENTARY INFORMATION:

I. The 404(c) Process and Criteria

The Clean Water Act, 33 U.S.C. § 1251 *et seq.*, prohibits the discharge of pollutants, including dredged and fill material, into the waters of the United States (including wetlands) except in compliance with, among other things, section 404. Section 404 establishes a federal permit program to regulate the discharge of dredged or fill material subject to the requirements of environmental guidelines developed by EPA in conjunction with the Department of the Army.[1] The U.S. Army Corps of Engineers (Corps) may, except as provided in section 404(c), issue permits authorizing dredged and fill material discharges into waters and wetlands if they comply with, among other things, the 404(b)(1) guidelines. Section 404(c) authorizes EPA, after providing notice and opportunity for hearing, to prohibit or restrict the use of a site for disposal of dredged or fill material, where it determines that such use would have an unacceptable adverse effect on municipal water supplies, shellfish beds, fishery areas (including spawning and breeding areas), wildlife, or recreational areas. EPA can exercise 404(c) to "veto" a permit the Corps has decided to issue or, as here, to protect valuable aquatic areas in advance of any specific permit decision.

The regulations implementing 404(c) are published at 40 CFR 231 and define "unacceptable adverse effect" as:

> Impact on an aquatic or wetland ecosystem, which is likely to result in significant degradation of municipal water supplies (including surface or ground water) or significant loss of or damage to fisheries, shellfishing, or wildlife habitat or recreation areas. In evaluating the unacceptability of such impacts, consideration should be given to the relevant portions of the section 404(b)(1) guidelines (40 CFR part 230).

The 404(c) regulations also establish the procedures to be followed by EPA in exerting section 404(c) authority. Whenever the Regional Administrator believes that the filling of a site may have an unacceptable adverse effect on the values listed above, he may begin the process by notifying the Corps of Engineers and landowners that he intends to issue a proposed determination under section 404(c). Unless within 15 days the landowners or the Corps persuade(s) the Regional Administrator that unacceptable adverse impacts will not occur, the Regional Administrator publishes a notice in the Federal Register proposing to prohibit or restrict use of the site for the discharge of dredged or fill material and soliciting public comment on the action. Today's notice represents this step in the process.

---

[1] The pertinent regulations, set forth at 40 CFR part 230 and often referred to as the section 404(b)(1) guidelines, contain several strong provisions which prohibit issuance of a permit for activities which would cause avoidable or significant impacts to wetlands.

Following close of the comment period (and the public hearing if one is held), the Regional Administrator decides either to withdraw the proposed determination or prepare a recommended determination. If he chooses the latter option, he then forwards it and the administrative record compiled in the Region to the Assistant Administrator for Water at EPA's headquarters for a final decision affirming, modifying or rescinding the recommended determination.

II. The Leonard Pond Site

Leonard Pond is located in Agawam, Massachusetts, west of and adjacent to South West Street, south of Johnson Corner, and roughly one mile north of Suffield, Connecticut. Approximately seven acres of palustrine scrub-shrub swamp, primarily to the north and south, and three acres of palustrine emergent marsh surround the six acre pond. A 33 acre tract of predominantly palustrine forested wetland drains into the pond from the north and west. Drainage also enters the pond via a long strip of forested wetland extending to the south for over a half mile. Water leaves the pond through an outlet into Still Brook.

The wetlands support diverse vegetation with over 70 plant species identified at the site. Red maple (*Acer rubrum*) dominates the canopy of the wooded swamps found throughout the area. Highbush blueberry (*Vaccinium corymbosum*), Northern arrowwood (*Viburnum recognitum*), and spicebush (*Lindera benzoin*) populate the understory of the wooded swamps while jewelweed (*Impatiens capensis*), skunk cabbage (*Symplocarpus foetidus*), and cinnamon, royal, and sensitive ferns (*Osmunda cinnamomea, O. regalis,* and *Onoclea sensibilis*) comprise some of the many species found in the herbaceous layer. Broad-leaved cattail (*Typha latifolia*) and members of the Cyperaceae and Juncaceae families dominate the emergent wetlands onsite. Scrub-shrub community dominants include buttonbush (*Cephalanthus occidentalis*), silky dogwood (*Cornus amomum*), steeplebush (*Spirea tomentosa*), and willows (*Salix* spp.).

The soils of the site are mostly poorly or very poorly drained. Shallow mucks, Scantic Variant silt loam, and Saco Variant silt loam constitute the bulk of the hydric soils present, as mapped in the Hampden County, Massachusetts Soil Conservation Service Soil Survey.

The Agawam Historical Society records indicate that while Leonard Pond was created or enhanced to provide water supply/power for a gristmill, the pond existed prior to 1869 and was known even then as a "wildlife and waterfowl stop-over." Present day surrounding land uses include residences on both sides of South West Street, tree farming primarily to the north, a large agricultural field/vegetable field to the west, a gas transmission right-or-way to the south, and undeveloped upland on Provin Mountain to the west. Heavily agricultural for most of the Town's history, much of the land in Agawam has reverted to forest or been developed for residential and commercial purposes.

A substantial body of scientific research has conclusively demonstrated that our nation's wetlands possess a wide range of biological, hydrological, and societal values; indeed, this is why the Clean Water Act's Section 404 program emphasizes their protection. Recent investigation by EPA and U.S. Fish and Wildlife Service staff combined with the work of others clearly shows the importance of the Leonard Pond wetlands to wildlife. Over 100 bird species have been observed in the area including waterfowl such as black, wood, ringnecked, and mallard ducks, green-winged teal, hooded and common mergansers, and great blue and green-backed herons. Raptors observed include red-tailed, red-shouldered, and broadwinged hawks, goshawk, osprey and turkey vultures. A panoply of migratory songbirds have been observed here also, including the northern yellowthroat, Louisiana waterthrush, and parula warbler. A wide range of mammals, reptiles, and amphibians probably use the site also. For example, red fox have been observed in the area. Sign of white-tailed deer, beaver, rabbit, raccoon, and muskrat have all been observed; coyote and spotted turtle (*Clemys guttata*), a "state rare" species listed by the Massachussetts Heritage Program, have been reported in the area.

The interspersion of vegetative cover types creates numerous "edge" habitats favored by wildlife. Surrounding uplands include hardwoods, old field, and agricultural areas which also enhance this edge effect for the adjacent wetlands. The high vegetation density throughout all the cover types of the site, and the presence of vertical sub-communities (e.g., canopy, sub-canopy, shrub, and herbaceous layers present in the red maple swamps) create structural heterogenity of the habitat for wildlife. These characteristics allow the site to support many types and numbers of wildlife. While bisected by an unpaved farm road on an east-west axis immediately north of the pond proper, the area has been minimally disturbed, other than by South West Street to the east. In summary, Leonard Pond and its wetlands represent outstanding wildlife habitat, a resource which continues to shrink in south-central Massachusetts with its long history of settlement and continuing urbanization.

These wetlands do more than provide habitat for wildlife. The area provides flood storage, although the extent of this function is uncertain. In addition, given the extensive herbaceous vegetation combined with irregular and braided stream channels through much of the swamp, these wetlands probably cleanse the water released to Still Brook downstream of the pond. This wetland function may be particularly important at the site in light of the application of fertilizers and pesticides that occurs in the surrounding agricultural and nursery areas. In addition, the pond supports a warm-water fishery likely including bass, pickerel and bluegill. Since the 19th century, townspeople and others have used the area for passive recreation, most notably birdwatching. Furthermore, the wetlands provide open space, an increasingly rare commodity in a landscape which continues to change as the region's population expands.

III. Impacts From Potential Filling Activities

For over a decade the Massachusetts Department of Public Works (DPW) has planned to upgrade and realign Massachusetts Route 57 through the town of Agawam. During the fall of 1985, meetings were held between the DPW, the Corps, the Fish and Wildlife Service and EPA to discuss DPW's proposed road alignment, which bisected the site from east to west. After receiving opinions from EPA, the Fish and Wildlife Service and the Corps that the road location did not comply with the 404(b)(1) guidelines, DPW delayed its section 404 permit application in order to investigate alternatives to reduce or avoid wetland impacts. At this time, EPA understands that DPW continues to evaluate at least one alternative in addition to its original proposal. This

alternative alignment considered by DPW would fill 2.21 acres of forested/scrub shrub wetlands at the northern end of the site. This 404(c) action would prohibit construction of both alignments as currently being considered by DPW.

While the original DPW proposal provided the impetus for this 404(c) action, EPA reasonably expects other development pressures to threaten the area eventually. Agawam has experienced significant growth during the past five years. For example, 102 building permits for new residential units were issued by the Town for 1981 and 1982. For the two year period 1986–1987, the Town issued 514 such permits. The areas surrounding Leonard Pond have not escaped this increased development. Moreover, should DPW proceed to relocate and upgrade Route 57 in the vicinity, it would increase the attractiveness of the site for residential and commercial development (e.g., the intersection with South West Street would be at grade). As noted above, surrounding land uses include residential development, agriculture and silviculture; any of these activities may encroach upon the wetlands in the future. In fact, a subdivision plan is on file with the town planning board for a portion of the contiguous wetlands north of Leonard Pond.

EPA believes that placing fill in this excellent aquatic habitat could have an unacceptable adverse effect on the environment by significantly and irreversibly diminishing the value of the area for wildlife. All wetland values would be destroyed under the footprint of the fill. Indirect impacts—disruption of drainage and flow patterns, reduction of edge habitat, introduction of contaminants—might also be severe. While the direct impacts of a fill generally increase with its size, even small fills can cause significant indirect impacts. In all likelihood, wetland vegetation and slow moving animals would perish under any fill. More mobile species would attempt to relocate in nearby habitats; however, if these habitats are at or near carrying capacity, the displaced animals probably would not survive. While the precise magnitude of the adverse impacts depends on the particular aspects of any given proposal, EPA believes nearly any filling would destroy valuable wetland habitat with a concomitant loss of wildlife value. Adverse impacts of filling woud be particularly intense in an area such as Leonard Pond because it has become an increasingly important refuge for wildlife as development consumes surrounding upland habitats. In addition to wildlife impacts, fill projects would degrade other wetland values as well. Fill in the wetland displaces water storage volume and could create or aggravate downstream flooding. Filling also reduces the wetlands' ability to maintain water quality while at the same time increasing the input of pollutants into the system. Loss of habitat and degradation of water quality could adversely affect the fish that use the pond and wetlands.

IV. Proposed Determination

The preamble to the section 404(c) regulations explains that one of the basic functions of section 404(c) is to police application of the section 404(b)(1) guidelines (see Part I above). In formulating this proposed determination, EPA has considered the purpose and key provisions of the section 404(b)(1) guidelines. Those sections which presume that wetland losses can be avoided for certain types of projects and which prohibit significant impacts to the aquatic environment are especially important in this case.

EPA proposes to restrict the extent of filling activities that may occur on the site. For purposes of this proposal, the site consists of Leonard Pond and its adjacent wetland within the following area: West of South West Street; north of the Teneco gas transmission line; east of Provin Mountain; and south of the dirt road that serves as the entrance to Boglisch and Sons nursery (because this road extends only part way to Provin Mountain, for purposes of this action the boundary will extend directly west from the end of this road to Provin Mountain). In addition, there are two small wetland areas that are located north of this boundary which are to be included as part of the site. The first is a red maple swamp directly north of this dirt road; the second is an emergent wetland area north of the irrigation pond just east of Provin Mountain.

We considered several factors in determining these boundaries. First, and most important, is the ecological value of these wetlands. All the wetlands within the boundary are integrally connected and provide valuable wildlife habitat. We have not included all hydrologically connected wetlands especially to the south and east, because to do so would encompass disturbed areas not as valuable for wildlife. In addition, we believe to expand this action significantly in these directions would make it administratively unwieldy and result in a complex and difficult to follow boundary for the public. We remain concerned about the wetlands not included within the proposed boundary; discharges of dredged and fill material in these areas would still require section 404 authorization and will be closely scrutinized by EPA.

The proposed restriction would, except as noted below, prevent the discharge of dredged or fill material into the Leonard Pond site for nonwater dependent purposes. A nonwater dependent fill project is one which does not require acess or proximity to water or wetlands to fulfill its basic purpose (e.g., housing, roadway, and most types of agriculture).

Water dependent activities (e.g., boat ramps, aquaculture projects) would not be prohibited by this proposal but may still require a section 404 permit from the Corps. Some water dependent activities may result in significant impacts or otherwise not comply with the section 404 requirements and, therefore, would be denied a permit. In addition, we recognize that some nonwater dependent fills may be sufficiently minor so as not to result in unacceptable impacts either individually or cumulatively. Therefore, this 404(c) action would not apply to discharges currently authorized by certain nationwide general permits issued by the Corps of Engineers. Specifically, this proposal would not affect the applicability of relevant nationwide permits 1–25 codified at 33 CFR 330.5(a).[8] These permits authorize, subject to certain restrictions and conditions, specific activities such as fish and wildlife harvesting devices, bank stabilization work, backfill and bedding for utility lines, and dredge and fill discharges which do not exceed 10 cubic yards. We propose, however, to override nationwide permits #21 and #26 at the site since these nationwide permits could, under certain circumstances, allow fills which would cause unacceptable adverse impacts.

EPA proposes this approach after considering the environmental values of the site, its sensitivity to disruption and the obvious harm most fill projects would cause. Moreover, our experience is that alternatives usually exist for nonwater dependent activities since, by definition, they do not have to be located in or near water. EPA believes, therefore, that such filling activities could have unacceptable adverse impacts on the aquatic ecosystem.

EPA believes this proposal would properly utilize the section 404(c) authority to prevent unacceptable

---

[8] Specifically, nationwide permit numbers 3, 6, 7, 12–18, 20, 22, 23, and 25. Other nationwide permits authorize activities under section 10 of the Rivers and Harbors Act and do not appy to this site.

adverse impacts from occurring at the Leonard Pond site. The types of activities proposed for restriction, nonwater dependent fill projects, as a class comprise the most environmentally destructive and the most frequently avoidable types of discharge. The 404(b)(1) guidelines contain a strong presumption against permitting such discharges. Moreover, in light of the outstanding value of the site for wildlife, nonwater dependent projects would likely violate the guidelines by causing or contributing to significant degradation. Therefore, by this proposal we intend to enforce the requirements of the section 404(b)(1) guidelines, a function envisioned by the section 404(c) regulations.

V. Solicitation of Comments

EPA solicits comments on all issues raised by this proposed determination. In particular, we are interested in receiving information pertaining to the environmental values of the Leonard Pond area and any current or proposed threats to these aquatic resources. We also are interested in receiving comments on the boundary of the 404(c) action and the activities affected (and not affected) by the proposal. Specifically, (1) whether placing dredged or fill material into Leonard Pond and its wetlands would have an unacceptable adverse effect on fish and wildlife habitat; (2) existence of any endangered or threatened species at the site; (3) cumulative impacts that may result from filling these wetlands; (4) whether the geographic limit of this action is reasonable and appropriate; (5) what, if any, type of filling activity could occur without individually or cumulatively causing unacceptable adverse impacts, and (6) whether the relocated Route 57, which would fill wetlands at the site, would cause significant loss or damage to wildlife.

Comments should be sent within 45 days from the date of publication of this **Federal Register** notice to the person listed above under **ADDRESSES**. If the Regional Administrator finds a significant degree of public interest in this announcement or that it would be otherwise in the public interest to hold a hearing, a hearing will be held. All comments received, as well as any hearing record will be fully considered by the Regional Administrator in making the decision to prepare a recommended determination to prohibit or restrict filling Leonard Pond and its wetlands or to withdraw this proposed determination.

Paul G. Keough,

Acting Regional Administrator, Region I.

BILLING CODE 6560-50-M

[FRL-3637-4]

Proposed NPDES General Permits for the Oil and Gas Extraction Point Source Category, Onshore Subcategory—States of Louisiana, New Mexico, Oklahoma, and Texas

AGENCY: Environmental Protection Agency.

ACTION: Notice of Four Proposed NPDES General Permits.

SUMMARY: The Regional Administrator of Region 6 (the "Region") is today proposing to issue four National Pollutant Discharge Elimination System (NPDES) general permits for facilities in the Onshore Subcategory of the Oil and Gas Extraction Point Source Category (40 CFR Part 435, Subpart C). These proposed general permits implement the no discharge requirement of the Onshore Subcategory regulations for oil and gas facilities conducting exploration drilling, development drilling, well completion, production and well treatment operations. These proposed permits are being issued as a Best Professional Judgement (BPJ) determination of Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) levels of pollution control. These permits, when issued, will prohibit discharges from oil and gas facilities in the Onshore Subcategory located in the States of Louisiana, New Mexico, Oklahoma, and Texas.

All four permits are proposed in one notice to take advantage of permit language that is common to all four permits.

DATE: Comments must be received by October 16, 1989.

ADDRESS: Comments should be sent to the Regional Administrator Region 6, U.S. Environmental Protection Agency, 1445 Ross Avenue, Dallas, Texas 75202-2733.

FOR FURTHER INFORMATION CONTACT: Ms. Ellen Caldwell, Region 6, U.S. Environmental Protection Agency, 1445 Ross Avenue, Dallas, Texas 75202-2733. Telephone: (214) 655-7190.

SUPPLEMENTARY INFORMATION:

Legal and Regulatory Authority

These general onshore permits have been prepared pursuant to sections 301(b) and 304(b) of the Clean Water Act. Section 301(b)(1) requires attainment of effluent limitations based on the application of "best practicable control technology currently available" (BPT) by July 1, 1977. Section 305(b) provides for the promulgation of regulations defining a technology as "best practicable control technology currently available" and specifies the factors to be considered in defining BPT. This effluent limitation has been promulgated for the oil and gas industry as the Oil and Gas Extraction Point Source Category, final and interim final Rules at 44 FR 22069 (April 13, 1979) and amended at 47 FR 31554 (July 21, 1982). The Federal Regulations governing the Onshore Subcategory are codified at 40 CFR Part 435, Subpart C.

The Environmental Protection Agency has issued a report entitled "Development Document for Interim Final Effluent Limitations Guidelines and Proposed New Source Performance Standards for the Oil and Gas Extraction Point Source Category" (41 FR 44942, October 13, 1976) which was prepared in support of the initial interim final BPT limitations promulgated in the Federal regulations cited above. This document discussed the oil and gas industry, available waste treatment technology and the results of the technical study which resulted in the limitations contained in the regulations (40 CFR Part 435). Additionally, a supplementary report on the possible economic impacts of the regulations was issued at that time.

Since publication of the interim final regulations, interested parties have submitted comments and new data for the consideration by the Agency. The promulgated regulations are based on the analyses of these comments and data. For the most part, the analysis merely clarified the interim final regulations. In applying the BPT limitations of these permits, the Region cannot estabish limitations less stringent than those already defined in the Federal regulations.

Many owners and operators of oil and gas facilities located in the Onshore Subcategory have applied for a NPDES permit; however, no such individual permits have been issued because priorities for NPDES permit issuance did not include these facilities. The permits proposed here will apply to all Onshore Subcategory oil and gas facilities

located in Louisiana, New Mexico, Oklahoma, and Texas whether or not an application has been previously filed with EPA. In effect, these permits implement the effluent guidelines for the Onshore Subcategory at 40 CFR 435.30, and thereby prohibit the discharge of any pollutants from these facilities into waters of the United States.

A permittee may request to be excluded from coverage of these permits by applying for an individual permit within 90 days after publication of these permits in the **Federal Register** (40 CFR 122.28(b)(2)(iii). In this case however the Region cannot foresee any case where the reasons cited by the owner or operator will be adequate to support a discharge since the Onshore Subcategory regulation has required no discharge for over 10 years. Applying for an individual permit does not authorize the discharge, and no discharges will be allowed after the effective date of this permit.

General Applicability

These proposed general permits apply to facilities in the Onshore Subcategory of the Oil and Gas Extraction Point Source Category within the States of Louisiana, New Mexico, Oklahoma, and Texas (as defined at 40 CFR Part 435.40 Subpart C and as amended at 47 FR, 31554 (July 21, 1982).

These permits do not apply to those facilities which are located inland from the inner boundary of the territorial seas in areas classified as Coastal as defined at 40 CFR 435.40 Subpart D and as amended at 47 FR, 31554. Likewise, these permits do not apply to "stripper" wells as defined at 40 CFR 435.60 and which are so classified before the effective date of these permits; nor do they apply to some exploration or producing facilities located west of the 98th meridian as defined at 40 CFR Part 435, Subpart E (Agricultural Wildlife Water Use Subcategory) which discharge potentially beneficial produced waters.

Facility location determines the applicable subcategory in 40 CFR Part 435, and pollutant discharges which are prohibited at the location of the facility may not be discharged at other locations.

Applicability Specified

Geographic Limits: These permits, based on Federal regulations, apply to the Onshore Subcategory as defined at 40 CFR 435.30. The Onshore Subcategory geographically also applies to an area that in part is also covered by the Coastal Subcategory as defined at 40 CFR 435.40, except as amended at 47 FR 31554 (July 21, 1982). The seaward boundaries of both subcategories are defined as the inner margin of the territorial seas and both extend inland with the inner or landward boundary of the Coastal Subcategory including any body of water landward of the territorial seas or any wetlands adjacent to such waters. The Coastal Subcategory is not geographically defined and, as promulgated, it applies to facilities operating in lakes, rivers, and streams. Oil and gas operations in the Coastal Subcategory are, on this basis, excluded from these permits; they will be regulated under separate general permits.

Onshore oil and gas operations located west of the 98th meridian in the states of New Mexico, Oklahoma or Texas and which qualify for coverage under 40 CFR 435.50 (Agricultural and Wildlife Water Use Subcategory) are likewise not included in these general onshore permits because the allowed use of produced waters for purposes defined in the subcategory requires evaluation of applicable water quality standards and criteria. Facilities in the Agricultural and Wildlife Water Use Subcategory will therefore be covered under separate general permits.

Location: Location of the oil and gas facility is determinate and discharges at other locations is prohibited. In taking this position, it is the Agency's intent that the location of the well head shall be the determining factor in defining within which subcategory a permittee is operating. It is also the Agency's intent that geographic location is also to determine the conditions under which discharges may or may not occur. Since discharges are meant to refer to the surface release of pollutants to waters of the United States, disposal by other methods approved by State Agencies, such as subsurface injection, is not prohibited by these permits.

Other Exemptions: "Stripper" wells as defined at 40 CFR 435.60, Subpart F, and which are classified as "stripper" prior to the date of this permit are not included in these general onshore permits. This subcategory, which applies to wells which produce 10 barrels of oil per day or a well with greater than 15,000 cubic feet of gas per barrel of oil per day, applies to single wells or fields wherein, as is the Agency's intention, production limits shall apply to an average expressed on a per well basis. See 44 FR 22073 (April 13, 1979).

Wells which become classified as "stripper" after the effective date of this permit are covered by this permit. Although no specific limitations have otherwise been promulgated for the Stripper Subcategory at this time, the proper classification of this source as a separate subcategory is regarded significant since it does exclude the source from other subcategories, allowing the establishment of more directly applicable limitations under section 402(a)(1) of the Clean Water Act. Effluent limitations regarding the Stripper Subcategory will be considered as separate general permits.

Consideration of Technology

These permits are based on the Agency's promulgated interim final effluent limitations which are based on the application of "best practicable control technology currently available" (BPT) for the Onshore Subcategory of the Oil and Gas Extraction point source Category. See 44 FR 22069 (April 13, 1979); 40 CFR Part 435, Subpart C. The Federal regulations applying to this subcategory incorporate terms based on comments received after publication of the interim final regulations and the Agency's stipulated agreements in litigation. In the absence of other guidelines for the onshore area, the Agency has taken the position that since the Federal regulations prohibit the discharge of pollutants from any source in the subcategory, that on the basis of best professional judgment (BPJ), the best conventional pollutant control technology (BCT) equals best available technology economically achievable (BAT) and that this equals the best practicable control technology (BPT) applied in the Onshore Subcategory. The no discharge limitation on onshore activities associated with the exploration and production of oil and gas is therefore in accord with the Federal regulations at 40 CFR Part 435, Subpart C, wherein the discharge of waste pollutants from any source related to oil and gas exploration and production activities in the Onshore Subcategory is prohibited. In applying the no discharge limitation in this permit, the Agency cannot establish limitations that are less stringent than those limitations defined in the Federal regulations.

Ultimate Disposal of Wastes

These proposed permits prohibit the direct discharge of pollutants to waters of the United States from oil and gas wells in the Onshore Subcategory and their appurtenant facilities, e.g., mud pits, reserve pits, oil/water separators. They do not, however, apply to the ultimate disposal of wastes derived from oil and gas activities. If such disposal involves a discharge a pollutants to waters of the United States, the disposal facility must obtain an individual NPDES permit prior to commencing the discharge. Generally, State permits are also required for such discharges.

Moreover, disposal of wastes from oil and gas operations through methods which do not involve discharges to waters of the United States, e.g., land farming, backfilling, subsurface injection, is also regulated by state agencies. Although other state agencies may also have jurisdiction, EPA suggests that parties desiring approval for such disposal methods contact the Louisiana Department of Environmental Quality (surface disposal), the Louisiana Department of Natural Resources (Subsurface disposal), the New Mexico Conservation Division, the Oklahoma Corporation Commission, or the Railroad Commission of the State of Texas, as appropriate.

Other Legal Requirements

State Certification: Section 301(b)(1)(C) of the Clean Water Act requires that NPDES permits contain conditions which ensure compliance with applicable State water quality standards or limitations. Under section 401(a)(1) of the Act, EPA may not issue a permit until the State grants or waives certification to ensure compliance with appropriate requirements of the Act and State law. The proposed permits, in not allowing discharges into waters of the United States, is in conformity with existing Federal regulations.

The Endangered Species Act: The Endangered Species Act (ESA) and its implementing regulations (50 FR CFR Part 402) requires that each Federal Agency ensure that its actions, such as permit issuance, do not jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of their critical habitats. In view of the fact that these permits will not allow discharges into the waters of the United States and are therefore unlikely to effect changes in the environment, EPA has concluded that their issuance is unlikely to adversely affect any of the listed species or their critical habitats. It is seeking concurrence in this determination from the U.S. Fish and Wildlife Service.

Economic Impact (Executive Order 12291): The Office of Management and Budget has exempted this action from the review requirements of Executive Order 12291 pursuant to section 8(b) of that order. The economic and inflationary effects of the regulations (40 CFR Part 435) upon which this permit is based have been evaluated in accordance with Executive Orders 11821 and 12044.

The Paperwork Reduction Act: EPA has reviewed the requirements imposed on regulated facilities in these general permits under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et. seq. The information collection requirements of these permits have been approved by the Office of Management and Budget in submissions made for the NPDES permit program under provision of the Clean Water Act.

The Regulatory Flexibility Act: EPA does not anticipate that these general permits will have a significant impact on the majority of the parties, including those with greater than and those with less than 500 employees, due to the fact that the no discharge limitations proposed are in effect in the form of existing State and Federal regulations.

After review of the facts presented in the notice printed above, I hereby certify pursuant to the provisions of 5 U.S.C. 605(b) that these general NPDES permits will not have a significant impact on a substantial number of small entities. Moreover, the permits reduce a significant administrative burden of applying for individual permits, on regulated sources.

Date: August 22, 1989.

Robert E. Layton Jr.,

Regional Administrator, Region 6.

General NPDES Permit for the Oil and Gas Extraction Point Source Category, Onshore Subcategory

Permit No. LAG320000—State of Louisiana

Permit No. NMG320000—State of New Mexico

Permit No. OKG320000—State of Oklahoma

Permit No. TXG320000—State of Texas

This permit, issued under the provisions of the Federal Water Pollution Control Act, as amended (33 U.S.C. 1251 et seq; The "Act"), prohibits the discharge of pollutants from any onshore oil and gas wells and facilities as defined in 40 CFR Part 435, Subpart C (Onshore Subcategory) and modified at 47 FR, 31554, July 21, 1982. It does not apply to wells or facilities in the Agricultural and Wildlife Use Subcategory (as defined at 40 CFR 435, Subpart E). Likewise, it does not apply to existing wells which, at the time of permit issuance, fall within the Stripper Subcategory as defined at 40 CFR 435, Subpart F, but later wells in which production falls below 10 barrels per day shall remain subject to this permit. This permit also does not apply to those wells or appurtenant facilities whose well heads are located in any body of water or adjacent wetlands (as defined at 40 CFR 435, Subpart D).

To the extent that applicability of this permit is based on the geographical location of wells or facilities, the location of the wellhead shall be determinative, i.e., pollutant discharges which are prohibited at the location of the well head may not be discharged at other locations.

This permit prohibits the discharge of any pollutant from wells or facilities subject to its terms. Said pollutants include (but are not limited to):

Drilling Fluids
Drill Cuttings
Produced water
Produced sand
Deck and Rig Floor Drainage
Blowout Preventer fluid
Well Treatment Fluids

Further description of said pollutants, as well as monitoring, reporting, and other requirements are set forth in Parts I, II, and III of this permit.

This permit shall become effective when issued, and expire at midnight on (*five years after final permit effective date*).

Myron O. Knudson,

Director, Water Management Division EPA Region 6.

Part I

(Applicable to LAG320000, NMG 320000, OKG320000, TXG320000)

Section A. General Permit Coverage

General Permit Limits

(Applicable to LAG320000)

This permit prohibits discharges into waters of the United States as defined in 40 CFR Part 435. The disposal of waters and waste resulting from oil and gas exploration and producing activities in manners other than by discharges into waters of the United States are limited by the Department of Natural Resources, Office of Conservation of the State of Louisiana according to Amendment to Statewide Order No. 29–B and the water quality standards of the Louisiana Department of Environmental Quality (Louisiana Revised Statute, L.R.S. 30:1091–1096).

(Applicable to NMG320000)

This permit prohibits discharges into waters of the United States as defined in 40 CFR Part 435. The disposal of waters and waste resulting from oil and gas exploration and producing activities in manners other than by discharges into waters of the United States are otherwise limited by the New Mexico Oil Conservation Division (NMOCD) Rules 01 through 1304 and regulations of the State Oil and Gas Act (Sections 70–2–1– through 70–2–36 NMSA, 1978) and as may be amended, and the water quality standards of the New Mexico Health and Environment Department, Environmental Improvement Division,

Sections 1–100 to 3101 and as explained in Water Quality and Water Pollution Control in New Mexico (1988), and as may be amended.

(Applicable to OKG320000)

This permit prohibits discharges into waters of the United States as defined in 40 CFR Part 435. The disposal of waters and waste resulting from oil and gas exploration and producing activities in manners other than by discharges into waters of the United States are otherwise limited by the Oklahoma Corporation Commission according to Rules of Practice 1 through 26 (1988) and the water quality standards of the Oklahoma Water Resources Board, Water Quality Division, Sections 1 through 8 and as appended (1985) and as may be amended.

(Applicable to TXG320000)

This permit prohibits discharges into waters of the United States as defined in 40 CFR Part 435. The disposal of waters and waste resulting from oil and gas exploration and producing activities in manners other than by discharges into waters of the United States are otherwise limited by the Railroad Commission of the State of Texas according to Rules 79 through 85 (1987) and the water quality standards of the Texas Water Commission (12 TexReg 3642, 13 TexReg 1776).

Section B. NPDES Individual versus General Permit Applicability

The Regional Administrator may require any person authorized by this permit to apply for and obtain an individual NPDES permit when:

1. The discharge(s) is a significant contributor of pollution;
2. The discharger is not in compliance with the conditions of this permit;
3. A change has occurred in the availability of the demonstrated technology or practices for the control or abatement of pollutants applicable to point sources;
4. A Water Management Plan containing requirements applicable to such a point source is approved;
5. The point source(s) covered by this permit no longer:

   (a) involves the same or substantially similar types of operations,

   (b) is no longer limited to the same types of wastes,

   (c) requires the same effluent limitations or operating conditions, or

   (d) in the opinion of the Regional Administrator, is more appropriately controlled under an individual permit than under a general permit.

Operators required to apply for an individual permit shall be notified in writing by the Regional Administrator.

A source excluded from coverage under this general permit solely because it already has an individual permit may request that its individual permit be revoked. Upon revocation of the individuel permit, this general permit shall apply to the source.

Part II

(Applicable to LAG320000, NMG320000, OKG320000, TXG320000)

Section A. Effluent limitations and Monitoring Requirements, Onshore Subcategory

(Applicable to LAG320000)

The oil and gas exploration and production activities covered by this permit apply to the onshore area of the State of Louisiana as defined in Part I.

(Applicable to NMG320000)

The oil and gas exploration and production activities covered by this permit apply to the onshore area of the State of New Mexico as defined in Part I.

(Applicable to OKG320000)

The oil and gas exploration and production activities covered by this permit apply to the onshore area of the State of Oklahoma as defined in Part I.

(Applicable to TXG320000)

The oil and gas exploration and production activities covered by this permit apply to the onshore area of the State of Texas as defined in Part I.

1. Drilling Fluids

(a) Applicability

Permit conditions apply to all drilling fluids (muds), whether oil, mineral oil or water based, and include fluids adhering to drill cuttings, used as the result of activities associated with the exploration and the production of oil and gas.

(b) Prohibitions

The discharge of drilling fluids into waters of the United States is prohibited.

(Applicable to LAG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the State of Louisiana, Department of Natural Resources, Office of Conservation (Statewide Order 29–B) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to NMG320000)

Best management practices (BMP) shall be used in accordance with the rules and regulations of the New Mexico Oil Conservation Division (Rules and Regulations) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to OKG320000)

Best management practices (BMP) shall be used in accordance with the rules and regulations of the Oklahoma Corporation Commission, Oil and Gas Conservation Division (General Rules and Regulations, 1988) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to TXG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Railroad Commission of Texas (Statewide rules for Oil, Gas and Geothermal Operations, RRCT, 1987) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

2. Drill Cuttings

Special note: The permit prohibitions and limitations that apply to drilling fluids also apply to cuttings as well as to the fluids that adhere to them. Any permit condition that applies to the drilling fluid system therefore also applies to cuttings.

3. Produced water

(a) Applicability

This permit applies to all formation waters recovered during activities associated with the exploration and production of oil and gas, including those recovered during production tests.

(b) Prohibitions

The discharge of produced water or produced water associated with oil is prohibited.

(Applicable to LAG320000)

Produced water, whether from well drilling, production or workover operations, as well as waste waters from storage tanks, separators, saltwater or brine pits are prohibited from being discharged into waters of the United States. Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Louisiana Department of Natural Resources, Office of Conservation (Statewide Order 29–B) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to NMG320000)

Produced water, whether from well drilling, production or workover operations, as well as waste waters from storage tanks, separators, saltwater or brine pits are prohibited from being discharged into waters of the United States. Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the New mexico Oil Conservation Division (Rules and Regulations) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to OKG320000)

Produced water, whether from well drilling, production or workover operations, as well as waste waters from storage tanks, separators, saltwater or brine pits are prohibited from being discharged into waters of the United States. Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Oklahoma Corporation Commission, Oil and Gas Conservation Division (General Rules and Regulations, 1988) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

(Applicable to TXG320000)

Produced water, whether from well drilling, production or workover operations, as well as waste waters from storage tanks, separators, saltwater or brine pits are prohibited from being discharged into waters of the United States. Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Railroad Commission of Texas (Statewide Rules for Oil, Gas and Geothermal Operations, RRCT, 1987) to ensure that receiving pits will not allow discharge or seepage of drilling fluids into waters of the United States.

4. Produced Sand

Special note: The prohibitions and limitation that apply to drill cuttings, drilling fluids, well completion fluids and fluids that adhere to cuttings also apply to produced sand.

5. Deck or Rig Floor Drainage

(a) Applicability

This permit applies to material or fluid spillage, including drilling muds (oil, mineral oil or water based), wash-down water, grease, waste oil, lubricants, or hydraulic fluids resulting from activities associated with the exploration and production of oil and gas.

(b) Prohibitions

The discharge of rig floor or deck drainage into waters of the United States is prohibited.

(Applicable to LAG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the State of Louisiana, Department of Natural Resources, Office of Conservation (Statewide Order 29–B) to ensure that rig floor or deck drainage will not discharge, seep or otherwise be released into waters of the United States.

(Applicable to NMG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the New Mexico Oil Conservation Division (Rules and Regulations) to ensure that rig floor or deck drainage will not discharge, seep or otherwise be released into waters of the United States.

(Applicable to OKG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Oklahoma Corporation Commission, Oil and Gas Conservation Division (General Rules and Regulations, 1988) to ensure that rig floor or deck drainage will not discharge, seep or otherwise be released into waters of the United States.

(Applicable to TXG320000)

Best management practices (BMP) shall be used in accordance with the treatment and disposal criteria of the Railroad Commission of Texas (Statewide rules for Oil, Gas and Geothermal Operations, RRCT, 1987) to ensure that rig floor or deck drainage will not discharge, seep or otherwise be released into waters of the United States.

6. Blowout Preventer Fluid

(a) Applicability

This permit applies to all oil or hydraulic fluids used in blowout preventer mechanisms used in activities associated with the exploration and production of oil and gas.

(b) Prohibition

The discharge of blowout preventer fluids are prohibited.

7. Well Treatment Fluids, Completion Fluids, Workover Fluids

(a) Applicability

This permit applies to well treatment fluids, including well completion fluids, workover fluids well stimulation fluids or fluids resulting from well tests used in activities related to the exploration and production of oil and gas.

(b) Prohibition

The discharge of well treatment, completion, well testing and workover fluids, as well as discharges from production test, flare, completion or otherwise designated temporary storage pits, into waters of the United States is prohibited.

(Applicable to LAG320000)

Best management practices (BMP) shall be used in the disposal of these wastes shall be in accordance with the treatment and disposal criteria of the State of Louisiana, Department of Natural Resources, Office of Conservation (Statewide Order 29–B) to ensure that there will be no discharges into waters of the United States.

(Applicable to NMG320000)

Best management practices (BMP) shall be used in the disposal of these wastes shall be in accordance with the treatment and disposal criteria of the New Mexico Oil Conservation Division (Rules and Regulations) to ensure that there will be no discharges into waters of the United States.

(Applicable to OKG320000)

Best management practices (BMP) shall be used in the disposal of these wastes shall be in accordance with the treatment and disposal criteria of the Oklahoma Corporation Commission, Oil and Gas Conservation Division (General Rules and Regulations, 1988) to ensure that there will be no discharges into waters of the United States.

(Applicable to TXG320000)

Best management practices (BMP) shall be used in the disposal of these wastes shall be in accordance with the treatment and disposal criteria of the Railroad Commission of Texas (Statewide Rules for Oil, Gas and Geothermal Operations, RRCT, 1987) to ensure that there will be no discharges into waters of the United States.

Part III.

(Applicable to LAG320000, NMG320000, OKG320000, TXG320000)

Section A. General Conditions

1. Introduction. In accordance with the provisions of 40 CFR Part 122.41 et seq., this permit incorporates by reference ALL conditions and requirements applicable to NPDES permits set forth in the Clean Water Act, as amended (hereinafter known as the "Act") as well as ALL applicable CFR regulations.

2. Duty to Comply. The permittee must comply with all conditions of this permit. Any permit non-compliance constitutes a violation of the Clean Water Act and is grounds for enforcement action and/or for requiring a permittee to apply for and obtain an individual NPDES permit.

3. Permit Flexibility. This permit may be modified, revoked and reissued, or terminated for cause, in accordance with 40 CFR 122.62–64. The filing for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition.

4. Property Rights. This permit does not convey any property rights of any sort, or any exclusive privileges nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State or local laws or regulations.

5. Duty to Provide Information. The permittee shall furnish to the Regional Administrator, within a reasonable time, any information which the Regional Administrator may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this permit, or to determine compliance with this permit. The permittee shall also furnish the Regional Administrator, upon request, copies of records required to be kept by this permit.

6. Criminal and Civil Liability. Except as provided in permit conditions on "Bypassing" and "Upsets", nothing in this permit shall be construed to relieve the permittee from civil or criminal penalties for noncompliance. Any false or materially misleading representation or concealment of information required to be reported by the provisions of the permit, the Act or applicable CFR regulations which avoids or effectively defeats the regulatory purpose of the Permit may subject the permittee to criminal enforcement pursuant to 18 Section 1001.

7. Oil and Hazardous Substance Liability. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties to which the permittee may be subject under Section 311 of the Act.

8. State Laws. Nothing in this permit shall be construed to preclude the institution of any legal action or relieve the permittee from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority preserved by Section 510 of the Clean Water Act.

9. Severability. The provisions of this permit are severable, and if any provision of this permit or the application of any provision of this permit to any circumstances is held invalid, the application of such provision to other circumstances, and the remainder of this permit, shall not be affected thereby.

Section B. Proper Operation and Maintenance

1. Need to Halt or Reduce Not a Defense. It shall not be a defense for a permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this permit.

2. Duty to Mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge in violation of this permit which has a reasonable likelihood of adversely affecting human health or the environment.

3. Proper Operation and Maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed and used by the permittee to achieve compliance with the conditions of this permit. This provision requires the operation of backup or auxiliary facilities of similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit.

4. Bypass of Facilities.

(a) Definitions

(1) "Bypass" means the intentional diversion of waste streams from any portion of a facility.

(2) "Severe property damage" means substantial physical damage to property, damage to the treatment facilities that causes them to be inoperable, or substantial and permanent loss of natural resources than can reasonably be expected to occur in the absence of bypass. Severe property damage does not mean economic loss caused by delays in production.

(b) Notice

(1) Anticipated bypass. If the permittee knows in advance of the need for a bypass, it shall submit prior notice, if possible at least ten days before the date of the bypass.

(2) Unanticipated bypass. The permittee shall, within 24 hours, submit notice of an unanticipated bypass as required in Part III.D.2.

(c) Prohibition of Bypass

(1) Bypass is prohibited, and the Regional Administrator may take enforcement action against a permittee for bypass, unless:

(a) Bypass was unavoidable to prevent loss of life, personal injury or severe property damage;

(b) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgement to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(c) The permittee submitted notices as required by Part III.B.4.(b).

(2) The Regional Administrator may approve an anticipated bypass, after considering its adverse effects, if the Regional Administrator determines that it will meet three conditions listed at Part III.B.4.(c)(1).

5. *Upset Conditions.* (a) Definition

"Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed facilities, inadequate facilities, lack of preventive maintenance, or careless or improper operation.

(b) Effects of an Upset. An upset constitutes an affirmative defense of an action brought for noncompliance with such technology-based permit effluent limitations if the requirements of Part III.B.5.b. are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

(c) Conditions necessary for a demonstration of upset. The permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous logs, or other relevant evidence that:

(1) An upset occurred and that the permittee can identify the cause(s) of the upset;

(2) The permitted facility was at the time being properly operated;

(3) The permittee submitted notice of the upset as required by Part III.D.2; and

(4) The permittee complied with Part III.B.2.

(d) Burden of Proof. In any enforcement proceeding the permittee seeking to establish the occurrence of an upset has the burden of proof.

6. *Removed Substances.* Solids, sludges, filler backwash, or other pollutants removed in the course of treatment or control of wastewaters shall be disposed of in a manner such as to prevent any pollution from such materials from entering waters of the United States.

Section C. Monitoring and Records

The permittee shall allow the Regional Administrator, or an authorized representative, upon the presentation of credentials and other documents as may be required by law to:

1. Enter upon the permittee premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this permit;

2. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this permit;

3. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices or operations regulated or required under this permit; and

4. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Act, any substances or parameters at any location.

Section D. Reporting Requirements

1. *Anticipated Noncompliance.* The permittee shall give advance notice to the Regional Administrator of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

2. *Twenty-Four Hour Reporting.* The permittee shall report any noncompliance with this permit, bypass or upset. Any information shall be provided orally within 24 hours from the time the permittee becomes aware of the circumstances. A written submission shall also be provided within 5 days of the time the permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or plans to reduce, eliminate, and prevent reoccurrence of the noncompliance. The Regional Administrator may waive the written report on a case-by-case basis if the oral report has been received within 24 hours.

3. *Other Information.* Where the permittee becomes aware that it failed to submit any relevant facts in any report to the Regional Administrator, it shall promptly submit such facts or information.

4. *Changes in Discharges of Toxic Substances.* The permittee shall notify the Regional Administrator as soon as it knows or has reason to believe:

(a) That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, or any toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the "notification levels" described in 40 CFR 122.42(a)(1).

(b) That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit, if that discharge will exceed the highest of the "notification levels" described in 40 CFR 122.42(a)(2).

5. *Signatory Requirements.* All applications, reports, or information submitted to the Regional Administrator shall be signed and certified as follows:

(a) All permit applications shall be signed as follows:

(1) For a corporation. By a responsible corporate officer. For the purpose of this section, a responsible corporate officer means:

(a) A president, secretary, treasurer, or vice-president of the corporation in charge of a principle business function, or decision making functions for the corporation, or

(b) The manager of one or more manufacturing, production, or operating facilities employing more than 250 persons or having gross annual sales or expenditures exceeding $25 million (in second-quarter 1980 dollars), if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures.

(c) For a partnership or sole proprietorship. By a general partner or the proprietor, respectively.

(d) For a municipality, State, Federal or other public agency. Either a principle executive office or ranking elected official. For purposes of this section, a principle executive officer of a Federal agency includes:

(1) The chief executive officer of the agency, or

(2) A senior executive officer having responsibility for the overall operations of a principle geographic unit of the agency.

(3) Alternatively, all reports required by the permit and other information requested by the Regional Administrator may be signed by a person described above or by a duly authorized representative only if:

(a) The authorization is made in writing by a person described above;

(b) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of plant manager, operator of a well or oil field, superintendent, or position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. A duly authorized representative may thus be either an individual or an individual occupying a named position; and

(3) The written authorization is submitted to the Regional Administrator.

(c) Certification. Any person signing a document under this section shall make the following certification:

> I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for the gathering of the information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

6. *Availability of Reports.* Except for applications, effluent data, and other data specified in 40 CFR 122.7, any information submitted pursuant to this permit may be claimed confidential by the submitter. If no claim is made at the time of submission, information may be made available to the public without further notice.

Section E. Penalties for Violations of Permit Conditions

1. Criminal

(a) *Negligent Violations.* The Act provides that any person who negligently violates permit conditions implementing Section 301, 302, 306, 307, or 308 of the Act is subject to a fine of

not less than $2,500 nor more than $25,000 per day of violation, or by imprisonment for not more than 1 year, or both.

(b) *Knowing Violations.* The Act provides that any person who knowingly violates permit conditions implementing Section 301, 302, 306, or 308 of the Act is subject to a fine of not less than $5,000 per day of violation nor more than $50,000 per day of violation, or by imprisonment for not more than 3 years, or both.

(c) *Knowing Endangerment.* The Act provides that any person who knowingly violates permit conditions implementing Section 301, 302, 306, 307, or 308 of the Act and who knows at the time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than $250,000, or by imprisonment for not more than 15 years, or both.

(d) *False Statements.* The Act provides that any person who knowlingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring devise or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than $10,000 per day, or by imprisonment for not more than 2 years, or by both. If a conviction of a person is for a violation committed after a first conviction of such a person under this paragraph, punishment shall be by a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or by both (See Section 309.c.4. of the Clean Water Act).

2. *Civil Penalties.* The Act provides that any person who violates a permit condition implementing Sections 301, 302, 306, 307 or 308 of the Act is subject to a civil penalty not to exceed $25,000 per day for each violation.

3. *Administrative Penalties.* The Act provides that any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the Act is subject to a civil penalty not to exceed $25,000 per day for each violation.

(a) Class I Penalty

Not to exceed $10,000 per violation nor shall the maximum amount exceed $25,000.

(b) Class II Penalty

Not to exceed $10,000 per day for each day during which the violations continues nor shall the maximum amount exceed $125,000.

Section F. Definitions

All definitions in Section 502 of the Act shall apply to this permit and are incorporated herein by reference. Unless otherwise specified in this permit, additional definitions words or phrases used in this permit are as follows:

1. "Act" means the Clean Water Act (33 U.S.C. 1251 et. seq.) as amended.

2. "Applicable effluent standards and limitations" means all state and Federal effluent standards and limitations to which a discharge is subject under the Act, including, but not limited to, effluent limitations, standards of performance, toxic effluent standards and prohibitions, and pretreatment standards.

3. "Applicable water quality standards" means all water quality standards to which a discharge is subject under the Act and which have been (a) approved or permitted to remain in effect by the Administrator following submission to him/her, pursuant to Section 303(a) of the Act, or (b) promulgated by the Administrator pursuant to section 303(b) or 303(c) of the Act.

4. "Blowout preventer fluid" means a fluid used to actuate the hydraulic blow out preventer at the well site.

5. "Bypass" means the intentional diversion of waste streams from any portion of a treatment facility.

6. "Coastal" means any body of water landward from the inner margin of the territorial seas; the term includes marine waters located landward from the inner margin of the territorial seas as well as inland rivers, streams and lakes and any wetlands adjacent to such bodies of waters.

7. "Deck drainage" means all waste resulting form platform washings, runoff from curbs, gutters, and drains including spillage of drilling muds, waste from drip pans and rig floor wash down and fluids derived from wash areas.

8. "Drill cuttings" means particles generated by drilling into subsurface geologic formations and which are carried to the surface with the drilling fluids.

9. "Drilling fluid" means any fluid sent down-hole, including muds and any specialty products, from the time the well is begun until the final cessation of drilling.

10. "Environmental Protection Agency" means the U.S. Environmental Protection Agency.

11. "Formulation test fluids" means fluids brought up from wells as the result of testing the productivity of potentially economic oil or gas from geologic formations encountered during drilling.

12. "National Pollutant Discharge Elimination System" means the national program for issuing, revoking and reissuing, teminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under sections 307, 318, 402 and 405 of the Act.

13. "Produced sand" means particulate matter, sands, produced along with oil, gas and water during the production of oil and gas.

14. "Regional Administrator" means the Administrator of the U.S. Environmental Protection Agency, Region 6.

15. "Severe property damage" means substantial physical damage to property, damage to treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of bypass. Severe property damage does not mean economic loss caused by delays in production.

16. "Territorial Seas" means the seas falling seaward of a line of ordinary low water along that portion of the coast which is in direct contact with the open ocean and the line marking the seaward limit of the inland waters, extending seaward a distance of 3 miles (CWA Section 502).

17. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

BILLING CODE 6560-50-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

Louisiana; Amendment to Notice of a Major Disaster Declaration

[FEMA-835-DR]

AGENCY: Federal Emergency Management Agency.

ACTION: Notice.

SUMMARY: This notice amends the notice of a major disaster for the State of Louisiana (FEMA-835-DR), dated July 18, 1989, and related determinations.

DATE: August 23, 1989.

FOR FURTHER INFORMATION CONTACT: Neva K. Elliott, Disaster Assistance Programs, Federal Emergency Management Agency, Washington, DC 20472, (202) 646-3614.

NOTICE: The notice of a major disaster for the State of Louisiana, dated July 16, 1989, is hereby amended to add the Public Assistance program and amend the parish designations as follows:

The parishes of Beauregard, Grant, Natchitoches, Vernon, Webster, and Winn for Public Assistance.

Sabine Parish for Individual Assistance and Public Assistance.

Grant C. Peterson,

Associate Director, State and Local Programs and Support, Federal Emergency Management Agency.

(Catalog of Federal Domestic Assistance No. 83.516, Disaster Assistance.)

[FR Doc. 89-20391 Filed 8-29-89; 8:45 am]

BILLING CODE 6718-02-M

FEDERAL MARITIME COMMISSION

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10220. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 224-200057-002

Title: Tampa Port Authority Lease Agreement

Parties: Tampa Port Authority and Garrison Stevedoring, Inc.

Synopsis: The Agreement permits Garrison Stevedoring, Inc. to assign, transfer and convey all its rights, titles and interest in and to its lease agreeement with Tampa Port Authority (Agreement No. 224-200057) to Tampa Bay International Terminals, Inc. Agreement No. 224-200057 authorizes the lease of approximately ten acres of waterfront property in Hillsborough County, Florida for use in connection with stevedoring and terminal operations.

Agreement No.: 224-200280

Title: Port of Seattle Terminal Agreement.

Parties: Port of Seattle and Clipper Navigation, Inc.

Synopsis: The Agreement provides for a 20 year lease of Pier 69, Port of Seattle for a passenger vessel service between Seattle and Victoria, B.C., Canada as well as to points other than Victoria. It also provides for the use of the facility for harbor tours and dinner excursions. Rental charges are based upon a square foot minimum and per passenger fees. The Agreement allows certain adjustments to the base rent and passenger charges.

By Order of the Federal Maritime Commission

Dated: August 25, 1989.

Joseph C. Polking,

Secretary.

[FR Doc. 89-20399 Filed 8-29-89; 8:45 am]

BILLING CODE 6730-01-M

Agreement(s) Filed

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of the Federal Maritime Commission, 1100 L Street, NW., Room 10325. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of Title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 212-011213-009

Title: Spain-Italy/Puerto Rico Island Pool Agreement

Parties: Nordana Line AS Compania Trasatlantica Espanola, S.A. Sea-Land Service, Inc.

Synopsis: The proposed modification would delete Nordana Line AS as a party to the Agreement.

By Order of the Federal Maritime Commission.

Dated: August 24, 1989.

Joseph C. Polking,

Secretary.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

First State Bancorp et al.; Formations of Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied for the Board's approval under section 3 of the Bank Holding Company Act (12 U.S.C. 1842) and § 225.14 of the Board's Regulation Y (12 CFR 225.14) to become a bank holding company or to acquire a bank or bank holding company. The factors that are considered in acting on the applications are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank or to the offices of the Board of Governors. Any comment on the application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Unless otherwise noted, comments regarding each of these applications must be received not later than September 20, 1989.

A. Federal Reserve Bank of New York (William L. Rutledge, Vice President) 33 Liberty Street, New York, New York 10045:

1. *First State Bancorp*, Howell New Jersey; to acquire 9.9 percent of the voting shares of First Washington State Bank, Washington Township, New Jersey, a *de novo* bank.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. *F & M Financial Services Corporation*, Menomonee Falls, Wisconsin; to acquire 100 percent of the voting shares of St. Francis State Bank, St. Francis, Wisconsin.

2. *L.B.T. Bancorporation*, West Des Moines, Iowa; to become a bank holding company by acquiring 100 percent of the voting shares of Liberty Bank & Trust, Lake Mills, Iowa.

Board of Governors of the Federal Reserve System, August 24, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

[FR Doc. 89-20369 Filed 8-29-89; 8:45 am]

BILLING CODE 6210-01-M

Change in Bank Control Notice; Acquisition of Shares of Banks or Bank Holding Companies

The notificant listed below has applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than September 13, 1989.

A. Federal Reserve Bank of Dallas (W. Arthur Tribble, Vice President) 400 South Akard Street, Dallas, Texas 75222:

1. *Klaus Peter Ulrich*, Kingwood, Texas, to acquire 5.15 percent of the common stock; Heinz Klinckwort, Calz Del Las Brujas, Mexico, to acquire 20.05 percent of the common stock; Inge. Ramon E. Beteta De Cou, Guadarajara, Mexico, to acquire 13.36 percent of the common stock; and Luis Mendez Jiminez, Prolongacion, Mexico, to acquire 56.48 percent of the common stock of Sun Belt Bancshares Corporation, Conroe, Texas, and thereby indirectly acquire National Bank of Conroe, Conroe, Texas.

Board of Governors of the Federal Reserve System, August 24, 1989.

Jennifer J. Johnson,

Associated Secretary of the Board.

BILLING CODE 6210-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 89F-0335]

Mitsui Petrochemical Industries, Ltd.; Filing of Food Additive Petition

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that Mitsui Petrochemical Industries, Ltd., has filed a petition proposing that the food additive regulations be amended to provide for changes in certain specifications applicable to 4-methylpentene-1 copolymers for use in articles or components of articles intended for use in contact with food.

FOR FURTHER INFORMATION CONTACT: Andrew D. Laumbach, Center for Food Safety and Applied Nutrition (HFF-335), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-472-5690.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (sec. 409(b)(5) (21 U.S.C. 348(b)(5))), notice is given that a petition (FAP 9B4160) had been filed by Mitsui Petrochemical Industries, Ltd., Kasumigaseki Bldg., P.O. Box 90, 2-5 Kasumigaseki 3-chome, Chiyoda-KU, Tokyo 100, Japan, proposing that § 177.1520 *Olefin polymers* (21 CFR 177.1520) be amended to provide for changes in the specifications applicable to 4-methylpentene-1 copolymers for use as articles or components of articles intended for use in contact with food. Changes in specifications in the table in § 177.1520(c), entry 3.3, would include

(1) Lowering the minimum acceptable melting point from 235 °C to 220 °C as determined by the American Society for Testing Material (ASTM) method 3418-82;

(2) Deleting the specification for maximum extractable fraction in *n*-hexane and maximum soluble fraction in xylene.; and

(3) Establishing a specification for minimum intrinsic viscosity of 1.0, as determined by ASTM method D1601-78.

The potential environmental impact of this section is being reviewed. If the agency finds that an environmental impact statement is not required and this petition results in a regulation, the notice of availability of the agency's finding of no significant impact and the evidence supporting that finding will be published with the regulation in the **Federal Register** in accordance with 21 CFR 25.40(c).

Dated: August 18, 1989.

Fred R. Shank,

Acting Director, Center for Food Safety and Applied Nutrition.

[FR Doc. 89–20354 Filed 8–29–89; 8:45 am]

BILLING CODE 4160-01-M

Advisory Committees; Meetings

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: This notice announces forthcoming meetings of public advisory committees of the Food and Drug Administration (FDA). This notice also summarizes the procedures for the meetings and methods by which interested persons may participate in open public hearings before FDA's advisory committees.

Meetings: The following advisory committee meetings are announced:

Blood Products Advisory Committee

Date, time, and place. September 14 and 15, 1989, 8 a.m., Conference Rms. D and E, Parklawn Bldg., 5600 Fishers Lane, Rockville, MD.

Type of meeting and contact person. Open public hearing, September 14, 1989, 8 a.m. to 9 a.m., unless public participation does not last that long; open committee discussion, 9 a.m. to 3 p.m.; closed committee deliberations, 3 p.m. to 4 p.m.; open committee discussion, 4 p.m. to 4:30 p.m.; open committee discussion, September 15, 1989, 8:30 a.m. to 9:30 a.m.; closed committee deliberations, 9:30 a.m. to 10:30 a.m.; open committee discussions, 10:30 a.m. to 12 m.; Linda A. Smallwood, Center for Biologics Evaluation and Research (HFB–400), Food and Drug Administration, 8800 Rockville Pike, Bethesda, MD 20892, 301–496–4396.

General function of the committee. The committee reviews and evaluates available data on the safety, effectiveness, and appropriate use of blood products intended for use in the diagnosis, prevention, or treatment of human diseases.

Agenda—Open public hearing. Interested persons requesting to present data, information, or views, orally or in writing, on issues pending before the committee should communicate with the contact person.

Open committee discussion. On the morning of September 14, 1989, the committee will discuss donor education materials, maximum allowable limits for red cell loss in apheresis procedures, and anti-thrombin III, and in the afternoon the committee will discuss the report on *Trypanosoma cruzi* infection in blood donors and sit as a medical device panel to recommend premarket approval for one test kit for the detection of antibody to hepatitis B core antigen. On September 15, 1989, the committee will discuss the safety and indications for use of fluosol.

Closed committee deliberations. The committee will discuss trade secret or confidential commercial information relevant to: (a) Premarket approval for a test kit for the detection of antibody to hepatitis B core antigen; and (b) may discuss data pertaining to fluosol. This portion of the meeting will be closed to permit discussion of this information (5 U.S.C. 552b(c)(4)).

Orthopedic and Rehabilitation Devices Panel

Date, time, and place. September 22, 1989, 8 a.m., Ballroom, Gaithersburg Marriott Hotel, 620 Lake Forest Blvd., Gaithersburg, MD.

Type of meeting and contact person. Open public hearing, 8 a.m. to 9 a.m., unless public participation does not last that long; open committee discussion, 9 a.m. to 11:45 a.m.; closed presentation of data, 11:45 to 11:55 a.m.; open committee discussion, 1:30 p.m. to 2:50 p.m.; closed presentation of data, 2:50 p.m. to 3 p.m.; open committee discussion, 3:15 p.m. to 4:35 p.m.; closed presentation of data, 4:35 p.m. to 4:45 p.m.; Marie A. Schroeder, Center for Devices and Radiological Health (HFZ–410), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301–427–1036.

General function of the committee. The committee reviews and evaluates available data on the safety and effectiveness of devices and makes recommendations for their regulation.

Agenda—Open public hearing. Interested persons may present data, information, or reviews, orally or in writing, on issues pending before the committee. Those desiring to make formal presentations should notify the contact person before September 15, 1989, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time required to make their comments.

Open committee discussion. The committee will discuss premarket approval applications for a diagnostic ultrasound device, a bone growth stimulator, an intra-articular prosthetic knee ligament, and an antibiotic bone cement.

Closed presentation of data. The committee may discuss trade secret and/or confidential commercial information regarding materials, design, and/or manufacturing information for the bone growth stimulator, the intra-articular prosthetic knee ligament, and the antibiotic bone cement. This portion of the meeting will be closed to permit discussion of this information (5 U.S.C. 552b(c)(4)).

Circulatory System Devices Panel

Date, time, and place. September 25, 1989, 8:30 a.m., Rm, 503A/529A. Hubert H. Humphrey Bldg., 200 Independence Ave. SW., Washington, DC.

Type of meeting and contact person. Open public hearing, 8:30 a.m. to 9:30 a.m., unless public participation does not last that long; open committee discussion, 9:30 a.m. to 2:30 p.m.; closed committee deliberations, 2:30 a.m. to 4 p.m.; Keith Lusted, Center for Devices and Radiological Health (HFZ)–450), Food and Drug Administration, 1390 Piccard Dr., Rockville, MD 20850, 301–427–1205.

General function of the committee. The committee reviews and evaluates available data on the safety and effectiveness of medical devices currently in use and makes recommendations for their regulation.

Agenda—Open public hearing. Interested persons may present data, information, or views, orally or in writing, on issues pending before the committee. Those desiring to make formal presentations should notify the contact person before September 11, 1989, and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time required to make their comments.

Open committee discussion. The committee will discuss premarket approval applications (PMA's) for percutaneous transluminal coronary angioplasty catheters.

Closed committee deliberations. The committee will discuss trade secret and/or confidential commercial information regarding the PMA's above. This portion of the meeting will be closed to permit discussion of this information (5 U.S.C. 552b(c)(4)).

Each public advisory committee meeting listed above may have as many as four separable portions: (1) An open public hearing, (2) an open committee discussion, (3) a closed presentation of data, and (4) a closed committee deliberation. Every advisory committee meeting shall have an open public hearing portion. Whether or not it also includes any of the other three portions will depend upon the specific meeting involved. The dates and times reserved

for the separate portions of each committee meeting are listed above.

The open public hearing portion of each meeting shall be at least 1 hour long unless public participation does not last that long. It is emphasized, however, that the 1 hour time limit for an open public hearing represents a minimum rather than a maximum time for public participation, and an open public hearing may last for whatever longer period the committee chairperson determines will facilitate the committee's work.

Public hearings are subject to FDA's guideline (subpart C of 21 CFR part 10) concerning the policy and procedures for electronic media coverage of FDA's public administrative proceedings, including hearings before public advisory committees under 21 CFR Part 14. Under 21 CFR 10.205, representatives of the electronic media may be permitted, subject to certain limitations, to videotape, film, or otherwise record FDA's public administrative proceedings, including presentations by participants.

Meetings of advisory committees shall be conducted, insofar as is practical, in accordance with the agenda published in this **Federal Register** notice. Changes in the agenda will be announced at the beginning of the open portion of a meeting.

Any interested person who wishes to be assured of the right to make an oral presentation at the open public hearing portion of a meeting shall inform the contact person listed above, either orally or in writing, prior to the meeting. Any person attending the hearing who does not in advance of the meeting request an opportunity to speak will be allowed to make an oral presentation at the hearing's conclusion, if time permits, at the chairperson's discretion.

Persons interested in specific agenda items to be discussed in open session may ascertain from the contact person the approximate time of discussion.

Details on the agenda, questions to be addressed by the committee, and a current list of committee members are available from the contact person before and after the meeting. Transcripts of the open portion of the meeting will be available from the Freedom of Information Office (HFI–35), Food and Drug Administration, Rm. 12A–16, 5600 Fishers Lane, Rockville, MD 20857, approximately 15 working days after the meeting, at a cost of 10 cents per page. The transcript may be viewed at the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857, approximately 15 working days after the meeting, between the hours of 9 a.m. and 4 p.m., Monday through Friday. Summary minutes of the open portion of the meeting will be available from the Freedom of Information Office (address above) beginning approximately 90 days after the meeting.

The Commissioner, with the concurrence of the Chief Counsel, has determined for the reasons stated that those portions of the advisory committee meetings so designated in this notice shall be closed. The Federal Advisory Committee Act (FACA), as amended by the Government in the Sunshine Act (Pub. L. 94–409), permits such closed advisory committee meetings in certain circumstances. Those portions of a meeting designated as closed, however, shall be closed for the shortest possible time, consistent with the intent of the cited statutes.

The FACA, as amended, provides that a portion of a meeting may be closed where the matter for discussion involves a trade secret; commercial or financial information that is privileged or confidential; information of a personal nature, disclosure of which would be a clearly unwarranted invasion of personal privacy; investigatory files compiled for law enforcement purposes; information the premature disclosure of which would be likely to significantly frustrate implementation of a proposed agency action; and information in certain other instances not generally relevant to FDA matters.

Examples of portions of FDA advisory committee meetings that ordinarily may be closed, where necessary and in accordance with FACA criteria include the review, discussion, and evaluation of drafts of regulations or guidelines or similar preexisting internal agency documents, but only if their premature disclosure is likely to significantly frustrate implementation of proposed agency action; review of trade secrets and confidential commercial or financial information submitted to the agency; consideration of matters involving investigatory files compiled for law enforcement purposes; and review of matters, such as personnel records or individual patient records, where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Examples of portions of FDA advisory committee meetings that ordinarily shall not be closed include the review, discussion, and evaluation of general preclinical and clinical test protocols and procedures for a class of drugs or devices; consideration of labeling requirements for a class of marketed drugs or devices; review of data and information on specific investigational or marketed drugs and devices that have previously been made public; presentation of any other data or information that is not exempt from public disclosure pursuant to the FACA, as amended; and, notably deliberative sessions to formulate advice and recommendations to the agency on matters that do not independently justify closing.

This notice is issued under section 10(a) (1) and (2) of the Federal Advisory Committee Act (Pub. L. 92–463, 86 Stat. 770–776 (5 U.S.C. App. I)), and FDA's regulations (21 CFR Part 14) on advisory committees.

Dated: August 26, 1989.

Frank E. Young,

Commissioner of Food and Drugs.

[FR Doc. 89–20562 Filed 8–29–89; 3:46 pm]

BILLING CODE 4160-01-M

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[WY-920-00-4120-10]

Powder River Regional Coal Team Activities: Public Meeting Announcement

ACTION: Public notice.

SUMMARY: The Powder River Regional Coal Team (RCT) will hold a public meeting on October 31, 1989, to (1) assess the need to resume Federal coal leasing in the Powder River Region; (2) develop a recommendation whether or not to totally or partially decertify the Powder River Coal Region and thereby allow for coal leasing on application in any regional areas that are decertified; and (3) review Federal coal management issues of regional concern. The full agenda and other details for this RCT meeting are set out below.

DATE: The RCT will meet at 8:30 a.m. on October 31, 1989.

ADDRESS: The RCT meeting will be held at the Holiday Inn of Sheridan, 1809 Sugarland Drive, Sheridan, Wyoming, 82801; telephone (307) 672–8931.

FOR FURTHER INFORMATION CONTACT: Don Brabson, Wyoming State Office, Bureau of Land Management, P.O. Box 1828, Cheyenne, Wyoming, 82001; telephone (307) 772–2571 or (FTS) 328–2571.

SUPPLEMENTARY INFORMATION: One primary purpose of this meeting will be to develop a recommendation for the Secretary of the Interior on whether or not to partially or totally decertify the Powder River Coal Region. By **Federal Register** notice published February 9, 1989, the ramifications of regional

BEST COPY AVAILABLE

decertification were explained and public comments were requested on partial decertification of the region by removing Musselshell, Yellowstone, and Golden Valley Counties, Montana from the region, or decertification of the entire region. Since then, the RCT has identified another partial decertification option which is the removal of all Montana counties from the region. In summary, any portion (i.e., a 3 county portion, all of the Montana portion, or the entirety) of the region which is decertified would become subject to coal leasing-by-application pursuant to 43 CFR 3425. Any coal leasing-by-application would be subject to RCT review, oversight, and guidance. Generally, coal lease applications can be processed to lease sale in approximately 1 year, whereas regional coal lease activity planning, which is now the current leasing mechanism for the region, necessitates approximately 3 years to result in a coal lease sale.

As of the publication of this notice, the RCT has received public comments on total decertification; decertification of Musselshell, Yellowstone, and Golden Valley Counties, Montana; and no decertification. Since decertification of all Montana Counties has been identified as a fourth decertification option, the RCT would like comments on this option as well. Accordingly, those commenters to the previous notice may wish to revise their comments to address total Montana decertification. Comments from additional parties are welcome on any of the four decertification options. By October 12, 1989, comments are to be received by the State Director (925), Wyoming State Office, Bureau of Land Management, 2515 Warren Avenue, P.O. Box 1828, Cheyenne, WY 82001.

Public comments on the decertification will be reviewed by the RCT during the meeting of October 31, 1989. The public may acquire copies of those written comments received to date from Don Brabson at the above address and telephone number.

The RCT will also review the need for regional leasing. Provided that the RCT does not recommend total regional decertification and thereby make the regional leasing issue moot, the RCT will develop a recommendation to either continue to defer or resume regional coal lease activity planning. The primary basis for this recommendation will be current market conditions and limited recent leasing interest, as well as public inputs. Any party interested in providing input about the need for regional leasing may do so by writing to the State Director (925), Wyoming State Office, Bureau of Land Management, 2515 Warren Avenue, P.O. Box 1828, Cheyenne, WY 82001, by October 12, 1989, or by addressing the RCT with his or her concerns about the meeting on October 31, 1989.

Another key RCT action which will occur during this meeting will be the RCT's guidance of the preparation of the Powder River Coal Region Round I Supplemental Final Environmental Impact Statement (EIS). This supplemental final EIS will be prepared based on public comments to the supplemental draft EIS, which was released for public review on July 18, 1989. The comment period on this supplement draft EIS closes on September 29, 1989. The RCT will review those public comments during this meeting in order to develop its guidance for the supplemental final EIS preparation. This supplemental final EIS will address the social, economic, and cultural impacts to the Northern Cheyenne and Crow Indian Reservations. It will serve as a means for the RCT to recommend for Secretarial consideration whether or not the Round I leases in Montana should have been sold in 1982, and if so, what mitigation measures of Indian Reservation impacts should be added to those leases. This supplemental final EIS and the RCT/Departmental review of Montana lease issuance and attendant Reservation mitigation is warranted in response to the May 18, 1985, decision of the U.S. District Court for the District of Montana and the *Northern Cheyenne Tribe vs. Hodel* litigation.

The meeting will also serve as a forum for public discussion on Federal coal management issues of regional concern. If appropriate, the RCT may develop additional regional coal management recommendations for Secretarial consideration.

Public input opportunities will be provided on all agenda items. The agenda for this meeting is as follows:

1. Introductions
2. Approval of Minutes of December 15, 1988, RCT Meeting
3. Regional Coal Activity Status
   a. Current production
   b. Preference Right Lease Applications
   c. Exchanges
   d. Other activity
4. Round I Montana Leases
   a. Status of development
   b. Draft Supplemental EIS comment review
   c. RCT guidance to Final Supplemental EIS preparation
5. Decertification Comments
   a. Review of written comments
   b. Hearing additional comments
6. RCT Decertification Recommendation
   a. No decertification
   b. Decertification of Musselshell, Yellowstone, and Golden Valley Counties, Montana
   c. Decertification of all of Montana
   d. Decertification of the entire region
7. Review of Market Conditions
8. Review of Historic Leasing Interests
9. Public Comments on Need for Regional Leasing
10. RCT Activity Planning Recommendation
   a. Resumption or deferral of activity planning
   b. Establish leasing schedule, if necessary
11. Other Regional Issues
12. Adjourn

David J. Walter,
Acting State Director.

BILLING CODE 4310-22-M

[CO-030-09-4410-13-1784]

Montrose District Advisory Council Meeting

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of meeting.

SUMMARY: Notice is hereby given in accordance with 43 CFR Subpart 1784, that a meeting of the Montrose District Advisory Council will be held September 12 and 13, 1989 in Montrose, Colorado.

DATES: The meeting is scheduled for September 12 and 13, 1989.

ADDRESS: For further information contact Kate Kitchell, Bureau of Land Management (BLM), Montrose District Office, 2465 S. Townsend Avenue, Montrose, CO 81401; Telephone (303) 249-7791.

SUPPLEMENTARY INFORMATION: The Council will convene at the Montrose District Office at 9:00 a.m. September 12. Agenda items will include the following:

(1) Report of 1989 activities,

(2) Summary of upcoming programs,

(3) Updates on The Uncompahgre Basin and Gunnison Resource Management Plans,

(4) Reports on National Park Service studies of a new Anasazi National Monument and expansion of Black Canyon of the Gunnison National Monument.

On September 13, the Council will tour BLM lands being studies for inclusion in the expansion of the Black Canyon of the Gunnison National Monument. The tour will begin at 9:00 a.m. at the Montrose District Office.

District Advisory Council meetings are open to the public.

Dated: August 23, 1989.

Jerry Jones,
Acting District Manager.

Colorado; Filing of Plats of Survey

August 21, 1989.

The plats of survey of the following described land, will be officially filed in the Colorado State Office, Bureau of Land Management, Lakewood, Colorado, effective 10:00 a.m., August 21, 1989.

The plat representing the dependent resurvey of the south boundary, T. 34 N., R. 6 W., New Mexico Principal Meridian, Colorado, Group No. 861, was accepted August 1, 1989.

This survey was executed to meet certain administrative needs of the Bureau of Indian Affairs and the Forest Service.

The plat representing the dependent resurvey of a portion of the subdivisional lines and the subdivision of certain sections, T. 3 N., R. 84 W., Sixth Principal Meridian, Colorado, Group No. 895, was accepted August 1, 1989.

This survey was executed to meet certain administrative needs of the Forest Service.

The protraction diagram of the following described land, will be officially filed in the Colorado State Office, Bureau of Land Management, Lakewood, Colorado, effective 10:00 a.m., October 9, 1989.

Protraction Diagram No. 48, prepared to delineate the remaining unsurveyed public lands in T. 37 N., R. 2 E., New Mexico Principal Meridian, Colorado, was approved July 25, 1989.

This diagram was prepared to meet certain administrative needs of this Bureau.

All inquiries about this land should be sent to the Colorado State Office, Bureau of Land Management, 2850 Youngfield Street, Lakewood, Colorado 80215.

Darryl A. Wilson,
Acting Chief, Cadastral Surveyor for Colorado.

BILLING CODE 4310-JB-M

Fish and Wildlife Service

Receipt of Applications for Permits

The following applicants have applied for permits to conduct certain activities with endangered species. This notice is provided pursuant to Section 10(c) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531, *et seq.*):

Applicant: The Peregrine Fund, Inc., PRT-740611, Boise, ID

The applicant requests a permit to export nine captive hatched Mauritius kestrels (*Falco punctatus*) to the Mauritius Wildlife Appeal Fund, Port Louis, Mauritius, for release to the wild.

Applicant: Cincinnati Zoo, PRT-740910, Cincinnati, OH

The applicant requests a permit to sell in foreign commerce one captive-bred female snow leopard (*Panthera uncia*) from the Howletts and Port Lympne Zoo, England to Thrigby Hall Wildlife Gardens, England for the purpose of propagation and education.

Applicant: International Crane Foundation, PRT-740924, Baraboo, WI

The applicant requests a permit to import one captive-hatched male Manchurian crane (*Grus japonensis*) from the North of England Zoological Society, Caughall Road, Upton-by-Chester, United Kingdom, for captive propagation purposes.

Applicant: Paul Johnson, PRT-741076, Holmes Beach, FL

The applicant requests a permit to purchase captive-hatched female scarlet-chested parakeets (*Neophema splendida*) from Mr. Finest Van, Finest Bird Farm, Tulane, California, for the purpose of captive propagation.

Applicant: Louis R. Raimo, PRT-741079, E. Hanover, NJ

The applicant requests a permit to import the sport-hunted trophy of one male bontebok (*Damaliscus dorcas dorcas*) to be culled from the captive herd maintained by Mr. Faan Hartzer, Fairland, Republic of South Africa, for the purpose of enhancement of survival of the species.

Applicant: Dr. Thomas Frank Harbin, Jr., PRT-741068, Manchester, TN

The applicant requests a permit to purchase captive-hatched Indian pythons (*Python molurus molurus*) from Herpetofauna, Inc., Ft. Myers, Florida, for captive breeding purposes.

Documents and other information submitted with these applications are available to the public during normal business hours (7:45 am to 4:15 pm) Room 432, 4401 N. Fairfax Dr., Arlington, VA 22203, or by writing to the Director, U.S. Office of Management Authority, P.O. Box 3507, Arlington, Virginia 22203-3507.

Interested persons may comment on any of these applications within 30 days of the date of this publication by submitting written views, arguments, or data to the Director at the above address. Please refer to the appropriate PRT number when submitting comments.

Date: August 24, 1989.

R. K. Robinson,
Chief, Branch of Permits, U.S. Office of Management Authority.

BILLING CODE 4310-MR-M

National Park Service

Concession Contract Negotiation; Bushkill Gulf Service Station

AGENCY: National Park Service, Interior.

ACTION: Public notice.

SUMMARY: Public notice is hereby given that the National Park Service proposes to negotiate a concession contract with Raymond A. Steele and Jean Q. Steele authorizing them to provide automobile service station facilities and services for the public at Bushkill Gulf Service Station, Delaware Water Gap National Recreation Area, Pennsylvania for a period of ten (10) years from January 1, 1990, through December 31, 1999.

EFFECTIVE DATE: September 29, 1989.

ADDRESS: Interested parties should contact the Chief, Concessions Management, Mid-Atlantic Region, 143 South Third Street, Philadelphia, Pennsylvania 19106, for information as to the requirements of the proposed contract.

SUPPLEMENTARY INFORMATION: This contract renewal has been determined to be categorically excluded from the procedural provisions of the National Environmental Policy Act and no environmental document will be prepared.

The foregoing concessioner has performed its obligations to the satisfaction of the Secretary under an existing permit which expires by limitation of time on December 31, 1989, and therefore pursuant to the provisions of Section 5 of the Act of October 9, 1965 (79 Stat. 969; 16 U.S.C. 20), is entitled to be given preference in the renewal of the permit and in the negotiation of a new contract as defined in 36 CFR 51.5.

The Secretary will consider all proposals received as a result of this notice. Any proposal, including that of the existing concessioner, must be postmarked or hand delivered on or before the sixtieth (60th) day following publication of this notice to be considered and evaluated.

Dated: August 22, 1989.

James W. Coleman, Jr.,

Regional Director, Mid-Atlantic Region.

BILLING CODE 4310-70-M

Office of Surface Mining Reclamation and Enforcement

Determination of Valid Existing Rights Within the Wayne National Forest

AGENCY: Office of Surface Mining Reclamation and Enforcement (OSM), Interior.

ACTION: Notice of reopening of record and invitation for interested parties to participate.

SUMMARY: OSM has decided to initiate reconsideration of OSM's December 23, 1988, determination that Belville Mining Company (Belville) has valid existing rights (VER) to surface mine coal on five tracts within the Wayne National Forest in Ohio. By this notice, OSM is inviting interested parties to participate in the proceeding and to submit relevant material on the matter. OSM intends to develop a complete administrative record, and will then render a final agency decision on whether Belville has VER.

DATES: OSM will accept written materials on all issues except those pertaining to the "McMullen tract" (as explained below) until 5:00 p.m. eastern time on September 29, 1989.

OSM will accept written materials on issues pertaining to the "McMullen tract" until 5:00 p.m. eastern time on September 14, 1989.

ADDRESSES: Hand deliver written materials to the Office of Surface Mining Reclamation and Enforcement, Administrative Record, Room 5131L, 1100 L Street, NW., Washington, DC or mail written materials to the Office of Surface Mining Reclamation and Enforcement, Administrative Record, Room 5131L, U.S. Department of the Interior, 1951 Constitution Avenue, NW., Washington, DC 20240. Documents contained in the Administrative Record at the address identified are available for public review.

FOR FURTHER INFORMATION CONTACT: Dr. Annetta Cheek, Office of Surface Mining Reclamation and Enforcement, U.S. Department of the Interior, 1951 Constitution Avenue, NW., Washington, DC 20240, or telephone Dr. Cheek at (202) 343-5241 (Commercial or FTS).

SUPPLEMENTARY INFORMATION: By letter dated December 23, 1988, the Office of Surface Mining Reclamation and Enforcement (OSM) notified Belville Mining Company (Belville) that, pursuant to Section 522(e) of the Surface Mining Control and Reclamation Act of 1977 (SMCRA), Belville had valid existing rights (VER) to conduct surface mining activities on five properties involving 5,440 acres of Federal land within the Wayne National Forest in Ohio. This decision reversed a December 3, 1986, determination by OSM that Belville's earlier submissions were insufficient to establish VER for the five properties in question. By letter dated August 15, 1988, Belville had asked OSM to reconsider its prior determination.

During the course of a review of recent OSM actions concerning VER, OSM has concluded that the administrative record of the past Belville VER determination was inadequate to determine whether the decision was correctly made. Accordingly, OSM has decided to reopen the matter and to suspend OSM's Belville VER determination of December 23, 1988. A letter has been sent to Belville specifying the reasons for OMS's reconsideration. W. Hord Tipton, OSM's Acting Deputy Director for Operations and Technical Services, has been directed to supervise the development of a sufficient administrative record capable of supporting a final determination as to whether Belville has VER.

Reconsideration will cover all five tracts, with expedited treatment to be given to the "McMullen tract," the 78-acre parcel for which permit application No. D0733-1 is currently pending with the Ohio state regulatory authority and for which the mineral reservation will expire in March 1990.

The effect of the decision to reopen the record is to stay the December 23, 1988, determination during the period of further consideration. Such a stay, which is effective immediately, is necessary to preserve the status quo by precluding surface disturbance in the Wayne National Forest, pending full agency consideration of the VER question. Reopening of this issue is not intended to reinstate OMS's December 3, 1986, decision which initially denied Belville's request for VER.

OSM will make a final decision on Belville's VER request as soon as is practicable following completion of the administrative record.

Dated: August 24, 1989.

Harry M. Snyder,

Director, OSM.

DEPARTMENT OF LABOR

Office of the Secretary

Advisory Council on Employee Welfare and Pension Benefit Plans; Extension of Announcement of Vacancies to September 30, 1989; Request for Nominations

Section 512 of the Employee Retirement Income Security Act of 1974 (ERISA), 88 Stat. 895, 29 U.S.C. 1142, provides for the establishment of an "Advisory Council on Employee Welfare and Pension Benefit Plans" (the Council) which is to consist of 15 members to be appointed by the Secretary of Labor (the Secretary) as follows: Three representatives of employee organizations (at least one of whom shall be representative of an organization whose members are participants in a multiemployer plan); three representatives of employers (at least one of whom shall be representative of employers maintaining or contributing to multiemployer plans); one representative each from the fields of insurance, corporate trust, actuarial counseling, investment counseling, investment management, and accounting; and three representatives from the general public (one of whom shall be a person representing those receiving benefits from a pension plan). Not more than eight members of the Council shall be members of the same political party.

Members shall be persons qualified to appraise the programs instituted under ERISA. Appointments are for terms of three years.

The prescribed duties of the Council are to advise the Secretary with respect to the carrying out of his/her functions under ERISA, and to submit to the Secretary recommendations with respect thereto. The Council will meet at least four times each year, and recommendations of the Council to the Secretary will be included in the Secretary's annual report to the Congress on ERISA.

The terms of five members of the Council expire on Tuesday, November 14, 1989. The groups or fields represented are as follows: Accounting field, employee organizations, employers, insurance field, and the general public (pensioners).

Accordingly, notice is hereby given that any person or organization desiring to recommend one or more individuals for appointment to the ERISA Advisory Council on Employee Welfare and Pension Benefits Plans to represent any of the groups or fields specified in the preceding paragraph, may submit recommendations to the Secretary of Labor, Frances Perkins Building, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210. Recommendations must be delivered or mailed on or before September 30, 1989. Recommendations may be in the form of a letter, resolution, or petition, signed by the person making the recommendation, or, in the case of a recommendation by an organization, by an authorized representative of the organization. Each recommendation shall identify the candidate by name, occupation or position, telephone number and address. It shall include a brief description of the candidate's qualifications and shall specify the group or field which he or she would represent for the purposes of section 512 of ERISA, the candidates' political party affiliation, and whether the candidate is available and would accept.

Signed at Washington, DC, this 25th day of August, 1989.

William E. Morrow,

Executive Secretary.

BILLING CODE 4510-29-M

Pension and Welfare Benefits Administration

[Application Nos. D-2788, L-7834, et al.]

Proposed Exemptions; Ameritrust Company National Association, et al.

AGENCY: Pension and Welfare Benefits Administration, Labor.

ACTION: Notice of proposed exemptions.

SUMMARY: This document contains notices of pendency before the Department of Labor (the Department) of proposed exemptions from certain of the prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974 (the Act) and/or the Internal Revenue Code of 1954 (the Code).

Written Comments and Hearing Requests

All interested persons are invited to submit written comments or requests for a hearing on the pending exemptions, unless otherwise stated in the Notice of Pendency, within 45 days from the date of publication of this **Federal Register** Notice. Comments and requests for a hearing should state the reasons for the writer's interest in the pending exemption.

ADDRESS: All written comments and requests for a hearing (at least three copies) should be sent to the Pension

and Welfare Benefits Administration, Office of Regulations and Interpretations, Room N-5671, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210. Attention: Application No. stated in each Notice of Pendency. The applications for exemption and the comments received will be available for public inspection in the Public Documents Room of Pension and Welfare Benefit Programs, U.S. Department of Labor, Room N-5507, 200 Constitution Avenue NW., Washington, DC 20210.

Notice to Interested Persons

Notice of the proposed exemptions will be provided to all interested persons in the manner agreed upon by the applicant and the Department within 15 days of the date of publication in the Federal Register. Such notice shall include a copy of the notice of pendency of the exemption as published in the Federal Register and shall inform interested persons of their right to comment and to request a hearing (where appropriate).

SUPPLEMENTARY INFORMATION: The proposed exemptions were requested in applications filed pursuant to section 408(a) of the Act and/or section 4975(c)(2) of the Code, and in accordance with procedures set forth in ERISA Procedure 75-1 (40 FR 18471, April 28, 1975). Effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type requested to the Secretary of Labor. Therefore, these notices of pendency are issued solely by the Department.

The applications contain representations with regard to the proposed exemptions which are summarized below. Interested persons are referred to the applications on file with the Department for a complete statement of the facts and representations.

Ameritrust Company National Association (Ameritrust) Located in Cleveland, Ohio

[Application Nos. D-7833 and L-7834]

Proposed Exemption

The Department is considering granting an exemption under the authority of section 408(a) of the Act and section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Procedure 75-1 (40 FR 18471, April 28, 1975). If the exemption is granted the restrictions of section 406 (b)(2) or (b)(3) of the Act and the sanctions resulting from the application of section 4975 of the Code, by reason of section 4975(c)(1)(F) of the Code shall not apply to the proposed receipt of fees by Ameritrust from the Financial Reserves Fund (the Fund), an open-ended investment company for which Ameritrust performs services, in connection with the investment of funds through a daily automated sweep arrangement, of certain employee benefit trusts (the Keogh or Keoghs) sponsored by certain incorporated and unincorporated businesses. Ameritrust acts either: (1) As an investment manager, directed trustee, or custodian for the Keoghs or (2) as an agent for other banks affiliated with Ameritrust (the Affiliated Banks) which act as investment managers, trustees, or custodians for such Keoghs.[1]

Summary of Facts and Representations

1. Ameritrust, a subsidiary of Ameritrust Corporation, is a national banking association, located at 900 Euclid Avenue, Cleveland, Ohio, authorized to do business under the banking laws of the United States. Ameritrust has established a prototype Keogh plan which provides for rollovers of distributions received by individuals from qualified plans. The individuals adopt the Keoghs, roll over their distributions, and generally make additional contributions based on self employment income.

In addition, Ameritrust represents that it and the Affiliated Banks also act as discretionary trustees or investment managers of Keoghs in which common law employees participate and which are considered "employee benefit plans" for the purpose of coverage under Title I of the Act.

2. The individuals (the Account Holders) who adopt the Keoghs or those who participate in Keoghs adopted by employers have the right to direct the investment of the assets held therein. However, this right can be waived wherein Ameritrust assumes discretionary authority over the investment of Keogh assets. If accounts Holders do not waive the right to direct the investment of assets in the Keoghs, Ameritrust represents that it does not have discretionary control or responsibility with respect to the investment of the Keoghs' assets, nor does it render any investment advice with respect to these assets. With respect to such non-discretionary Keoghs, Ameritrust and the Affiliated Banks charge a custodial fee based on a range of .1% to .3% of the market value of the assets held in such Keoghs.

3. With respect to any of the Account Holders who waive the right to direct the investment of assets in the Keoghs, even if Ameritrust or the Affiliated Banks have discretionary responsibility and control over the assets of these Keoghs, such Account Holders still retain the right to direct the investment of cash accumulating in the Keoghs on a temporary basis. As to Keoghs for which such a waiver is in effect, Ameritrust charges a fee for its investment management services. The investment management fee is based on a range of .475% to .85% of the market value of the funds under management and includes the fee for custodial services, as well as, management services provided to the Keoghs over which Ameritrust or the Affiliated Banks have discretionary authority and control.

4. The Fund is a diversified open-end investment company established as a Massachusetts business trust and is designed to meet short-term investment requirements by providing for the investment of cash in a professionally managed portfolio of domestic money market instruments. Such short-term investments include certificates of deposit, banker's commercial paper, obligations issued by the government of the United States or any agency or instrumentality thereof, short-term (one-year or less) corporate obligations, and qualified repurchase agreements.

5. Fidelity Management and Research Company (FMR), located in Boston, Massachusetts, is the Fund's investment adviser and manager. Shares of the Fund are distributed by Fidelity Distribution Corporation (FDC), a subsidiary of FMR which is registered as a broker-dealer under the Securities Exchange Act of 1934. The applicant represents that neither FMR nor FDC is a fiduciary, as defined in section 3(21) of the Act, or an interested person, as defined in section 3(14) of the Act, with respect to any of the Keoghs. There is no ownership, connection, or affiliation, direct or indirect, between Ameritrust and FMR or FDC.

6. Ameritrust, however, is the administrator for the Fund and performs services for the Fund as custodian of Fund assets. Ameritrust acts also as the servicing agent with respect to transfers from the Fund and distribution of dividends to shareholders. For these services which it renders to the Fund, Ameritrust receives a monthly fee at an

---

[1] For purposes of this proposed exemption the references made to provisions of Title I of the Act, unless otherwise specified, shall be deemed to include parallel provisions of the Code. In addition, the Department is providing no exemptive relief herein for those transactions covered by section 408(b)(2) of the Act and § 2550.408b-2 of the regulations.

989
MI

annual rate of .25% of the average daily net assets of the Fund. Ameritrust represents that it receives no other consideration or benefits from the Fund.

7. Shares of the Fund may be purchased or redeemed on a daily basis. A purchaser does not pay any sales charge or redemption fee to the Fund or Ameritrust upon purchase or redemption of Fund shares. Such prospective purchasers receive a prospectus from the Fund and are entitled to vote all Fund shares held by them.

8. The applicant represents that Keoghs for which Ameritrust or the Affiliated Banks exercise investment discretion cannot participate in Ameritrust's short term collective investment fund for retirement trusts (the STIF). The STIF is part of a collective investment fund established in accordance with 12 CFR section 9.18(a)(2). The STIF provides the primary vehicle for temporary investment and for a daily sweep for most employee benefit trusts held by Ameritrust or the Affiliated Banks acting as full-power trustee and/or investment manager. However, the applicant represents that the Keoghs cannot participate in the STIF, because the exemption from registration for sales of interests to employee benefit trusts under section 3(a)(2) of the Securities Act of 1933 is not available for sales of interests to the Keoghs.

Ameritrust has made available to the Keoghs an automated cash management system using a daily sweep into a General Motors Acceptance Corporation (GMAC) master note, a commercial paper investment. However, Ameritrust believes that the Fund provides a better cash management vehicle for the Keoghs. The GMAC note is an unsecured promissory note of the issuer. The Fund, by contrast, is a money market fund comprised of approximately fifty different issues of money market instruments.

Further, it is represented that use of the Fund as the sweep vehicle would enable the Keoghs to avoid the risk of future credit ratings reductions with General Motors. Also, General Motors limits the amount of participation it makes available, making participation potentially unavailable on some occasions. On the other hand, it is represented that the Fund provides unlimited participation for eligible accounts. If the exemption proposed herein is granted, Ameritrust intends to make the availability of the Fund known to the Account Holders of the Keoghs and let them choose their cash management vehicle.

9. Ameritrust represents that the decision to invest is made solely by the Account Holders of the Keoghs and Account Holders must sign an authorization letter which indicates that they have received and read the most recent prospectus of the Fund, are aware of the fee schedule, and authorize the use of the Fund for cash management in their Keoghs. Any of the Account Holders of Keoghs which elect to participate in the Fund will have cash in a Keogh automatically swept into the Fund, down to a zero balance, on a daily basis, in order to have all of the Keogh's funds invested at all times. However, Ameritrust has no discretion with respect to the timing within the day of the sweep either into or out of the Fund.

Once invested in the Fund, the Account Holder must notify Ameritrust or its Affiliated Banks in writing of its intention to withdraw from the Fund's automated cash management sweep. Ameritrust states that there is no penalty for withdrawing and withdrawals would be effective immediately upon receipt of the notice to withdraw. For the Keoghs' assets invested in the Fund, Ameritrust will continue to receive its standard custodial fees and will not offset such custodial fees against the amount it receives from the Fund. However, Ameritrust represents that it will receive no additional fee from the Keoghs as a result of this investment.

With respect to those Keoghs for which the Account Holders have waived the right to direct investments, Ameritrust will reduce its investment management fee (see paragraph no. 3, above) by offsetting an amount equal to an annual fee of .25% of assets managed with respect to Keoghs' assets invested in the Fund for the entire period of such investment. Accordingly, Ameritrust will reduce its management fee for the Keoghs by an amount equal to the fee it receives as a service provider to the Fund (see paragraph no. 6, above.)

10. The applicant states that any increases in fees paid to Ameritrust by the Fund would be disclosed in a new prospectus issued by the Fund and supplied to all Fund participants prior to additional sales and purchases. Ameritrust or its Affiliated Banks will also advise the participants in the Fund that withdrawals could be made at any time without penalty prior to the increase in fees. In addition, if Ameritrust's fee from the Fund were increased, Ameritrust would reduce by an additional corresponding amount its management fee charged to the Keoghs for which it provides investment management services.

11. In summary, the applicant represents that the proposed transaction satisfies the criteria of section 408(a) of the Act because: (a) The decision to invest in the Fund will be made for each of the Keoghs by the Account Holders only after a full disclosure of the fees received by Ameritrust; (b) the investment of the Keoghs assets in the Fund will enable those assets to be fully invested on a daily basis in a professionally managed money market fund; (c) the Fund is the best available means for Ameritrust to provide for the daily investment of all the assets of the Keoghs and the only available means provided for automated cash management into a diversified fund; and (d) Ameritrust will reduce its management fee from the Keoghs by an amount equal to the fee it receives as service provider to the Fund.

Franklyn W. Meyer Self-Directed Individual Retirement Account (IRA) Located in Danville, California

[Application No. D-8035]

Proposed Exemption

The Department is considering granting an exemption under the authority of section 4975(c)(2) of the Code and in accordance with the procedures set forth in ERISA Procedure 75–1 (40 FR 18471, April 28, 1975). If the exemption is granted, the sanctions resulting from the application of section 4975 of the Code, by reason of section 4975(c)(1)(A) through (E) of the Code, shall not apply to the proposed cash purchase by the IRA from Franklyn W. Meyer (Mr. Meyer), a disqualified person with respect to the IRA, of 1,075 shares (the Shares) of the Windsor Fund (the Fund); provided that the terms and conditions of the transaction are at least as favorable to the IRA as those obtainable in an arm's-length transaction between unrelated parties.[3]

Summary of Facts and Representations

1. The IRA is a self-directed IRA with Charles Schwab & Co. (Schwab) acting as trustee. As of September 30, 1988, the IRA held assets of $437,556.20.

2. Mr. Meyer desires that the IRA invest in the Fund and has requested an exemption to permit the IRA's cash purchase of the Shares in the Fund from his personal account. He represents that the exemption is necessary because the Fund's board of directors has restricted Schwab's purchase of the Fund, which restriction, in turn, prevents the IRA's direct purchase of shares from the Fund.

3. Mr. Meyer proposes to sell the Shares to the Plan at a price equivalent to the net asset value of the Shares at the close of business on the date of the transaction and submits that the current fair market value of the Shares is approximately $14,921 or $13.88 per Share. Mr. Meyer represents that the IRA will pay no fees or commissions in connection with its purchase of the Shares. Upon purchase by the IRA, the Shares will represent approximately 1% of the IRA's assets.

4. In summary, the applicant represents that the proposed transaction satisfies the statutory criteria set forth in section 4975(c)(2) of the Code because: a) The transaction is a one-time purchase and will be consummated for cash; b) The Shares will represent only 1% of the IRA's investment portfolio; c) The IRA will pay a price equal to the net asset value of the Shares at the close of business on the date of the transaction; d) No commissions or fees will be paid by the IRA in connection with the transaction; and e) Mr. Meyer, the disqualified person with respect to the IRA, is the only participant to be affected by this transaction.

Notice to Interested Persons: Because Mr. Meyer is the sole participant in the IRA, the Department has determined that there is no need to distribute the notice of pendency of the proposed exemption to interested persons. Comments and requests for hearing must be received within 30 days of the date of publication in the **Federal Register** of this notice of proposed exemption.

For Further Information Contact: Mrs. B.S. Scott of the Department, telephone (202) 523–8883. (This is not a toll-free number.)

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and/or section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and/or the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which among other things require a fiduciary to discharge his duties respecting the plan solely in the interest of the participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) Before an exemption may be granted under section 408(a) of the Act and/or section 4975(c)(2) of the Code, the Department must find that the exemption is administratively feasible, in the interests of the plan and of its participants and beneficiaries and protective of the rights of participants and beneficiaries of the plan; and

(3) The proposed exemptions, if granted, will be supplemental to, and not in derogation of, any other provisions of the Act and/or the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

(4) The proposed exemptions, if granted, will be subject to the express condition that the material facts and representations contained in each application are true and complete, and that each application accurately describes all material terms of the transaction which is the subject of the exemption.

Signed at Washington, DC, this 25th day of August, 1989.

Ivan Strasfeld,

Director of Exemption Determinations, Pension and Welfare Benefits Administration, U.S. Department of Labor.

[FR Doc. 89–20403 Filed 8–29–89; 8:45 am]

BILLING CODE 4510-29-M

[Prohibited Transaction Exemption 89–74; Exemption Application No. D–7107 et al.]

Grant of Individual Exemptions; General American Life Insurance Company, et al.

AGENCY: Pension and Welfare Benefits Administration, Labor.

ACTION: Grant of individual exemptions.

SUMMARY: This document contains exemptions issued by the Department of Labor (the Department) from certain of the prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974 (the Act) and/or the Internal Revenue Code of 1954 (the Code).

Notices were published in the **Federal Register** of the pendency before the Department of proposals to grant such exemptions. The notices set forth a summary of facts and representations contained in each application for exemption and referred interested persons to the respective applications for a complete statement of the facts and representations. The applications have been available for public inspection at the Department in Washington, DC. The notices also invited interested persons to submit comments on the requested exemptions to the Department. In addition the notices stated that any interested person might submit a written request that a public hearing be held (where appropriate). The applicants have represented that they have complied with the requirements of the notification to interested persons. No public comments and no requests for a hearing, unless otherwise stated, were received by the Department.

The notices of pendency were issued and the exemptions are being granted solely by the Department because, effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978 (43 FR 47713, October 17, 1978) transferred the authority of the Secretary of the Treasury to issue exemptions of the type proposed to the Secretary of Labor.

Statutory Findings

In accordance with section 408(a) of the Act and/or section 4975(c)(2) of the Code and the procedures set forth in ERISA Procedure 75–1 (40 FR 18471, April 28, 1975), and based upon the entire record, the Department makes the following findings:

(a) The exemptions are administratively feasible;

(b) They are in the interests of the plans and their participants and beneficiaries; and

(c) They are protective of the rights of the participants and beneficiaries of the plans.

General American Life Insurance Company (General American) Located in St. Louis, MO

[Prohibited Transaction Exemption 89–74; Application No. D–7107]

Exemption

The restrictions of section 406(a), 406(b)(1) and 406(b)(2) of the Act and the sanctions resulting from the application of section 4975 of the Code, shall not apply to: (1) The proposed amendment (the Amendment) to an annuity contract and Separate Account agreement entered into by General American and the Carpenters' Pension Trust Fund of St. Louis (the Plan) which will provide that General American will insure that, in the event of a foreclosure upon a mortgage loan note (Note) held by General American's Separate Account No. 3 (the Account), the Account will receive the unpaid principal balance, and any due and unpaid interest at the face rate of the note, and any advances and foreclosure costs with respect to that Note; and (2) the proposed purchase of residential real property or delinquent Notes by General American from the Account in accordance with the Amendment, provided that the terms and conditions of the transactions are at least as favorable to the Plan as those between unrelated parties would be.

---

[3] Pursuant to the provisions contained in 29 CFR 2510.3–2(d), the IRA is not subject to Title I of the Act. However, the IRA is subject to Title II of the Act pursuant to section 4975 of the Code.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on June 14, 1989 at 54 FR 25355.

For Further Information Contact: David Lurie of the Department, telephone (202) 523-8671. (This is not a toll-free number.)

ALTA Health Strategies, Inc. (ALTA) and ALTA Reinsurance Company (ALTA Re) Located in Salt Lake City, Utah

[Prohibited Transaction Exemption 89-75; Exemption Application No. D-7550]

Exemption

The restrictions of section 406(a) of the Act shall not apply to the reinsurance of group health, life, and accidental death and dismemberment risks, and the receipt of premiums therefrom, by ALTA Re pursuant to reinsurance arrangements with Issuing Carriers in connection with stop-loss insurance contracts sold to employee welfare benefit plans for which ALTA serves as a third party administrator or provides brokerage services (the Plans), provided the following conditions are satisfied:

(1) The Plans pay no more than adequate consideration for the insurance contracts;

(2) The transactions covered by the proposed exemption will be offered as an option to be considered by the Plan fiduciary described in 2(d) below, only when each of the following conditions are satisfied: (a) The Plans for which the transactions are presented as an option have 100 or more participants; (b) ALTA concludes, on the basis of its analysis, that the stop-loss insurance arrangement covered by this exemption is consistent with the insurance needs of the Plans; (c) ALTA concludes that the proposed transactions would be less expensive than conventional stop-loss insurance offered by comparable primary insurers and reinsurers having the equivalent reserves and Best's ratings; further, ALTA will not offer this option unless it concludes that, based on a review of the available data concerning the insurance market, stop-loss insurance consistent with this exemption will, in fact, be more beneficial to the Plans than comparable coverage not subject to this exemption; (d) ALTA determines that, in accordance with the procedures described in (e), below, the decision to utilize the option covered by this exemption is being made by a fiduciary of the Plan who is independent of ALTA and ALTA Re, who is capable of making an independent decision, and who is sufficiently knowledgeable with respect to the Plan, and administrative, benefits, and funding matters related thereto, to make an informed decision concerning the option covered by this exemption; and (e) with respect to the determinations made by ALTA pursuant to (d), above, ALTA maintains a written procedure under which criteria are established for making such determinations. Pursuant to such procedure, each determination, and the basis therefore, shall be documented and, thereafter, approved by an officier of ALTA who was not involved in the presentation of the options to the Plan fiduciary. Such documentation shall, among other things, include: Written representations provided by the fiduciary or plan sponsor supporting such determinations, the qualifications of the fiduciary on which ALTA based its determination, and any other factors which ALTA took into account in making its determination, and the relevance of such factors. Such documentation shall be retained for a period of six years from the date that the transaction was entered into pursuant to this exemption. Similarly, a copy of the procedure shall be retained during any period for which documentation is required to be retained. Both the procedure and documentation shall be unconditionally available at ALTA's principal place of business for examination during working hours by any duly authorized employee or representative of the Department;

(3) ALTA provides to the fiduciary described in 2(d) above a complete description of all services, commissions, fees, contracts or arrangements and relationships between ALTA, ALTA Re and any other party, and will provide a complete description of the insurance arrangements offered by the direct insurers, and the fiduciary acknowledges in writing the receipt of such information and that the decision to select an option (including the proposed option) is a decision made in its fiduciary capacity;

(4) no commissions will be paid with respect to the reinsurance of the risks by ALTA Re;

(5) no single group of affiliated Plans will represent more than 5 percent of the total premiums written pursuant to the subject transactions;

(6) ALTA will follow its standard claims processing practices regarding any claims submitted with respect to Plans engaging in the subject transactions;

(7) ALTA will not offer any incentives to any of its employees with respect to the stop-loss option covered by the proposed exemption and in all cases the compensation paid with respect to employees or other persons acting on behalf of ALTA will be paid in the same manner regardless of the option selection;

(8) ALTA Re will comply with all applicable requirements of the law of its domiciliary state, Arizona, regarding its operations and reserves; and

(9) ALTA Re will be subject to a financial audit by the Arizona Department of Insurance no less frequently than once every three years.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on June 22, 1989 at 54 FR 26267.

Written Comments: The Department received one written comment which supported the granting of the proposed exemption. The Department has considered the entire record, including the written comment, and has determined to grant the exemption as proposed.

For Further Information Contact: Gary H. Lefkowitz of the Department, telephone (202) 523-8881. (This is not a toll-free number.)

Extension of Prohibited Transaction Exemption (PTE) 82-184 for Certain Transactions Involving the Alaska Teamster-Employer Pension Plan (the Plan) Located in Anchorage, Alaska

[Prohibited Transaction Exemption 89-76; Exemption Application No. D-7797]

Extension of Exemption

The Department hereby extends, for a period of five years, a portion of PTE 82-184 (47 FR 52248, November 19, 1982). Authority to grant the extension of PTE 82-184 is given the Department under section 408(a) of the Act, section 4975(c)(2) of the Code and the procedures set forth in ERISA Procedure 75-1 (40 FR 18471, April 28, 1975).

Accordingly, the restrictions of section 406(a) of the Act and the sanctions resulting from the application of section 4975 of the Code, by reason of section 4975(c)(1) (A) through (D) of the Code shall not apply to the sales of certain residential units (the Units) located near Palm Springs, California, by Desert Horizons, Inc. (Desert Horizons), a wholly owned corporation of the Plan, to parties in interest with respect to the Plan who are not fiduciaries (within the meaning of section 3(21)(A) of the Act), provided the following conditions are satisfied:

1(A) Before a Unit may be sold to a non-fiduciary party in interest, the terms and conditions of the prospective sale to that party in interest, including the price and Unit/lot number and type, shall be advertised in the *Desert Sun* newspaper. The advertisement also shall set forth the price and the terms and conditions of comparable Units sold at Desert Horizons within a reasonable time prior to a prospective sale. Additionally, the advertisement shall indicate that the Unit is available for purchase by all other non-party in interest members of the public at a price and on terms and conditions that are equal to the offer made by the party in interest.

(B) For thirty days from the publication of the advertisement described in paragraph 1(A), no sale of said Unit to the party in interest shall be consummated, even if such party offers more than the advertised price.

(C) During the period between publication and thirty days thereafter, if any non-party in interest member of the public agrees to match or better the price or terms and conditions advertised, that member (or those members) of the public shall have a right to purchase the Unit that supersedes the right of the party in interest. If, after a reasonable period of time subsequent to the thirty day period, the member or members of the public who have gained the prior right do not prove that they are ready, willing and able to consummate the purchase, the Unit may be sold to the party in interest at a price and on terms and conditions that are equal to or greater than the advertised price and its terms and conditions.

(D) If, after thirty days from the publication of the advertisement, no non-party in interest member of the public offers to purchase the Unit, the party in interest who made the offer cited in the advertisement shall become an eligible purchaser but only at the advertised price and its terms and conditions or at a price and on terms and conditions that are more favorable to Desert Horizons.

(E) All prospective purchasers shall complete a questionnaire indicating whether they are a party in interest with respect to the Plan.

(2) Prior to the execution of a contract for the sale of a residential Unit to a party in interest, A.N. Advisors (Advisors) and any successor independent fiduciary shall certify in writing that, based on all relevant market factors, the sales price and the terms and conditions for a Unit are not less than its fair market value. The written certification shall also state that: (A) the advertisement procedures set forth in paragraphs 1(A)-(E) have been met; and (B) the terms and conditions (including price) of such sale are at least as equal to those that the Plan could receive in a similar transaction with an unrelated party. In the event that Advisors resigns or is terminated, or a replacement is chosen after its contract expires, the Plan shall notify the Department's Office of Exemption Determinations of the name and qualifications of a prospective successor fiduciary and the reasons for the change. Solely for the purposes of continuing the effectiveness of this exemption, appointment of such successor independent fiduciary shall not be effective until the receipt by Desert Horizons of the Department's approval.

(3) The Plan and/or Desert Horizons shall maintain accurate records demonstrating compliance with the conditions of this exemption for all party in interest transactions. The Plan and/or Desert Horizons shall make available to the Department such records, including the written certification described in paragraph (2).

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on April 4, 1989 at 54 FR 13586.

Effective Date: This extension of PTE 82-184 will expire five years from the date of the grant.

For Further Information Contact: Ms. Jan D. Broady of the Department, telephone (202) 523-8881. (This is not a toll-free number.)

Complete General Construction Company Profit Sharing Plan (the Plan) Located in Columbus, Ohio

[Prohibited Transaction Exemption 89-77; Exemption Application No. D-7868]

Exemption

The restrictions of section 406(a) and 406 (b)(1) and (b)(2) of the Act and the sanctions resulting from the application of section 4975 of the Code, by reason of section 4975(c)(1) (A) through (E) of the Code, shall not apply to the sale for cash by the Plan of certain real property (the Real Property) to Complete General Construction Company, a party in interest with respect to the Plan, provided that the price paid be no less than the fair market value of the Real Property as of the date of sale, as determined by an independent and qualified appraiser.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on June 14, 1989 at 54 FR 25363.

For Further Information Contact: Joseph L. Roberts III of the Department, telephone (202) 523-8881. (This is not a toll-free number.)

Washington Mortgage Corporation (WMC) Located in Seattle, Washington

[Prohibited Transaction Exemption 89-78; Exemption Application Nos. D-7891 and D-7892]

Exemption

I. The restrictions of section 406(a) of the Act and the sanctions resulting from the application of section 4975 of the Code, by reason of section 4975(c)(1) (A) through (D) of the Code shall not apply to: 1) The sale, exchange or transfer between WMC and its affiliates and certain employee benefit plans (the Plans) of certain construction loans or participation interests therein to non-party in interest entities; and 2) the sale, exchange or transfer between WMC and its affiliates and the Plans of any construction or permanent loan made by a Plan to a party in interest, and the resulting extension of credit therefrom, provided that:

(a) The terms of the transactions are not less favorable to the Plans then the terms generally available in arm's-length transactions between unrelated parties;

(b) Such sales, exchanges or transfers are expressly approved by a Plan fiduciary independent of WMC and its affiliates who has authority to manage or control those Plan assets being invested in mortgages or participation interests therein;

(c) No investment management, advisory, underwriting fee or sales commission or similar compensation is paid to WMC or any of its affiliates with regard to such sale, exchange or transfer;

(d) The decision to invest in a loan or a participation interest therein is not part of an arrangement under which a fiduciary of a Plan, acting with the knowledge of WMC or its affiliate, causes a transaction to be made with or for the benefit of a party in interest [as defined in section 3(14) of the Act] with respect to the Plan;

(e) At the time of its acquisition of a loan or participation therein, no Plan will have more than 25% of its assets invested in construction or permanent mortgages;

(f) WMC and its affiliates do not and will not act as fiduciaries with regard to any Plan investing in permanent and construction loans and interests therein which are the subject of this exemption; and

(g) WMC shall maintain or will cause to be maintained, for the duration of any loan or participation therein sold to a Plan pursuant to this exemption, such records as are necessary to determine whether the conditions of this exemption have been met. The records mentioned above must be unconditionally available at their customary location for examination for purposes reasonably related to protecting rights under the Plans, during normal business hours, by: Any trustee, investment manager, employer of Plan participants, employee organization whose members are covered by a Plan, participant or beneficiary of a Plan.

II. The restrictions of section 406(a) of the Act and the sanctions resulting from the application of section 4975 of the Code by reason of section 4975(c)(1) (A) through (D) of the Code shall not apply to any transactions to which such restrictions or taxes would otherwise apply merely because WMC or any of its affiliates is deemed to be a party in interest with respect to a Plan by virtue of providing services to the Plan in connection with the subject loan transactions [or because it has a relationship to such service provider described in section 3(14) (F), (G), (H) or (I) of the Act], solely because of the ownership of a loan participation interest therein as described in this exemption by such Plan.

III. Definitions

For purposes of this exemption,

(a) An "affiliate" of WMC includes—

(1) Any person directly or indirectly through one or more intermediaries, controlling, controlled by, or under common control with WMC,

(2) Any officer, director, employee, relative of, or partner in any such person, and

(3) Any corporation or partnership of which such person is an officer, director, partner or employee.

(b) The term "control" means the power to exercise a controlling influence over the management or policies of a person other than an individual.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on June 22, 1989 at 54 FR 26273.

Temporary Nature of Exemption: This exemption will be effective only for those transactions entered into within five years of the date on which the Final Grant of this proposed exemption is published in the **Federal Register**.

For further information contact: Gary H. Lefkowitz of the Department, telephone (202) 523–8881. (This is not a toll-free number.)

Electrical Workers Local Union No. 103, I.B.E.W., Health and Welfare Fund, Deferred Income Fund, Pension Fund, and Holiday, Vacation and Supplementary Unemployment Benefits Fund (collectively, the Funds) Located in Boston, Massachusetts

[Prohibited Transaction Exemption 89–79; Exemption Application Nos. D–7893 through D–7896]

Exemption

The restrictions of section 406(b)(2) of the Act shall not apply to the proposed leasing of certain office space, to the Funds by the Local 103, I.B.E.W., Building Corporation, a corporation which is wholly-owned by the Local Union No. 103 of the International Brotherhood of Electrical Workers, AFL–CIO, a party in interest with respect of the Funds, provided that the terms of the transaction are at least as favorable to the Funds as the terms which would exist in an arm's length transaction with an unrelated party.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on July 3, 1989 at 54 FR 27963.

Effective date: The effective date of this exemption is July 14, 1988.

For further information contact: Mr. E.F. Williams of the Department, telephone (202) 523–8883. (This is not a toll-free number.)

Hunter and Associates Laboratory, Inc., Profit Based Retirement Plan and Trust (the Plan) Located in Reston, Virginia

[Prohibited Transaction Exemption 89–80; Exemption Application No. D–7906]

Exemption

The restrictions of section 406(a), 406 (b)(1) and (b)(2) of the Act and the sanctions resulting from the application of section 4975 of the Code, by reasons of section 4975(c)(1) (A) through (E) of the Code, shall not apply to the sale by the Plan to Hunter Associates Laboratory, Inc., the sponsor of the Plan, of (1) the Plan's rights with respect to an unsatisfied judgment against the National Exchange Leasing Company, and (2) the Plan's rights as creditor in a loan to Government Financial Services, Inc., including any preferential payment refunds due from the Plan with respect thereto; provided that all terms of such transactions are not less favorable to the Plan than those which the Plan could obtain in an arm's-length transaction with an unrelated party.

For a more complete statement of the facts and representations supporting the Department's decision to grant this exemption refer to the notice of proposed exemption published on Monday, July 3, 1989 at 54 FR 27959.

For further information contact: Ronald Willett of the Department, telephone (202) 523–8881. (This is not a toll-free number.)

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under section 408(a) of the Act and/or section 4975(c)(2) of the Code does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of the Act and/or the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of section 404 of the Act, which amount other things require a fiduciary to discharge his duties respecting the plan solely in the interest of the participants and beneficiaries of the plan and in a prudent fashion in accordance with section 404(a)(1)(B) of the Act; nor does it affect the requirement of section 401(a) of the Code that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) These exemptions are supplemental to and not in derogation of, any other provisions of the Act and/or the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction.

(3) The availability of these exemptions is subject to the express condition that the material fact is and representations contained in each application accurately describes all

material terms of the transaction which is the subject of the exemption.

Signed at Washington, DC, this 25th day of August 1989.

Ivan Strasfeld,

Director of Exemption Determinations, Pension and Welfare Benefits Administration, U.S. Department of Labor.

BILLING CODE 4510-29-M

LEGAL SERVICES CORPORATION

Request for Comments on a Grant Award to Single Parents United 'N Kids (SPUNK)

AGENCY: Legal Services Corporation.

ACTION: The Legal Services Corporation (LCS) announces its intention to award a one-time, non-recurring grant of $32,380 in fiscal year 1989 to Single Parents United 'N Kids (SPUNK). The purpose for making this grant is to provide training and technical assistance in child support matters. These services will be provided to client eligible persons residing in or near Los Angeles County, California.

DATE: All comments and recommendations must be received by the Office of Field Services of LSC on or before September 29, 1989.

FOR FURTHER INFORMATION CONTACT: Victoria O'Brien, Counsel to the Director, or Charles T. Moses, Associate Director, Legal Services Corporation, Office of Field Services, 400 Virginia Ave., SW., Washington, DC 20024–2751, (202) 863–1837.

SUPPLEMENTARY INFORMATION: The Legal Services Corporation is the national independent organization charged with implementing the federally funded system of legal services for low-income people. It hereby announces its intention to award a grant in the amount of $32,380 to SUPPORT. The grantee will use this grant to provide training and technical assistance on child support matters to client eligible persons residing in or near Los Angeles County.

It is anticipated that the twelve month term of this grant will extend from September 30, 1989 to September 29, 1990.

Interested persons are invited to submit written comments and/or recommendations concerning the above to Victoria O'Brian or Charles T. Moses.

Dated: August 25, 1989.

Ellen J. Smead,

Acting Director, Office of Field Services.

BILLING CODE 7050-01-M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–400]

Carolina Power & Light Co., et al., Shearon Harris Nuclear Power Plant, Unit 1; Environmental Assessment and Finding of No Significant Impact

The United States Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–63 to the Carolina Power & Light Company (CP&L or the licensee), for the Shearon Harris Nuclear Power Plant, Unit 1, located in Wake and Chatham Counties, North Carolina.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the provisions in the Technical Specifications (TS) relating to fuel enrichment.

The proposed action is in accordance with the licensee's applications dated April 11 and July 26, 1989.

The Need for the Proposed Action

The proposed changes are needed so that the licensee can use higher enrichment fuel, and provides the flexibility of extending the fuel irradiation and permitting operation of longer fuel cycles.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revisions to the Technical specifications. The proposed revisions would permit use of fuel enrichment with Uranium 235 in excess of 4.2 weight percent and up to 5.0 weight percent and the licensee would expect the fuel to be irradiated to levels above 33 gigawatt days per metric to (GWD/MT) but not to exceed 60 GWD/MT. The safety considerations associated with reactor operation with higher enrichment and extended irradiation have been evaluated by the NRC staff. The staff has concluded that such changes would not adversely affect plant safety. The proposed changes have no adverse effect on the probability of any accident. The increased burnup and higher enrichment may slightly change the mix of fission products that might be released in the event of a serious accident but such small changes would not significantly affect the consequences of serious accidents. No changes are being made in the types or amounts of any radiological effluents that may be released offsite. There is no significant increase in the allowable individual or cumulative occupational radiation exposure.

With regard to potential nonradiological impacts of reactor operation with higher enrichment and extended irradiation, the proposed changes to the TS involve systems located within the restricted area, as defined in 10 CFR part 20. They do not affect nonradiological plant effluents and have no other environmental impact.

The environmental impacts of transporation resulting from the use of higher enrichment fuel and extended irradiation were published and discussed in the staff assessment entitled, "NRC Assessment of the Environmental Effects of Transporation Resulting from Extended Fuel Enrichment and Irradiation," dated July 7, 1988 and published in the **Federal Register** (53 FR 30355) on August 11, 1988. As indicated therein, the environmental cost contribution of the proposed increase in the fuel enrichment and irradiation limits are either unchanged or may, in fact, be reduced from those summarized in Table S–4 as set forth in 10 CFR 51.52(c).

Therefore, the Commission concludes that there are no significant radiological or nonradiological environmental impacts associated with the proposed amendment.

Alternative to the Proposed Action

Since the Commission concluded that there are no significant environmental effects that would result from the proposed action, any alternatives with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendment. This would not reduce the environmental impacts of plant operation and would result in reduced operational flexibility.

Alternative Use of Resources

This action does not involve the use of resources not previously considered in connection with the "Final Environmental Statement related to the operation of the Shearon Harris Nuclear Power Plant, Units 1 and 2," dated October 1983.

Agencies and Persons Consulted

The NRC staff has reviewed the licensee's request and did not consult other agencies or persons.

Finding of no Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Plant, but will allow the inventory for

Dated at Rockville, Maryland this 23rd day

been foreseen by the licensee because

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated April 11 and supplement dated July 28, 1989, which are available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, and at the Richard B. Harrison Library, 1313 New Bern Avenue, Raleigh, North Carolina 27610.

Dated at Rockville, Maryland, this 22nd day of August 1989.

For the Nuclear Regulatory Commission.

Elinor G. Adensam,

Director, Project Directorate II-1, Division of Reactor Projects I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89-20360 Filed 8-29-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50-302]

Florida Power Corp.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission is considering issuance of an amendment to Facility Operating License No. DPR-72 to the Florida Power Corporation (the licensee) for the Crystal River Unit 3 Nuclear Generating Plant located in Crystal River, Florida.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the provisions in the Technical Specifications (TS) relating to fuel enrichment.

The proposed action is in accordance with the licensee's application dated December 23, 1988, as supplemented July 12, 1989.

The Need for the Proposed Action

The proposed changes are needed so that the licensee can use higher enrichment fuel. In addition, the proposed changes provide the flexibility of extending the fuel irradiation, thus allowing longer fuel cycles.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revisions to the TS. The proposed revisions would permit use of fuel enriched with Uranium 235 in excess of 4 weight percent and up to 4.5 weight percent. The licensee would expect the fuel to be irradiated to levels above 33 gigawatt days per metric ton (GWD/MT), but not to exceed 60 GWD/MT. The safety considerations associated with reactor operation with higher enrichment and extended irradiation have been evaluated by the NRC staff. The staff has concluded that such changes would not adversely affect plant safety. The proposed changes have no adverse effect on the probability of any accident. The increased burnup may slightly change the mix of fission products that might be released in the event of a serious accident, but such small changes would not significantly affect the consequences of serious accidents. No changes are being made in the types or amounts of any radiological effluents that may be released offsite. There is no significant increase in the allowable individual or cumulative occupational radiation exposure.

With regard to potential nonradiological impacts of reactor operation with higher enrichment and extended irradiation, the proposed changes to the TS involve systems located within the restricted area as defined in 10 CFR partr 20. They do no affect nonradiological plant effluents and have no other environmental impact.

The environmental impacts of transportation resulting form the use of higher enrichment fuel and extended irradiation are discussed in the staff assessment entitled, "NRC Assessment of the Environmental Effects of Transportation Resulting from Extended Fuel Enrichment and Irradiation," dated July 7, 1988 (53 FR 30355). As indicated therein, the environmental cost contribution of the proposed increase in the fuel enrichment and irradiation limits are either unchanged or may in fact be reduced from those summarized in Table S-4 as set forth in 10 CFR 51.52(c).

Therefore, the Commission concludes that there are no significant radiological or nonradiological environmental impacts associated with the proposed amendment.

Alternatives to the Proposed Action

Since the Commission concluded that there are no significant environmental effects that would result from the proposed action, any alternative with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendment. This would not reduce environmental impacts of plant operation and would result in reduced operational flexibility.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in the Final Environmental Statement for the Crystal River Unit 3 Generating Plant.

Agencies and Persons Consulted

The NRC staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of no Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based on the foregoing environmental assessment, we conclude that the proposed action will not have a significant impact on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated December 23, 1988, as supplemented July 12, 1989, which are available for public inspection at the Commission's Public Document Room, 2120 L Street, NW, Washington, DC and at the Crystal River Public Library, 668 NW First Avenue, Crystal River, Florida 32629.

Dated at Rockville, Maryland, this 22nd day of August 1989.

For the Nuclear Regulatory Commission.

Herbert N. Berkow,

Director, Project Directorate II-2, Division of Reactor Projects—I/II, Office of Nuclear Reactor Regulation.

[FR Doc. 89-20361 Filed 8-29-89; 8:45 am]

BILLING CODE 7590-01-M

[Docket Nos. 50-390 and 50-391]

Environmental Assessment and Finding of No Significant Impact; Tennessee Valley Authority Watts Bar Nuclear Plant, Units 1 and 2

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of a temporary exemption from the requirements of 10 CFR 70.51(d) to the Tennessee Valley Authority (the licensee) for Watts Bar Nuclear Plant, Units 1 and 2. The units are located at the licensee's plant site in Rhea County, Tennessee.

Environmental Assessment

Identification of Proposed Action: By application dated July 10, 1989, the licensee requested a temporary exemption to 10 CFR 70.51(d). The temporary exemption will maintain the requirement for an annual inventory of fuel stored at the Watts Bar Nuclear

Plant, but will allow the inventory for 1989 to be conducted at an interval of more than 12 months but not more than 15 months from the date of the inventory for 1988. The requirements of 10 CFR 50.71(d) specify that the annual inventories must be conducted at an interval of not more than 12 months.

The Need for the Proposed Action: The licensee is requesting a temporary exemption for 1989 from the annual physical inventory requirement in 10 CFR 70.51(d).

Pursuant to 10 CFR 70.51(d), the licensee conducted a physical inventory of the Watts Bar fuel by piece count and serial number verification in August 1988. The next scheduled inventory was to be conducted by August 9, 1989. In order to perform the inventory, removal of the spent fuel pit covers and the new fuel vault covers is required. However, the Auxiliary Building crane which is required to remove those covers was and is currently out of service. The spent fuel pool covers weigh approximately 5000 pounds each and the new fuel vault covers weigh approximately 6000 pounds each. This crane was not returned to service in time to conduct the physical inventory before the required date.

Environmental Impact of the Proposed Action: The proposed action is an administrative action only and will have no environmental impact.

Alternative Use of Resources: This action does not involve the use of resources not previously considered in connection with the "Final Environmental Statement Related to the Operation of the Watts Bar Nuclear Plant, Units 1 and 2."

Agencies and Persons Consulted: The licensee initiated this temporary exemption action. The NRC staff is reviewing their request. No other agencies or persons were consulted.

Finding of no Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed temporary exemption.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not adversely affect the public health and safety nor common defense and security.

For further details with respect to this action, see the licensee's application dated July 10, 1989 which is available in the Commission's Public Document Room, 2120 L Street NW., Washington, DC 20555 and at the Chattanooga-Hamilton County Bicentennial Library, 1001 Broad Street, Chattanooga, Tennessee 37402.

Dated at Rockville, Maryland this 23rd day of August 1989.

For the Nuclear Regulatory Commission.

Suzanne Black,

Assistant Director for Project, TVA Projects Division, Office of Nuclear Reactor Regulation.

BILLING CODE 7590-01-M

[Docket No. 50-440]

Cleveland Electric Illuminating Co., et al.; Consideration of Issuance of Amendment to Facility Operating License and Proposed No Significant Hazards Consideration Determination and Opportunity for Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF-58, issued to the Cleveland Electric Illuminating Company, Duquesne Light Company, Ohio Edison Company, Pennsylvania Power Company and Toledo Edison Company (the licensees), for operation of the Perry Nuclear Power Plant, Unit No. 1 located in Lake County, Ohio.

The amendment would permit the use of functioning channels of the Traversing In-Core Probe (TIP) system to provide data when one or more of the TIP measurement locations are inaccessible or inoperable. Operable TIP measurement data would be substituted from symmetric core locations for use in Local Power Range Monitoring (LPRM) calibrations and thermal power monitoring.

The exigent circumstances related to this request are that the first indication of a problem with the TIP system occurred on August 11, 1989. Mechanical interference within the 'B' TIP unit indexing mechanism prevented taking traces on a channel. Subsequently, three other channels on that TIP unit also became inaccessible. Two of these four channels can be accessed by other TIP units, however, two remain inaccessible. The TIP mechanisms are located in the drywell and are inaccessible at power due to the high radiation levels. The next calibration of the LPRM detectors is due on September 18, 1989. Utilizing the 25 percent permissible extension of surveillance intervals would make the late date for this surveillance September 29, 1989. If the 'B' TIP indexing mechanism cannot be restored prior to this surveillance being due, it must be declared inoperable. Without the proposed change, the plant would be required to shut down when the above surveillance becomes overdue in late September. This problem could not have been foreseen by the licensee because TIP calibrations can only be performed after entry into power operation and no problems were identified with the TIP indexing mechanism during prior system testing. Three previous successful TIP core traverses were performing during the operating cycle prior to this failure. The licensees' amendment request was promptly submitted on August 23, 1989 and did not result in creation of the exigent circumstances.

The due date of this amendment request to avoid shutdown of the unit does not allow for a full 30-day notice in the Federal Register. The earliest publication date in the Federal Register of the notice for this proposed amendment is no earlier than August 30, 1989. Therefore, based on the above, the staff has determined that exigent circumstances exist with respect to this license amendment request.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards considerations. Under the Commission's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The licensees have provided the following analysis of the above three factors:

> 1. The core monitoring methodology is based on symmetry of rod patterns and fuel loading. This is not changed, but extended to use a higher order of symmetry (octant symmetry) which exists with "type A" sequence rod patterns.
>
> This change does not change the fundamental process involved in calibrating neutron instrumentation (LPRMs), but requires that only the equipment associated with the TIP channels necessary for recalibrating LPRMs and for core monitoring functions be operable. The use of symmetric detectors to provide substitute data for inaccessible TIP channels does not compromise the ability of the process computer to accurately represent the spatial gamma flux distribution of the reactor core.
>
> This proposed change does not alter the basic method used to calculate power and exposure distributions and fuel thermal limits. The existing method for calculating core power and exposure distributions and

fuel thermal limits includes provisions for monitoring the gamma flux distribution with mirror or rotational symmetry. This proposed change includes provisions for using octant symmetry, which is both mirror and rotationally symmetrical.

This proposed change does not alter the basic method used to determine the appropriate constants with which to relate the readings of LPRMs to those of the TIPs or the basic method used to determine substitute values to be used by the process computer for LPRMs which have failed. The proposed change specifies the use of TIP data which is equivalent to that which would normally be used.

The calibration of LPRMs using symmetric string base distributions provide LPRM data within the normal uncertainty expected for calibration with all five machines operable. Consequently, this condition will not adversely affect core thermal limit calculations.

This proposed change does not alter the function, performance or operation of any safety system or safety related equipment. The restriction to "A" control rod sequences and the limitation on total TIP uncertainty ensures the readings from symmetric channels are equivalent.

Therefore, this proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. The substitution of data into inaccessible TIP channels has no effect on any accident initiator, therefore this proposed change does not create the possibility of a new or different kind of accident from any accident previously evaluated.

3. This proposed change does not involve a significant reduction in a margin of safety because the implementation is restricted by the LCO to type A symmetric control rod patterns, and then only when the total TIP uncertainty has been demonstrated previously in the cycle to be within the value assumed in the General Electric reload licensing topical report—GESTAR II (8.7 percent).

The staff agrees with the licensees' analysis; accordingly, the Commission proposes to determine that this change does not involve significant hazards considerations.

The Commission is seeking public comments on this proposed determination. Any comments received within 15 days after the date of publication of this notice will be considered in making any final determination. The Commission will not normally make a final determination unless it receives a request for a hearing.

Written comments may be submitted by mail to the Regulatory Publications Branch, Division of Freedom of Information and Publications Services, Office of Administration, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and should cite the publication date and page number of the **Federal Register** notice.

Written comments may also be delivered to Room P–216, Phillips Building, 7920 Norfolk Avenue, Bethesda, Maryland from 7:30 a.m. to 4:15 p.m. Copies of written comments received may be examined at the NRC Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC. The filing of requests for hearing and petitions for leave to intervene is discussed below.

By September 29, 1989, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any persons whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for hearing and a petition for leave to intervene. Requests for a hearing and petitions for leave to intervene shall be filed in accordance with the Commission's "Rule of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than fifteen (15) days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene, which must include a list of the contentions that are sought to be litigated in the matter, and the bases for each contention set forth with reasonable specificity. Contentions shall be limited to matters within the scope of the amendment under consideration. A petitioner who fails to file such a supplement which satisfies these requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

If the amendment is issued before the expiration of 30-days, the Commission will make a final determination on the issue of no significant hazards considerations. If a hearing is requested, the final determination will serve to decide when the hearing is held.

If the final determination is that the amendment request involves no significant hazards considerations, the Commission may issue the amendment and make it effective, notwithstanding the request for a hearing. Any hearing held would take place after issuance of the amendment.

If the final determination is that the amendment request involves significant hazards considerations, any hearing held would take place before the issuance of any amendment.

Normally, the Commission will not issue the amendment until the expiration of the 15-day notice period. However, should circumstances change during the notice period, such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 15-day notice period, provided that its final determination is that the amendment involves no significant hazards considerations. The final determination will consider all public and State comments received. Should the Commission take this action, it will publish a notice of issuance. The Commission expects that the need to take this action will occur very infrequently.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention:

Docketing and Service Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC, by the above date. Where petitions are filed during the last ten (10) days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1 (800) 325–6000 (in Missouri 1 (800) 342–6700). The Western Union operator should be given Datagram Identification Number 3737 and the following message addressed to John N. Hannon: Petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Jay Silberg, Esq., Shaw, Pittman, Potts and Trowbridge, 2300 N Street NW., Washington, DC 20037.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

For further details with respect to this action, see the application for amendment dated August 23, 1989, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street NW., Washington, DC 20555, and at the Local Public Document Room, Perry Public Library, 3753 Main Street, Perry, Ohio.

Dated at Rockville, Maryland, this 25th day of August 1989.

For the Nuclear Regulatory Commission.

Timothy G. Colburn,

Acting Director, Project Directorate III–3, Division of Reactor Projects—III, IV, V and Special Projects, Office of Nuclear Reactor Regulation.

NUCLEAR WASTE TECHNICAL REVIEW BOARD

Nuclear Waste Technical Review Board; Meeting

Notice is hereby given that a meeting of the Nuclear Waste Technical Review Board will be held on Tuesday, September 12, 1989, from 9 a.m. to 5 p.m., and on Wednesday, September 23, 1989, from 8:30 a.m. to 2 p.m. in the Fairfax Room, Hyatt Regency Crystal City Hotel, 2799 Jefferson Davis Highway, Arlington, VA 22202, telephone (703) 418–1234. Additionally, the first meeting of the Board's Environmental and Public Health Panel will be held on Thursday, September 14, 1989, from 9 a.m. to 4 p.m., in room 258, 2000 L Street NW., Washington, DC 20036.

The meeting on Tuesday, September 12, will be closed to the public in order for the Board to discuss matters solely related to the internal personnel rules and practices of the Board, and discuss information of a personnel nature the disclosure of which would constitute a clearly unwarranted invasion of personal privacy. The meeting on Wednesday, September 13, 1989, will include reports from the Board Panels on Containers and Transportation, Risk and Performance Analysis, and Structural Geology and Geoengineering. On Thursday, September 14, 1989, the Environmental and Public Health Panel will be briefed on environmental regulatory requirements, field activities, monitoring and mitigation, reclamation planning, status of site characterization permitting, repository EIS planning, and a review of regulatory requirements of 40 CFR part 191 draft standards. The public is invited to attend the meetings on September 13 and 14 only as observers. The meetings on these dates will be transcribed and procedures to obtain transcripts will be provided at the meeting. To ensure that adequate facilities are provided for public attendance, persons planning to attend the meetings should contact Helen Einersen on (202) 254–4792 by September 5, 1989, 4:30 p.m. (EST).

Further information on these meetings can be obtained from William W. Coons, Executive Director, Nuclear Waste Technical Review Board, 1111 18th Street NW., Suite 801, Washington, DC 20036, (202) 254–4792.

Dated: August 28, 1989.

William W. Coons,

Executive Director, Nuclear Waste Technical Review Board.

BILLING CODE 6820-AM-M

SECURITIES AND EXCHANGE COMMISSION

[Rel. No. 34–27169; File No. SR–Amex–89–12]

Self-Regulatory Organizations; American Stock Exchange, Inc.; Order Approving Proposed Rule Change Relating to Associate Membership

On June 9, 1989, the American Stock Exchange, Inc. ("Amex" or "Exchange") submitted to the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend its Constitution to expand Associate Membership privileges to include access to the PER/AMOS system as well as to delete some outdated and unnecessary provisions.[3] Amendment No. 1, reflecting Exchange membership approval of the proposal, was filed on August 7, 1989.

The proposed rule change was noticed in Securities Exchange Act Release No. 26964 (June 23, 1989), 54 FR 28132 (July 5, 1989). No comments were received on the proposal.

The Amex has proposed that Associate Membership privileges be expanded to provide access to PER/AMOS. Associate Membership is one category of membership on the Exchange. This type of membership, which dates back to the early days of the Exchange, enables the Associate Member and his or her firm to send orders for execution directly to a Regular Member broker on the trading floor via the telephone line. An Associate Member may not transact business on the Floor itself, or exercise privileges enjoyed by other classes of members. Aside from telephone access to the Floor, an Associate Member's only privilege is that its own name may be given up as the clearing firm. The 169 current Associate Members have paid a one-time fee equal to 5% of the most recent price of a Regular Membership, and annual dues of $750.

---

[1] 15 U.S.C. 78s(b)(1) (1982).

[2] 17 CFR 240.19b–4 (1989).

[3] Amex's Post Execution Reporting Service ("PER") electronically routes market and marketable limit orders in equity securities of up to 2,000 shares to the applicable specialist post. Amex's Options Switching System ("AMOS") allows Amex members to route options market and marketable limit orders of up to 20 contracts directly to the applicable specialist's post.

Since December 1987, when the Board approved modifications to the Exchange's telephone access policy to permit non-members to establish direct telephone access to members' booths on the Floor,[4] Associate Members have had no significant membership advantage over non-members. This has led to the possibility that some Associate Members might discontinue their membership over time, reducing the number of broker-dealers with membership ties to the Exchange. In addition, several Associate Member firms have requested direct access to the Exchange's PER/AMOS electronics order routing system over the past year. The Exchange believes that if PER/AMOS were made accessible to Associate Members, this category of membership would continue to be viewed as an attractive alternative to Regular Membership, and that the Exchange would thus retain an important segment of the member firm community.

For these reasons, the Amex proposes that Associate Membership privileges be expanded to provide access to PER/AMOS. The enhanced Associate Membership would be similar to the New York Stock Exchange's ("NYSE") electronic access membership, which was created in 1978.[5] Existing Associate Members could obtain PER/AMOS privileges on payment of an annual fee, or maintain their current status. All new Associated Members would pay the one-time initiation fee, as well as an annual fee if they wished to access PER/AMOS. As now, Associate Memberships could not be sold or leased. The Board would have authority to extend Associate Member access to other electronic systems that may become available in the future.

The Amex proposes that the one-time initiation fee for Associate Membership remain at 5% of the most recent price of a Regular Membership, and that an annual fee be set yearly at 10% of the average price at which Regular Memberships have been sold for the prior twelve months.

The Amex also proposes to amend the Exchange Constitution to eliminate certain outdated provisions relating to Associate Members. The requirement that an Associate Member be actively engaged as a broker/dealer has been deleted since, as with other types of membership, this is a requirement imposed by the Act. The requirement that Associate Membership be cancelled on election to Regular Membership has been deleted as an unnecessary administrative burden on member firms. The posting requirement has been deleted, to be replaced by a provision in a proposed new Admission of Members section of the Exchange's rules, which has been submitted separately to the SEC for consideration.[6]

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of section 6(b)(5) of the Act.[7] The Commission believes that the proposal is consistent with the section 6(b)(5) requirement that "the rules of the exchange * * * perfect the mechanism of a free and open market." In this regard, the Commission believes that the proposal, by providing Associate Members with significant additional membership advantages, will help attract additional firms to the Amex's market. In particular, the Commission believes that providing Associate Members with access to PER/AMOS will allow the Amex to maintain or widen the number of such memberships, thus providing customers with additional firms through which orders in Amex securities can be routed. In addition, the Commission notes that the Amex's proposal is similar to the NYSE's electronic access membership, which was approved by the Commission in 1978.[8]

It therefore is ordered, pursuant to section 19(b)(2) of the Act,[9] that the proposed rule change is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[10]

Dated: August 23, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34-27159; Files No. SR-AMEX-89-21; SR-PHLX-89-45]

Self-Regulatory Organizations; American Stock Exchange, Inc.; Philadelphia Stock Exchange, Inc.; Notice of Filings and Order Granting Accelerated Approval to Proposed Rule Changes Relating to Margin Requirements for Equity and Index Options

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on August 8, 1989, and August 7, 1989, respectively, the American Stock Exchange, Inc. ("AMEX") and Philadelphia Stock Exchange, Inc. ("PHLX") (collectively "Exchanges"), filed with the Securities and Exchange Commission ("Commission") the proposed rule changes as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organizations ("SROs"). The Commission is publishing this notice to solicit comments on the proposed rule changes from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Changes

The Exchanges propose to extend the current margin requirements for equity and index options until such time as the Commission approves subsequent proposed rule changes filed by the Exchanges pursuant to Section 19 of the Act in accordance with a joint options SRO margin monitoring program which is expected to be implemented in the future.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for the Proposed Rule Changes

In its filing with the Commission, the SROs included statements concerning the purpose of and basis for the proposed rule changes and discussed any comments received on the proposed rule changes. The text of these statements may be examined at the places specified in Item IV below. The SROs have prepared summaries, set forth in Sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statements of the Purpose of, and Statutory Basis for, the Proposed Rule Changes

On May 17, 1988, the Commission approved proposals by the AMEX, PHLX and the other options SROs to amend their rules to increase customer

[10] 17 CFR 200.30–3(a)(12) (1989).

margin requirements for equity and index options.[1] Specifically, the current customer margin requirements are as follows. For broad-based index options, the margin requirement is 100% of the option premium plus 15% of the underlying aggregate index value, less any out-of-the-money amount, with a minimum requirement of the option premium plus 10% of the underlying aggregate index value. For equity options and narrow-based index options, the requirement is 100% of the option premium plus 20% of the underlying product value, less any out-of-the-money amount, with a minimum requirement of the option premium plus 10% of the underlying product value.

The SROs propose to extend the current margin requirements for equity and index options until a routine margin monitoring program expected to be instituted by the options SROs is implemented.[2] The SROs believe that the proposed rule changes are consistent with Section 6(b)(5) of the Act because extending the current margin requirements until a routine margin monitoring program is implemented should assure both firms and investors reasonable financial protection, even if market volatility increases during this period, thereby promoting just and equitable principles of trade and protecting investors and the public interest.

(B) Self-Regulatory Organizations Statement on Burden on Competition

The SROs do not believe the proposed rule changes will impose a burden on competition.

(C) Self-Regulatory Organizations Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The SROs have requested that the proposed rule changes be given accelerated effectiveness pursuant to Section 19(b)(2) of the Act so that the current margin levels can continue uninterrupted.

The Commission finds that the proposed rule changes are consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of Section 6 and the rules and regulations thereunder.[3] In particular, the Commission finds that the proposed rule changes are consistent with Section 6(b)(5) because extending the current margin requirements until a routine margin monitoring program is implemented will assure the financial protection of both firms and investors, even if market volatility increases during this period, thereby protecting investors and the public interest.[4]

The Commission finds good cause for approving the proposed rule changes prior to the thirtieth day after the date of publication of the proposals in the **Federal Register** so that the increased margin requirements can continue uninterrupted. The Commission previously has solicited comments on the proposed margin levels on three separate occasions and has not received any negative comments. Moreover, the proposals extend margin levels that have been in place for over one year and prevents the margins from reverting back to levels that may be inconsistent with the routine margin monitoring program that is being developed.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule changes that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. Section 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC. Copies of such filings also will be available for inspection and copying at the respective principal offices of the above-referenced self-regulatory organizations. All submissions should refer to the file numbers in the caption above and should be submitted by September 18, 1989.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[5] that the proposed rule changes (AMEX–89–21 and PHLX–89–45) are approved, nunc pro tunc as of July 17, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[6]

Dated: August 21, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34-27168; File No. SR-NYSE-89-22]

Self-Regulatory Organizations; Proposed Rule Change by New York Stock Exchange, Inc., Relating to Specifications and Content Outline for the Modified Series 7—UK Representatives Examination

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1) ("Act"), notice is hereby given that on August 10, 1989, the New York Stock Exchange, Inc. ("NYSE" or "Exchange") filed with the Securities and Exchange Commission, ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested parties.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange has filed specifications and a content outline for the Modified Series 7—United Kingdom ("UK") Representatives Examination administered by the Exchange.

III. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these below and is set forth in Sections (A), (B), and (C) below.

---

[1] Securities Exchange Act Release No. 25701 (May 17, 1988), 53 FR 20706, approving the margin increases for a six-month period. In Securities Exchange Act Release No. 26381 (December 21, 1988), 53 FR 52541, the margin requirements were extended for an additional three-month period. In Securities Exchange Act Release No. 26696 (April 4, 1989), 53 FR 14403, and Securities Exchange Act Release No. 26721 (April 12, 1989), 53 FR 16033, the margin requirements were extended until July 17, 1989.

[2] The SROs also have requested that this approval order be applied retroactively to July 17, 1989, to avoid any lapse in the applicability of the higher margin requirements.

[3] 15 U.S.C. 78f(b)(5) (1982).

[4] The Commission also approves the rule change retroactively to July 17, 1989 to avoid any lapse in the applicability of the increased margin requirements.

[5] 15 U.S.C. 78s(b)(2) (1982).

[6] 17 CFR 200.30–3(a)(12) (1988).

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The Exchange and The Securities Association ("TSA") of the United Kingdom have recently completed a joint study of respective qualification requirements for registered representatives in an effort to eliminate duplicative qualification requirements and facilitate cross-qualification of Exchange and TSA member firm personnel.

The Exchange and TSA have agreed that TSA's qualified registered representatives in good standing applying to become registered representatives with Exchange member organizations can satisfy the Exchange's examination requirement under Rule 345.15 by obtaining a passing score of 70% on an abbreviated version of the Series 7 Examination. Such persons will be required to take a special ninety (90) question examination dealing with U.S. securities laws, regulations, sales practices and special products drawn from the Series 7 to become registered with the Exchange. Consideration will also be given to the candidate's previous experience for the purpose of satisfying the Exchange's four-month training requirement pursuant to Rule 345.15.

U.S. Series 7 qualified registered representatives will be able to satisfy TSA qualification requirements by passing TSA's equivalent of the modified Series 7 examination or meeting an experience criterion, *i.e.*, U.S. registered persons with "continuous relevant experience" since January 1, 1987 will be exempt by TSA from the examination requirement. Those without such experience will have to take the U.K. test.

Those individuals passing the modified Series 7 examination will be eligible to sell all securities except municipal securities. Persons seeking municipal securities registration will be required to pass the standard Series 7 or the modified exam plus the Series 52.

The statutory basis for the proposed rule change is section 6(c)(3)(B) of the Act which requires the Exchange to prescribe standards of training, experience and competence for persons associated with Exchange members and member organizations.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the specifications or content outline for the modified Series 7—UK Representatives Examination will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement of Comments on the Proposed Rule Change Received From Members, Participants or Others

Comments were neither solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding, or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve the proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any persons, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552 will be available for inspection and copying at the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the NYSE. All submissions should refer to File No. SR–NYSE–89–22 and should be submitted by September 18, 1989.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Dated: August 22, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010–01–M

[Rel. No. 34–27167; File No. SR–CBOE–89–17]

Self-Regulatory Organizations; Proposed Rule Change by the Chicago Board Options Exchange, Inc. Relating to the Extension of Its Modified Trading System Pilot

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on August 3, 1989, the Chicago Board Options Exchange, Inc. ("CBOE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend CBOE Rule 8.13 to continue for two additional years its Modified Trading System ("MTS") pilot program. (Italic indicate additions; brackets indicate deletions.)

Rule 8.13 Modified Trading System

(a) From September 22, [1987] *1989* through September 22, [1989] *1991*, the Exchange will *continue the* pilot *of* a modified trading system. The pilot will be used, at the discretion of the Exchange, in any one or more of the option classes opened for trading at the Exchange after May 1, 1987. Option classes opened for trading prior to May 1, 1987, or replacements thereof, will not become a part of this pilot except to the extent authorized by a membership vote.

(b) through (d). No change.

* * * Interpretations and Policies .01 through .02. No change.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The test of these statements may be examined at the places specified in Item IV below and is set forth in sections (A), (B), and (C) below.

(A) Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

The MTS provides for the assignment of a designated primary market maker ("DPM") to specific option classes.

The DPM's functions are a cross between those of a specialist and those of a regular market maker. To date the CBOE has assigned a DPM in 31 option classes. The proposed rule filing is intended to extend the MTS pilot program for a maximum additional two years or until such lesser time when the pilot becomes permanent. While the pilot has been successful, the Exchange intends to implement changes to the pilot through subsequent filings. As such, the CBOE believes the two-year extension does not constitute a significant change and qualifies for accelerated approval in that it is an existing rule of the Exchange.

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder, and in particular, the requirements of Section 6. Specifically, the CBOE believes the proposed rule is consistent with Section 6(b)(5) of the Act, which provides, among other things, that the rules of the Exchange are to be designed to promote just and equitable principles of trade.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose a burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has requested that the proposed rule change be given accelerated effectiveness pursuant to section 19(b)(2) of the Act so that the pilot program can continue without interruption.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and in particular, the requirements of section 6 and the rules and regulations thereunder. Specifically, the Commission believes that the proposed rule change is consistent with section 6(b)(5) because it will benefit investors and perfect the mechanism of a free and open market by continuing a pilot program designed to enhance the CBOE's overall marketmaking capabilities. In addition, the program has not been the subject of any complaints nor resulted in any performance or disciplinary action.

The Commission finds good cause for approving the proposed rule change prior to the thirteenth day after the date of publication of notice of filing thereof so that the pilot program can continue without interruption. In addition, the Commission previously has solicited comments on this pilot program and has not received any negative comments on its operation. Moreover, this program has operated effectively and generally has been well received.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC. Copies of such filing will also be available for inspections and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by September 15, 1989.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act,[1] that the proposed rule change (SR–CBOE–89–17) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[2]

Dated: August 22, 1989.

Jonathan G. Katz,

Secretary.

Self-Regulatory Organizations; MBS Clearing Corporation; Notice of Filing of Proposed Rule Change Relating to Trade Processing and Participation Standards

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on March 31, 1989, MBS Clearing Corporation filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III, below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Accounts and Account Groups. A new Rule 1 is added to Article II. Article II, Rule 1, Section 1, provides for the maintenance of separate Accounts for different types of transactions: (i) Trade-for-Trade Accounts for processing transactions through the Trade-for-Trade System only, (ii) SBO Accounts for processing transactions through the SBO System and the Trade-for-Trade System, (iii) Option Accounts for recording Option Contracts and (iv) such other types of Accounts as may be specified in the Procedures. Article II, Rule 1, Section 2, permits conversion of an SBO Account to a Trade-for-Trade Account and *vice versa* upon prior notice to the Corporation and cancellation of all transactions in the original Account and re-entry of the transactions in the new Account.

The former defined term "Non-Dealer" in Article I, Rule 1, has been deleted; for purposes of the Rules, a Participant is either a Broker or a Dealer. Under Article II, Rule 1, Section 1, Accounts of a Participant acting as a Broker on behalf of Participant Dealers (newly defined in Article I, Rule 1, as Broker Accounts) are maintained in a Broker Account Group, and Accounts of a Participant acting as a Dealer (newly defined in Article I, Rule 1, as Dealer Accounts) are maintained in a Dealer Account Group. If a Participant maintains two or more Account Groups, each Account Group will be treated separately for purposes of calculating Account maintenance fees, deposits to the Participants Fund and Market Margin Differential Deposits. However, under Article II, Rule 1, Section 1, a Participant with two or more Account Groups bears full responsibility for transactions in all of its Account

BEST COPY AVAILABLE

Groups. See "Participants Fund Deposits," below.

Transactions by Brokers. The proposed Rule changes clarify the processing of transactions entered by Brokers acting on behalf of Participant Dealers, which previously were addressed only in Article II, Rule 3, Section 6, captioned "Substitution of Participants" (which is now deleted). Under Article II, Rule 3, Section 1, a transaction may be entered as a Broker Give-Up Trade (newly defined in Article I, Rule 1), with the Broker submitting pre-compared trade input on behalf of both the selling and the purchasing Dealers for which the Broker is acting. Pursuant to Article II, Rule 3, Section 3, all of such transactions are reflected in an Audit Report (newly defined in Article I, Rule 1) delivered to the Broker. Under Article II, Rule 3, Section 2, and Article II, Rule 6, in a Broker Give-Up Trade the Broker initially will be identified in Purchase and Sale Reports and Open Commitment Reports as the Original Contra-Side Participant of both Dealers on whose behalf it is acting. On a prescribed Broker Give-Up Date, the Dealers will be paired with one another. Pursuant to Article II, Rule 3, Section 3, the Dealers will receive a Broker Give-Up Report (newly defined in Article I, Rule 1) reflecting such pairing, while pursuant to Article II, Rule 3, Section 2, and Article II, Rule 6, the Dealers will receive new Purchase and Sale and Open Commitment Reports identifying them as the contra-side Participants.

Under Article II, Rule 3, Section 1, any Participant entering a transaction as a Broker Give-Up Trade warrants that it is authorized to do so by both the selling and the purchasing Dealers, and each such Dealer is liable as principal notwithstanding the temporary designation of the Broker as Original Contra-Side Participant. Article IV, Rule 4 is revised to make it clear that a Broker that enters a transaction other than as a Broker Give-Up Trade remains liable as principal.

The Rules continue to provide that the Purchase and Sale Report constitutes the sole confirmation of transactions between Original Contra-Side Participants that are processed by the Corporation. However, Article II, Rule 3, Section 4, is amended to make it clear that the Rules do not relieve a Broker of any obligation to confirm transactions effected by it on behalf of a Dealer.

Participants Fund Deposits. Currently, the Rules require each Participant to deposit in the Participants Fund a minimum of $10,000 in cash plus the amount of any Market Margin Differential computed by the Corporation. Under revised Article IV, Rule 1, a Participant is required to make a Basic Deposit (newly defined in Article I, Rule 1) of no less than $10,000 per Account and a Minimum Market Margin Differential Deposit (also newly defined in Article I, Rule 1) of $2,500,000 for each Account Group; provided that the Corporation's Board of Directors may, at its option, based on the recommendation of the Corporation's Risk Management Committee, increase the amount of either the Basic Deposit or the Minimum Market Margin Differential Deposit and exempt any Broker Account Group from the Minimum Market Margin Differential Deposit requirement. Under Article III, Rule 1, Section 12, if a Participant ceases to meet the financial requirements for participation, the Board of Directors may condition the Participant's continued participation on an increase in its minimum required deposits to the Participants Fund for any of its Account Groups.

Under Article IV, Rule 2, Section 4, the Basic Deposit must be made in cash. Minimum Market Margin Differential Deposits may be in the form of cash, approved securities or letters of credit. Article IV, Rule 2, Section 6, is amended to clarify a Participant's right to substitute securities, while Article IV, Rule 2, Section 7, is amended to clarify a Participant's right to substitute letters of credit, in each case upon prior notice to and approval by the Corporation. Article II, Rule 2, Section 5, is amended to provide for the distribution of investment income, less an amount to compensate the Corporation for its handling costs, only on cash deposits in excess of Basic Deposits.

Market Margin Differential Deposits. Article I, Rule 1, is amended to distinguish between the Market Margin Differential and the Market Margin Differential Deposit. The former is the amount calculated by the Corporation pursuant to Article IV, Rule 2, Section 1, while the latter is the amount a Participant is required to deposit to the Participants Fund pursuant to new Article IV, Rule 2, Section 2. Under Article IV, Rule 2, Section 2, the Market Margin Differential Deposit for any Account Group will be based on the net Market Margin Differential for all Accounts included in the Account Group, reduced by the amount of the Minimum Market Margin Differential Deposit to the Participants Fund with respect to that Account Group. Under Article IV, Rule 2, Section 2, if a Participant has more than one Account Group, any excess Market Margin Differential Deposit for one Account Group may, upon written request, be used to offset a deficiency in any other Account Group.

Article IV, Rule 2, Section 1, is amended to make it clear that Market Margin Differential is computed not only with respect to net long or net short positions in a particular Settlement Class, but also with respect to net zero positions, in which purchases have been offset by sales. Market Margin Differential with respect to net zero positions is equal to the net excess of original contract value of the Participant's purchases over original contract value of its sales.

Article I, Rule 1 provides new definitions for "Put Option Contract" and "Call Option Contract." Put Option Contracts or Call Option Contracts for Securities of the same typoe and coupon rate and having the same Expiration Date are referred to in Article I, Rule 1 by the new term "Option Class." The concept of Option Class is used in Article IV, Rule 2, Section 1 to clarify the computation of Margin Differential with respect to Option Contracts.

Under Article II, Rule 4, Section 6; Article III, Rule 3, Section 4; and Article IV, Rule 3 and 5, if the Corporation ceases to act for a Participant, or a Participant fails to discharge any liability to the Corporation for any Account Group, the Corporation may utilize the Participants Fund deposits with respect to any of the Participant's Account Groups to cover any losses or discharge any liability to the Corporation.

Under the Corporation's existing Rules, if the Corporation ceases to act for a Participant, the Corporation will use the Participant's contributions to the Participants Fund and the proceeds for liquidation of its open commitments for settlement to satisfy loss claims for SBO Contra-Side Participants and Original Contra-Side Participants. Revised Article III, Rule 3, Section 4, clarifies the Corporation's intenstion to use such funds first to satisfy the loss claims of SBO Contra-Side Participants which were not also Original Contra-Side Participants, assessing Original Contra-Side Participants to the extent that such funds are insufficient to cover the loss claims of such SBO Contra-Side Participants in full. Any remaining funds will be used to satisfy the loss claims of Original Contra-Side Participants, including SBO Contra-Side Participants which are also Original Contra-Side Participants.

SBO Transactions. The proposed Rule changes make a number of clarifications in, the operation of the SBO System. Currently, trades having a face value of less than $1,000,000 or not evenly divisible by $1,000,000 are said to be ineligible for settlement in the SBO System; such provisions in Article II, Rule 4, Section 1, will be replaced by reference to the Procedures, which in turn will refer to trades in amounts which do not satisfy the PSA Guidelines. To eliminate confusion with SBO Trades (the trades resulting from netting of a Participant's purchases and sales within a particular Settlement Class), "SBO-Destined Trade" is newly defined in Article I, Rule 1, to refer to a transaction intended for netting through the SBO System. The definition of "SBO Trade" in Article I, Rule 1, is modified to make it clear that a Participant's transactions in a particular Settlement Class may net to more than one Long or Short SBO Trade. Finally, in Article I, Rule 1, a former distinction in the definition of "Impending Settlement Date" between transactions in the SBO and Trade-for-Trade Systems has been eliminated; the term refers to any transaction with a Settlement Date scheduled to occur within the next 30 days.

The proposed Rule changes describe in greater detail the Corporation's current procedure for netting SBO-Destined Trades to produce SBO Trades. Under Article II, Rule 4, Section 2, each Participant's SBO-Destined Trades are netted by Settlement Class as follows:

(a) First, the Corporation creates Netted Positions (newly defined in Article I, Rule 1) by offsetting the Participant's purchases from and sales to each of its Original Contra-Side Participants.

(b) Second, to the extent that SBO-Destined Trades cannot be eliminated through Netted Positions, the Corporation creates Net-Out Positions (also newly defined in Article I, Rule 1) by offsetting the Participant's purchases form the sales to different Original Contra-Side Participants.

(c) Third, to the extent that SBO-Destined Trades cannot be eliminated through Netted or Net-Out Positions (i.e., remain Net Open Positions, as newly defined in Article I, Rule 1), the Corporation creates one or more SBO Trades between the Participant and another Participant, which may or may not have been its Original Contra-Side Participant.

The current Rules provide that SBO Trades are settled at the SBO Price determined by the Corporation. The proposed amendment to Article II, Rule 4, Section 2, provides more specifically that SBO Trades are settled at the Class Average Price (CAP) (newly defined in Article I, Rule 1), which is the average contract price of all SBO-Destined Trades in the Settlement Class.

Article II, Rule 4, Section 3, as proposed to be amended, expands and clarifies the Corporation's current method of computing the SBO Market Differential, which is redefined accordingly in Article I, Rule 1. The Corporation begins by computing a Firm Class Average Price (FCAP) (newly defined in Article I, Rule 1) for all of a Participant's sales to, or purchases from, a particular Original Contra-Side Participant. The FCAP is the average contract price of such sales or such purchases. The Participant's SBO Market Differential is equal to the sum of the following:

(a) For each of its Netted Positions, the difference (positive or negative) between the FCAPs for its purchases and the FCAPs for its sales; plus or minus

(b) For each of its Net-Out Positions, the difference (positive or negative) between the FCAPs for its purchases and the FCAPs for its sales; plus or minus

(c) For each of its Net Open Positions, the difference (positive or negative) between the Participant's FCAP for its purchase or sale transactions with the Original Contra-Side Participant and the CAP for its SBO Trade.

On the Settlement Date, a Participant with a negative SBO Market Differential is required to pay such negative amount to the Corporation, while a Participant with a positive SBO Market Differential is entitled to receive such positive amount from the Corporation.

Following clearance of an SBO Trade, Participants are required to submit to the Corporation an SBO Notification of Settlement. If only one Participant submits clearance information or the information submitted by both Participants does not compare, the proposed Rule changes provide in Article II, Rule 7, Section 2, for an SBO Pool Uncompared/Advisory Report (newly defined in Article I, Rule 1); the current Uncompared/Advisory Report, as redefined in Article I, Rule 1, will list only uncompared trade input.

The proposed Rule changes revise Article II, Rule 4, Sections 4 and 5, to make it clear that any Cash Adjustment (formerly referred to as the SBO Cash Adjustment) payable following clearance (including any Broker Adjustment payable by or to Dealers on whose behalf a Broker has acted) is based on the difference between the amortized value of Securities delivered and the Par Amount, rather than the amount reported to the Corporation.

Following clearance of an SBO Trade, new Article II, Rule 8, Section 2, provides that the Corporation will ascertian whether the delivery conformed with the PSA Guidelines. If not, the delivery will be reflected in an SBO Pool Reject Report (newly defined in Article I, Rule 1).

Procedures and PSA Guidelines. The current Rules contain detailed specifications for trade input (Article II, Rule 2, Section 1) and reconciliation of input discrepancies (Article II, Rule 2, Section 4); exercise of Option Contracts Article II, Rule 2, Section 1); settlement reporting (Article II, Rule 3, Section 2, and Article II, Rule 4, Section 2) and reconciliation of settlement discrepancies (Article II, Rule 6); good delivery (Article II, Rule 7, Sections 2 and 3); payment of, and due bills for, principal and interest (Article II, Rule 7, Sections 5 and 6); and reclamations (Article II, Rule 9). The proposed Rule changes replace such specifications with references to the Procedures and the PSA Guidelines. The current Rules also contian specific time frames for a variety of actions to be taken by Participants and the Corporation. The proposed Rule changes substitute references to times specified in the Procedures. These include Article II, Rule 3, Section 1 (submission of trade input), 2 (delivery of Purchase and Sele Report) and 5 (verification and correction of discrepancies in Purchase and Sale Reports); Article II, Rule 5 (furnishing of settlement information to original Contra-Side Participants in Trade-for-Trade transactions); and Article III, Rule 3, Section 4 (liquidation of open commitments of Participants for which the Corporation has ceased to act).

Participation Standards. Article III, Rule 1, Section 1, makes it clear that entities eligible for participation include not only broker-dealers registered under Section 15 of the Securities Exchange Act of 1934, but also government securities broker-dealers registered under Section 15C of the Act. Consistent with that change, Article III, Rule 1, Section 10, permits government securities broker-dealers to satisfy certain financial reporting obligations by submitting to the Corporation copies of their Form G–405 Reports on Finances and Operations to the Department of the Treasury.

Article III, Rule 1, Section 1, clarifies provisions relating to use of the net worth of a parent guarantor to satisfy the Corporation's net worth standards. Financial reporting requirements in Article III, Rule 1, Section 10, are expressly made applicable to parent guarantors. Article III, Rule 1, Section 8, is amended to require a Participant to submit, in addition to specifically enumerated financial reports, such other information pertaining to the financial condition of the Participant or its parent guarantor as the Corporation may reasonably request.

The Corporation's current practice of requiring Participants to respond to monthly "Audit Packages" is incoporated in new Article V, Rule 4, section 4, along with a reference to sanctions for failure to respond. The term "Audit Package" is newly defined in Article I, Rule 1, as a request for confirmation of Open Commitment Reports.

Miscellaneous Changes

Changes in Terminology. A number of definitions that formerly appeared in Article I, Rule 1, have been deleted as unnecessary, either because of simplification of the Rules (FHLMC Agreement, FHLMC Securities, FNMA Securities, GNMA Securities, Par Amount, Price, Principal and Interest Due Bill, Principal and Interest Payment Date, Reclamation, Record Date, Repurchase Agreement) or because of changes in trading practices in the mortgage-backed securities industry (Delayed-Delivery Contract, Graduated Payment Mortgage, Guaranteed Coupon, Par/Price Cap, Specified Transaction).

The proposed Rule changes also modify certain definitions previously used and add new definitions. The term "Settlement Date" has been redefined in Article I, Rule 1, to refer to the PSA-designated settlement date for SBO transactions and the date designated by the parties for Trade-for-Trade transactions. In some instances, the word "settlement" is replaced by the word "clearance"—defined in Article I, Rule 1, as the acutal settlement of a transaction as reported to the Corporation, which may occur on the PSA-designated Settlement Date or another date.

Finally, references to certian reports in Article I, Rule 1, have been changed to correspond to the exact titles given to such reports by the Corporation's computer system. These include the Notification of Settlement Summary (formerly referred to as the Notification of Settlement Report) and Uncompared/Advisory List (formerly referred to as the Uncompared/Advisory Report).

Additional Services. To accommodate possible future services, the term "Securities" has been expanded in Article I, Rule 1, to cover not only Mortgage-Backed Securities and Government Securities but also any other asset-backed securities designated by the Corporation as Eligible Securities. Under Article I, Rule 2, Eligible Securities are those determined by the Corporation to be eligible for comparison, recording, clearance or other services provided by the Corporation—not merely clearance through the SBO or Trade-for-Trade systems (which will be used only for transactions in Mortgage-Backed Securities). Conforming changes have been made throughout the Rules, including Article II, Rule 1, Section 1; Article II, Rule 2; Article II, Rule 3, Sections 2 and 6; Article II, Rule 6; Article II, Rule 8, Section 1; Article II, Rule 9; Article III, Rule 3, Sections 2 and 4; and Article V, Rule 7, Section 1. The Corporation does not currently propose to designate additional types of Securities as Eligible Securities; if and when it does so, the nature of the services provided with respect to such Securities will be specified by amendment to the Corporation's Rules and/or its Procedures.

Sale of Depository Division. The Corporation contemplates in the near future closing the sale of its Depository Division. Upon the closing of that sale, references to separate Clearing and Depository Divisions will be unnecessary. Accordingly, the terms "Clearing Division" and "Depository" have been deleted from Article I, Rule 1, and throughout the Rules. All references to the Clearing Division have been replaced with references to the Corporation. References to the MBSCC Clearing Division Pledgee Account in the Depository Division are also deleted from Article I, Rule 1, and Article IV, Rule 2, section 6, and a provision authorizing the Clearing Division to make available to the Depository Division any excess deposits a dual Participant may have made to the Participants Fund has been deleted from Article III, Rule 1, section 3.

Billing. Article V, Rule 2, section 3, is modified to codify the Corporation's recently implemented practice of billing, on behalf of the PSA, Participants which are members of the PSA for fees and charges imposed by the PSA.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Section (A), (B), and (C) below, of the most significant aspects of such statements. Further statements are available in the file available at the Commission.

(A) Self-Regulatory Organization's Statement of the Purposes of, and Statutory Basis for, the Proposed Rule Change

The proposed Rule changes are intended, among other things, to (1) provide for maintenance of separate Account Groups for Participants acting as Brokers or as Dealers, each containing separate Accounts for SBO transactions, Trade-for-Trade transactions, Option Contracts and other transactions; (2) clarify existing provisions and add new provisions relating to transactions of Participants acting as Brokers; (3) provide additional collateral security for performance of Participants' settlement obligations by increasing minimum required deposits to the Participants Fund; (4) clarify provisions relating to Market Margin Differential Deposits to the Participants Fund and application of the Participants Fund; (5) add further provisions relating to the processing of SBO transactions not included in the Corporation's prior Rule filing related to the SBO System (SR-MBS-88-19, filed November 23, 1988); (6) provide additional flexibility by relegating to the Procedures and PSA Guidelines certain matters previously addressed in detail in the Corporation's Rules; (7) clarify participation standards and financial reporting requirements; and (8) effect miscellaneous changes designed to conform terminology to current usage, to accommodate possible future services and to reflect the intended sale of the Corporation's Depository Division.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Corporation does not believe that any burden will be placed on competition as a result of the proposed Rule changes.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

The proposed Rule changes effecting substantive changes in the practice of the Corporation were described in an Administrative Bulletin to Clearing Division Participants dated November 22, 1988. Having received no comments, the Corporation redistributed the Administrative Bulletin on or about December 5, 1988. Again, no comments were received.

The Corporation announced in an Administrative Bulletin dated January 24, 1989 its intention to begin billing, on behalf of the PSA, Participants which are members of the PSA for charges and fees imposed by the PSA. No rerponses from Participants were received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-referenced self-regulatory organization. All submissions should refer to File No. SR-MBS-89-3 and should be submitted by September 15, 1989.

For the Commission by the Division of Market Regulations, pursuant to delegated authority.

Dated: August 22, 1989

Jonathan G. Katz,

Secretary.

BILLING CODE 8010-01-M

[34-27173; SR-MSE-89-7]

Self-Regulatory Organizations; Proposed Rule Change by Midwest Clearing Corporation Relating to the Fee for Automated Customer Account Transfer Service Function, Transfer of Residual Credit Positions

August 23, 1989.

Pusuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on August 16, 1989 the Midwest Clearing Corporation ("MCC") filed with the Securities and Exchange Commission the proposeed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Midwest Clearing Corporation ("MCC") proposes to institute a fee for its newly created Automated Customer Account Transfer Service ("ACATS") function, Transfer of Residual Credit Positions. The service will be priced at $0.12 per item entered into the MST System.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B) and (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule change is designed to establish a fee for the Transfer of Residual Credit Positions, a service recently provided to MCC Participants through the ACATS system. This new function allows the delivering broker to initiate transfer of cash or securities which have been credited to an account after that account has been transferred via ACATS. (See SR-MCC-89-3)

The new fee is consistent with section a of the Securities Exchange Act of 1934 (the "Act") in that it provides for the equitable allocation of reasonable dues, fees and other charges among MCC's Participants.

(B) Self-Regulatory Organization's Statement on Burden on Competition

Midwest Clearing Corporation does not believe that any burdens will be placed on competition as a result of the proposed rule change.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to section 19(b)(3) of the Securities Exchange Act of 1934 and subparagraph (e) of Securities Exchange Act 19b-4. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purpose of the Securities Exchange Act of 1934.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities & Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying at the principal office of the above-referenced self-regulatory organization. All submissions should refer to file number SR-MCC-89-7 and should be submitted by September 20, 1989.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34–27175; File No. SR–MSRB–89–4]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Order Approving Proposed Rule Change by the Municipal Securities Rulemaking Board Relating to Professional Qualifications

On June 15, 1989, the Municipal Securities Rulemaking Board ("MSRB") submitted a proposed rule change (File No. SR–MSRB–89–4) pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") to revise examination specifications and a study outline for the Municipal Securities Representative Qualification Examination (Series 52).[1] The MSRB also requested that the Commission delay the effectiveness of the proposed rule change until January 1, 1990, in order to permit the Series 52 question bank to be updated to reflect the revised test specifications and study outline and to provide time for information concerning the revised study outline to be circulated to the industry.

Notice of the proposed rule change was given in Securities Exchange Act Release No. 27016 (July 7, 1989), 54 FR 30488. The Commission received no comments on the proposal. This order approves the proposal.

In its filing with the Commission, the MSRB stated that specific subjects and questions have been updated from time to time in the series 52 examination to reflect changes in the municipal securities industry or in Board rules. At this time, however, the Board's Professional Qualifications Advisory Committee ("PQAC")[2] determined that a comprehensive review of the current study outline should be undertaken, both to ensure that the subject matter reflected current products and practices and to realign some of the topics for clarity. The Series 52 examination contains questions not only on municipal securities and the municipal markets, but also on U.S. Government, federal agency and money market instruments, government economic policy and behavior of interest rates, anjd applicable federal securities laws and regulations.

To achieve the PQAC's objective of the study outline reflecting current products and practices and ensuring clarity, some topics have been revised (*e.g.,* the section on "Revenue Bonds" was expanded and reformatted to reflect the increasing use of these bonds in the market). The most significant revision made to the current study outline concerns the topic of customer suitability. The current examination tests suitability indirectly by testing the components of suitability (*e.g.,* product knowledge, tax considerations, and Board rules). The revised study outline contains the topic "Customer Suitability Considerations" as a direct means to test suitability. This will be achieved by requiring the candidates to answer "application" questions by making suitability determinations with respect to a given customer's finance profile, investment objectives, tax status and similar information.

The examination specifications specify how the questions asked on each examination are to be allocated among the various topics. In general, the PQAC concluded that the allocation of questions in the current examination specificaitons are appropriate, although some changes were made to increase questions on some topics and to decrease the number in other topic areas. The revised question allocations to Part Two (U.S. Government, Federal Agencies, and Other Financial Instruments) reflects a realignment of the subject matter. The revised examination specifications have been filed under a separate letter dated June 14, 1989, requesting confidential treatment to Jonathan G. Katz, Secretary, SEC.

The revised examination will remain a three-hour, 100-question examination administered by the National Association of Securities Dealers, Inc. using Control Data Corporation's PLATO computer system.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the MSRB. In particular, the Commission finds that the proposal is consistent with section 15B(b)(2)(A) which requires the MSRB to propose and adopt the rules that:

> provide that no municipal securities broker or municipal securities dealer shall effect any transaction in, or induce or attempt to induce the purchase or sale of, any municipal security unless * * * such municipal securities broker or municipal securities dealer and every natural person associated with such municipal securities broker or municipal securities dealer meets such standards of training, experience, competence, and such other qualifications as the Board finds necessary or appropriate in the public interest or for the protection of investors.

Section 15B(b)(2)(A) of the Act also provides that the Board may appropriately classify municipal securities brokers and municipal securities dealers and their associated personnel and require persons in any such class to pass tests prescribed by the Board.

It is therefore ordered, Pursuant to section 19(b)(2) of the Act, the File No. SR–MSRB–89–04, be, and hereby is, approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority, 17 CFR 200.30–3(12).

Dated: August 24, 1989.

Shirley E. Hollis,

Assistant Secretary.

FR Doc. 89–20419 Filed 8–29–89; 8:45 am]

BILLING CODE 8010-01-M

---

[1] An application for confidential treatment of the revised examination specifications was filed with the Secretary of the Commission on June 14, 1989.

[2] The PQAC is composed of the Representative Examination Subcommittee and the principal Examination Subcommittee. The Subcommittees are composed of individuals with extensive experience in the securities industry. The committee members are employed by securities firms and bank dealers and come from diverse geographic locations.

Self-Regulatory Organizations; Filing of Proposed Rule Change by the National Securities Clearing Corporation Regarding a Modification of Automated Customer Account Transfer Service Rules

August 23, 1989.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on August 14, 1989, NSCC filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II, and III below, which Items have been prepared by National Securities Clearing Corporation (NSCC). The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change consists of a modification of NSCC's Automated Customer Account Transfer Service Rules to provide for the automated transfer of Fund/SERV eligible book share mutual fund assets.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, NSCC included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. NSCC has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

(a) The purpose of the proposed rule filing is to enhance NSCC's Automated Customer Account Transfer Service (ACAT Service) in order to permit the automated transfer of book share mutual fund assets for mutual funds associated with NSCC Fund Members and Mutual Fund Processors (hereinafter referred to as "Eligible Shares"). The enhancement will occur in two phases.

Under Phase I, only Receiving and Delivering Members (as those terms are used in the ACAT rule) who request to be included will be permitted to transfer Eligible Shares in an automated format. To be eligible to participate both the Receiving and Delivering Members will be required to input data to NSCC in automated format. In addition, NSCC will create standing transfer instructions which will be used in the event the Receiving Member does not properly and timely submit transfer instructions to NSCC.

NSCC expects to implement Phase II sixty days after implementation of Phase I. In Phase II all Members will become eligible Receiving Members, but to be eligible they must continue to have automated input capabilities. Receiving Members will also be given the opportunity to provide NSCC with standing transfer instructions.

Currently mutual fund assets, for the purposes of the ACAT Service, are categorized by NSCC as non-CNS eligible. If mutual fund shares are to be transferred, the Delivering and Receiving Members are debited and credited respectively, on settlement day, for the value of the mutual fund assets (along with the debits and credits for the value of all other non-CNS eligible assets), while the actual transfer of the mutual fund shares occurs directly between the Receiving and Delivering Members outside the ACAT Service.

Under the proposed enhancement, if an eligible fund asset is held in book share form and the Delivering Member submits all asset details in automated format, the transfer will be processed through NSCC's Fund/SERV Service. Neither the Deliverer nor the Receiver will be required to be a Fund/SERV user in order for this to occur. If shares are held in physical form or if the shares are not Eligible Shares they will continue to be transferred directly between the Receiving and Delivering Members outside the ACAT Service.

In order for the automated transfer of Eligible Shares to occur Delivering Members will be required to: (1) Submit all customer account asset details in automated format and (2) submit certain additional asset details pertaining to the mutual fund shares. These details are: (1) The customer account number at the Mutual Fund, (2) whether the number was assigned by the Delivering Member or the Mutual Fund, (3) a Networking control indicator (if the account is a Networking Account), (4) whether the account is held in customer or street name, (5) whether the shares are physical or book shares[1] and (6) the registered representative's identity. If the asset details are submitted in paper format the entire account process will be pended, the Receiving and Delivering Members will be notified and the Deliverer will be required to re-submit the details in automated format. NSCC will report the mutual fund asset details along with the other account asset details, to the Receiving and Delivering Member. Eligible mutual fund shares which are held in book share form, will be set forth in a separate category on the asset detail report.

Currently, a Receiving Member must, within two business days of receipt of the asset detail report, accept the account, request the Delivering Member to make adjustments, or reject the account. Under the proposed rule change the Receiving Member will also be required to submit transfer instructions for those mutual fund shares to be processed through Fund/SERV. If a Receiving Member makes an adjustment to the account the Receiving Member will be allowed two additional business days to submit the transfer information. If the Receiving Member fails to submit the instructions by the required time, or submits them incorrectly, NSCC will provide pre-established (standing) transfer instructions to the Fund Member or Mutual Fund Processor.

Initially, the standing instructions will be derived by NSCC; eventually the Receiving Member will be able to establish his own standing transfer instructions. In the event the Receiving Member chooses not to provide standing instructions, the NSCC derived standing instructions will be used. A Registration Detail Report will be produced, advising Members of the transfer instructions received by the corporation, errors if any in such instructions and where no instructions were received, the standing instructions which will be sent to the Fund Member or Mutual Fund Processor. The Receiver will have the opportunity within the two business day time period to submit changes to this information prior to the instructions being submitted to the Fund Member or Mutual Fund Processor. The Delivering Member will continue to be debited on settlement day (as indicated on the ACATS Settlement Report) for the value of the Mutual fund asset and the Receiving Member will be credited with the value.

NSCC will transmit through Fund/SERV, to the Fund Member or Mutual Fund Processor, the transfer instructions and details of the Eligible Shares. The Fund Member or Mutual Fund Processor will be obligated to confirm or reject the data. Through ACATS, NSCC will notify the Receiving and Delivery Members, on a Statistics Report, of those items which have been confirmed or rejected and those to which there has not been a response. The Fund Member or Mutual Fund Processor will be reminded, on a daily basis, of the items which it has not confirmed or rejected. These pending items will be continually carried forward in the system. If the Member or Mutual Fund Processor rejects a Fund/SERV eligible book share mutual fund asset, NSCC, as part of the ACAT Service, will issue Receive and Deliver orders. The actual transfer of these rejected items will be required to be accomplished between the parties, outside the ACAT and Fund/SERV Services. On the day following the day a Fund Member or Mutual Fund Processor confirms Eligible Shares, NSCC will debit the Receiver and credit the Deliverer for the value of the assets as indicated on the Statistics Report. This reversing debit and credit entry will be separately set forth on the Member's settlement statement.

(b) The proposed rule change provides for the automated transfer of Fund/SERV eligible book share mutual funds as part of a transfer of a customer account from one brokerage firm to another. The rule change therefore, facilitates the prompt and accurate clearance and settlement of securities transactions and is consistent with the requirements of the 1934 Act and the rules and regulations thereunder applicable to NSCC.

---

[1] If the Delivering Member indicates physical shares, then transfer will not occur in automated format, but as it does today.

B. Self-Regulatory Organization's Statement on Burden on Competition

NSCC does not believe that the proposed rule will have an impact or impose a burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments have been solicited or received. NSCC will notify the Commission of any written comments received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reason for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule changes should be approved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change that are filed with Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to file number SR-NSCC-89-12 and should be submitted by September 20, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34-27171 File No. SR-PSE-89-15]

Self-Regulatory Organizations; Pacific Stock Exchange, Inc.; Order Approving Proposed Rule Change Relating to the Trading Privileges of Holders of Special Memberships

On June 6, 1989, the Pacific Stock Exchange, Inc. ("PSE" or "Exchange") submitted to the Securities and Exchange Commission ("SEC" or "Commission"), pursuant to section 19(b)(1) of the Act,[1] and Rule 19b-4 thereunder,[2] a proposed rule change to describe more clearly the trading privileges of holders of Special Memberships.

The proposed rule change was noticed in Securities Exchange Act Release No. 26961 (June 23, 1989), 54 FR 28140 (July 5, 1989). No comments were received by the Commission on the proposed rule change.

The PSE proposes to amend Rule IX, section 13, to describe more specifically the limitations on trading privileges accorded to holders of Special Memberships. Currently, under section 13, holders of Special Memberships issued by the Exchange are entitled to admission to the options trading floor and registration as a Market Maker or Floor Broker in options on the PSE Technology Index, Financial News Composite Index ("FNCI") and such other new products as the Board may determine to include.

The PSE proposes to add new language, in the form of Commentary .01 to section 13, to make clear that a market maker holding a special membership, while present on the options trading floor, may not place orders in option classes other than that for which the market maker is registered. In particular, Commentary .01 states that a market maker holding a special membership may bid, offer, purchase, write, and enter orders for his market maker account only in FNCI options series currently open for trading. The PSE has removed the reference to the PSE Technology Index in section 13 because that product is no longer traded. If a market maker holding a special membership wishes to place an order in an option class other than that for which he is registered, he must do so from off the floor. The market maker must identify the order as a customer order and any position established that was entered from off the floor will be placed in the market maker's investment account and subject to applicable customer margin. The PSE states that these specific procedures are designed to preclude any unfair competitive advantage over public orders.

The PSE proposes to add new Commentary .02 to section 13 that provides that floor brokers holding special memberships are limited to accepting and executing orders on option contracts on the FNCI.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, with the requirements of section 6 [3] and the rules and regulations thereunder. Holders of special memberships are allowed to pay reduced fees in connection with the application for and acquisition or transfer of such memberships. In return, holders of special memberships are limited in the rights and privileges provided for regular members as set forth in the PSE Constitution. For example, a holder of a special membership is not entitled to vote at meetings of the Exchange, and is not eligible to be elected as a member of the Board of Governors. In addition, as described in this proposal, holders of special memberships are subject to certain limitations on the trading privileges associated with such memberships.

The Commission believes that the PSE's proposal, by more clearly delineating the limitations on trading privileges accorded to market makers and floor brokers holding special memberships, is an appropriate exercise of the Exchange's authority to create special classes of memberships. Such memberships are designed to enhance the ability of the Exchange to ensure fair and orderly markets. Accordingly, the proposal, by clarifying the rights of special memberships, is consistent with the protection of investors and the public interest pursuant to section 6(b)(5) of the Act.

Is therefore is ordered, pursuant to section 19(b)(2) of the Act,[4] that the proposed rule change is approved.

Self-Regulatory Organizations; Pacific Stock Exchange, Inc.; Order Approving Proposed Rule Change Relating to the Summary Sanctioning of Members by Floor Officials

On May 15, 1989, the Pacific Stock Exchange, Inc. ("PSE" or "Exchange") submitted to the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(1) of the Securities Act of 1934 ("Act")[1] and Rule 19b-4 thereunder,[2] a proposed rule change to provide PSE Floor Officials with the authority to impose summary sanctions on PSE members by issuing floor citations.

The proposed rule change was published for comment in Securities Exchange Act Release No. 26901 (June 7, 1989), 54 FR 25522 (June 15, 1989). No comments were received on the proposed rule change.

Currently, floor citations are issued by a Floor Official to a member, member organization, or employee of a member organization when charged with an alleged violation of Exchange rules. The citation is then forwarded to Exchange staff for a complete investigation consisting of witness interviews, rule interpretation, documentary evidence evaluations, and other necessary research. After completion of the investigation, a memorandum is presented to the Options Floor Trading Committee ("Committee") for its evaluation and determination as to disposition of the matter. A finding of guilt results in the imposition of a fine in accordance with the Committee's "Recommended Fine Schedule."

In the current rule filing, the PSE proposes to simplify the floor citation process. Specifically, under the proposed rule change, Floor Officials will have the discretion, after the alleged occurrence of a violation, to conduct an immediate investigation and impose an automatic fine in accordance with the same fine schedule as employed by the Committee. The Exchange believes the proposed rule change will eliminate certain unnecessary and time-consuming procedures which exist in the processing of floor citations. In particular, the PSE believes that Floor Officials, due to their location on the trading floor, will have the ability to investigate and evaluate alleged violative conduct promptly, thereby allowing the Exchange to use its resources more effectively. Nevertheless, under the proposal, Floor Officials will retain the discretion to refer matters, particularly instances involving egregious or complicating factors, to the Committee for its evaluation and determination as to disposition.

The PSE, however, does not believe the expedited disciplinary procedures will compromise the due process rights of individuals that receive summary sanctions for the following reasons. First, similar to current PSE procedures, whereby a member may appeal the sanction imposed by the Committee, under the PSE proposal, a member may appeal the sanction imposed by Floor Officials pursuant to PSE Rule XX, Section 11.[3] Second, the proposal incorporates safeguards to prevent the arbitrary or capricious impositions of fines by floor officials.[4] Third, the Committee will receive a monthly report of the citations issued summarily for its review and discussion. Lastly, in order to protect against arbitrary or capricious determinations of sanction amounts, citing Floor Officials will follow a "Recommended Fine Schedule" when assessing fines.

The PSE also proposes to modify the "Recommended Fine Schedule" to increase by 100% the recommended fines for most trading violations. The Exchange believes that the increased sanctions will promote public confidence in the operations of the Exchange by discouraging violative conduct.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of Section 6.[5] Specifically, the Commission finds that simplifying the floor citation procedure and increasing the fine schedule is consistent with Sections 6(b)(6) and 6(b)(7) of the Act because violators of the Exchange's rules will be appropriately disciplined through a fair procedure. In particular, the Commission believes that the safeguards built into the summary sanction procedure (*i.e.*, the issuance of citations by two Floor Officials, the generation of monthly citation reports, the right to appeal summary sanctions, and the adherence to a "Recommend Fine Schedule") adequately ensure that the due process rights of PSE members are not diminished.

The rule violations subject to the Floor Citation Procedures solely concern floor procedure, and most are technical in nature. They include such violations as the failure of a member to time stamp an order, violation of conduct or dress standards, and improper execution of a cross transaction. Moreover, the floor citation plan proposed by the PSE is similar to plans adopted by other exchanges and approved by the Commission.[6] In addition, the PSE has filed a reporting plan for the Floor Citation violations under Section 19(d) of the Act and Rule 19d-1 thereunder. The procedures proposed by the PSE are consistent with Section 6(b)(5) of the Act in that they will make the disciplinary process for minor violations more timely and efficient while preserving the alleged violator's procedural rights. Finally, under the procedures Floor Officials retain the discretion to forward a violation to the Exchange Compliance Department if, for example, the violation was egregious or repetitive in nature.

It is therefore ordered, pursuant to Section 19(b)(2) of the Act, [7] that the proposed rule change (SR-PSE-89-08) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[8]

Dated: August 22, 1989.

[1] 15 U.S.C. 78s(b)(12) (1984).

[2] 17 CFR 240.19b-4 (1988).

[3] The Exchange has amended recently the appeal process to clarify the precise procedures by which floor citations are reviewed, and to facilitate the systematic, complete and orderly operation of the review proceedings. Among other things, the new procedures clarify the right of an applicant to request that their appeal of floor citations be reviewed via oral presentation or based on written documentation. *See* Securities Exchange Act Release No. 27110 (August 9, 1989).

[4] Specifically, the proposal requires the participation of two Floor Officials for the issuance of a citation and imposition of a fine. Also, the proposed rule change mandates that the citing Floor Officials confer with Exchange staff before issuing the citation and fine.

Proposed Rule Change By the Pacific Stock Exchange Inc. Relating to Orders Entered From Off the Floor

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b)(1), notice is hereby given that on August 8, 1989, the Pacific Stock Exchange Incorporated ("PSE" or the "Exchange") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

ITEM 1. *Text of the Proposed Rule Change*

The Pacific Stock Exchange Incorporated ("PSE" or the "Exchange"), proposes to delete Options Floor Procedure Advice ("OFPA") B–11 and amend Rule VI, Section 73, to incorporate the language of OFPA B–11 as a commentary. The purpose for the proposed changes is to work toward the eventual elimination of all Procedure Advices from the rules. (Brackets indicate language to be deleted, italics indicate new language.)

Sec. 73 A Market Maker is an individual who is registered with the Exchange for the purpose of making transactions as dealer-specialist on the Floor of the Exchange in accordance with the provisions of this Section. Registered Market Makers are designated as specialists on the Exchange for all purposes under the Securities Exchange Act of 1934 and the Rules and Regulations thereunder. Only transactions that are initiated on the Floor of the Exchange shall count as Market Maker transactions for the purposes of this Section.

Commentary: .01 *Market Makers and Floor Brokers effecting transactions as Market Makers are instructed that, except as specified below, only transactions that are initiated on the Floor of the Exchange by that person shall count as Market Maker transactions and be entitled to special margin treatment, pursuant to the net capital requirements of Rule 15c3–1 of the Securities Exchange Act of 1934 and Regulation T of the Board of Governors of the Federal Reserve System.*

Accordingly, any position established for the account of a Market Maker which has been "entered from off the floor" must be placed in the Market Maker's investment account and be subject to applicable customer margin.

Market Maker clearing firms are directed to instruct their respective trading desks to identify their order as entered from off the floor by placing a "C" after the Market Maker's number in the firm box on the ticket. Floor Brokers, when accepting an order by phone from a Market Maker, are similarly directed to identify that order in the above manner.

An exception to the above stated procedure exists when an order is marked GTC, as referred to in Rule I, Section 6(a) of the Rules of the Exchange. A Market Maker, while on the floor, may enter a GTC order with a Floor Broker and still receive special margin treatment, as described above. However, the order must be a limit order where the quantity cannot be increased or the limit changed. If the order is increased or the limit changed, the GTC order shall be handled as a new order, subject to the guidelines of an "order entered from off the floor," and shall not receive the special margin treatment. Likewise, limit orders to "buy and sell" in the same series, discretionary orders, and "market not-held" orders may not be handled on a GTC basis without being subject to the above provisions applicable to "orders entered from off the floor."

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections (A), (B) and (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for the Proposed Rule Change

The proposed rule change deletes Options Floor Procedure Advice B–11, and incorporates the amended language into Rule VI, Section 73. The purpose for this change is to work toward the eventual elimination of all Procedure Advices from the rules.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes a burden on competition.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants or Others

Written comments on the proposed rule change were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of the publication of this notice in the **Federal Register** or within such longer period: (1) As the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding; or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change;

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street, NW., Washington, DC. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned, self-regulatory organization. All submissions should refer to the file number in the caption above and should be submitted by September 15, 1989.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.

Dated: August 21, 1989.

Jonathan G. Katz,
Secretary.

BILLING CODE 8010-01-M

[Rel. No. 34-21764; File No. SR-PHLX-89-16]

Self-Regulatory Organizations; Philadelphia Stock Exchange, Inc.; Order Approving Proposed Rule Change Relating to Specialist Allocation Restrictions Policy

I. Introduction

On March 23, 1989, the Philadelphia Stock Exchange, Inc. ("Exchange" or "PHLX") filed with the Securities and Exchange Commission ("Commission" or "SEC"), pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") [1] and Rule 19b–4 thereunder,[2] copies of a proposed rule change designed to impose allocation restrictions on a specialist unit that loses its registration in a specialty stock or options class as a result of an involuntary reallocation proceeding or a disciplinary proceeding.[3]

Notice of the filing of the proposed rule change together with its terms of substance was provided by the issuance of a Commission release (Securities Exchange Act Release No. 26714, April 11, 1989) and by publication in the **Federal Register** (54 FR 15581, April 18, 1989). No comments were received in connection with the proposal.

II. Description of the Proposal

PHLX Rule 506 delineates the application process for an equity book or options class in connection with an allocation or reallocation proceeding by the Exchange's Allocation, Evaluation and Securities Committee ("Committee"). The Exchange is proposing to add suplementary material .01 to PHLX Rule 506. The proposed supplementary material provision would prohibit a specialist unit from applying for any new listings for a six (6) month period immediately following the reallocation of a unit's stock book or options class as a result of: (i) An involuntary reallocation proceeding, or (ii) a disciplinary proceeding. The proposal also would prohibit the affected specialist from applying for any new listings for a subsequent six (6) month period unless the Exchange is satisfied that adequate corrective actions have been undertaken by the specialist.

The proposed rule change is intended to complement the provisions of PHLX Rules 511 and 515. PHLX Rule 511(b) establishes the substantive criteria that the Committee may consider when making allocation or reallocation decisions, and authorizes the Committee to allocate or reallocate equity books and options classes based on the results of specialist evaluations conducted pursuant to PHLX Rule 515 and any other factors the Committee deems appropriate. Additionally, because PHLX Rule 511(b) provides that all allocations and reallocations are made on a temporary basis for a period of up to 60 days, during that 60-day period the Committee may conduct a special review pursuant to PHLX Rule 515(b) to determine whether or not reallocation proceedings should be commenced. PHLX Rule 511(c) allows the Exchange to conduct a special review of a specialist's performance and, if necessary, to institute proceedings to determine whether to remove and reallocate an equity book or options class if a specialist unit has performed below minimum standards.

Rule 515 and the supplementary material thereto delineate the format for specialist evaluations by the Exchange. Pursuant to PHLX Rule 515 supplementary material .01 and .02, if an equity or options specialist unit performed below minimum standards on a prior occasion, did not have a specialty stock or options class reallocated, and continues over the next year to demonstrate performance weakness, a mandatory Committee review will be commenced to determine whether to reallocate one or more securities.

With respect to disciplinary proceedings conducted under the Exchange's Disciplinary Rules, PHLX Rule 960.10 authorizes the Business Conduct Committee to discipline members adjudicated to have violated an Exchange rule by "expulsion, suspension, fine, censure, limitations or terminations as to activities, functions, operations or association with a member or member organization, or any other fitting sanction." The Business Conduct Committee's authority in this area includes the authority to reallocate a specialist's securities.[4]

These rules do not specifically restrict a specialist unit's ability to receive new allocations following the reassignment of a security due to a reallocation or disciplinary action. The Exchange contends that it is inappropriate for a specialist unit to obtain a new listing during a period of time immediately subsequent to its loss of a listing. The Committee probably would not award new books immediately following a specialist unit's loss of a listing pursuant to a reallocation or disciplinary proceeding, but the Exchange contends that the proposed rule change will strengthen existing PHLX allocation, evaluation and reallocation rules by codifying that result. The Exchange believes that implementation of the proposal will provide notice to specialists of definite repercussions for substandard performance of their specialist responsibilities or being subject to serious disciplinary findings.

The Exchange also notes that the proposed rule change would not operate as a permanent bar to obtaining new listings. Rather, the prohibition would extend for a sufficiently long duration to grant a specialist time to remedy the operational deficiencies which originally led to the reallocation of its specialty securities. In this regard, the Exchange further notes that a second six (6) month prohibition would be imposed only if the Exchange is not satisfied that adequate corrective actions of the deficiencies which initially gave rise to the removal of the unit's specialist books have been undertaken by the specialist.

After the initial six month allocation restriction period, the specialist unit will be permitted to apply for new listings during the following six months, but only if the unit satisfactorily demonstrates that it has undertaken adequate measures to address the circumstances surrounding the reallocation of a specialty security.[5] In the event that the Committee determines that the unit's corrective measures did not adequately address the circumstances surrounding the reassignment of the unit's specialty stock or options class, the unit would not be permitted to apply for new listings at that time.[6] A unit could, however, apply for another new listing at a later date during the second six month period; however, the submission of an application for a new listing would trigger an Exchange review of the unit's corrective measures. At the conclusion of the second six month restriction period, the specialist unit's eligibility to participate in the Exchange's allocation process would be fully restored.

---

[1] 15 U.S.C. 78s(b)(1) (1982).

[2] 17 CFR 240.19b–4 (1989).

[3] The proposal that is the subject of this approval order is similar to a New York Stock Exchange, Inc. ("NYSE") proposal recently approved by the Commission. See Securities Exchange Act Release No. 26487, January 24, 1989 (54 FR 4359, January 30, 1989) (Commission approval of File No. SR–NYSE–88–33).

[4] *See* PHLX By-Laws, § 10–9.

[5] The determination of whether a unit may apply for new listings during this second six month period will be made by the Committee for instances where securities have been reallocated pursuant to PHLX Rules 500 through 599. Where a specialist's securities have been reallocated pursuant to sanctions imposed by the Exchange's Business Conduct Committee under PHLX Rule 960.10, the Committee's determination will be made in consultation with the Business Conduct Committee. In making this determination, the Committee will have the discretion to consider, among other things, whether the unit hired additional manpower, including back office personnel, changes in the unit's professional staff, whether the unit implemented more stringent supervisory procedures, and its dealer participation rates in its specialty stock. *See* Letter from William W. Uchimoto, General Counsel, PHLX, to George E. Scargle, Staff Attorney, SEC, Division of Market Regulation, dated August 7, 1989.

The Exchange indicates that the new policy is designed to complement the Exchange's existing allocation, evaluation, and reallocation rules which provide standards to be considered by the Committee in awarding new allocations, but which do not specifically restrict a specialist unit's ability to receive new allocations following the reassignment of registration in a specialty stock or options class due to a disciplinary proceeding or performance improvement action. The Exchange further indicates that the policy is intended to specifically complement PHLX Rules 511 and 515, which, as discussed above, provide for the reallocation of one or more of a unit's equity books or options classes for substandard performance. As stated above, the Exchange believes that it would be inappropriate for a specialist unit to receive a new allocation during a period of time immediately following the loss of a listing pursuant to a disciplinary or reallocation proceeding.

The Exchange believes that the proposal is consistent with section 6(b) of the Act in that it will enhance its ability to ensure the fair allocation of securities to specialist units and to prevent the allocation of securities to specialist units whose performance is below acceptable standards. Further, the Exchange contends that for purposes of investor protection, the public interest and the maintenance of fair and orderly markets, it is consistent to impose temporary allocation restrictions on specialists who have had a security reallocated due to substandard performance and/or disciplinary actions.

III. Discussion and Conclusion

After careful consideration, the Commission believes that the Exchange's proposal to impose allocation restrictions on certain specialist units is consistent with the Act, and, therefore, has determined to approve the filing. In particular, the Commission believes, as the Exchange maintains, that a specialist unit whose performance leads to the reallocation of a security should not be allowed to participate in the allocation process until it demonstrates that its performance has improved. In this regard, the Commission believes that the initial six month allocation prohibition period should provide the unit with sufficient time to develop and implement the necessary corrective measures to rectify the deficiencies which led to the reassignment of a speciality security. The success of the unit's improvement initiatives during this period will determine whether it will be permitted to apply for new listings during the second six month period.[7]

Further, the allocation restriction policy will act as an incentive for improved specialist performance. Because the unit will be precluded from applying for new allocations during the allocation prohibition and conditionally prohibited for the following six months, the Commission believes that a unit will find it advantageous to avoid the consequences of a reallocation of an assigned security and subsequent imposition of the allocation restrictions by maintaining quality markets in its assigned securities as well as complying with Exchange rules and policies.

Under the proposal, the reallocation and subsequent imposition of the allocation restrictions is not a permanent impediment to a unit's future allocation success. In the event that a unit's specialty security is reallocated and the restriction period triggered, the unit has, as discussed above, six months to institute the necessary reforms to correct its deficiencies. The unit could only be restricted for an additional six month period if the Committee finds that the unit has not taken adequate steps to resolve the circumstances giving rise to the reallocation. Accordingly, at most, a unit could be precluded from applying for new allocations only for a twelve month period. The Commission does not believe a potential twelve month allocation bar for units that have had securities reallocated is too restrictive. Rather, we strongly believe it is consistent with investor protection, the public interest and the maintenance of fair and orderly markets to impose temporary allocation restrictions on specialists who have had a specialty security reallocated due to poor performance and/or disciplinary action.

Finally, the Commission believes that the safeguards provided for in the procedures governing performance improvement and disciplinary proceedings will ensure that a specialist unit subject to the allocation restrictions will receive proper notice and the opportunity to defend its performance prior to the imposition of the allocation restrictions. For the reasons noted above, the Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of Section 6 of the Act and the rules and regulations thereunder.

It is therefore ordered, pursuant to section 19(b)(2) [8] of the Act, that the above mentioned proposed rule change be, and hereby is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[9]

Dated: August 22, 1989.

extend the PHLX's expedited disciplinary scheme for minor rule infractions to the Exchange's equity floor and impose fines on PHLX members and persons associated with PHLX members for failure to comply with data requests made by the Exchange's Market Surveillance Department.

The proposed rule change was published for comment in Securities Exchange Act Release No. 26899 (June 7, 1989), 54 FR 25528 (June 15, 1989). No comments were received on the proposed rule change.

In 1986, the Commission approved the adoption of PHLX Rule 970 that established an expedited disciplinary scheme for minor rule infractions.[3] Specifically, Rule 970 authorizes the PHLX to promulgate "Option Floor Procedure Advices ("Advices")" that describes minor rule infractions and permit the Exchange's Market Surveillance Department ("Surveillance") to impose fines (up to $2,500) for violations of these Advices according to pre-set fine schedules. The PHLX believes that the disciplinary scheme created by Rule 970 has worked well as: (1) Violators of Advices have been summarily cited for violations without the need of the Exchange's Business Conduct Committee to exercise its discretion on a case-by-case basis; and (2) violators of Advices have been treated uniformly and fairly because of the imposition of fines according to pre-set fine schedules.

By its terms, however, Rule 970 only authorizes the promulgation of "Option" Advices, and, therefore, only applies to infractions committed on the PHLX's equity option and currency option trading floors. Accordingly, the PHLX proposes to amend Rule 970 to extend the minor rule infraction plan to the equity trading floor because of its demonstrated efficiency and fairness on the PHLX's options trading floors.

Additionally, pursuant to the proposed expanded version of Rule 970, the PHLX proposes the adoption of two new identical floor procedure advices that would require PHLX members and persons associated with PHLX members to comply promptly with any request for information made by Surveillance in connection with any investigation within the Exchange's disciplinary jurisdiction.[4] In order to ensure compliance with such data requests, the Exchange also proposes to establish a fine schedule for violations of these Advices.[5] The Exchange believes the proposed Advices will expedite Surveillance investigations by enabling the Exchange to discipline quickly and effectively members who fail to respond in a timely fashion to Surveillance information requests.

The Commission finds that the proposed amendment to PHLX Rule 970 to permit the promulgation of Equity Floor Procedure Advices is consistent with the requirements of the Act and the rules and regulations thereunder applicable to a national securities exchange, and, in particular, the requirements of section 6.[6] Specifically, the Commission believes that the proposal is consistent with section 6(b)(1) of the Act because it will facilitate the enforcement by the Exchange of compliance with the provisions of the Act, the rules and regulations thereunder, and the rules of the Exchange by PHLX members and persons associated with PHLX members.[7] The proposal will extend to minor equity violations a summary disciplinary procedure that has been fair and effective for minor options violations. The Commission also finds that the proposed amendment to Rule 970 is consistent with section 6(b)(6) of the Act because the penalties under the Equity Floor Procedure Advices are reasonable in relation to the infractions in question. Finally, the Commission finds that the floor procedure advice requiring members to comply promptly with information requests by Surveillance is consistent with the Act. As the Commission stated in approving a similar proposal by the New York Stock Exchange, "In order to effect its supervisory and compliance role over members and member organizations, it is necessary for the Exchange to have the ability to set timetables for the receipt of information, and the disciplinary authority to compel members to comply with such requests." [8]

It is therefore ordered, pursuant to section 19(b)(2) of the Act,[9] that the proposed rule change (SR-PHLX-89-20) is approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[10]

Dated: August 18, 1989.

BILLING CODE 8010-01-M

Self-Regulatory Organizations; Applications for Unlisted Trading Privileges and of Opportunity for Hearing; Cincinnati Stock Exchange, Inc.

August 24, 1989.

The above named national securities exchange has filed applications with the Securities and Exchange Commission ("Commission") pursuant to section 12(f)(1)(B) of the Securities Exchange Act of 1934 and Rule 12f-1 thereunder for unlisted trading privileges in the following securities:

Borden Chemicals and Plastics LP
  Common Stock, No Par Value (File No. 7-5300)

These securities are listed and registered on one or more other national securities exchange and are reported in the consolidated transaction reporting system.

Interested persons are invited to submit on or before September 15, 1989, written data, views and arguments concerning the above-referenced applications. Persons desiring to make written comments should file three copies thereof with the Secretary of the Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Following this opportunity for hearing, the Commission will approve the applications if it finds, based upon all the information available to it, that the extensions of unlisted trading privileges pursuant to such applications are consistent with the maintenance of fair and orderly markets and the protection of investors.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

[FR Doc. 89-20417 Filed 8-29-89; 8:45 am]

BILLING CODE 8010-01-M

---

[3] *See* Securities Act Release No. 23290 (June 4, 1986) 51 FR 21430 (June 12, 1986).

[4] Under the proposal, the procedures would be called Options Floor Procedure Advices F-8 and Equity Floor Procedure Advice EM-1.

[5] The PHLX amended the proposed fine schedule by letter dated August 3, 1989 from William W. Uchimoto, General Counsel, PHLX, to Thomas Gira, Branch Chief, Division of Market Regulation, SEC. Specifically, the amendment provides that violations of the Advices will receive a $500 fine instead of a warning for the first occurrence of a violation.

[6] 15 U.S.C. 78f (1982).

[7] As with Option Floor Procedure Advices the Commission finds that the PHLX must file all proposed Equity Floor Procedure Advices with the Commission as proposed rule changes under Section 19(b) of the Act for its review and approval.

[8] *See* Securities Exchange Act Release No. 25763 (May 27, 1988) 53 FR 20925 (June 7, 1988) as 20929. The reasoning contained in that Release is incorporated in this Order.

[9] 15 U.S.C. 78s(b)(2) (1982).

[10] 17 C.F.R. 200.30-3(a)(12) (1986).

Self-Regulatory Organizations; Applications for Unlisted Trading Privileges and of Opportunity for Hearing; Midwest Stock Exchange, Inc.

August 24, 1989.

The above named national securities exchange has filed application with the Securities and Exchange Commission ("Commission") pursuant to section 12(f)(1)(B) of the Securities Exchange Act of 1934 and Rule 12f-1 thereunder for unlisted trading privileges ("UTP") limited to odd-lot transactions [1] in the securities listed in the attached Exhibit A.

These securities are listed and registered on one or more other national securities exchange and are reported in the consolidated transaction reporting system.[2]

Interested persons are invited to submit on or before September 1, 1989, written data, views and arguments concerning the above-referenced applications. Persons desiring to make written comments should file three copies thereof with the Secretary of the Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Following this opportunity for hearing, the Commission will approve the applications if it finds, based upon all the information available to it, that the extensions of unlisted trading privileges pursuant to such applications are consistent with the maintenance of fair and orderly markets and the protection of investors.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Shirley E. Hollis,

Assistant Secretary.

---

[1] Odd-lot transactions normally involve orders of less than 100 shares unless otherwise designated by an exchange. See *e.g.*, MSE Rules, Article XXXI, Rules 1 and 2.

[2] The MSE has indicated that all the securities on which they are seeking to trade UTP for odd-lot transactions only are listed and registered on the American Stock Exchange, Inc.

DEPARTMENT OF TRANSPORTATION

Coast Guard

[CGD 89-069]

New York Harbor Traffic Management Advisory Committee; Reestablishment

AGENCY: Coast Guard, DOT.

ACTION: Notice of renewal.

SUMMARY: The Secretary of Transportation has approved the reestablishment of the New York Harbor Traffic Management Advisory Committee. The purpose of this Committee is to advise the Coast Guard on matters relating to maritime traffic management and safety in the New York Harbor area.

FOR FURTHER INFORMATION CONTACT: Lieutenant Commander L. Brooks, USCG, Executive Secretary, New York Harbor Traffic Management Advisory Committee, Port Safety Office, Building 109, Governors Island, New York 10004, Phone (212) 668-7834.

This notice is issued under authority of the Federal Advisory Committee Act, Public Law 92-463, 5 U.S.C. App. 1.

Dated: August 25, 1989.

Robert T. Nelson,

Rear Admiral, U.S. Coast Guard, Chief, Office of Naval Safety and Waterway Services.

[CGD 89-66]

National Offshore Safety Advisory Committee; Meeting of Subcommittee

AGENCY: Coast Guard, Department of Transportation.

ACTION: Notice of meeting.

SUMMARY: Pursuant to section 10(a)(2) of the Federal Advisory Act (Pub. L. 92-463; U.S.C. App. I), notice is hereby given to a meeting of the Tonnage Study Subcommittee of the National Offshore Safety Advisory Committee (NOSAC).

1. The subcommittee on the Tonnage Study will meet on September 25, 1989, in the 29th floor McDermott Inc. meeting room, Bank of New Orleans Building, 1010 Common Street, New Orleans, Louisiana 70112.

The meeting is scheduled to begin at 10:00 a.m. on Monday, September 25 and end at 4:00 p.m.

The agenda for the meeting will be to evaluate the progress that the Tonnage Study Subcommittee has made in preparing input for a Congressionally mandated study of the impact of applying tonnages determined under the 1969 Tonnage Convention measurement system to laws of the U.S. that contain provisions based on tonnage. This input includes recommended levels to which tonnage thresholds should be raised so that additional vessels will not become subject to more stringent requirements if Congress decides sometime in the future that a complete conversion to the Tonnage Convention system is warranted.

Members of the public may present oral or written statements at the meeting. Additional information may be obtained from Mr. Gene Hammel, Executive Director of NOSAC at U.S. Coast Guard Headquarters, G-MP-2, Room 2414, 2100 Second Street SW., Washington, DC 20593-0001, or by calling (202) 267-1406.

Dated: August 21, 1989.

J.D. Sipes,

Rear Admiral, U.S. Coast Guard, Chief, Office of Marine Safety, Security and Environmental Protection.

BILLING CODE 4910-14-M

[CGD 89-056]

Mid-Continent Loran-C Expansion Project Group Repetition Interval Selection

AGENCY: U.S. Coast Guard, DOT.

ACTION: Notice and request for comments.

SUMMARY: Notice is hereby given that the U.S. Coast Guard has tentatively selected Group Repetition Intervals (GRIs) for the Mid-Continent Loran-C Expansion Project. These GRIs are 82,900 microseconds for the North Central U.S. (NOCUS) chain and 96,100 microseconds for the South Central U.S. (SOCUS) chain. This action precedes the creation of two new Loran-C chains in the mid-continental area of the U.S.

DATES: Comments should be submitted by September 29, 1989.

ADDRESSES: Comments concerning this selection may be sent to: Commandant (G-NRN-2), U.S. Coast Guard, 2100 Second Street SW., Washington, DC 20593-0001.

FOR FURTHER INFORMATION CONTACT: LTJG Roger Barnett, USCG—U.S. Coast Guard Headquarters, Radio-Aids Applications and Developments Branch at the above address; telephone 202/267-0298, (FTS) 267-0298.

SUPPLEMENTARY INFORMATION: The Mid-Continent Loran-C Expansion Project is a joint USCG/FAA project that closes the present gap in Loran-C coverage in the mid-continental area of the U.S.

This project will meet the requirements for aviation use of Loran-C in the FAA's National Airspace System. To close the gap in Loran-C coverage, the USCG is expanding the Great Lakes Loran-C chain and creating two new Loran-C chains. The Great Lakes chain will be expanded by adding Boise City, OK as the Zulu (Z) secondary. The two new Loran-C chains will be the North Central U.S. and the South Central U.S. chains. The first of these operational changes is anticipated by January 1991 and the expanded Loran-C coverage should be completed by 30 April 1991.

Information on the tentative selection of these GRIs has previously been provided to prospective Loran-C users by Local Notice to Mariners, published by the Coast Guard, and Notice to Airmen, published by the Federal Aviation Administration. No objections have been received. The purpose of this notice is to provide an opportunity for comment by other persons affected by the selection of Loran GRIs. Unless the GRIs are changed, no further **Federal Register** Notice will be published.

Dated: August 24, 1989.

J.W. Lockwood,

Captain, U.S. Coast Guard, Acting Chief, Office of Navigation Safety and Waterway Services.

BILLING CODE 4910-14-M

Federal Railroad Administration

Petitions for Exemption or Waiver; Vermont Railway, et al.

In accordance with 49 CFR 211.9 and 211.41, notice is hereby given that five railroads have petitioned the Federal Railroad Administration (FRA) for a waiver of compliance with the provisions of the Hours of Service Act (83 Stat. 464, Pub. L. 91-169, 45 U.S.C. 64a(e)).

The Hours of Service Act currently makes it unlawful for a railroad to require specified employees to remain on duty for a period in excess of 12 hours. However, the Hours of Service Act contains a provision that permits a railroad which employs not more than 15 employees who are subject to the statute to seek an exemption from the 12-hour limitation.

Vermont Railway (VTR)

[FRA Waiver Petition Docket No. HS-89-4]

The VTR seeks this exemption so that it may permit certain employees to

remain on duty not more than 16 hours in any 24-hour period. The VTR states that it is not its intention to employ a train crew over 12 hours per day under normal operating conditions, but that, if granted, this exemption would help its operation if it encountered unusual operating conditions or circumstances. The VTR provides service on over 128 miles of track from a connection with the Central Vermont Railway at Burlington, Vermont to a connection with the Guilford Transportation Industries at White Creek, New York. In addition, this carrier interchanges cars with the Green Mountain and Clarendon & Pittsford Railroad at Rutland, Vermont.

The petitioner indicates that granting the exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs not more than 15 employees and has demonstrated good cause for granting this exemption.

Clarendon & Pittsford Railroad (CLP)

[FRA Waiver Petition Docket No. HS-89-5]

The CLP seeks this exemption so that it may permit certain employees to remain on duty not more than 16 hours in any 24-hour period. The CLP states that it is not its intention to employ a train crew over 12 hours per day under normal operating conditions, but that, if granted, this exemption would help the CLP's operation if it encountered unusual operating conditions or circumstances. The CLP provides freight service on over 24 miles of track between Rutland, Vermont and Whitehall, New York. A branch line is operated between Florence Junction and Florence, Vermont. Interchange is made with the Vermont Railway and the Green Mountain at Rutland, Vermont and with the Delaware and Hudson Railway at Whitehall.

The petitioner indicates that granting the exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs not more than 15 employees and has demonstrated good cause for granting this exemption.

Ohi-Rail Corporation (OHIC)

[FRW Waiver Petition Docket No. HS-89-6]

The OHIC seeks this exemption so that it may permit certain employees to remain on duty not more than 16 hours in any 24-hour period. The OHIC states that it is not its intention to employ a train crew over 12 hours per day under normal operating conditions, but that, if granted, this exemption would help its operation if it encountered unusual operating conditions or circumstances. The OHIC provides service on over 38 miles of track between a connection with the Norfolk Southern at Hopedale, Ohio and a connection with Conrail at Minerva, Ohio.

The petitioner indicates that granting the exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs not more than 15 employees and has demonstrated good cause for granting this exemption.

Port Utilities Commission of Charleston (PUCC)

[FRA Waiver Petition Docket No. HS-89-7]

The PUCC seeks this exemption so that it may permit certain employees to remain on duty not more than 16 hours in any 24-hour period. The PUCC states that it is not its intention to employ a train crew over 12 hours per day under normal operating conditions, but that, if granted, this exemption would help its operation if it encountered unusual operating conditions or circumstances. The PUCC provides industrial switching service on over 1 mile of track in and around the Port of Charleston, South Carolina.

The petitioner indicates that granting the exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs not more than 15 employees and has demonstrated good cause for granting this waiver.

Port Terminal Railroad of South Carolina (PTRS)

[FRA Waiver Petition Docket No. HS-89-8]

The PTRS seeks this exemption so that it may permit certain employees to remain on duty not more than 16 hours in any 24-hour period. The PTRS states that it is not its intention to employ a train crew over 12 hours per day under normal operating conditions, but that, if granted, this exemption would help its operation if it encountered unusual operating conditions or circumstances. The PTRS provides industrial switching service on less than one mile of trackage at North Charleston, South Carolina.

The petitioner indicates that granting the exemption is in the public interest and will not adversely affect safety. Additionally, the petitioner asserts that it employs not more than 15 employees and has demonstrated good cause for granting this exemption.

Interested persons are invited to participate in these proceedings by submitting written views and comments. FRA has not scheduled an opportunity for oral comment since the facts do not appear to warrant it. If any interested party desires an opportunity for oral comment, he or she should notify FRA, in writing, before the end of the comment period and specify the basis for his or her request. Any communications concerning these proceedings should identify the appropriate docket number (e.g., Waiver Petition Docket Number HS-87-20) and must be submitted in triplicate to the Docket Clerk, Office of Chief Counsel, Federal Railroad Administration, Nassif Building, 400 Seventh Street SW., Washington, DC 20590.

Communications received before October 16, 1989 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable. All comments received will be available for examination both before and after the closing date for comments during regular business hours (9 a.m.–5 p.m.) in Room 8201, Nassif Building, 400 Seventh Street SW., Washington, DC 20590.

Issued in Washington, DC, on August 21, 1989.

J.W. Walsh,

Associate Administrator for Safety.

Form Number: PD 5238.

Type of Review: Extension.

Title: Request for Redemption of U.S. Treasury Securities–State and Local Government Series One-Day Certificates of Indebtedness.

Description: This form is used to collect account redemption information from State and local Government entities wishing to redeem demand deposit U.S. Treasury securities–State and local Government Series. Information on the forms will be encoded to process redemptions of book-entry accounts on the records of the Bureau of Public Debt.

Respondents: State and local governments.

Estimated Number of Respondents: 30,000.

Estimated Burden Hours Per Response: 3 minutes.

Frequency of Response: On occasion.

Estimated Total Reporting Burden: 2,000 hours.

Clearance Officer: Rita DeNagy (202) 447–1640, Bureau of the Public Debt, Room 137, BEP Annex, 300 13th Street SW., Washington, DC 20239–0001.

OMB Reviewer: Milo Sunderhauf (202) 395–6880, Office of Management and Budget, Room 3001, New Executive Office Building, Washington, DC 20503.

Lois K. Holland,

Departmental Reports Management Officer.

BILLING CODE 4810-25-M

Customs Service

Entry/Entry Summary Required for Importation of Hong Kong Textiles; Change of Effective Date

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Notice of change of effective date.

SUMMARY: Customs published a notice in the **Federal Register** (54 FR 13292) on March 31, 1989, stating that Customs was delaying implementation of the requirement that an entry/entry summary ("live" entry) be filed for all textiles and textile articles of Hong Kong origin which have a textile category number. The effective date set for the requirement in that notice was September 1, 1989. A determination has been made to delay the effective date of the requirement until January 1, 1990.

EFFECTIVE DATE: January 1, 1990.

FOR FURTHER INFORMATION CONTACT: Dick Crichton, Office of Trade Operations, (202) 566–9443 or Ilene Gilbert, Office of Trade Operations, (202) 566–6006.

SUPPLEMENTARY INFORMATION: On January 5, 1989, Customs published a document in the **Federal Register** (54 FR 349), stating that Customs will require the filing of an entry/entry summary ("live" entry) for all textiles and textile products which have a textile category number, effective February 1, 1989. A correction document for that notice was published in the **Federal Register** (54 FR 1844) on January 17, 1989. On February 1, 1989, Customs published a notice in the **Federal Register** (54 FR 3281), changing the effective date to April 1, 1989. Another notice of change was published in the **Federal Register** on March 31, 1989 (54 FR 13292) delaying the effective date of the entry/entry summary requirements for Hong Kong textiles and textile articles until September 1, 1989, when it was expected that a more modern environment would have been available to allow electronic filers an option to separate payment of duty from the filing of the entry summary documentation. A decision has been made by Customs to again delay the entry/entry summary requirements for Hong Kong textiles and textile products. The effective date of the requirement is now January 1, 1990. This document is a notice of the delayed effective date.

Dated: August 28, 1989.

Michael Schmitz,

Acting Commissioner of Customs.

BILLING CODE 4820-02-M

Application for Recordation of Trade Name "TRIPLE FAT GOOSE"

ACTION: Notice of Application for Recordation of Trade Name.

SUMMARY: Application has been filed pursuant to § 133.12, Customs Regulations (19 CFR 133.12), for the recordation under section 42 of the Act of July 5, 1946, as amended (15 U.S.C. 1124), of the trade name "TRIPLE FAT GOOSE", used by Turbo Sportswear, Inc., a corporation organized under the laws of the State of New Jersey, located at One Walnut Street, Perth Amboy, New Jersey 08862.

The application states that the trade name is used in connection with men's and boy's down filled outwear and active sportswear. The merchandise is manufactured in Korea.

Before final action is taken on the application, consideration will be given to any relevant data, views, or arguments submitted in writing by any person in opposition to the recordation of this trade name. Notice of the action taken on the application for recordation of this trade name will be published in the Federal Register.

DATE: Comments must be received on or before October 30, 1989.

ADDRESS: Written comments should be addressed to U.S. Customs Service, Attention: Value, Special Programs and Admissibility Branch, 1301 Constitution Avenue NW. (Room 2104), Washington, DC 20229.

FOR FURTHER INFORMATION CONTACT: Velma Taylor Value, Special Programs and Admissibility Branch, 1301 Constitution Avenue NW., Washington, DC 20229 (202-566-5765).

Dated: August 23, 1989.

Marvin M. Amernick,

Chief, Value, Special Programs and Admissibility Branch.

BILLING CODE 4820-02-M

Internal Revenue Service

Tax on Certain Imported Substances; Notice of Filing of Petition

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice.

SUMMARY: This notice announces the acceptance under Notice 89-61, 1989-21 I.R.B. 25, of a petition requesting that polyethylene terephthalate be added to the list of taxable substances in section 4672(a)(3) of the Internal Revenue Code. Publication of this notice is in compliance with Notice 89-61. This is not a determination that the list of taxable substances should be modified.

DATE: Written comments and requests for a public hearing relating to this petition must be delivered or mailed by October 30, 1989.

ADDRESS: Send comments and requests for a public hearing to the Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC 20224 Attention: CC:CORP:T:R (Petition).

FOR FURTHER INFORMATION CONTACT: Ruth Hoffman, Office of Assistant Chief Counsel (Passthroughs and Special Industries). Telephone 202-566-4475 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The petition was received on June 30, 1989. The petitioner is Eastman Chemicals Division, Eastman Kodak Company, a manufacturer and exporter of this substance. The following is a summary of the information contained in the petition. The complete petition is available in the Internal Revenue Service Freedom of Information Reading Room.

Harmonized Tariff System number	3907.60.00
Schedule B number	3907.60.0000.5
Chemical Abstract Service number	25038-59-9

This substance is derived from the taxable chemicals *xylene* and *ethylene*. Polyethylene terephthalate (PET) is a polyester produced from terephthalic acid and ethylene glycol. Terephthalic acid is produced by the air oxidation of p-xylene, and ethylene glycol is produced by reaction of ethylene with oxygen and water.

The stoichiometric material consumption formula for this substance is:

$$\underset{\text{xylene}}{100\ C_6H_4(CH_3)_2} + \underset{\text{ethylene}}{101\ H_2C{:}CH_2} + \underset{\text{oxygen}}{350.5\ O_2} + \underset{\text{water}}{101\ H_2O} \rightarrow \underset{\text{PET}}{C_2H_6O_2(C_{10}H_8O_4)_{100}} + \underset{\text{water}}{400\ H_2O}$$

According to the petition, taxable chemicals constitute 50.8 per cent by weight of the materials used to produce this substance. The rate of tax for this substance would be *$8.30* per ton. This is based upon a conversion factor for xylene of 0.5507 and a conversion factor for ethylene of 0.1470.

Dale D. Goode,

Chief, Regulations Unit, Assistant Chief Counsel (Corporate).

[FR Doc. 89-20350 Filed 8-29-89; 8:45 am]

BILLING CODE 4830-01-M

Tax on Certain Imported Substances; Notice of Filing of Petition

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice.

SUMMARY: This notice announces the acceptance under Notice 89-61, 1989-21 I.R.B. 25, of petitions requesting that linear alpha olefins and polyalphaolefins be added to the list of taxable substances in section 4672(a)(3) of the Internal Revenue Code. Publication of this notice is in compliance with Notice 89-61. This is not a determination that the list of taxable substances should be modified.

DATE: Written comments and requests for a public hearing relating to this petition must be delivered or mailed by October 30, 1989.

ADDRESS: Send comments and requests for a public hearing to the Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC 20224 Attention: CC:CORP:T:R (Petition).

FOR FURTHER INFORMATION CONTACT: Ruth Hoffman, Office of Assistant Chief Counsel (Passthroughs and Special Industries). Telephone 202-566-4475 (not a toll-free number).

SUPPLEMENTARY INFORMATION: The petitions were received on July 11, 1989. The petitioner is Ethyl Corporation, a manufacturer and exporter of these substances. The following is a summary of the information contained in the petitions. The complete petitions are available in the Internal Revenue Service Freedom of Information Reading Room.

Linear Alpha Olefins

Harmonized Tariff System number	2901.29.1010-9
Schedule B number	2901.29.1010-9
Chemical Abstract Service number	variable

This substance is derived from the taxable chemical ethylene. Linear alpha olefins are produced via the catalytic chain growth of ethylene.

The stoichiometric material consumption formula for this substance is:

$$\underset{\text{ethylene}}{n/2\ C_2H_4} \rightarrow \underset{\text{linear alpha olefin}}{C_nH_{2n}}$$

According to the petition, taxable chemicals constitute 100 per cent by weight of the materials used to produce this substance. The rate of tax for this substance would be *$4.87* per ton. This is based upon a conversion factor for ethylene of 1.00.

Polyalphaolefins

Harmonized Tariff System number	3902.90.0050-3
Schedule B number	3902.90.0050-3
Chemical Abstract Service number	variable

This substance is derived from the taxable chemical ethylene. Polyalphaolefins are produced by oligomerization of decene-1, a linear alpha olefin.

The stoichiometric material consumption formula for this substance is:

$$\underset{\text{ethylene}}{n/2\ C_2H_4} + \underset{\text{hydrogen}}{H_2} \rightarrow \underset{\text{polyalphaolefin}}{C_nH_{2n+2}}$$

According to the petition, taxable chemicals constitute 99.61 per cent by weight of the materials used to produce this substance. The rate of tax for this substance would be *$4.85* per ton. This is based upon a conversion factor for ethylene of 0.9961.

Dale D. Goode,

Chief, Regulations Unit, Assistant Chief Counsel (Corporate).

Sunshine Act Meetings

Federal Register
Vol. 54, No. 167
Wednesday, August 30, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

NATIONAL TRANSPORTATION SAFETY BOARD

TIME AND DATE: 9:30 a.m. Tuesday, September 12, 1989.

PLACE: Board Room, Eighth Floor, 800 Independence Avenue SW., Washington, DC 20594.

STATUS: The first two items are open to the public. The last five items are closed to the public under Exemption 10 of the Government in Sunshine Act.

MATTERS TO BE CONSIDERED:

1. Marine Accident Report: Capsizing and Sinking of the U.S. Mobile Offshore Drilling Unit ROWAN GORILLA I, North Atlantic Ocean, December 15, 1988.
2. Reconsideration of Probable Cause: Midair Collision of SkyWest Airlines Metro II and Mooney M20, Kearns, Utah, January 15, 1987.
3. Opinion and Order: Administrator v. Janka and Newman, Dockets SE-8144 and SE-8159; disposition of the Admninistrator's appeal.
4. Opinion and Order: Administrator v. Godwin, Docket SE-8397; disposition of the respondent's appeal.
5. Opinion and Order: Administrator v. Hoag, Docket SE-8609; disposition of the appeals of both parties.
6. Opinion and Order: Administrator v. Sampson, Docket SE-8668; disposition of cross appeals.
7. Opinion and Order: Administrator v. Ruhn, Docket SE-9471; disposition of the Admninistrator's motion to dismiss.

FOR MORE INFORMATION CONTACT: Bea Hardesty, (202) 382-6525.

Bea Hardesty,

Federal Register Liaison Officer.

August 24, 1989.

Part II

Environmental Protection Agency

40 CFR Parts 302 and 355
Reportable Quantity Adjustments; Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 302 and 355

[FRL-3535-3]

RIN 2050-AC14

Reportable Quantity Adjustments

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to adjust reportable quantities (RQs) for 232 extremely hazardous substances (EHSs) proposed for designation as hazardous substances under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA). These substances were originally listed as EHSs pursuant to section 302 of the Superfund Amendments and Reauthorization Act of 1986 (SARA) and were subsequently proposed for designation on January 23, 1989 (54 FR 3388). By adjusting the one-pound reporting triggers proposed under CERCLA section 102 and currently in effect under SARA section 304, EPA will reduce the reporting and response burdens on the regulated community and on Federal, State, and local governments, respectively. EPA also is proposing to adjust the RQs of 19 EHSs that are already listed as CERCLA hazardous substances but have RQs greater than their threshold planning quantities (TPQs). To adjust the RQs of these 251 substances, EPA is proposing to apply the methodology used to establish TPQs as part of the RQ adjustment methodology for those CERCLA hazardous substances meeting the EHS screening criteria.

DATES: Comments must be submitted on or before October 30, 1989.

ADDRESSES:

Comments: Comments should be submitted in triplicate to: Emergency Response Division, Attention: Superfund Docket Clerk, Docket Number 102 RQ-251EHS, Superfund Docket Room M2427, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460.

Docket: Copies of materials relevant to this rulemaking are contained in Room M2427 at the U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460. The docket is available for inspection between the hours of 9 a.m. and 4 p.m., Monday through Friday, excluding Federal holidays. Appointments to review the docket can be made by calling 1-202/382-3046. As provided in 40 CFR Part 2, a reasonable fee (the first 50 pages are free and each additional page costs $.20) may be charged for copying services.

Release Notification: The toll-free telephone number of the National Response Center is 1-800/424-8802; in the Washington, DC metropolitan area, the number is 1-202/267-2675.

FOR FURTHER INFORMATION CONTACT: Ms. Gerain H. Perry, Response Standards and Criteria Branch, Emergency Response Division (OS-210), U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460; or the RCRA/Superfund Hotline at 1-800/424-9346; in the Washington, DC metropolitan area at 1-202/382-3000.

SUPPLEMENTARY INFORMATION: The contents of today's preamble are listed in the following outline:

I. Introduction
  A. Statutory Authority
  B. Background of this Rulemaking
II. Reportable Quantity Adjustments
  A. Introduction
  B. Summary of the Reportable Quantity Adjustment Methodology
  C. Substances for Which Adjusted RQs Are Being Proposed
III. Regulatory Analyses
  A. Executive Order 12291
  B. Regulatory Flexibility Act
  C. Paperwork Reduction Act

I. Introduction

A. Statutory Authority

Under section 102(b) of the Comprehensive Environmental Reponse, Compensation, and Liability Act of 1980 (CERCLA) (Pub. L. 96-510), 42 U.S.C. 9601 et seq., as amended, a reportable quantity (RQ) of one pound is established for releases of hazardous substances, except those for which RQs were established pursuant to section 311 of the Clean Water Act (CWA). Under CERCLA section 103(a), the person in charge of a vessel or facility from which a hazardous substance has been released in a quantity that equals or exceeds its RQ must immediately notify the National Response Center (NRC) of the release.[1] In addition to this CERCLA reporting requirement, releases of hazardous substances in quantities equal to or greater than their RQs must be reported to State and local response authorities under section 304 of the Superfund Amendments and Reauthorization Act of 1986 (SARA) (Pub. L. 99-499). Releases of SARA Title III extremely hazardous substances (EHSs) that are not CERCLA hazardous substances must be reported under section 304 of SARA if the quantity released equals or exceeds one pound. The U.S. Environmental Protection Agency (EPA or the Agency) is authorized under section 102(a) of CERCLA to adjust RQs for hazardous substances,

B. Background of This Rulemaking

On April 4, 1985, EPA published a final rule (50 FR 13456) to clarify procedures for reporting releases of CERCLA hazardous substances, to list 698 "hazardous substances" defined under section 101(14) of CERCLA, and to adjust RQs for 340 of the CERCLA hazardous substances.[2] The preamble to that final rule discussed the CERCLA notification provisions (including the persons required to notify the NRC of a release, the hazardous substances for which notification is required, the types of releases subject to the notification requirements, and the exemptions from these requirements), the proposed methodology used to adjust the RQs, and the RQ adjustments proposed under section 102 of CERCLA and under section 311 of the CWA.

The Agency subsequently promulgated final rules that clarify CERCLA section 103(a) reporting procedures and set RQ adjustments for nearly all hazardous substances.[3] In addition, the Agency has proposed rules (53 FR 12868, April 19, 1988; 53 FR 27268, July 19, 1988) to clarify both the reduced reporting requirements for continuous releases (see CERCLA section 103(f)) and the exemption from CERCLA reporting and liability requirements for federally permitted releases (see CERCLA sections 101(10), 103(a), and 107(j)).

In 1986 Congress enacted Title III of SARA, also known as the "Emergency Planning and Community Right-to-Know Act of 1986," which established both a framework for emergency planning at the State and local levels and extensive requirements for reporting of stored or released hazardous chemicals to allow the public access to such information in local communities. Under the authority of section 302 of SARA, EPA published a list of EHSs for purposes of emergency planning, using screening criteria described in a November 17, 1986 interim final rule (51 FR 41570) and an April 22, 1987 final rule (52 FR 13378). Reports of releases of CERCLA hazardous substances and EHSs must be made to the State emergency response commission (SERC) and to the local emergency planning committee (LEPC) pursuant to SARA section 304. The November 17, 1986 interim final rule and the April 22, 1987 final rule also established the methodology for determining threshold planning quantities (TPQs). If a TPQ of an EHS is present at a facility, the facility becomes subject to the emergency planning requirements of SARA sections 302 and 303.

The list of EHSs and TPQs published on April 22, 1987 contained 406 substances. In **Federal Register** notices published on December 17, 1987 (52 FR 48072, 48083) and February 25, 1988 (53 FR 5574), EPA delisted 40 EHSs that were found not to meet the acute toxicity listing criteria. The EHS list has been codified in 40 CFR Part 355.

EPA today proposes to adjust the RQs of 251 substances by amending Table 302.4 of 40 CFR 302.4 and Appendices A and B of 40 CFR Part 355. Of these 251 substances, 232 are EHSs that were proposed for designation as CERCLA hazardous substances under CERCLA section 102(a) on January 23, 1989 (54 FR 3388). The remaining 19 substances are EHSs that were already listed as CERCLA hazardous substances, but had RQs greater than their TPQs. EPA also proposes to apply the methodology used to establish TPQs as part of the RQ adjustment methodology for those substances meeting the EHS screening criteria.

The proposed methodology for adjusting RQs is discussed in Section II of this preamble. Section III provides a summary of the analyses supporting this proposed rule.

II. Reportable Quantity Adjustments

A. Introduction

In this rulemaking, the Agency proposes to adjust RQs based upon specific scientific and technical criteria that relate to the possibility of harm from the release of a hazardous substance in certain amounts.[4] The quantity released is but one factor considered by the government when assessing the need to respond to such a release. Other factors, assessed on a case-by-case basis, include but are not limited to: (1) The location of the release; (2) its proximity to drinking water supplies or other valuable resources; and (3) the likelihood of exposure or injury to nearby populations. The RQ adjustments proposed today, when finalized, will enable the Agency to focus its resources on those releases that are most likely to pose potential threats to public health or welfare or the environment. These adjustments will also relieve the regulated community and emergency response personnel from the burden of making and responding to reports of releases that are unlikely to pose such threats.

For 65 of the EHSs to be designated as CERCLA hazardous substances and 19 EHSs that are already CERCLA hazardous substances, the adjusted RQ obtained by considering the existing RQ adjustment criteria (described in Section II.B.1 of today's preamble) would be higher than the TPQ under SARA section 302 for the same substance. As a result, emergency planning would be required for an amount on the plant site which, if entirely released, would not require reporting to the NRC, the SERC, or the LEPC. Several commenters on EPA's November 17, 1986 interim final rule (51 FR 41570) on EHSs, TPQs, and reporting requirements expressed concern that some EHSs had CERCLA RQs that exceeded their TPQs. The Agency is therefore proposing to resolve these differences between RQs and TPQs by considering the TPQ adjustment methodology as part of the RQ adjustment methodology (as described in Section II.B.2 of today's preamble). In contrast to the RQ adjustment methodology, the TPQ methodology includes an exposure factor (e.g., the ability of a substance to disperse) and provides for the selection of the most sensitive species in measuring acute mammalian toxicity. Therefore, by taking into account the TPQ methodology in adjusting RQs for CERCLA hazardous substances, greater protection of public health and welfare and the environment could result.

B. Summary of the Reportable Quantity Adjustment Methodology

1. Primary and Secondary Criteria

The Agency has wide discretion under CERCLA in adjusting the statutory RQs for hazardous substances. Administrative feasibility and practicality are important considerations. The Agency's selected methodology for adjusting RQs begins with an evaluation of the intrinsic physical, chemical, and toxicological properties of each hazardous substance. The intrinsic properties examined—called "primary criteria"— are aquatic toxicity, mammalian toxicity (oral, dermal, and inhalation), ignitability, reactivity, chronic toxicity, and potential carcinogenicity.

The Agency ranks hazardous substances for each intrinsic property on a relative ranking scale, associating a specific range of values on each scale with a particular RQ level. The RQ levels of 1, 10, 100, 1000, and 5000 pounds were originally established pursuant to CWA section 311 (see 40 CFR Part 117 and 44 FR 50776, August 29, 1979).

Hazardous substances that fall within EPA's weight-of-evidence Groups A, B, or C (i.e., known, probable, or possible human carcinogens, respectively) are ranked and assigned RQs based on potential carcinogenicity. These substances also receive a potency classification of Group 1, 2, or 3, with Group 1 representing the potential carcinogens with the highest relative potencies. The weight-of-evidence and potency groups are combined using a matrix (see 54 FR 33421, August 14, 1989) to yield a relative hazard ranking for each substance. The resulting hazard rankings—"high," "medium," and "low"—correspond with RQ levels of 1, 10, and 100 pounds, respectively.

Each hazardous substance evaluated under the six primary criteria is assigned several tentative RQ values based on its particular properties as data allow. The lowest of the tentative RQs becomes the "primary criteria RQ" for that substance.

For a more detailed discussion of the five primary criteria other than potential carcinogenicity, see the preambles to the April 4, 1985 and September 29, 1986 final rules (50 FR 13456, Section V.D.1; 51 FR 34534) and the Technical Background Document to Support Rulemaking Pursuant to CERCLA Section 102, Volumes 1 and 2. For a more detailed discussion of the RQ adjustment methodology based on the primary criterion of potential carcinogenicity, see the preamble to the August 14, 1989 final rule (54 FR 33418) in which EPA adjusts the RQs of six hazardous substances and the Technical Background Document to Support Rulemaking Pursuant to CERCLA Section 102, Volume 3. These documents are available for inspection at Room M2427, U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460.

---

[1] A release into the environment of a substance that is not listed as a CERCLA hazardous substance, but which rapidly forms a CERCLA hazardous substance upon release, is subject to the notification requirements of section 103. If the amount of the CERCLA hazardous substance formed as such a reaction product equals or exceeds the RQ for that substance, the release must be reported to the NRC.

[2] Twenty-nine additional substances have been listed under section 101(14). These substances are: waste streams F020, F021, F022, F023, F026, F027, and F028 under section 3001 of RCRA (50 FR 1978, January 14, 1985); waste streams K111, K112, K113, K114, K115, and K116, o-toluidine, and p-toluidine under section 3001 of RCRA (50 FR 42936, October 23, 1985); waste streams K117, K118, and K136 under section 3001 of RCRA (51 FR 5327, February 13, 1986); 2-ethoxyethanol under section 3001 of RCRA (51 FR 6537, February 25, 1986); waste streams K123, K124, K125, and K126 under section 3001 of RCRA (51 FR 37725, October 24, 1986); and waste streams K064, K065, K066, K088, K090, and K091 under section of 3001 of RCRA (53 FR 35412, September 13, 1988). On October 31, 1988, two hazardous substances (iron dextran and strontium sulfide) were deleted from the list of CERCLA hazardous substances (53 FR 43878 and 53 FR 43881). Currently there are 725 CERCLA hazardous substances. Based on a final rule published on August 14, 1989 (54 FR 33426), a third substance (ammonium thiosulfate) will be deleted from the CERCLA list effective October 13, 1989.

[3] 51 FR 34534, September 29, 1986; 54 FR 22524, May 24, 1989, 54 FR 33418, August 14, 1989; 54 FR 33426, August 14, 1989. Adjusted RQs have not yet been promulgated for methyl isocyanate, lead metal, certain lead compounds, and 11 waste streams (K002, K003, K005, K048, K049, K051, K061, K062, K069, K086, and K100) that may contain lead and lead compounds.

[4] RQs represent a determination only of possible or potential harm, not that releases of a particular amount of a hazardous substance necessarily will be harmful to the public health or welfare or the environment.

After the primary criteria RQs are assigned, substances are further evaluated for their susceptibility to certain degradative processes that are used as secondary RQ adjustment criteria. These natural degradative processes are biodegradation, hydrolysis, and photolysis (BHP). These processes tend to reduce the relative potential for harm to the public health or welfare or the environment of many hazardous substance releases. If analysis indicates that an eligible hazardous substance degrades relative rapidly to a less harmful form by one or more of the BHP processes, its primary criteria RQ is raised one level on the basis of BHP.[5] If hazardous substances have primary criteria RQs already at the maximum assignable level or are found to be bioaccumulative, environmentally persistent, highly reactive (or otherwise unusually hazardous), or degradable to more hazardous products, they are not eligible for a one-level RQ increase on the basis of BHP. Furthermore, if available evidence shows that a hazardous substance degrades into a reaction product that is more hazardous than the original substance, the primary criteria are applied to the more hazardous product rather than to the original substance to determine the tentative RQ values for the original substance (51 FR 34534, September 29, 1986). For a more detailed discussion of the BHP criteria and their use in combination with the primary criteria, see the preamble to the April 4, 1985 final rule adjusting RQs (50 FR 13456, Sections V.C.1 and V.D.2) and the Technical Background Document to Support Rulemaking Pursuant to CERCLA Section 102, Volume 1, available for inspection at Room M2427, U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460.

2. Threshold Planning Quantity Methodology

The proposed integration of the TPQ methodology as part of the RQ adjustment methodology involves the followng steps. First, the screening criteria used to identify EHSs (see Table 1, adapted from the preamble to the November 17, 1986 interim final rule, for screening cutoff values) are applied to all CERCLA hazardous substances. As with the TPQ methodology, acute mammalian toxicity data, based on the most sensitive species, are used to establish a level of concern for each hazardous substance that meets the screening criteria. In addition, the dispersion potential of each of these hazardous substances is assessed by considering its physical state and volatility. These two factors, level of concern and dispersion potential, are combined to produce an index value. The screened substances are then ranked according to the index value. Tentative RQs are obtained from this ranking (see Table 2). As shown in the table, the index value ranges used to assign TPQs are combined to match the RQ levels, where necessary.

TABLE 1.—SCREENING CRITERIA TO IDENTIFY EHSs

Route of exposure*	Acute toxicity measure**	Screening cutoff value
Inhalation	Median Lethal Concentration in Air (LC_{50})	Less than or equal to 0.5 milligrams per liter of air.
Dermal	Median Lethal Dose (LD_{50})	Less than or equal to 50 milligrams per kilogram of body weight.
Oral	Median Lethal Dose (LD_{50})	Less than or equal to 25 milligrams per kilogram of body weight.

* The route by which the test animals absorbed the chemical, i.e., by breathing it in air (inhalation), by absorbing it through the skin (dermal), or by ingestion (oral).

** LC_{50}: The concentration of the chemical in air at which 50 percent of the test animals dies. LD_{50}: The dose that killed 50 percent of the test animals. In the absence of LC_{50} or LD_{50} data, LC_{LO} or LD_{LO} data should be used. LC_{LO}: Lethal Concentraton Low, the lowest concentration in air at which any test animals dies. LD_{LO}: Lethal Dose Low, the lowest dose at which any test animals die.

TABLE 2—SCALES FOR ASSIGNING TPQs OR TENTATIVE RQs BASED ON THE TPQ ADJUSTMENT METHODOLOGY

TPQ (pounds)	Index value	Tentative RQ (pounds)
1	< 0.001	1
10	> 0.001 to < 0.01	10
100	> 0.01 to < 0.1*	100
500	> 0.1 to < 1*	100
1,000	> 1 to < 10	1,000
10,000	> 10**	5,000

* Because there is no 500 pound RQ level, these two index value ranges are combined to yield a single index value range (> 0.01 to < 1) equivalent to a tentative RQ of 100 pounds based on the TPQ adjustment methodology.

** Because RQs are not assigned at levels greater than 5,000 pounds, a hazardous substance with an index value equal to or greater than 10 is assigned a tentative RQ of 5,000 pounds based on the TPQ adjustment methodology.

Hazardous substances with the lowest index values (highest concern) are assigned tentative RQs equal to one pound. Hazardous substances with low index values are assigned tentative RQs of 10 pounds. Hazardous substances with moderate index values, i.e., those that have TPQs of 100 or 500 pounds, are assigned tentative RQs of 100 pounds. Hazardous substances with high index values are assigned tentative RQs of 1000 pounds, and those with the highest index values (TPQ=10,000 pounds) are assigned tentative RQs of 5000 pounds.

If the tentative RQ assigned in this way is lower than the primary and (if applicable) secondary criteria RQ, this tentative RQ using the TPQ methodology becomes the proposed RQ. EPA believes that the selection of the lower of the two numbers appropriately reflects a conservative and protective approach to setting RQs. This revised RQ adjustment process also will ensure that all substances will have TPQs equal to or greater than their RQs. For more detailed discussion of how the TPQ methodology is used as part of the RQ adjustment methodology, see the Technical Background Document to Support Adjustment of the Reportable Quantities of the Extremely Hazardous Substances Designated as CERCLA Hazardous Substances, Volume 5, available for inspection at Room M2427, U.S. Environmental Protection Agency,

---

[5] The Agency does not adjust RQs beyond 100 pounds for potential carcinogens based on BHP. See the preamble to the August 14, 1989 final rule (54 FR 33426) in which EPA adjusts the RQs of 258 hazardous substances.

401 M Street SW, Washington, DC 20460.

3. Alternative Approaches Considered

In developing the proposed methodology, EPA considered a number of other approaches to addressing differences between RQs and TPQs, including: a no-action alternative; raising TPQs or lowering RQs for individual EHSs; and an extensive reevaluation or modification of the RQ and TPQ methodologies to create a unified methodology. Each of these alternatives had significant drawbacks and was rejected. If EPA did not undertake any action, the RQ/TPQ differences would not be resolved, concerns expressed by commenters on the November 17, 1986 interim final rule (51 FR 41570) would not be addressed, and the Agency would have failed to fulfill its commitment in the preamble to the April 22, 1987 final rule (52 FR 13378) to address these differences. Changing RQs or TPQs for individual EHSs could undercut the validity of the RQ and TPQ methodologies, and future changes would be required for any RQ/TPQ differences that result from additions of substances to the EHS list. Major revisions to the RQ and TPQ methodologies could involve a significant amount of time for development and implementation, which would create uncertainty in the regulated community. Such revisions would affect large numbers of EHSs and CERCLA hazardous substances in addition to those that have RQ/TPQ differences.

Under the methodology proposed today, the concern about RQ and TPQ differences can be addressed in a timely and straightforward manner, based on a sound technical rationale. EPA will fulfill its commitment to resolve this issue, and all current and future TPQ/RQ differences will be addressed. Under this proposed methodology, no adjustments to TPQs or the TPQ methodology are required; an additional step is simply included in the existing RQ adjustment methodology. That step, integration of the TPQ methodology, is an appropriate addition to the RQ methodology in light of recent public and Congressional concern about sudden, catastrophic releases of highly toxic substances, which led to the development of the EHS and TPQ program.

A further discussion of the alternatives considered by the Agency in formulating this proposal appears on pages 2–3 through 2–5 of Volume 5 of the Technical Background Document and in the "Options Paper to Address Reportable Quantity and Threshold Planning Quantity Differences," which are available in the rulemaking record.

C. Substances for Which Adjusted RQs Are Being Proposed

In applying the EHS screening criteria to CERCLA hazardous substances, 143 substances were identified, including nine that are not currently on the EHS list.[6] Of these 143 substances, 19 substances (all currently on the EHS list) would have their RQs lowered based on application of the proposed methodology.[7] In this rule, EPA proposes RQ adjustments for these 19 EHSs and for the 232 EHSs that have been proposed for designation as CERCLA hazardous substances.

The primary criteria bases for the 251 proposed adjusted RQ adjustments are as follows: 109 are based only on acute mammalian toxicity; 17 are based only on chronic toxicity; seven are based only on potential carcinogenicity; and four are based only on ignitability. Twenty-seven proposed RQ adjustments are based on more than one primary criterion. Two of the EHSs have their primary criteria RQs raised one level by applying BHP. Eighty-five proposed RQ adjustments are based only on application of the TPQ adjustment methodology.

The 232 EHSs proposed to be added to the list of CERCLA hazardous substances have proposed statutory RQs of one pound. EPA is proposing RQ adjustments that would raise the RQs for 225 of those 232 EHSs. Seven of the EHSs would have adjusted RQs proposed at one pound. Of the 19 EHSs that are currently on the list of hazardous substances, 17 have RQs proposed to be lowered one level. Two of the 19, benzal chloride and hydrochloric acid, have RQs proposed to be lowered two levels.[8] EPA considers the proposed RQs to be appropriate reporting triggers for releases of these substances, because of their potential hazards and concerns about their existing RQs. The proposed revisions to the RQ methodology address those concerns by taking into account alternative measures of adverse effects, as discussed in the Technical Background Document to Support Adjustment of the Reportable Quantities of the Extremely Hazardous Substances Designated as CERCLA Hazardous Substances, Volume 5, available for inspection at Room M2427, U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460.

III. Summary of Supporting Analyses

A. Executive Order 12291

Executive Order (E.O.) 12291 requires that regulations be classified as major or nonmajor for purposes of review by the Office of Management and Budget (OMB). According to E.O. 12291, major rules are regulations that are likely to result in:

(1) An annual effect on the economy of $100 million or more; or

(2) A major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or

(3) Significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

An economic analysis performed by the Agency, available for inspection at Room M2427, U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460, shows that today's proposed rule is nonmajor, because the rule will result in a cost savings of approximately $1.8 million annually. These cost savings reflect only those effects of the RQ adjustments that are: (1) readily quantifiable in dollars; and (2) associated with the release notification requirements under CERCLA section 103 and SARA section 304 (including the associated activities of recordkeeping, notification processing, monitoring, and response).

This proposed rule has been submitted to OMB as required by E.O. 12291.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 requires that a Regulatory Flexibility Analysis be performed for all rules that are likely to have a "significant impact on a substantial number of small entities." To determine whether a Regulatory Flexibility Analysis was necessary for today's proposed rule, a preliminary analysis was conducted using a computer model that simulated the typical operation of a small U.S. chemical company.

---

[6] For the nine substances not on the EHS list, application of the proposed RQ adjustment methodology would not result in a change in the RQ.

[7] At present, Appendices A and B of 40 CFR Part 355 incorrectly show a TPQ of 10,000 pounds for one of these 19 substances, "Muscimol," CAS No. 2763–96–4. The correct TPQ is 500 or 10,000 pounds, depending on the physical form of the substance. On July 21, 1989, the Agency proposed to adjust this TPQ (54 FR 30700).

[8] At present, Appendices A and B of 40 CFR Part 355 incorrectly show an RQ of one pound for "Hydrogen Chloride (Gas Only)," CAS No. 7647–01–0. The correct RQ for this substance, however, is the one that applies to hydrochloric acid, shown in Table 302.4 of 40 CFR Part 302 as 5000 pounds. The RQ proposed today is 100 pounds.

The results of the simulation indicate that the upper-bound total cost of compliance to small firms is negligible. See the Economic Impact Analysis of Reportable Quantity Adjustments for the Extremely Hazardous Substances Designated as CERCLA Hazardous Substances, Volume V, available for inspection at Room M2427, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460. Therefore, because today's proposed rule is not expected to have a significant impact on small entities, EPA certifies that no Regulatory Flexibility Analysis is necessary.

C. Paperwork Reduction Act

The information collection requirements contained in this proposed rule have been submitted for approval to OMB under the Paperwork Reduction Act, 44 U.S.C. 3501 et seq. Information Collection Request documents have been prepared by EPA (IRC No. 1049 and 1491) and copies may be obtained from Carl Koch, Information Policy Branch, PM–223, U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460, or by calling 1–202/382–2739.

The public reporting burden for this collection of information is estimated to vary from 8 to 11 hours per response, with an average of 8.3 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM–233, U.S. Environmental Protection Agency, 401 M Street SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA." The final rule will respond to any OMB or public comments on the information collection requirements contained in this proposal.

List of Subjects

40 CFR Part 302

Air pollution control, Chemicals, Hazardous chemicals, Hazardous materials, Hazardous materials transportation, Hazardous substances, Hazardous wastes, Intergovernmental relations, Natural resources, Pesticides and pests, Reporting and recordkeeping requirements, Superfund, Waste Treatment and disposal, Water pollution control.

40 CFR Part 355

Air pollution control, Chemical accident prevention, Chemical emergency preparedness, Chemicals, Community emergency response plan, Community right-to-know, Contingency planning, Extremely hazardous substances, Hazardous substances, Intergovernmental relations, Reportable quantity, Reporting and recordkeeping requirements, Superfund Amendments and Reauthorization Act, Threshold planning quantity.

Dated: August 2, 1989.

William K. Reilly,

Administrator.

For the reasons set out in the preamble, it is proposed to amend title 40 chapter I of the Code of Federal Regulations as follows:

PART 302—DESIGNATION, REPORTABLE QUANTITIES, AND NOTIFICATION

1. The authority citation for part 302 continues to read as follows:

Authority: 42 U.S.C. 9602; 33 U.S.C. 1321 and 1361.

2. Section 302.4 is amended by adding the following entries in alphabetical order to Table 302.4 and in CASRN order to Appendix A to § 302.4 as set forth below. The note preceding Table 302.4 is revised to read as follows:

§ 302.4 Designation of hazardous substances.

* * * * *

Note: The numbers under the column headed "CASRN" are the Chemical Abstracts Service Registry Numbers for each hazardous substance. Other names by which each hazardous substance is identified in other statutes and their implementing regulations are provided in the "Regulatory Synonyms" column. The "Statutory RQ" column lists the RQs for hazardous substances established by section 102 of CERCLA. The "Statutory Code" column indicates the statutory source of hazardous substances defined in section 101(14) of CERLA or designated under section 102 of CERLA: "1" indicates that the statutory source is section 311(b)(4) of the Clean Water Act, "2" indicates that the source is section 307(a) of the Clean Water Act, "3" indicates that the source is section 112 of the Clean Air Act, "4" indicates that the source is RCRA section 3001, and "5a" indicates that the source is SARA section 302. The "RCRA Waste Number" column provides the waste identification numbers assigned to various substances by RCRA regulations. The column headed "Category" lists the code letters "X", "A", "B", "C", and "D", which are associated with reportable quantities of 1, 10, 100, 1000, and 5000 pounds, respectively. The "Pounds (kg)" column provides the reportable quantity for each hazardous substance in pounds and kilograms.

Zinc, dichloro(4,4-dimethyl-5((((methylamino) carbonyl)oxy)imino)pentanenitrile)-,(T-4)-.	58270089		1	5a		B	100	45.4

†—Indicates the statutory source as defined by 1, 2, 3, or 4 below:

1—indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 311(b)(4).

2—indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 307(a).

3—indicates that the statutory source for designation of this hazardous substance under CERCLA is CAA Section 112.

4—indicates that the statutory source for designation of this hazardous substance under CERCLA is RCRA Section 3001.

5a—indicates that the statutory source for designation of this hazardous substance is CERCLA Section 102(a).

APPENDIX A—SEQUENTIAL CAS REGISTRY NUMBER LIST OF EXTREMELY HAZARDOUS SUBSTANCES

CASRN	Hazardous substance
0	Organorhodium complex (PMN-82-147).
50146	Ergocalciferol.
51218	Fluorouracil.
51752	Mechlorethamine.
51832	Carbachol chloride.
54626	Aminopterin.
56257	Cantharidin.
57476	Physostigmine.
57578	Propiolactone, beta-
57647	Physostigmine, salicylate (1:1)
58366	Phenoxarsine, 10, 10-oxydi.
59881	Phenylhydrazine hydrochloride.
60413	Strychnine, sulfate.
64006	Phenol, 3-(1-methylethyl)-, methylcarbamate.
64868	Colchicine.
65305	Nicotine sulfate.
66819	Cycloheximide.
70699	Propiophenone, 4-amino.
71636	Digitoxin.
75183	Dimethyl sulfide.
75741	Tetramethyllead.
75774	Trimethylchlorosilane.
75785	Dimethyldichlorosilane.
75796	Methyltrichlorosilane.
76028	Trichloroacetyl chloride.
77816	Tabun.
78342	Dioxathion.
78535	Amiton.
78717	Oxetane, 3,3-bis(chloromethyl)-.
78820	Isobutyronitrile.
78944	Methyl vinyl ketone.
78977	Lactonitrile.
79118	Chloroacetic acid.
79210	Peracetic acid.
80637	Methyl 2-chloroacrylate.
82666	Diphacinone.
88051	Aniline, 2,4,6-trimethyl-.
97187	Phenol, 2,2'-thiobis(4,6-dichloro-.
98055	Benzenearsonic acid.
98135	Trichlorophenylsilane.
98168	Benzenamine, 3-(trifluoromethyl)-.
99989	Dimethyl-p-phenylenediamine.
100141	Benzene, 1-(chloromethyl)-4-nitro-.
102363	Isocyanic acid, 3,4-dichlorophenyl ester.
106967	Propargyl bromide.
107073	Chloroethanol.
107119	Allylamine.
107164	Formaldehyde cyanohydrin.
107448	Sarin.
108236	Isopropyl chloroformate.
108918	Cyclohexylamine.
109615	Propyl chloroformate.
110576	Trans-1,4-dichlorobutene.
110894	Piperidine.
111693	Adiponitrile.
115219	Trichloroethylsilane.
115264	Dimefox.
115902	Fensulfothion.
119380	Isopropylmethylpyrazolyl dimethylcarbamate.
122145	Fenitrothion.
123319	Hydroquinone.
124652	Sodium cacodylate.
124878	Picrotoxin.
129066	Warfarin sodium.
131522	Sodium pentachlorophenate.
140294	Benzyl cyanide.
140761	Pyridine, 2-methyl-5-vinyl.
141662	Dicrotophos.
144490	Fluoroacetic acid.
149746	Dichloromethylphenylsilane.
151382	Methoxyethylmercuric acetate.
297789	Isobenzan.
300629	Amphetamine.
316427	Emetine, dihydrochloride.
327980	Trichloronate.
353424	Boron trifluoride compound with methyl ether (1:1).
359068	Fluoroacetyl chloride.
371620	Ethylene fluorohydrin.
379793	Ergotamine tartrate.
470906	Chlorfenvinfos.
502396	Methylmercuric dicyanamide.
505602	Mustard gas.
506785	Cyanogen iodide.
514738	Dithiazanine iodide.
534076	Bis(chloromethyl) ketone.
535897	Crimidine.
538078	Ethylbis(2-chloroethyl)amine.
541253	Lewisite.
542905	Ethylthiocyanate.
555771	Tris(2-chloroethyl)amine.
556616	Methyl isothiocyanate.
556649	Methyl thiocyanate.
558258	Methanesulfonyl fluoride.
563417	Semicarbazide hydrochloride.
597648	Tetraethyltin.
614788	Thiourea, (2-methylphenyl)-.
624920	Methyl disulfide.
625558	Isopropyl formate.
627112	Chloroethyl chloroformate.
630604	Ouabain.
639587	Triphenyltin chloride.
644644	Dimetilan.
675149	Cyanuric fluoride.
676971	Methyl phosphonic dichloride.
732116	Phosmet.
760930	Methacrylic anhydride.
786196	Carbophenothion.
814493	Diethyl chlorophosphate.
814686	Acrylyl chloride.
824113	Trimethylolpropane phosphite.
900958	Stannane, acetoxytriphenyl-.
919868	Demeton-S-methyl.
920467	Methacryloyl chloride.
944229	Fonofos.
947024	Phosfolan.
950107	Mephosfolan.
950378	Methidathion.
991424	Norbormide.
998301	Triethoxysilane.
999815	Chlormequat chloride.
1031476	Triamiphos.
1066451	Trimethyltin chloride.
1122607	Nitrocyclohexane.
1124330	Pyridine, 4-nitro-, 1-oxide.
1129415	Metolcarb.
1306190	Cadmium oxide.
1314563	Phosphorus pentoxide.
1397940	Antimycin A.
1420071	Dinoterb.
1558254	Trichloro(chloromethyl)silane.
1600277	Mercuric acetate.
1622328	Ethanesulfonyl chloride, 2-chloro-.
1642542	Diethylcarbamazine citrate.
1752303	Acetone thiosemicarbazide.
1910425	Paraquat.
1982474	Chloroxuron.
2001958	Valinomycin.
2074502	Paraquat methosulfate.
2097190	Phenylsilatrane.
2104645	EPN.
2223930	Cadmium stearate.
2231574	Thiocarbazide.
2238075	Diglycidyl ether.
2275185	Prothoate.
2497076	Oxydisulfoton.
2524030	Dimethyl phosphorochloridothioate.
2540821	Formothion.
2570265	Pentadecylamine.
2587908	Phosphorothioic acid, 0,0-dimethyl-S-(2-methylthio) ethyl ester.
2631370	Promecarb.
2636262	Cyanophos.
2642719	Azinphos-ethyl.
2665307	Phosphonothioc acid, methyl-,0-(4-nitrophenyl) 0-phenyl ester.
2703131	Phosphonothioic acid, methyl-,0-ethyl 0-(4-(methylthio)phenyl) ester.
2757188	Thallous malonate.
2778043	Endothion.
3037727	Silane, (4-aminobutyl)diethoxymethyl-.
3254635	Phosphoric acid, dimethyl 4-(methylthio)phenyl ester.
3569571	Sulfoxide, 3-chloropropyl octyl.
3615212	Benzimidazole, 4,5-dichloro-2-(trifluoromethyl)-.
3691358	Chlorophacinone.
3734972	Amiton oxalate.
3735237	Methyl phenkapton.
3878191	Fuberidazole.
4044659	Bitoscanate.
4098719	Isophorone diisocyanate.
4104147	Phosacetim.
4301502	Fluenetil.
4418660	Phenol, 2,2'-thiobis[4-chloro-6-methyl-phenol, 2,2'-thiobis (4-chloro-6-methyl)-.
4835114	Hexamethylenediamine, N,N'-dibutyl-.
5281130	Piprotal.
5836293	Coumatetralyl.
6923224	Monocrotophos.
7446095	Sulfur dioxide.
7446119	Sulfur trioxide.
7487947	Mercuric chloride.
7550450	Titanium tetrachloride.
7580678	Lithium hydride.
7637072	Boron trifluoride.
7722841	Hydrogen peroxide (concentration > 52%).
7726956	Bromine.
7783075	Hydrogen selenide.
7783600	Sulfur tetrafluoride.
7783702	Antimony pentafluoride.
7783804	Tellurium hexafluoride.
7784421	Arsine.
7791233	Selenium oxychloride.
8065483	Demeton.
10025737	Chromic chloride.
10026138	Phosphorus pentachloride.
10028156	Ozone.
10102202	Sodium tellurite.
10140871	Ethanol, 1,2-dichloro-, acetate.
10210681	Cobalt carbonyl.
10265926	Methamidophos.
10294345	Boron trichloride.
10311849	Dialifor.
10476956	Methacrolein diacetate.
12108133	Manganese, tricarbonyl methylcyclopentadienyl.
13071799	Terbufos.
13171216	Phosphamidon.
13194484	Ethoprophos.
13410010	Sodium selenate.
13450903	Gallium trichloride.
13463406	Iron, pentacarbonyl-.
13494809	Tellurium.
14167181	Salcomine.
15271417	Bicyclo[2,2,1]heptane-2-carbonitrile, 5-chloro-6-((((methylamino)carbonyl)oxy)im.
17702419	Decaborane(14).
17702577	Formparanate.
19287457	Diborane.
19624227	Pentaborane.
20830755	Digoxin.
21548323	Fosthietan.

APPENDIX A—SEQUENTIAL CAS REGISTRY NUMBER LIST OF EXTREMELY HAZARDOUS SUBSTANCES—Continued

CASRN	Hazardous substance
21609905	Leptophos.
21908532	Mercuric oxide.
21923239	Chlorthiophos.
22224926	Fenamiphos.
23135220	Oxamyl.
23422539	Formetanate hydrochloride.
23505411	Pirimifos-ethyl.
24017478	Triazofos.
24934916	Chlormephos.
26419738	Carbamic acid, methyl-, 0-(((2,4-dimethyl-1,3-dithiolan-2-yl)methylene)amino)-.
27137855	Trichloro(dichlorophenyl)silane.
28347139	Xylylene dichloride.
28772567	Bromadiolone.
30674807	Methacryloyloxyethyl isocyanate.
50782699	Phosphonothioc acid, methyl-, S-(2-bis(1-methylethyl)amino)ethyl 0-ethyl ester.
53558251	Pyriminil.
58270089	Zinc, dichloro(4,4-dimethyl-5((((methylamino)carbonyl)oxy)imino) pentanenitrile)-,(T-4)-.
62207765	Cobalt, ((2,2'-ethanediylbis (nitrilomethylidyne))bis(6-fluorophenolato))(2).

3. Section 302.4 is amended by revising the following entries to Table 302.4 as set forth below:

§ 302.4 Designation of Hazardous Substances.

* * * * *

TABLE 302.4—LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES

Hazardous Substance	CASRN	Regulatory Synonyms	Statutory			Proposed RQ	
			RQ	Code*	RCRA Waste Number	Category	Pounds (Kg)
*		* * *		*			
Acrylamide	79061	2-Propenamide	*1	4	U007	C	1,000 (454)
*		* * *		*			
5-(Aminomethyl)-3-isoxazolol	2763964	Muscimol 3(2H)-Isoxazolone, 5-(aminomethyl)	*1	4	P007	B	100 (45.4)
*		* * *		*			
4-Aminopyridine	504245	Pyridine, 4-amino-4-Pyridinamine	*1	4	P008	B	100 (45.4)
*		* * *		*			
Aniline	62533	Benzenamine	1,000	1,4	U012	C	1,000 (454)
*		* * *		*			
Benzal chloride	98873	Benzene, dichloromethyl-	*1	4	U017	B	100 (45.4)
*		* * *		*			
Benzenamine	62533	Aniline	1,000	1,4	U012	C	1,000 (454)
*		* * *		*			
Benzene, dichloromethyl-	98873	Benzal chloride	*1	4	U017	B	100 (45.4)
*		* * *		*			
Benzene, hydroxy-	108952	Phenol	1,000	1,2,4	U188	B	100 (45.4)
*		* * *		*			
Bromine cyanide	506683	Cyanogen bromide	*1	4	U246	B	100 (45.4)
*		* * *		*			
Carbonochloridic acid, methyl ester	79221	Methyl chlorocarbonate, Methyl chloroformate.	*1	4	U156	B	100 (45.4)
*		* * *		*			
Cyanogen bromide	506683	Bromine cyanide	*1	4	U246	B	100 (45.4)
*		* * *		*			
Dinoseb	88857	Phenol, 2,4-dinitro-6-(1-methylpropyl)-	*1	4	P020	B	100 (45.4)
*		* * *		*			
Hydrochloric acid	647010	Hydrogen chloride	5,000	1		B	100 (45.4)
*		* * *		*			
Hydrogen chloride	647010	Hydrochloric acid	5,000	1		B	100 (45.4)
*		* * *		*			
3(2H)-Isoxazolone, 5-(aminomethyl)-	2763964	Muscimol 5-(Aminomethyl)-3-isoxazolol	*1	4	P007	B	100 (45.4)
*		* * *		*			
Malononitrile	109773	Propanedinitrile	*1	4	U149	B	100 (45.4)
*		* * *		*			
Methacrylonitrile	126987	2-Propenenitrile, 2-methyl-	*1	4	U152	B	100 (45.4)
*		* * *		*			
Methyl chlorocarbonate	79221	Carbonochloridic acid, methyl ester Methyl chloroformate.	*1	43	U156	B	100 (45.4)
*		* * *		*			
Methyl chloroformate	79221	Carbonochloridic acid, methyl ester, methyl chlorocarbonate.	*1	4	U156	B	100 (45.4)
*		* * *		*			
Mexacarbate	315184		1,000	1		B	100 (45.4)
*		* * *		*			
Muscimol	2763964	3(2H)-Isoxazolone, 5-(aminomethyl)-5-(Aminomethyl)-3-isoxazolol.	*1	4	P007	B	100 (45.4)
*		* * *		*			
Nickel carbonyl	13463393	Nickel carbonyl Ni(CO)4, T-4)	*1	4	P073	X	1 (0.454)
*		* * *		*			
Nickel carbonyl Ni(CO)4, T-4)	13463393	Nickel carbonyl	*1	4	P073	X	1 (0.454)
*		* * *		*			
Phenol	108952	Benzene, hydroxy	1,000	1,2,4	U188	B	100 (45.4)

TABLE 302.4—LIST OF HAZARDOUS SUBSTANCES AND REPORTABLE QUANTITIES—Continued

Hazardous Substance	CASRN	Regulatory Synonyms	Statutory			Proposed RQ	
			RQ	Code*	RCRA Waste Number	Category	Pounds (Kg)
*		* * *		*			
Phenol, 2,4-dinitro-6-(1-methylpropyl)	88857	Dinoseb	*1	4	P020	B	100 (45.4)
*		* * *		*			
Phosphorous oxychloride	10025873		5,000	1		B	100 (45.4)
*		* * *		*			
Propanedinitrile	109773	Malononitrile	*1	4	U149	B	100 (45.4)
*		* * *		*			
2-Propenamide	79061	Acrylamide	*1	4	U007	C	1,000 (454)
*		* * *		*			
2-Propenenitrile, 2-methyl	126987	Methacrylonitrile	*1	4	U152	B	100 (45.4)
*		* * *		*			
Pyrene	129000		*1	2		C	1,000 (454)
*		* * *		*			
4-Pyridinamine	504245	Pyridine, 4-amino-4-Aminopyridine	*1	4	P008	B	100 (45.4)
*		* * *		*			
Pyridine, 4-amino-	504245	4-Aminopyridine, 4-Pyridinamine	*1	4	P008	B	100 (45.4)
*		* * *		*			
Sodium azide	26628228		*1	4	P105	B	100 (45.4)
*		* * *		*			
Vanadium(V) oxide	1314621	Vanadium pentoxide	1,000	1,4	P120	B	100 (45.4)
*		* * *		*			
Vanadium pentoxide	1314621	Vanadium(V) oxide	1,000	1,4	P120	B	100 (45.4)
*		* * *		*			
Vinyl acetate	108054	Vinyl acetate monomer	1,000	1		C	1,000 (454)
*		* * *		*			
Vinyl acetate monomer	108054	Vinyl acetate	1,000	1		C	1,000 (454)

*—Indicates the statutory source as defined by 1, 2, 3, or 4 below:
1—Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 311(b)(4).
2—Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 307(a).
3—Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 112.
4—Indicates that the statutory source for designation of this hazardous substance under CERCLA is CWA Section 3001.
5a—Indicates that the statutory source for designation of this hazardous substance is CERCLA Section 102(a).

PART 355—EMERGENCY PLANNING AND NOTIFICATION

4. The authority citation for part 355 continues to read as follows:

Authority: 42 U.S.C. 11002 and 11048.

5. Part 355 is amended by revising the following entries to Appendices A and B.

APPENDIX A.—THE LIST OF EXTREMELY HAZARDOUS SUBSTANCES AND THEIR THRESHOLD PLANNING QUANTITIES

[Alphabetical Order]

CAS No.	Chemical Name	Notes	Proposed RQ (pounds)	Threshold planning quantity (pounds)
01752303	Acetone thiosemicarbazide	d	100	1,000/10,000
00079061	Acrylamide	i	1000	1,000/10,000
00814686	Acrylyl chloride	d, f	100	100
00111693	Adiponitrile	d, l	1000	1,000
00107119	Allylamine	d	100	500
00054626	Aminopterin	d	10	500/10,000
00078535	Amiton	d	100	500
03734972	Amiton oxalate	d	100	100/10,000
00300629	Amphetamine	d	100	1,000
00062533	Aniline	i	1000	1,000
00088051	Aniline, 2,4,6-trimethyl-	d	100	500
07783702	Antimony pentafluoride	d	100	500
01397940	Antimycin A	c, d	1000	1,000/10,000
07784421	Arsine	d	1	100
02642719	Azinphos-ethyl	d	100	100/10,000
00098873	Benzal chloride		100	500
00098166	Benzenamine, 3-(trifluoromethyl)-	d	100	500
00100141	Benzene, 1-(chloromethyl)-4-nitro-	d	100	500/10,000
00098055	Benzenearsonic acid	d	10	10/10,000
03615212	Benzimidazole, 4,5-dichloro-2-(trifluoromethyl)-	d, e	100	500/10,000
00140294	Benzyl cyanide	d, f	100	500
15271417	Bicyclo(2,2,1)heptane-2-carbonitrile, 5-chloro-6-((((methylamino) carbonyl)oxy)m.	d	100	500/10,000
00534076	Bis(chloromethyl)ketone	d	10	10/10,000
04044659	Bitoscanate	d	100	500/10,000
10294345	Boron trichloride	d	100	500

APPENDIX A.—THE LIST OF EXTREMELY HAZARDOUS SUBSTANCES AND THEIR THRESHOLD PLANNING QUANTITIES—Continued

[Alphabetical Order]

CAS No.	Chemical Name	Notes	Proposed RQ (pounds)	Threshold planning quantity (pounds)
07637072	Boron trifluoride	d	100	500
00353424	Boron trifluoride compound with methyl ether	d	1000	1,000
28772567	Bromadiolone	d	100	100/10,000
07726956	Bromine	d, i	100	500
01306190	Cadmium oxide	d	10	100/10,000
02223930	Cadmium stearate	c, d	10	1,000/10,000
00056257	Cantharidin	d	100	100/10,000
00051832	Carbachol chloride	d	100	500/10,000
26419738	Carbamic acid, methyl-, o-(((2,4-dimethyl-1,3-dithiolan-2-yl)methylene)amino)-.	d	100	100/10,000
00786196	Carbophenothion	d	100	500
24934916	Chlormephos	d	100	500
00999815	Chlormequat chloride	d, f	100	100/10,000
00079118	Chloroacetic acid	d	1100	100/10,000
00107073	Chloroethanol	d	100	500
00627112	Chloroethyl chloroformate	d	100	1,000
00470906	Chlorofenvinfos	d	100	500
03691358	Chlorophacinone	d	100	100/10,000
01982474	Chloroxuron	d	100	500/10,000
21923239	Chlorthiophos	d, f	100	500
10025737	Chromic chloride	d	1	1/10,000
10210681	Cobalt carbonyl	d, f	10	10/10,000
62207765	Cobalt, ((2,2'-(1,2-ethanediylbis (nitrilomethylidyne))bis(6-fluorophenolato))(2).	d	100	100/10,000
00064868	Colchicine	d, f	10	10/10,000
05836293	Coumatetralyl	d	100	500/10,000
00535897	Crimidine	d	100	100/10,000
00506785	Cyanogen iodide	d	1000	1,000/10,000
00506683	Cyanogen bromide		100	500/10,000
02636262	Cyanophos	d	1000	1,000
00675149	Cyanuric fluoride	d	100	100
00066819	Cycloheximide	d	100	100/10,000
00108918	Cyclohexylamine	d, i	1000	10,000
17702419	Decaborane(14)	d	10	500/10,000
08065483	Demeton	d	100	500
00919868	Demeton-S-methyl	d	100	500
10311849	Dialifor	d	100	100/10,000
19287457	Diborane	d	10	100
00110576	Trans-1,4-dichlorobutene	d	100	500
00149746	Dichloromethylphenylsilane	d	100	1,000
00141662	Dicrotophos	d	100	100
00814493	Diethyl chlorophosphate	d, f	100	500
01642542	Diethylcarbamazine citrate	d	100	100/10,000
00071636	Digitoxin	c, d	100	100/10,000
02238075	Diglycidyl ether	d	100	1,000
20830755	Digoxin	d, f	10	10/10,000
00115264	Dimefox	d	100	500
02524030	Dimethyl phosphorochloridothioate	d	100	500
00075785	Dimethyldichlorosilane	d, f	100	500
00099989	Dimethyl-p-phenylenediamine	d	1	10/10,000
00075183	Dimethyl sulfide	d	100	100
00644644	Dimetilan	d	100	500/10,000
00088857	Dinoseb	T	100	
01420071	Dinoterb	d	100	500/10,000
00078342	Dioxathion	d	100	500
00082666	Diphacinone	d	10	10/10,000
00514738	Dithiazanine iodide	d	100	500/10,000
00316427	Emetine, dihydrochloride	d, f	1	1/10,000
02778043	Endothion	d	100	500/10,000
02104645	EPN	d	100	100/10,000
00050146	Ergocalciferol	c, d	100	1,000/10,000
00379793	Ergotamine tartrate	d	100	500/10,000
01622328	Ethanesulfonyl chloride, 2-chloro-	d	100	500
01622328	Ethanesulfonyl chloride, 2-chloro-	d	100	500
10140871	Ethanol, 1,2-dichloro-, acetate	d	100	1,000
13194484	Ethoprophos	d	1000	1,000
00538078	Ethylbis(2-chloroethyl)amine	d, f	100	500
00371620	Ethylene fluorohydrin	c, d, f	10	10
00542905	Ethylthiocyanate	d	1000	10,000
22224926	Fenamiphos	d	10	10/10,000
00122145	Fenitrothion	d	100	500
00115902	Fensulfothion	d, f	100	500
04301502	Fluenetil	d	100	100/10,000
00144490	Fluoroacetic acid	d	10	10/10,000
00359068	Fluoroacetyl chloride	c, d	10	10
00051218	Fluorouracil	d	100	500/10,000

APPENDIX A.—THE LIST OF EXTREMELY HAZARDOUS SUBSTANCES AND THEIR THRESHOLD PLANNING QUANTITIES—Continued

[Alphabetical Order]

CAS No.	Chemical Name	Notes	Proposed RQ (pounds)	Threshold planning quantity (pounds)
00944229	Fonofos	d	100	500
00107164	Formaldehyde cyanohydrin	d, f	1000	1,000
23422539	Formetanate hydrochloride	d, f	100	500/10,000

APPENDIX A.—THE LIST OF EXTREMELY HAZARDOUS SUBSTANCES AND THEIR THRESHOLD PLANNING QUANTITIES—Continued

[Alphabetical Order]

CAS No.	Chemical Name	Notes	Proposed RQ (pounds)	Threshold planning quantity (pounds)
28347139	Xylylene dichloride	d	100	100/10,000
58270089	Zinc, dichloro(4,4-dimethyl-5((((methylamino)carbonyl)oxy)imino)-pentanenitrile)-, (T-4)-.	d	100	100/10,000

Notes:

a—This chemical does not meet acute toxicity criteria. Its TPQ is set at 10,000 pounds.

b—This material is a reactive solid. The TPQ does not default to 10,000 pounds for non-powder, non-molten, non-solution form.

c—The calculated TPQ changed after technical review as described in the technical support document.

d—Until the proposed RQs are finalized, reporting under SARA section 304(a)(2) must be done at the statutory level (see Table 302.4 in this proposed rule for these statutory RQs).

e—New chemicals added that were not part of the original list of 402 substances.

f—Revised TPQ based on new or re-evaluated toxicity data.

g—TPQ is revised to its calculated value and does not change due to technical review as in proposed rule.

h—The TPQ was revised after proposal due to calculation error.

i—Chemicals on the original list that do not meet toxicity criteria but because of their high production volume and recognized toxicity are considered chemicals of concern ("Other chemicals").

62207765	Cobalt, ((2,2'-(1,2-ethanediylbis (nitrilomethylidyne))bis(6-fluorophenolato))(2).	d	100	100/10,000

NOTES:

a—This chemical does not meet acute toxicity criteria. Its TPQ is set at 10,000 pounds.

b—This material is a reactive solid. The TPQ does not default to 10,000 pounds for non-powder, non-molten, non-solution form.

c—The calculated TPQ changed after technical review as described in the technical support document.

d—Until the proposed RQs are finalized, reporting under SARA section 304(a)(2) must be done at the statutory level (see Table 302.4 in this proposed rule for these statutory RQs).

e—New chemicals added that were not part of the original list of 402 substances.

f—Revised TPQ based on new or re-evaluated toxicity data.

g—TPQ is revised to its calculated value and does not change due to technical review as in proposed rule.

h—The TPQ was revised after proposal due to calculation error.

i—Chemicals on the original list that do not meet toxicity criteria but because of their high production volume and recognized toxicity are considered chemicals of concern ("Other chemicals").

Department of the Interior

Fish and Wildlife Service

50 CFR Part 20
Migratory Bird Hunting; Final Rule

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 20

RIN-1018-AA24

Migratory Bird Hunting; Early Seasons, Bag and Possession Limits of Certain Migratory Game Birds in the Contiguous United States, Alaska, Hawaii, Puerto Rico and the Virgin Islands

AGENCY: Fish and Wildliife Service, Interior.

ACTION: Final rule.

SUMMARY: This rule prescribes the hunting seasons, hours, areas, and daily bag and possession limits of mourning, white-winged and white-tipped doves; band-tailed pigeons; rails; moorhens and gallinules; woodcock; common snipe; sea ducks in the Atlantic Flyway; experimental September duck seasons in identified States; experimental and special September Canada goose seasons in portions of identified States; sandhill cranes in the Central and Pacific Flyways; doves in Hawaii; migratory game birds in Alaska, Puerto Rico, and the Virgin Islands; and some extended falconry seasons during 1989–90. The taking of these migratory birds is prohibited unless hunting seasons are specifically provided. This rule will permit the hunting of these species within specified periods of time beginning as early as September 1, as has been the case in past years.

DATE: Effective on August 30, 1989.

FOR FURTHER INFORMATION CONTACT: Byron K. Williams, Acting Chief, Office of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, Room 634-Arlington Square, Washington, DC, telephone 703–358–1714.

SUPPLEMENTARY INFORMATION: The Migratory Bird Treaty Act of July 3, 1918 (40 Stat 755; 16 U.S.C. 703 et seq.), as amended, authorizes and directs the Secretary of the Interior, having due regard for the zones of temperature and for the distribution, abundance, economic value, breeding habits, and times and lines of flight of migratory game birds to determine when, to what extent, and by what means such birds or any part, nest, or egg thereof may be taken, hunted, captured, killed, possessed, sold, purchased, shipped, carried, exported or transported.

On March 27, 1989, the U.S. Fish and Wildlife Service (hereinafter the Service) published for public comment in the **Federal Register** (54 FR 12534) a proposal to amend 50 CFR part 20, with comment periods ending July 23, 1989, for early-season proposals, and August 28, 1989, for the late-season proposals. The March 27 document dealt with the establishment of hunting seasons, hours, areas and limits for migratory game birds under § 20.101 through 20.107, 20.109 and 20.110 of Subpart K. On June 6, 1989, the Service published in the **Federal Register** (54 FR 24290) a second document consisting of a supplemental proposed rulemaking dealing with both the early- and late-season frameworks. On July 13, 1989, the Service published for public comment in the **Federal Register** (54 FR 29640) a third document consisting of a proposed rulemaking dealing specifically with frameworks for early-season migratory bird hunting regulations. On August 11, 1989, the Service published a fourth document (54 FR 32975) containing final frameworks for early migratory bird hunting seasons from which wildlife conservation agency officials from the States, Puerto Rico and the Virgin Islands selected early-season hunting dates, hours, areas and limits for 1989–90. On August 16, 1989, the Service published the fifth document in the series (54 FR 33721) that deals specifically with proposed frameworks for the 1989–90 late-season migratory bird hunting regulations. The final rule described here is the sixth in a series of proposed, supplemental and final rulemaking documents for migratory game bird hunting regulations and deals specifically with amending Subpart K of 50 CFR part 20 to set hunting seasons, hours, areas and limits for mourning, white-winged and white-tipped doves; band-tailed pigeons; rails; moorhens and gallinules, woodcock; common snipe; sea ducks in the Atlantic Flyway; experimental September duck seasons in identified States; experimental and special September Canada goose seasons in portions of identified States; sandhill cranes in the Central and Pacific Flyways; doves in Hawaii; migratory game birds in Alaska, Puerto Rico, and the Virgin Islands; and some extended falconry seasons.

Nontoxic Shot Regulations

In the April 13, 1989, **Federal Register** (54 FR 14814), the Service published a final rule describing zones in which lead shot is prohibited for hunting waterfowl, coots and certain other species in the 1989–90 season. Waterfowl hunters are advised to become familiar with State and local regulations regarding the use of nontoxic shot for waterfowl hunting.

NEPA Consideration

NEPA considerations are covered by the programmatic document, "Final Supplemental Environmental Impact Statement: Issuance of Annual Regulations Permitting the Sport Hunting of Migratory Birds (FSES 88–14)," filed with EPA on June 9, 1988. Notice of Availability was published in the **Federal Register** on June 16, 1988 (53 FR 22582). The Service's Record of Decision was published on August 18, 1988 (53 FR 31341).

Endangered Species Act Consideration

On June 22, 1989, the Division of Endangered Species and Habitat Conservation gave a biological opinion that the proposed actions were not likely to jeopardize the continued existence of listed species or result in the destruction or adverse modification of their critical habitats.

As in the past, hunting regulations this year are designed, among other things, to remove or alleviate chances of conflict between seasons for migratory game birds and the protection and conservation of endangered and threatened species.

The Service's biological opinion resulting from its consultation under section 7 is considered a public document and is available for inspection in the Division of Endangered Species and Habitat Conservation and the Office of Migratory Bird Management, U.S. Fish and Wildlife Service, 4401 North Fairfax Drive, Arlington, Virginia.

Regulatory Flexibility Act, Executive Order 12291 and the Paperwork Reduction Act.

In the **Federal Register** dated March 27, 1989 (54 FR 12534), the Service reported measures it had undertaken to comply with requirements of the Regulatory Flexibility Act and the Executive Order. These included preparing a Determination of Effects and an updated Final Regulatory Impact Analysis, and publication of a summary of the latter. These regulations have been determined to be major under Executive Order 12291 and they have a significant economic impact on substantial numbers of small entities under the Regulatory Flexibility Act. This determination is detailed in the aforementioned documents which are available upon request from the Office of Migratory Bird Management, U.S. Fish and Wildlife Service, Department of the Interior, Washington, DC 20240. These regulations contain no information collections subject to Office of Management and Budget under the Paperwork Reduction Act of 1980.

Memorandum of Law

The Service published its Memorandum of Law, required by section 4 of Executive Order 12291, in the **Federal Register** dated August 11, 1989 (54 FR 32975).

Authorship

The primary author of this rule is Morton M. Smith, Office of Migratory Bird Management, working under the direction of Byron K. Williams, Acting Chief.

Regulations Promulgation

After analysis of migratory game bird survey data obtained through investigations conducted by the Service, State conservation agencies, and other sources, and consideration of all comments received on the early proposals (54 FR 12534, March 27, 1989; 54 FR 24290, June 6, 1989; and 54 FR 29640, July 13, 1989), the Service published in the **Federal Register** on August 11, 1989 (54 FR 32975) final early-season frameworks for the United States, including Alaska and Hawaii, and Puerto Rico and the Virgin Islands. Copies of the final frameworks were sent to the officials of the State conservation agencies and to conservation agency officials in Puerto Rico and the Virgin Islands who were invited to submit recommendations for hunting seasons which complied with the season times and lengths, hours, areas and limits specified in the frameworks.

The taking of the designated species of migratory birds is prohibited unless open hunting seasons are specifically provided. The following amendments will permit taking of the designated species within specified time periods beginning as early as September 1, as has been the case in past years.

The rulemaking process for migratory game bird hunting must, by its nature, operate under severe time constraints. However, the Service intends that the public be given the greatest possible opportunity to comment on the regulations. Thus, when proposed rulemakings were published on March 27, June 6, and July 13, 1989, the Service established what it believed were the longest periods possible for public comment. In doing this the Serivce recognized that when the comment period closed, time would be of the essence. That is, if there were a delay in the effective date of these regulations after this final rulemaking, the States would have insufficient time to select their season dates, shooting hours, hunting areas and limits; to communicate those selections to the Service; and to establish and publicize the necessary regulations and procedures to implement their decisions. The Service therefore finds that "good cause" exists, within the terms of 5 U.S.C. 553(d)(3) (Administrative Procedure Act), and these regulations will, therefore, take effect immediately upon publication.

Accordingly, with each State conservation agency having had an opportunity to participate in selecting the hunting seasons desired for its State on those species of migratory birds for which open seasons are now to be prescribed, and consideration having been given to all other relevant matters presented, certain sections of Title 50, Chapter I, Subchapter B, Part 20, Subpart K, are amended as set forth below.

List of Subjects in 50 CFR Part 20

Exports, Hunting imports, Transportation, Wildlife.

PART 20—[AMENDED]

For these reasons set out in the preamble, Title 50, Chapter I, Subchapter B, Part 20, Subpart K, is amended as follows.

1. The authority citation for Part 20 is revised to read as follows:

Authority: Migratory Bird Treaty Act, sec. 3, Pub. L. 65–186, 40 Stat. 755 (16 U.S.C. 701–718h); sec. 3(h), Pub. L. 95–616, 92 Stat. 3112 (16 U.S.C. 712); Alaska Game Act of 1925, 43 Stat. 739, as amended, 54 Stat. 1103–04.

Note: The following annual hunting regulations provided for by §§20.101 through 20.106 and 20.109 of 50 CFR Part 20 will not appear in Code of Federal Regulations because of their seasonal nature.

2. Section 20.101 is revised to read as follows:

§ 20.101 Seasons, limits and shooting hours for Puerto Rico and the Virgin Islands.

1. Subject to the applicable provisions of the preceding sections of this part, the open seasons (dates inclusive), the shooting and hawking hours, and the daily bag and possession limits, and areas for hunting the species designated in this section are prescribed as follows:

(a) *Puerto Rico*

	Doves	Pigeons
Daily bag limit	10 singly or in the aggregate of all permitted species.	5
Possession limit.	10 singly or in the aggregate of all permitted species.	5
Season dates	September 2 to October 30, 1989.	
Shooting hours	One-half hour before sunrise to sunset daily.	

Restrictions: Only the following species of doves and pigeons may be hunted during the open season: Zenaida dove-Tortola cardosantera; white-winged dove—Tortola aliblanca o cubanita; mourning dove—Tortola rabilarga o rabiche; and scaly-naped pigeon—Paloma turca o torcaz.

Closed Areas

No season is prescribed for doves and pigeons on Mona Island, in the Municipality of Culebra and on Desecheo Island.

No season is prescribed in the El Verde Closure Area consisting of those areas of the municipalities of Rio Grande and Loiza delineated as follows: (1) All lands between Routes 956 on the west and 186 on the east, from Route 3 on the north to the juncture of Routes 956 and 186 (Km 13.2) in the south; (2) all lands between Routes 186 and 966 from the juncture of 186 and 966 on the north, to the Caribbean National Forest Boundary on the south; (3) all lands lying west of Route 186 for one (1) kilometer from the juncture of Routes 186 and 956 south of Km 6 on Route 186; (4) all lands within Km 14 and Km 6 on the west and the Caribbean National Forest Boundary on the east; and (5) all lands within the Caribbean National Forest Boundary whether private or public.

No season is prescribed for doves and pigeons of any species in all of Cidra Municipality and in portions of Aguas Buenas, Caguas, Cayey, and Comerio Municipalities as encompassed within the following boundary: beginning on Highway 172 as it leaves the Municipality of Cidra on the west edge, north to Highway 156, east on Highway 156 to Highway 1, south on Highway 1 to Highway 765, south of Highway 765 to Highway 763, south on Highway 763 to the Rio Guavata, west along the Rio Guavata to Highway 1, southwest on Highway 1 to Highway 14, west on Highway 14 to Highway 729, north on Highway 729 to Cidra Municipality, and westerly, northerly, and easterly along the Cidra Municipality boundary to the point of beginning.

Check Commonwealth Regulations for Additional Restrictions

(b) *Puerto Rico*

	Ducks	Common moorhens (gallinules)	Common snipe
Daily bag limits	3	6	6
Possession limits	6	12	12
Season dates	November 4 to December 4, 1989 & February 3 to February 26, 1990.		
Shooting hours	One-half hour before sunrise until sunset daily.		

Restrictions: No season is prescribed for waterfowl in the Municipality of Culebra and on Desecheo Island. The season is closed on the ruddy duck *(Oxyura jamaicensis)*; Bahama pintail *(Anas bahamensis)*; West Indian whistling (tree) duck *(Dendrocygna arborea)*; fulvous whistling (tree) duck *(Dendrocygna bicolor)*; masked duck *Oxyura dominica)*; purple gallinule *(Porphyrula martinica)*; American coot *Fulica americana)*; and Caribbean coot *(Fulica carbaea)*.

Check Commonwealth Regulations for Additional Restrictions

Note: Local names for game bird: Ruddy duck *(Oxyura jamaicensis)*—Pato rojo (protected); purple gallinule *(Porphyrula martinica)*—Gallareta azul (protected); and Puerto Rican plain pigeon *Columba inornata wetmorei)*—Paloma sabanera (protected).

(c) *Virgin Islands*

	Zenaida dove	Scaly-naped pigeon	Ducks
Daily bag limits	10	5	3
Possession limits	10	5	6
Season dates:			
Zenaida dove and scaly-naped pigeon	September 1 through October 30, 1989.		
Ducks only	December 6, 1989, through January 29, 1990.		
Shooting hours	One half-hour before sunrise until sunset.		

Restrictions: Seasons are closed for ground or quail doves and pigeons (except scaly-naped pigeon) in the Virgin Islands. The season is closed on the ruddy duck *(Oxyura jamaicensis)*; White-cheeked pintail *(Anas bahamensis)*; West Indian whistling (tree) duck *(Dendrocygna arborea)*; fulvous whistling (tree) duck *(Dendrocygna bicolor)*; masked duck *(Oxyura dominica)*, and purple gallinule *(Porphyrula martinica)*.

Note: Local names for game birds: Zenaida dove—mountain dove; Bridled quail dove—Barbary dove, partridge (protected); Ground dove—stone dove, tobacco dove, rola, tortolita (protected); Scaly-naped pigeon—red-necked pigeon, scaled pigeon.

Check Commonwealth Regulations for Additional Restrictions

3. Section 20.102 is revised to read as follows:

§ 20.102 Seasons, limits, and shooting hours for Alaska.

Subject to the applicable provisions of the preceding sections of this part, the areas open to hunting, the respective open seasons (dates inclusive), the shooting and hawking hours, and the daily bag and possession limits on the species designated in this section are prescribed as follows:

Shooting and hawking hours: One-half hour before sunrise to sunset daily.

Check State Regulations for Additional Restrictions, Including Area Descriptions

Open Seasons	Ducks, Geese (including Brant), Cranes, and Snipe
Area	
State Game Mgmt. Units: 11–13 and 17–26.	Sept. 1–Dec. 16.
State Game Mgmt. Units: 5–7, 9, 14–16 & 10 (Unimak island only).	Sept. 1–Dec. 16.
State Game Mgmt. Units: 1–4.	Sept. 1–Dec. 16.
State Game Mgmt. Units: 8 and 10 (except Unimak Island).	Oct. 8–Jan. 22.

DAILY BAG AND POSSESSION LIMITS

Area	Ducks [1]	Geese [2]	Emperor Geese	Brant	Common Snipe	Sandhill Cranes
Units 11–13 and 17–26	8–24	6–12	Closed	2–4	8–16	Units 11–13 and 18–26, 3–6; unit 17, 2–4.
Units 5–7, 9, 14–16 and 10 (Unimak Island only)	6–18	6–12	Closed	2–4	8–16	2–4.
Units 1–4	5–15	6–12	Closed	2–4	8–16	2–4.
Unit 10 (except Unimak Island)	5–15	6–12	Closed	2–4	8–16	2–4.
Unit 8	5–15	6–12	Closed	2–4	8–16	2–4.

[1] In Units 1–26 (Statewide) the basic bag limits may include not more than 2 pintails daily and 6 pintails in possession, and 1 canvasback daily and 1 canvasback in possession. In addition to the basic daily bag and possession limits, a daily bag limit of 15 and a possession limit of 30 is permitted singly or in the aggregate of the following species: scoter, eider, oldsquaw, harlequin, and common and red-breasted mergansers.

[2] No more than 4 daily, or 8 in possession may be any combination of Canada and/or white-fronted geese, provided that: in Units 1–9 and 14–18, no more than 2 daily, or 4 in possession, may be white-fronted geese. In Units 5 and 6, the taking of Canada geese is only permitted from September 21 through December 16. In Units 8, 9(E), 10 (except Unimak Island) and 18, the taking of Canada geese is prohibited. In Unit 1(C), the taking of snow geese is prohibited. In Units 1–26 (Statewide) the taking of Aleutian and cackling Canada geese and emperor geese is prohibited.

Special Tundra Swan Season: In Unit 22 there will be an experimental tundra swan season from September 1 through October 30, 1989, with a limit of 1 swan per hunter per season. This season is by registration permit (300 only).

4. Section 20.103 is revised to read as follows:

§ 20.103 Seasons, limits, and shooting hours for mourning and white-winged doves and wild pigeons.

Subject to the applicable provisions of the preceding sections of this part, the areas open to hunting, the respective open seasons (dates inclusive), the shooting and hawking hours and the daily bag and possession limits on the species designated in this section are prescribed as follows:

(a) *Mourning Doves—Eastern Management Unit.*

In Delaware, Florida, Georgia, Louisiana, Maryland, North Carolina, Pennsylvania, Rhode Island, South Carolina, Virginia and West Virginia	
Daily bag limit	12
Possession limit	24
In Illinois, Indiana, Kentucky, Mississippi and Tennessee:	
Daily bag limit	15
Possession limit	30
In Alabama:	
North Zone	
Daily Bag Limit	15
Possession Limit	15
South Zone	
Daily Bag Limit	12
Possession Limit	12

Shooting and hawking hours: One-half hour before sunrise to sunset except as noted otherwise.

Alabama:	
North Zone: [1]	
12 noon to sunset.	Sept. 16.
½ hour before sunrise to sunset.	Sept. 17–Nov. 4 and Dec. 23–Jan. 1.
South Zone: [1]	
½ hour before sunrise to sunset.	Sept. 23–Sept. 24 and Oct. 14–Oct. 31.
12 noon to sunset.	Nov. 1–Dec. 10 and Dec. 23–Jan. 1.
Connecticut	Closed.
Delaware (12 noon to sanset).	Sept. 2–Sept. 23 and Oct. 16–Oct. 28 and Dec. 11–Jan. 13.
Florida (2):	
12 noon to sunset.	Oct. 7–Oct. 29.
½ hour before sunrise to sunset.	Nov. 11–Nov. 26 and Dec. 9–Jan. 7.
Georgia:	
North Zone (3)	
12 noon to sunset.	Sept. 2.
½ hour before sunrise to sunset.	Sept. 3–Oct. 1 and Nov 23–Nov. 26 and Dec. 11–Jan. 15.
South Zone (3)	
12 noon to sunset.	Sept. 23
½ hour before sunrise to sunset.	Sept. 24–Oct. 22 and Nov. 23–Nov. 26 and Dec. 11–Jan. 15.
Illinois (12 noon to sunset)	Sept. 1–Oct. 30.
Indiana:	
12 noon to sunset.	Sept. 1–Oct. 16.
½ hour before sunrise to sunset.	Nov. 10–Nov. 19 and Nov. 23–Nov. 26.
Kentucky:	
11 a.m. to sunset	Sept. 1–Sept. 30 and Oct. 7–Oct. 30.
sunrise to sunset	Dec. 1–Dec. 6.
Louisiana:	
12 noon to sunset.	Sept. 2–Sept. 3 and Oct. 14–Oct. 15 and Dec. 9–Dec. 10.
½ hour before sunrise to sunset.	Sept. 4–Sept. 10 and Oct. 16–Nov. 12 and Dec. 11–Jan. 8.
Maine	Closed.
Maryland:	
12 noon to sunset.	Sept. 1–Oct. 21.
½ hour before sunrise to sunset.	Nov. 11–Nov. 18 and Dec. 16–Dec. 28.
Massachusetts	Closed.
Michigan	Closed.
Mississippi	Sept. 2–Sept. 24 and Oct. 14–Oct. 28 and Dec. 24–Jan. 14.
New Hampshire	Closed.
New Jersey	Closed.
New York	Closed.
North Carolina	Sept. 2–Oct. 7 and Nov. 21–Nov. 25 and Dec. 16–Jan. 13.
Ohio	Closed.
Pennsylvania:	
12 noon to sunset.	Sept. 1–Oct. 14.
½ hour before sunrise to sunset.	Oct. 28–Nov. 18.
Rhode Island:	
12 noon to sunset.	Sept. 11–Sept. 24.
	Oct. 21–Nov. 25 and Dec. 27–Jan. 15.
South Carolina	Sept. 2–Oct. 7 and Nov. 18–Nov. 25 and Dec. 21–Jan. 15.
Tennessee:	
12 noon to sunset.	Sept. 1.
½ hour before sunrise to sunset.	Sept. 2–Sept. 30 and Oct. 7–Oct. 21 and Dec. 9–Dec. 23.
Vermont	Closed.
Virginia:	
12 noon to sunset.	Sept. 2–Nov. 4.
½ hour before sunrise to sunset.	Dec. 25–Dec. 30.
West Virginia:	
12 noon to sunset.	Sept. 1.
½ hour before sunrise to sunset.	Sept. 2–Oct. 14 and Dec. 19–Jan. 13.
Wisconsin	Closed.

[1] In Alabama, the South Zone is defined as: Mobile, Baldwin, Escambia, Covington, Coffee, Geneva, Dale, Houston and Henry Counties. North Zone: remainder of the State.

(2) In Florida, the daily bag limit is 12 mourning and white-winged doves in the aggregate, of which not more than 4 may be white-winged doves. The possession limit is 24 mourning and white-winged doves in the aggregate, of which not more than 8 may be white-winged doves.

(3) In Georgia, the North Zone is defined as that area lying north of a division line as follows: U.S. Highway 280 from Columbus to Wilcox County, thence southward along the western border of Wilcox County, thence east along the southern border of Wilcox County to the Ocmulgee River, thence north along the Ocmulgee River to Highway 280, thence east along Highway 280 to the Little Ocmulgee River; thence southward along the Little Ocmulgee River; to the Ocmulgee River, thence southwesterly along the Ocmulgee River to the western border of Jeff Davis County, south along the western border of Jeff Davis County, east along the southern border of Jeff Davis and Appling Counties, north along the eastern border of Appling County to the Altamaha River, east to the eastern border of Tattnall County; north along the eastern boundary of Tattnall County, north along the western border of Evans County to Candler County, east along the northern border of Evans County to Bulloch County, north along the western border of Bulloch County to Highway 301, then northeast along Highway 301 to the South Carolina line.

(b) *Mourning Doves—Central Management Unit.*

In Missouri:	
Daily bag limit	10
Possession limit	20
In Texas:	
Daily bag limit	12(3)
Possession limit	24(3)
In Arkansas, Colorado, Kansas, Nebraska, North Dakota, New Mexico, Oklahoma, South Dakota, Wyoming and Montana:	
Daily bag limit	15(1)
Possession limit	30(1)

Shooting and hawking hours: One-half hour before sunrise until sunset except as noted otherwise.

Check State Regulations for Additional Restrictions, Including Area Descriptions

Arkansas	Sept 2–Sept. 24 & Oct. 7–Oct. 22 & Dec. 16–Jan. 5.
Colorado	Sept. 1–Oct. 30.
Iowa	Closed.
Kansas	Sept. 1–Oct. 30.
Minnesota	Closed.
Missouri	Sept. 1–Nov. 9.
Montana	Sept. 2–Oct. 11.
Nebraska	Sept. 1–Oct. 30.
New Mexico (1)	Sept. 1–Sept. 30 & Dec. 1–Dec. 30.
North Dakota	Sept. 1–Oct. 30.
Oklahoma	Sept. 1–Oct. 30.
South Dakota	Sept. 1–Oct. 20.
Texas: (2)(3)	
North Zone	Sept. 1–Nov.9.
Central Zone	Sept. 1–Oct. 30 & Jan. 6–Jan. 15.
South Zone (4)	Sept. 20–Nov. 18 & Jan. 6–Jan. 15.
Wyoming	Sept. 1–Oct. 15.

(1) In New Mexico, the daily bag limit is 15 and the possession limit is 30 white-winged end mourning doves, singly or in the aggregate of these species.

(2) In Texas, the three zones are North, South and Central as follows:

North Zone—That portion of the State north of a line beginning at the International Bridge south of Fort Hancock; north along FM 1088 to State Highway 20; west along State Highway 20 to State Highway 148; north along State Highway 148 to Interstate Highway 10 at Fort Hancock; east along Interstate Highway 10 to Interstate Highway 20; northeast along Interstate Highway 20 to Interstate Highway 30 at Fort Worth; northeast along Interstate Highway 30 to the Texas-Arkansas State line.

South Zone—That portion of the State south and west of a line beginning at the International Bridge south of Fort Hancock; north along FM 1088 to State Highway 20; west along State Highway 20 to State Highway 148; north along State Highway 148 to Interstate Highway 10 at Fort Hancock; east along Interstate Highway 10 to Van Horn, south and east on U.S. 90 to San Antonio; then east on Interstate 10 to Orange, Texas.

Central Zone—That portion of the State lying between the North and South Zones. (3) In Texas, the daily bag limit is 12 mourning, white-winged and white-tipped doves in the aggregate, of which no more than 2 can be white-winged doves and 2 can be white-tipped doves; and the possession limit is 24, of which no more than 4 may be whitewings, and 4 may be whitetips, except during the special 4-day white-winged dove season in 2 portions of the Special White-winged Dove Area of the South Zone. In that portion north and west of Del Rio, the aggregate daily bag limit for doves is 10 daily, not to exceed 2 white-tipped doves, while south and east of Del Rio, the aggregate daily bag lmit for doves may not contain more than 5 mourning doves and 2 white-tipped doves. Possession limits are twice the daily bag limit. (4) In Texas, the mourning dove season in the Special White-winged Dove Area of the South Zone is Sept. 20–Nov. 14 and Jan. 6–Jan. 15.

(c) *Mourning Doves—Western Management Unit.*

In Arizona, California, Idaho, Nevada, Oregon, Washington and Utah:

Daily bag limit	10(1)(2)
Possession limit	20(1)(2)

Shooting and hawking hours: One-half hour before sunrise until sunset.

Check State Regulations for Additional Restrictions, Including Area Descriptions

Arizona (1):	
½ hour before sunrise to noon.	Sept. 1–Sept. 10.
½ hour before sunrise to sunset.	Nov. 24–Jan. 12.
California (2)	Sept. 1-Sept. 15 & Nov. 11–Dec. 25.
Idaho	Sept. 1–Sept. 30.
Nevada (2)	Sept. 1–Sept. 30.
Oregon	Sept. 1–Sept. 30.
Utah	Sept. 1–Sept. 30.
Washington	Sept. 1–Sept. 15.

(1) In Arizona, during September 1 through 10, 1989, the daily bag limit is 10 mourning and white-winged doves in the aggregate of which no more than 6 may be white-winged doves. The possession limit after opening day is 20 mourning and white-winged doves in the aggregate of which no more than 12 may be white-winged doves. During November 24, 1989, through January 12, 1990, the bag and possession limits are 10 and 20 mourning doves, respectively.

(2) In those counties of California (Imperial, Riverside, and San Bernardino) and Nevada (Clark and Nye) having a season on white-winged doves, the daily bag limit is 10 and the possession limit is 20 mourning and white-winged doves, singly or in the aggregate of these species.

Hawaii Regulations. Subject to the applicable provisions of the preceding sections of this part, mourning doves may be taken in accordance with the State regulations.

(d) *White-winged Doves.* Shooting and hawking hours: One-half hour before sunrise until sunset except as noted otherwise.

NOTE.— No seasons are prescribed for woodcock. Snipe seasons have been deferred by all other States in the Pacific Flyway.

---

(1) The bag and possession limits for sora and Virginia rails apply singly or in the aggregate of these two species.

(2) In addition to the limits on sora and Virginia rials, in Connecticut, Delaware, Maryland, New Jersey, and Rhode Island, there is a daily bag limit of 10 and possession limit of 20 clapper and king rails, singly or in the aggregate of these two species, except that the season is closed on king rails in New Jersey by State regulation. In Alabama, Florida, Georgia, Louisiana, Mississippi, North Carolina, South Carolina, Texas, and Virginia, there is a daily bag limit of 15 and possession limit of 30 clapper and king rails, singly or in the aggregate of these two species.

(3) In States of the Atlantic Flyway, the woodcock bag limit is 3 daily and 6 in possession.

(4) For description of zones or management units within a State, see State regulations.

(5) In Iowa, rail limits are 15 daily and 25 in possession.

(6) See State regulations for listing of certain Great Lakes waters where the season is to open concurrently with the duck season.

(7) The Central Flyway portion consists of: *Colorado* and *Wyoming*—the area lying east of the Continental Divide; Montana—the area lying east of Hill, Chouteau, Cascade, Meagher, and Park Counties; *New Mexico*—the area lying east of the Continental Divide but outside the Jicarilla Apache Indian Reservation. The remaining portions of these States are in the Pacific Flyway.

(8) In Nebraska, the rail limits are 10 daily and 20 in possession.

(9) In South Dakota, the snipe limits are 5 daily and 15 in possession.

(10) In New York, the seasons for rails (Sora and Virginia) and common snipe are statewide *except* in Long Island.

(11) In Alabama, the rail limits are 15 daily and 15 in possession.

(12) In New Mexico, the rail limits are 10 daily and 10 in possession.

Noted: Some States may select rail, woodcock, and snipe seasons at the time they select their duck seasons in August. Consult waterfowl regulations to be published later for information concerning these seasons.

6. Section 20.105 is amended by revising paragraphs (a) through (c) and by amending paragraph (d) to read as follows:

§ 20.105 Seasons, limits, and shooting hours for waterfowl, coots, and common moorhens and purple gallinules.

Subject to the applicable provisions of the preceding sections of this part, the areas open to hunting, the respective open seasons (dates inclusive), the shooting and hawking hours, and the daily bag and possession limits on the species designated in this section are prescribed as follows:

(a) *Sea Ducks.* (1) An open season for taking scoter, eider and oldsquaw ducks is prescribed according to the following table during the period between September 15, 1989, and January 20, 1990, in all coastal waters and all waters of rivers and streams seaward from the first upstream bridge in Maine, New Hampshire, Massachusetts, Rhode Island, Connecticut and New York; in any waters of the Atlantic Ocean and, in addition, in any tidal waters of any bay which are separated by at least one mile of open water from any shore, island and emergent vegetation in New Jersey, South Carolina and Georgia; and in any waters of the Atlantic Ocean and/or in any tidal waters of any bay which are separated by at least 800 yards of open water from any shore, island and emergent vegetation in Delaware, Maryland, North Carolina and Virginia; and provided that any such areas have been described, delineated and designated as special duck hunting areas under the hunting regulations adopted by the respective States. In all other areas of these States and in all other States in the Atlantic Flyway, sea ducks may be taken only during the regular open season for ducks and they must be included in the regular duck season conventional or point-system daily bag and possession limits.

(2) The daily bag limit is 7 and the possession limit is 14, singly or in the aggregate of these species. Within the special sea duck areas, during the regular duck season in the Atlantic Flyway, States may set, in addition to the regular season limits, a daily bag limit of 7 and a possession limit of 14 scoter, eider and oldsquaw ducks, singly or in the aggregate of these species.

(3) Shooting and hawking hours are one-half hour before sunrise until sunset daily.

South Carolina	Deferred.
Virginia	Deferred.

(4) Notwithstanding the provisions of this part 20, the shooting of *crippled* waterfowl from a motorboat under power will be permitted in Maine, Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, Delaware, Virginia and Maryland in those areas described, delineated and designated in their respective hunting regulations as being open to sea duck hunting.

Note: States with deferred seasons may select sea duck seasons at the time they select their waterfowl seasons in August. Consult waterfowl regulations to be published later for information concerning these later seasons.

(b) *Teal.* The September teal season is suspended in 1989.

(c) *Common Moorhens and Purple Gallinules.*

Bag limit	15 singly or in the aggregate of the two species.
Possession limit	30 singly or in the aggregate of the two species.

Shooting and hawking hours: One-half hour before sunrise to sunset.

Check State Regulations for Additional Restrictions

Seasons in the Atlantic Flyway:	
Connecticut	Sept. 1–Nov. 9.
Delaware	Sept. 1–Nov. 9.
Florida (1)	Sept. 1–Nov. 9.
Georgia	Nov. 23–Nov. 26 & Dec. 13–Jan. 7.
Maine	Sept. 1–Nov. 9.
Maryland	Closed.
Massachusetts	Closed.
New Hampshire	Closed.
New Jersey (2)	Sept. 1–Nov. 9.
New York:	
Long Island	Closed.
Remainder of State.	Sept. 1–Nov. 9.
North Carolina	Sept. 2–Nov. 10.
Pennsylvania	Sept. 1–Nov. 4.
Rhode Island	Sept. 11–Nov. 19.
South Carolina	Sept. 13–Nov. 16 & Dec. 10–Dec. 14.
Vermont	Sept. 30–Dec. 8.
Virginia	Deferred.
West Virginia	Deferred.
Seasons in the Mississippi Flyway:	
Alabama (3)	Nov. 11–Jan. 19.
Arkansas	Sept. 2–Nov. 10.
Illinois	Closed.
Indiana	Sept. 1–Nov. 9.
Iowa	Closed.
Kentucky	Deferred.
Louisiana	Nov. 18–Jan. 20.
Michigan	Deferred.
Minnesota	Oct. 7–Nov. 5.
Mississippi	Oct. 14–Dec. 22.
Missouri	Closed.
Ohio	Sept. 1–Nov. 9.
Tennessee	Deferred.
Wisconsin	Oct. 7–Nov. 19.
Seasons in the Central Flyway:	
Colorado (4)	Closed.
Kansas	Closed.
Montana (4)	Closed.
Nebraska	Closed.
New Mexico (4)(5):	
North Zone	Oct. 8–Nov. 15 & Dec. 9–Dec. 20.
South Zone	Nov. 18–Jan. 7.
North Dakota	Closed.
Oklahoma	Sept. 1–Nov. 9.
South Dakota	Closed.
Texas	Sept. 1–Nov. 9.
Wyoming (4)	Closed.
Seasons in the Pacific Flyway:	
All States and portions thereof.	Deferred.

(1) The season in Florida applies to the common moorhen only. There is no open season on the purple gallinule in Florida.

(2) In New Jersey, the bag limit is 10 daily and 20 in possession.

(3) In Alabama, the bag limit is 15 daily and 15 in possession.

(4) Seasons apply to Central Flyway portion of State only.

(5) In New Mexico, the bag limit is 5 common moorhens daily and 10 in possession; there is no open season on the purple gallinule in New Mexico.

Note: States with deferred seasons may select gallinule seasons at the time they select their waterfowl seasons in August. Consult waterfowl regulations to be published later for information concerning these later seasons.

(d) *Waterfowl and coots in Atlantic, Mississippi, Central and Pacific Flyways.*

Atlantic Flyway

Flywaywide Restrictions

Shooting (including hawking) hours: One-half hour before sunrise to sunset daily except as otherwise restricted.

7. Section 20.106 is revised to read as follows:

§ 20.106 Seasons, limits, and shooting hours for sandhill cranes.

Central Flyway: Subject to the applicable provisions of the preceding sections of this part, open seasons are prescribed for taking sandhill cranes with a daily bag limit of 3 and a possession limit of 6 cranes (unless otherwise noted), and with shooting hours from one-half hour before sunrise until sunset (unless otherwise noted) in the following areas for the dates indicated:

(a) In Colorado (the Central Flyway portion except the San Luis Valley and North Park) the inclusive dates are September 30 through November 26, 1989.

(b) In New Mexico (a) in the counties of Chaves, Curry, De Baca, Eddy, Lea, Quay, and Roosevelt, the inclusive dates for the regular season are October 21, 1989, through January 21, 1990; (b) in the Middle Rio Grande Valley Hunt Area (described in State regulations) the inclusive dates for the experimental season are October 18 through October 24, and October 25 through October 30, 1989; and (c) in the Hatch-Deming Zone in the counties of Sierra, Luna, and Dona Ana the inclusive dates are January 5–January 7; January 12–January 14; January 19–January 21; and January 26–January 28, 1990.

Hunting in the experimental seasons is by State permit only, the daily bag limit is 3 sandhill cranes, the possession limit is 6 and the seasonal bag limit is 9, and shooting hours are sunrise to sunset.

(c) In Oklahoma (that portion west of I–35) the inclusive dates are October 21, 1989, through January 21, 1990.

(d) In Texas that portion west of a line from Brownsville along U.S. 77 to Victoria; U.S. 87 to Placedo; Farm Road 616 to Blessing; State 35 to Alvin; State 6 to U.S. 290; U.S. 290 to Sonora; U.S. 277 to Abilene; Texas 351 to Albany; U.S. 283 to Vernon; and U.S. 183 to the Texas-Oklahoma boundary the season has been deferred.

(e) In North Dakota (that portion west of U.S. Highway 281) the inclusive dates are September 9 through November 5, 1989.

(f) In South Dakota, the inclusive season dates are September 30 through November 5, 1989.

(g) In Montana (the Central Flyway portion except that area south of I-90 and west of the Bighorn River), the inclusive dates are September 30 through November 26, 1989.

(h) In Wyoming, in Campbell, Converse, Crook, Goshen, Laramie, Niobrara, Platte, and Weston Counties, the inclusive season dates are September 16 through November 12, 1989.

Each hunter participating in the regular sandhill crane hunting season must obtain and carry in his possession while hunting sandhill cranes a valid Federal sandhill crane hunting permit available without cost from conservation agencies in the States where crane hunting seasons are allowed. The permit must be displayed to any authorized law enforcement official upon request.

Pacific Flyway

(a) In Arizona (within Game Management Units 30A, 30B, 31, and 32), the season selection has been deferred.

(b) In Utah (Cache and Rich Counties), the season dates are September 2 through September 4 and September 9 through September 11. Hunting by State permit only. Season limit is 1 sandhill crane per hunter.

(c) In Wyoming's sandhill crane hunt areas: Hunting by State permit only.

Bear River area in Lincoln County—the season dates are September 2 through September 4, 1989. Season limits are 2 sandhill cranes per hunter.

Riverton-Boysen Unit in Fremont County (Central Flyway)—the season dates are September 9 through September 10, 1989. Season limits are 2 sandhill cranes per hunter.

Salt River (Star Valley) area in Lincoln County—the season dates are September 2 through September 4, 1989. Season limits are 2 sandhill cranes per hunter.

Eden-Farson Agricultural Project in Sweetwater and Sublette Counties—the season dates are September 2 through September 4, 1989. Season limits are 2 sandhill cranes per hunter.

8. Section 20.109 is revised to read as follows:

§ 20.109 Extended seasons, limits, and hours for taking migratory game birds by falconry.

Subject to the applicable provisions of this part, the areas open to hunting, the respective open seasons (dates inclusive), the hawking hours, and the daily bag and possession limits on the species designated in this section are prescribed as follows:

Daily bag limit	3 singly or in the aggregate unless otherwise restricted.
Possession limit	6 singly or in the aggregate unless otherwise restricted.

These limits apply during both regular hunting seasons and extended falconry seasons.

Hawking hours: One-half hour before sunrise until sunset daily unless otherwise restricted.

Check State Regulations for Additional Restrictions

Atlantic Flyway:	
Florida:	
Mourning doves and white-winged doves, moorhens and rails.	Sept. 23–Dec. 1.

Part IV

Environmental Protection Agency

40 CFR Part 135

Requirements for Citizen Suits Under the Clean Water Act; Proposed Rule

---

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 135

[FRL-3429-9]

RIN 2640-AB50

Requirements for Citizen Suits Under the Clean Water Act

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: Section 505 of the Clean Water Act (CWA) authorizes any person to sue an alleged violator of certain requirements of the CWA. The Water Quality Act of 1987 (WQA) amended CWA section 505 to require that the citizen plaintiff shall serve a copy of the complaint filed in such a suit on the Administrator and the Attorney General. The WQA also provides that no consent judgment shall be entered by the court to resolve such a suit prior to 45 days following the receipt of the proposed consent judgment by the Administrator and the Attorney General. EPA is today proposing regulations governing the manner in which parties in citizen suits must provide copies of filed complaints and proposed consent decrees under this new provision.

DATES: Comments on the proposed rule must be received by October 16, 1989.

ADDRESSES: Send comments to: David Drelich, Office of Enforcement and Compliance Monitoring, Water Division (LE–134W), U.S. Environmental Protection Agency, 401 M Street, SW., Washington, DC 20460.

Persons may inspect all comments and the record of this rulemaking at that address, in Room 3109 Mall, during normal Agency working hours.

FOR FURTHER INFORMATION CONTACT: David Drelich, (same address) (202) 382–2949.

SUPPLEMENTARY INFORMATION:

Section 505 of the Clean Water Act (CWA or the Act) (33 U.S.C. 1365) authorizes any person with an interest which is or may be adversely affected to commence a civil action against anyone alleged to be in violation of certain requirements of the CWA. CWA section 505(a)(1). No such action may be commenced under this citizen suit provision prior to 60 days after the citizen plaintiff has given notice to the Administrator (and others) of the alleged violations. Rules for providing the requisite notice of violation can be found at 40 CFR part 135.

Effective February 4, 1987, Congress amended the Act to require that citizen plaintiffs provide the federal government with copies of complaints filed under CWA 505(a)(1). In addition, the federal government must be provided with copies of proposed "consent judgments" by which the parties intend to resolve such citizen enforcement suits. See Public Law 100–4, February 4, 1987. Specifically, the Water Quality Act of 1987, section 504, amended CWA section 505 as follows:

Section 505(c) is amended by adding at the end thereof the following new paragraph:

> (3) PROTECTION OF INTERESTS OF UNITED STATES.—Whenever any action is brought under this section in a court of the United States, the plaintiff shall serve a copy of the complaint on the Attorney General and the Administrator. No consent judgment shall be entered in an action in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator.

Although CWA section 505(c)(3) (WQA section 504) is self-implementing, the Environmental Protection Agency (EPA or the Agency) is proposing to amend 40 CFR part 135 in order to clarify the statutory requirement and to ensure that the amendment will be implemented in a consistent way, and in accordance with the purpose of the statutory amendment.

The purpose of the statutory amendment is to facilitate the ability of the United States to monitor the quantity and nature of citizen enforcement activity under the Act. In addition, the purpose of the statutory amendment is to provide an opportunity for the United States to take appropriate action when its interests may be affected by citizen suit activity. However, the legislative history of WQA section 504 is clear that the United States' review and/or receipt of these complaints and proposed consent judgments in no way affects the United States' ability to bring a separate federal enforcement action on the same violations addressed by the citizen complaint or consent judgment to which the U.S. is not a party. Remarks of Sen. Chafee, Debate on S. 1128, June 12 and 13, 1985, reprinted in 2 A Legislative History of the Water Quality Act of 1987 1351 (1988). *See also U.S.* v. *Atlas Powder Co.*, 26 Env't Rep. Cas. (BNA) 1391 (1987).

Congress also passed another provision which affects citizen enforcement. Section 309(g) (also amended by the WQA, section 314) now provides that citizen enforcement actions for civil penalties for the same violations are generally precluded if the Administrator, the Secretary of the Army or the State has commenced and is diligently prosecuting an administrative penalty action under a State law comparable to section 309(g) or one of these authorities has issued a final order not subject to further judicial review and the violator has paid a penalty assessed under section 309(g) or comparable state law. Exceptions to these limits on citizen civil penalty actions are provided for circumstances in which (a) the citizen enforcement suit is filed prior to commencement of the government administrative penalty action, or (b) the citizen's sixty-day notice of violation is given in accordance with 40 CFR part 135 prior to the commencement of the government administrative penalty action, and the citizen enforcement action is filed before the 120th day after the date on which such notice is given. (The Agency's regulations and procedures implementing the new section 309(g) administrative penalty authorities were noticed at 52 FR 30671 (Aug. 17, 1987), and 52 FR 30730 (Aug. 17, 1987).)

Thus, citizen compliance with the statutory and regulatory requirements concerning service of notices of violation may have consequences as to whether or not a citizen penalty suit is barred by a government administrative penalty action. Furthermore, the timely filing of citizen complaints (after notices of violation) takes on added importance in light of the new administrative penalty provisions, and prompt service upon the federal government of such complaints is needed.

Existing procedures for notices of violations are not affected by this proposed rule. Note that today's proposed regulations are designated as part of "subpart A" of part 135. This is based on the changes in the rule governing notices of intent to sue under the Safe Drinking Water Act, which was published as a final rule at 54 FR 20770 (May 12, 1989).

Today's proposed rule is straightforward. Citizen plaintiffs are required to send copies of complaints to the Administrator, the Regional Administrator of the EPA Region in which the violations allegedly occurred, and the Attorney General of the United States. Proposed consent judgments must be sent via certified mail to the same persons. The court must be notified of the statutory requirement not to enter the proposed consent judgment prior to 45 days following receipt of the proposed settlement by the Administrator and the Attorney General.

Paperwork Reduction Act

EPA has not prepared an information collection request under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*) for the reporting requirements contained in this rule. EPA has received approximately nine notices of citizens suits under the CWA per month. The public reporting burden for individuals complying with this rule is estimated to average one hour or less. If the number of notices received by EPA substantially increases in succeeding years, EPA will prepare and solicit comment on an information collection request for today's rule, in accordance with 5 CFR 1320.14. In the meantime, any comments on the estimate of burden or any other aspect of the information collection requirements contained in this rule, including suggestions to reduce the burden, should be sent to: Chief, Information Policy Branch (PM–223), U.S. Environmental Protection Agency, 401 M Street SW, Washington, DC 20460 or Director, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

Regulatory Impact Analysis

The Administrator has determined that this is a minor regulation under the terms of E.O. 12291 and does not require a regulatory impact analysis.

Regulatory Flexibility Act

There are no significant impacts on small entities as defined under the Regulatory Flexibility Act.

This proposed regulation has been reviewed by the Office of Management and Budget.

List of Subjects in 40 CFR Part 135

Litigation notices, Service of intent to sue, Service of proposed settlement, water pollution control.

Dated: July 19, 1989.

William K. Reilly,
Administrator.

It is proposed that part 135 of Title 40 of the Code of Federal Regulations be amended as follows:

PART 135—[AMENDED]

1. The authority citation for part 135 is revised to read as follows:

Authority: Sec. 505, Clean Water Act, as amended 1987; Sec. 504, Pub. L. 100–4; 101 Stat. 7 (33 U.S.C. 1365).

2. Section 135.1 of subpart A is revised to read as follows:

§ 135.1 Purpose.

(a) Section 505(a)(1) of the Clean Water Act (hereinafter the Act) authorizes any person or persons having an interest which is or may be adversely affected to commence a civil action on his own behalf to enforce the Act or to enforce certain requirements promulgated pursuant to the Act. In addition, section 505(c)(3) of the Act provides that, for purposes of protecting the interests of the United States, whenever a citizen enforcement action is brought under Section 505(a)(1) of the Act in a court of the United States, the Plaintiff shall serve a copy of the complaint on the Attorney General and the Administrator. Section 505(c)(3) also provides that no consent judgment shall be entered in any citizen action in which the United States is not a party prior to 45 days following the receipt of a copy of the proposed consent judgment by the Attorney General and the Administrator.

(b) The purpose of this subpart is to prescribe procedures governing the giving of notice required by section 505(b) of the Act as a prerequisite to the commencing of such actions, and governing the service of complaints and proposed consent judgments as required by section 505(c)(3) of the Act.

4. Sections 135.4 and 135.5 are added to subpart A to read as follows:

§ 135.4 Service of complaints.

(a) A citizen plaintiff shall mail a copy of a complaint filed against an alleged violator under section 505(a)(1) of the Act to the Administrator of the Environmental Protection Agency, the Regional Administrator of the EPA Region in which the violations are alleged to have occurred, and the Attorney General of the United States.

(b) The copy so served shall be of a filed, date-stamped complaint, and shall indicate the assigned civil action number.

(c) A citizen plaintiff shall mail a copy of the complaint on the same date on which the plaintiff files the complaint with the court, or as expeditiously thereafter as practicable.

(d) If the alleged violator is a Federal agency, a citizen plaintiff must serve the complaint on the United States in accordance with relevant Federal law and court rules affecting service on defendants, in addition to complying with the service requirements of this subpart.

§ 135.5 Service of proposed consent judgment.

(a) Service of a copy of a proposed consent judgment, signed by all parties to the lawsuit, in a citizen enforcement suit filed against alleged violations under section 505(a)(1) of the Act, shall be accomplished by certified mail (return receipt requested) addressed to, or by personal service upon, the Administrator, Environmental Protection Agency, Washington, DC 20460, and the Attorney General, Department of Justice, Citizen Suit Coordinator, Room 2615, Washington, DC 20530. A copy of a proposed consent judgment shall also be mailed at the same time to the Regional Administrator of the EPA Region in which the violations were alleged to have occurred.

(b) When the proposed consent judgment is filed or lodged with the court, the parties shall notify the court:

(1) Of the statutory requirement that the consent judgment shall not be entered prior to 45 days following receipt by both the Administrator and the Attorney General of a copy of the consent judgment, and

(2) Of the date(s) on which the Administrator and the Attorney General received copies of the proposed consent judgment.

USAF Scientific Advisory Board; Meeting

DEPARTMENT OF DEFENSE

Department of the Air Force

USAF Scientific Advisory Board; Meeting

August 28, 1989.

The USAF Scientific Advisory Board Munitions Systems Division Advisory Group has postponed the meeting previously scheduled for 30 Aug–1 Sep 89 until 14–15 Sep 1989 from 8:00 AM to 5:00 PM at Eglin AFB, Florida.

The purpose of this meeting is to review developments in the field of tactical missiles. This meeting will involve discussions of classified defense matters listed in Section 552b(c) of Title 5, United States Code, specifically subparagraph (1) thereof, and accordingly will be closed to the public.

For further information, contact the Scientific Advisory Board Secretariat at (202) 697–4648.

Patsy J. Conner,

Air Force Federal Register Liaison Officer.

Briefings on How To Use the Federal Register
For information on briefings in Washington, DC, and Atlanta, GA, see announcement on the inside cover of this issue.

BEST COPY AVAILABLE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers for $340 per year in paper form; $195 per year in microfiche form; or $37,500 per year for the magnetic tape. Six-month subscriptions are also available at one-half the annual rate. The charge for individual copies in paper or microfiche form is $1.50 for each issue, or $1.50 for each group of pages as actually bound, or $175.00 per magnetic tape. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, or charge to your GPO Deposit Account or VISA or Mastercard.

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 54 FR 12345.

Subscriptions:	
Paper or fiche	523–5240
Magnetic tapes	275–3328
Problems with Federal agency subscriptions	523–5240

For other telephone numbers, see the Reader Aids section at the end of this issue.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

ATLANTA, GA

WHEN: September 20; at 9:00 a.m.
WHERE: Room 808, 75 Spring Street, SW.
Richard B. Russell Federal Building
Atlanta, GA
RESERVATIONS: Call the Federal Information Center
404–331–6895

WASHINGTON, DC

WHEN: September 25; at 9:00 a.m.
WHERE: Office of the Federal Register
First Floor Conference Room
1100 L Street NW., Washington, DC
RESERVATIONS: 202–523–5240

Rules and Regulations

Federal Register
Vol. 54, No. 168
Thursday, August 31, 1989

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

19 CFR Parts 141, 143, 145, and 148

[T.D. 89-92]

Customs Regulations Amendments Changing the Maximum Amount for Informal Entries to $1250

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Final rule.

SUMMARY: Under current Customs Regulations, a shipment must generally be valued at $1000 or less to qualify for informal entry procedures. This document amends various parts of the Customs Regulations to raise the $1000 ceiling to $1250.

Public Law 98–573, dated October 30, 1984, amended 19 U.S.C. 1498(a)(1) by granting the Secretary of the Treasury the authority to increase the informal entry limit from $250 to $1250. When the Customs Service originally implemented the statutory change in 1985, it decided to set the maximum for informal entry at $1000, reserving the option to raise the limit to the statutory maximum at a subsequent time. Customs has now determined that in order to devote its resources to higher priority, higher valued shipments, it is appropriate to raise the limit for informal entry to the statutory maximum.

DATE: These regulatory amendments are effective October 1, 1989.

FOR FURTHER INFORMATION CONTACT: *Operational Aspects*—Esther Mandelay, Office of Inspection and Control, (202) 566–8151; *Legal Aspects*—Norman King, Entry Rulings Branch, (202) 566–5856.

SUPPLEMENTARY INFORMATION:

Background

All merchandise which is imported into the customs territory of the United States is subject to entry and clearance procedures. Section 484(a), Tariff Act of 1930, as amended (19 U.S.C. 1484(a)), provides that the "importer of record" of imported merchandise or his agent shall make entry by filing such documentation as is necessary to enable the Customs officer to determine whether the merchandise may be released from Customs custody and to ascertain properly the duties on the merchandise as well as whether other legal requirements are met. Part 142, Customs Regulations (19 CFR part 142), implements section 484, and prescribes procedures applicable to most Customs entry transactions. These procedures, known as formal entry procedures, generally require the filing of Customs forms as well as commercial documents pertaining to the transaction.

Section 498, Tariff Act of 1930, as originally enacted, authorized the Secretary to prescribe rules and regulations for, among other things, the declaration and entry of shipments the aggregate value of which did not exceed $250. Regulations setting forth procedures for such shipments were issued in subpart C of part 143, Customs Regulations (19 CFR part 143, subpart C), entitled "Informal Entries". Informal entry procedures are less burdensome than their formal counterparts. For example, with the assent of the district director of Customs, merchandise eligible for informal entry may be entered simply by means of a commercial invoice which contains a signed declaration by the importer.

Section 206 of Public Law 98–573, dated October 30, 1984, amended section 498, Tariff Act of 1930, as amended (19 U.S.C. 1498), by granting, with certain exceptions, the Secretary of the Treasury the authority to raise to $1250 the maximum amount for informal entry status. On July 23, 1985, Customs published a number of conforming amendments in the **Federal Register** (50 FR 29949), including one raising the limit for which informal entries could be filed. However, Customs raised the limit to only $1000 and preserved the option of raising the limit further until after it could evaluate the operational effect of this increase.

On December 16, 1987, Customs published a proposal in the **Federal Register** (52 FR 47729), to change the procedures for the clearance of cargo carried by express consignment operators or carriers. One purpose of that proposal, which was published as a final rule in the May 8, 1989, **Federal Register** (54 FR 19561), and was effective June 7, 1989, was to provide more expedited clearance procedures for processing of such cargo. In that document, the limit for which informal entry procedures could be used for cargo carried by express consignment operators or carriers was raised from $1000 to $1250.

On January 24, 1989, Customs published a proposal in the **Federal Register** (54 FR 3492), to increase the informal entry limit for all other entry filers from $1000 to $1250. In that proposal it was noted that the informal entry procedures were less burdensome to Customs and the importing public and that they should be uniformly set at the statutory limit for all importers.

Since publication of the proposed rule it was noted that the informal entry procedures in § 148.23(c), Customs Regulations (19 CFR 148.23(c)), related to the clearance of articles accompanying persons arriving in the United States and properly listed on their baggage declaration, were inadvertently omitted from the proposed rule. In order to conform that provision to the other informal entry provisions, an appropriate regulatory amendment is included herein. Inasmuch as this amendment merely conforms the cited provision to other related provisions which were specifically noted in the proposed rule and is procedural in nature, notice and public procedure are deemed unnecessary, pursuant to 5 U.S.C. 553(b)(B), and a delayed effective date relative thereto, is not required, pursuant to 5 U.S.C. 553(d)(3).

Analysis of Comments

Ten comments were received in response to the notice published in the **Federal Register** on January 24, 1989 (54 FR 3492). Eight of the commenters supported increasing the monetary limit for informal entries. Some of these commenters favored increasing the monetary limit to $2500 and introducing such change at the beginning of a calendar quarter. One of these commenters also noted that items covered by import alerts may not be subject to the same scrutiny under the change as they previously were. In addition, the two commenters that did not support the proposal, expressed

---

---

paragraphs (c)(1) and (c)(2), and

the shipping safety fairway regulations

steep angle from their permitted surface concern that the change would increase Customs paperwork burden, would be contrary to the automation efforts of Customs and Customs brokers, and would weaken safeguards to assure compliance.

Based on our review of the comments, we note the following:

1. The suggestion to raise the informal entry monetary limit above $1,250 would require additional statutory authority.

2. The suggestion to introduce the change at the beginning of a calendar quarter, which would provide a clean break for data comparison purposes, has been incorporated herein.

3. We agree that the interception of commodities subject to import alerts is a matter of concern. We, however, do not believe that the increase in the informal entry monetary limit will alter the need for scrutiny regarding these matters. The import alert information can be placed in the Customs Automated Commercial System (ACS) which is currently being utilized by many entry filers for informal entry purposes. Also, district directors of Customs, as currently authorized, may require merchandise to be covered by a formal entry, with an appropriate bond, if deemed necessary for import admissibility enforcement purposes.

4. The extension of the informal entry provision will not conflict with automation efforts. Currently, many entry filers are using ACS to file informal entries. We are working toward further automation of the informal entry procedures. We believe this will result is greater reconciliation of entries and bills of lading/air waybills. Compliance safeguards would not be weakened since the enforcement cargo selectivity system for informal entries will provide a sound basis for Customs to deal with these areas. We previously noted in T.D. 86–143 and T.D. 89–53, when responding to similar comments, that audits and intensive examinations have been successful in insuring compliance with laws and regulations.

Determination

After carefully analyzing the comments received and further consideration of the matter, it has been determined to adopt the regulatory changes as proposed with the modifications noted.

Regulatory Flexibility Act

Pursuant to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) it is certified that, if adopted, the proposed amendment will not have a significant impact on a substantial number of small entities. Accordingly, it is not subject to the regulatory analysis or other requirements of 5 U.S.C. 603 and 604.

Executive Order 12291

This document does not meet the criteria for a "major rule" as specified in E.O. 12291. Accordingly, no regulatory impact analysis has been prepared.

Drafting Information

The principal author of this document was Arnold L. Sarasky, Regulations and Disclosure Law Branch, U.S. Customs Service. However, personnel from other offices participated in its development.

Amendments

Parts 141, 143, 145 and 148 (19 CFR parts 141, 143, 145, and 148) are amended as set forth below.

PART 141—ENTRY OF MERCHANDISE

1. The authority citation for part 141 continues to read as follows:

Authority: 19 U.S.C. 66, 1448, 1484, 1624.

* * * * *

Subpart F is also issued under 19 U.S.C. 1481.

* * * * *

§ 141.82 [Amended]

2. Section 141.82 is amended by removing "$1000", where it appears in paragraph (d), and inserting in its place "$1250".

PART 143—CONSUMPTION, APPRAISEMENT AND INFORMAL ENTRIES

1. The general authority citation for part 143 continues to read as follows:

Authority: 19 U.S.C. 66, 1481, 1484, 1498, 1624.

§ 143.21 [Amended]

2. Section 143.21 is amended by removing "$1000", where it appears in paragraphs (a), (b), (c), (f), (g) and (l), and inserting in its place "$1250".

§ 143.22 [Amended]

3. Section 143.22 is amended by removing "$1000" and inserting in its place "$1250".

§ 143.23 [Amended]

4. Section 143.23 is amended by removing "$1000", where it appears in paragraph (d), and inserting in its place "$1250".

§ 143.29 [Amended]

5. Section 143.29 is amended by removing "$1000" where it appears in the introductory text to that section and paragraph (b) thereof and inserting in its place "$1250".

PART 145—MAIL IMPORTATIONS

1. The authority citation for part 145 continues to read as follows:

Authority: 19 U.S.C. 66, 1202 (General Note 8, Harmonized Tariff Schedule of the United States), 1624.

* * * * *

Section 145.12 also issued under 19 U.S.C. 1315, 1484, 1498;

* * * * *

Section 145.35 also issued under 19 U.S.C. 1498;

* * * * *

§ 145.12 [Amended]

2. Section 145.12 is amended by removing "$1000", where it appears in paragraphs (a)(2), (a)(3), (b) and (c), and inserting in its place $1250".

§ 145.35 [Amended]

3. Section 145.35 is amended by removing "$1000" and inserting in its place "$1250".

§ 145.41 [Amended]

4. Section 145.41 is amended by removing "$1000" and inserting in its place "$1250".

PART 148—PERSONAL DECLARATIONS AND EXEMPTIONS

1. The general authority for part 148 continues to read as follows:

Authority: 19 U.S.C. 66, 1498, 1624. The provisions of this part, except for subpart C, are also issued under General Note 8, Harmonized Tariff Schedule of the United States, 19 U.S.C. 1202.

§ 148.23 [Amended]

2. Section 148.23 is amended by removing "$1000", where it appears in

paragraphs (c)(1) and (c)(2), and inserting in its place "$1250".

William von Raab,

Commissioner of Customs.

Approved: August 25, 1989.

Salvator R. Martocha,

Assistant Secretary of the Treasury.

Coast Guard

33 CFR Part 166

[CGD 87–038]

RIN 2115–AC78

Port Access Routes; Approach to Freeport, TX

AGENCY: Coast Guard, DOT.

ACTION: Notice of study results.

SUMMARY: This notice publishes the results of a Port Access Route Study to determine if the Freeport Harbor Anchorage Area should be modified to facilitate recovery of hydrocarbon reserves which lie within the fairway anchorage. The Report of Study concluded that the fairway anchorage is an integral and necessary part of the fairway system that provides safe access to the Port of Freeport and should not be changed.

FOR FURTHER INFORMATION CONTACT: Lieutenant Junior Grade Jeffrey D. Irino, Project Officer, Eighth Coast Guard District at (504) 589–4686 or Margie G. Hegy, Project Manager, Coast Guard Headquarters at (202) 267–0415.

SUPPLEMENTARY INFORMATION: The Report of Study upon which this notice is based, is available for inspection and copying at the Marine Safety Council, U.S. Coast Guard Headquarters, Room 3600, 2100 Second Street SW., Washington, DC 20593–0001 or at the Eighth Coast Guard District office, Room 1141, Hale Boggs Federal Building, 500 Camp Street, New Orleans, LA 70130–3396 between the hours of 8 a.m. and 3:30 p.m., Monday through Friday, except holidays.

Background

The Freeport Harbor Anchorage Area was established by the U.S. Army Corps of Engineers (COE) on October 25, 1968 (33 FR 15787). After the 1978 amendments to the Ports and Waterways Safety Act (PWSA) (33 U.S.C. 1223) authorized the Coast Guard to designate necessary shipping safety fairways to provide safe access routes to U.S. ports, the Coast Guard adopted the shipping safety fairway regulations originally promulgated by the COE and placed them in 33 CFR part 166 (May 13, 1982, 47 FR 20580). On June 30, 1983 (48 FR 30108), the Coast Guard defined shipping safety fairways and fairway anchorages.

A shipping safety fairway is an area in which no fixed structures are permitted, and therefore may inhibit exploration and exploitation of mineral resources. A fairway anchorage is an anchorage area contiguous to and associated with a fairway, in which fixed structures may be permitted with a two-mile spacing limitation (33 CFR 166.100(c)(1)).

Regulatory History

Pursuant to the 1978 amendments to the PWSA, the Coast Guard undertook a port access route study of the potential traffic density and the need for safe access routes for vessels proceeding to or from U.S. ports.

The port access route study, which included the Freeport Harbor area, was opened on April 16, 1979 (44 FR 22543). The Notice of Study Results, published on October 8, 1981 at 46 FR 49969, recommended no change to the existing shipping safety fairway or fairway anchorage area in the approach to Freeport, TX.

On July 2, 1987 (52 FR 25039), the Coast Guard opened a port access route study of the Freeport area in response to a request from the Amoco Production Company (USA) to modify the existing Freeport Harbor Anchorage Area.

Amoco's Request

Amoco Production Company requested that 18.40 square miles of the southwestern section of the Freeport Harbor Anchorage Area be deleted. Amoco desires to drill a 14,000′ wildcat well within the southwestern section of the Freeport Harbor Anchorage Area. Federal regulations (33 CFR 166.200(c)(1)) prohibit Amoco from placing a structure in their preferred location because structures located within a fairway anchorage must be at least two nautical miles apart. The southwestern section of the fairway anchorage presently contains three production structures. With the requested modification, Amoco could obtain a drilling permit for their preferred location, State Tract 307L SE/4.

Amoco currently has a permit to drill the 14,000′ wildcat well from a location in the northeastern section of the fairway anchorage which meets the two-mile spacing requirement. This is not the preferred location because it will require Amoco to drill a directional well at a steep angle from their permitted surface location. Amoco feels that a directional hole will greatly increase their risk and significantly reduce their ability to successfully drill the well to its objective, as well as substantially increase the cost of the well. In light of this and the current economic climate, Amoco states they cannot justify the drilling of a well from the northeastern section.

The requested modification would open an area within the southwestern section of the fairway anchorage to exploration and production drilling without any spacing limitations. Amoco believes the adjustment is necessary and that present resource exploration and exploitation cannot be reasonably accommodated if the fairway anchorage is not changed. They believe the present estimated costs to directionally drill are not reasonable for oil and gas exploration in this immediate area.

Amoco suggested a specific alternative which would reconfigure, but not reduce the net size of, the Freeport Harbor Anchorage Area. They proposed that the 18.40 square miles of anchorage area deleted from the southwestern section be added to the northeastern section of the fairway anchorage.

Amoco contends that the requested modification would have a negligible effect, if any, on vessels seeking anchorage, because the southwestern section of the fairway anchorage is not presently used for anchoring. To support their contention, Amoco photographed the southwestern section of the fairway anchorage during the month of February 1988 and showed no ships anchored.

The Study

The port access route study area encompassed part of the present Freeport Harbor Safety Fairway, the existing and proposed Freeport Harbor Anchorage Areas, and part of adjacent safety fairways in the offshore approach to Freeport, Texas.

The port access route study involved contacts with other Federal agencies, state government officials, and representatives of a wide variety of interests in the area. Comments were specifically solicited from Federal, state and local agencies who have an interest in the accessability to Freeport Harbor or the development of offshore oil leases in the area.

Uses of the Area

The Port of Freeport is known as the Star of the Mid-Coast because it is the most accessible port in the Gulf Coast, only 45 minutes from deep water via three miles of soon to be completed 45-

foot deep channel. The Port has direct connections to all inland rail, barge, and highway transportation systems. The Intracoastal Waterway intersects the harbor less than one mile from dockside and provides barge access to all the major river ports of mid-America.

The Freeport Harbor Anchorage Area is located approximately 3 square miles outside of the entrance to Freeport Harbor. The anchorage area consists of two sections, one on each side of the Freeport Harbor Safety Fairway. The southwestern section of the anchorage area consists of 51.6 square miles and the northeastern section has approximately 59.7 square miles.

The southwestern section currently has three production platforms located within the inshore half. The northeastern section has no structures, but two oil companies have permits to build structures. Amoco has a permit to build a structure on the inshore side of the northeastern section.

The Freeport Harbor Anchorage Area is the only anchorage serving the Port. The next closest anchorage area is in Galveston, approximately 40 miles northeast.

Dow Chemical reported that over 270 vessels per year use the Freeport Harbor Anchorage Area, but did not specify which section. Phillips 66 Company reported anchoring fifty vessels per year in the northeastern section, as close to the sea buoy as possible. Amoco reported that Jahre Shipping anchored approximately 61 vessels in the northeastern section of the anchorage in 1986 and 1987.

U.S. Army Corps of Engineers (COE) Dredging Projects and Planned Port Improvements

Freeport Harbor is in competition with the ports of Houston, Texas City, and Galveston to the north and east, and the ports of Matagorda and Corpus Christi to the south and west. In order to stay competitive, both dredging and port improvement projects are planned.

The COE General Design Memorandum for Freeport Harbor provides for deepening, realigning and enlarging the main channels and turning basins from existing depths of 36-feet to depths of 45-feet, and deepening the existing Brazos Harbor side channel and turning basin from a project depth of 30-feet to a depth of 36-feet. The 45-foot project is funded and a 50-foot depth, as authorized by Congress, is being pursued.

In conjunction with the COE deepening project, harbor improvements are planned which will develop 2,000 acres of port space and provide 25 additional 1,000 foot berths.

Study Data

Vessel traffic density data for the port access route study area was obtained from the U.S. Army Corps of Engineers Center for Waterborne Commerce, New Orleans, LA, and the Brazos Pilots' Association. The Coast Guard also reviewed COE environmental studies of the area containing data on weather conditions, including wind and tidal information, and seasonal conditions.

Vessel statistics compiled by the COE show that over the ten year period 1976–1986, Freeport handled an average of 577 vessels per year with drafts greater than 19 feet. The Brazos Pilots' Association reported an average of 1,157 ship movements per year over the ten year period 1978–1988.

Public Comments

Comments were received from State agencies, oil companies, a pilots' association, marine associations, and various local authorities.

The State of Texas General Land Office supports Amoco's request because it will have a positive effect on the development of minerals owned by the State.

Although it would affect one of Tenneco's active leases, Tenneco Oil Exploration and Production has no objection to Amoco's request as it would not impose an undue hardship on planned operations.

The Apache Corporation and Santa Fe Minerals, Inc. submitted letters stating "no objection" to Amoco's request.

Phillips 66 has no objection to Amoco's request. They feel that vessel operations can continue with the addition of Amoco's platform in the southwestern section of the anchorage area, but state that "any additional platforms would certainly be cause for concern". Phillips 66 is opposed to a drilling platform on Amoco's lease block in the northeastern section of the fairway anchorage. In addition, Phillips 66 requested that the Coast Guard consider establishing a precautionary zone with a three-mile radius around the most seaward channel buoy.

Keystone Shipping Company indicated their support for increased safety margins through improved port facilities. They caution that, in this case, improved access routes must take into consideration anchorage areas and lightering areas. They recognize energy requirements but feel they "must take a back seat to safe navigation in and out of U.S. Gulf ports."

The Brazos Pilots' Association (State and Federal Pilots serving Freeport, Texas) oppose Amoco's request. They agree with Amoco that the southwestern section of the fairway anchorage is "drilled up" and that no more structures can be placed in this section without violating the two-mile spacing rule. The Pilots' feel that allowing even one more structure in the southwestern section would make it "useless and a virtual hazard to safe navigation. Prevailing current and winds make it imperative that areas adjacent to the fairways be kept uncluttered enough to allow safe navigation." Additionally, the Pilots requested that a precautionary zone be established around the seabuoy.

Cities Service Oil and Gas Corporation opposes Amoco's proposed relocation of the anchorage space because it would cover the greater part of their lease block 314, leased prior to the port access route study. The lease block is already partially covered by both the southwestern and northeastern sections of the fairway anchorage.

The Brazosport Economic Development Corporation, Port of Freeport, West Gulf Maritime Association, and Mobil Exploration and Producing U.S. Inc. are opposed to Amoco's request.

The Port of Freeport feels that the present anchorage areas are "marginally adequate" and once the 45-foot dredging project is complete, larger and less maneuverable vessels will be the norm. The Port of Freeport is "diametrically opposed" to changing the fairway anchorage to accommodate a drill rig, citing the future need for anchorage space and the continuing need for safe access to the Port.

The West Gulf Maritime Association refers to the southwestern section of the fairway anchorage as the "last safe haven" under prevailing wind conditions when mechanical problems force vessels into emergency procedures.

The Board of Navigation and Canal Commissioners of the Brazos River Harbor Navigation District and the Brazosport Chamber of Commerce passed resolutions requesting the Coast Guard to disapprove Amoco's request.

Discussion of Comments

The right of navigation is paramount in routing measures designated under the authority of the PWSA. The Coast Guard feels that the present fairway anchorage configuration allows for convenient, safe access to the Port. The study data indicates that larger, less maneuverable vessels and increased traffic will result when channel and harbor improvements are completed. With more ships entering the Port, it is expected that the southwestern section

of the fairway anchorage will have increased utility.

To promote a multiple use approach to offshore waters, the Coast Guard, as far as practicable, will try to minimize impacts on leases which were granted before a study is announced. Accordingly, Amoco's proposed alternative to relocate the 18.40 square miles of anchorage space from the southwestern section to the northeastern section of the fairway anchorage is not a viable alternative because it would place restrictions on the lease block owned by Cities Service Oil and Gas Corporation prior to the port access route study. The Coast Guard examined the study area to see if other locations were available to establish new anchorage areas without infringing upon existing leases. None are available at the present time due to existing structures and rights of current lease block owners.

The port access route study considered whether the requested modification of the fairway anchorage was necessary to recover potential hydrocarbon reserves which lie within the fairway anchorage. Amoco can access the resources, albeit at greater cost, from the northeastern section of the fairway anchorage via directional drilling. Therefore, modification of the fairway anchorage is not necessary because recovery of the resources is not precluded by the existing fairway anchorage boundaries and regulations.

As requested, consideration was given to establishing a precautionary zone around the channel buoy. The Coast Guard feels that at the present time there is sufficient space free from fixed navigational hazards for pilots to embark. Therefore, a precautionary zone is not needed at this time.

Findings

1. The Freeport Harbor Anchorage Area is an integral and necessary part of the fairway system that provides safe access to the Port of Freeport.
2. The number and size of vessels calling on Freeport is expected to increase when the dredging and port improvement projects are completed.
3. There are no acceptable alternative locations for designating new anchorage areas.
4. Amoco can access the resources from their lease block in the northeastern section without modifying the fairway anchorage.
5. Safety of navigation outweighs the additional costs associated with directional drilling from another lease block already owned by Amoco.
6. The Freeport Harbor Anchorage Area should remain as presently configured to meet the needs of navigation safety (See 33 CFR 166.200(d)(9)).

Conclusion

The Coast Guard has concluded that the fairway anchorage, as presently configured, is an essential element of the fairway system in the Port of Freeport and will not be modified as requested by Amoco.

Dated: August 25, 1989.

R.T. Nelson,

Rear Admiral, U.S. Coast Guard, Office of Navigation Safety & Waterway Services.

EFFECTIVE DATE: July 28, 1989.

FOR FURTHER INFORMATION CONTACT: Charles A. Fountaine III, Chief, Directives Management Division (70Y731), Paperwork Management and Regulations Service, Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC, (202) 233–2073.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of June 28, 1989 (54 FR 27161), VA published its regulations to eliminate an ambiguity regarding the stage at which disability evaluations are to be rounded in determining the combined degree of disability. In that final regulation, the amendatory language was incorrectly stated and is corrected.

List of Subjects in 38 CFR Part 21

Handicapped, Pensions, Veterans.

Dated: August 28, 1989.

Charles A. Fountaine,

Chief, Directives Management Division.

For the foregoing reason, the Department of Veterans Affairs hereby corrects the amendatory language in FR 89–15238 in the issue of June 28, 1989, on page 27161, middle column, to read as follows:

PART 4—[AMENDED]

In 38 CFR part 4 SCHEDULE OF RATING DISABILITIES, § 4.25 is amended by revising the introductory text, and adding paragraphs (a) and (b) preceding Table I, to read as follows:

[FR Doc. 89-20663 Filed 8-30-89; 8:45 am]

BILLING CODE 8320-01-M

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1002

[Ex Parte No. 246, Sub-No. 7]

Regulations Governing Fees for Services Performed in Connection With Licensing and Related Services; 1989 Update

AGENCY: Interstate Commerce Commission.

ACTION: Final rule.

SUMMARY: The Commission is required by the regulations in 49 CFR 1002.3 to update user fees annually. The proposed 1989 user fees update was published on June 12, 1989 at 54 FR 24915. This final rule adopts those user fees.

In 1989, the Commission also conducted a cost study of various fee items to ensure that the fee for these items reflects current Commission costs for performing those services. Based on the review of the comments submitted in this proceeding, the Commission has decided to establish the 1989 filing fees for fee items (33)(ii), (38), (41), (55)(i–iii) and (64) at less than the fully distributed cost level. All other fees developed in the cost study are adopted here.

The Commission also adopts its proposal to establish the filing fee for Fee Item (60) and Fee Item (62)(i) complaint-type declaratory order at 10 percent of current costs and gradually to increase that fee by 10 percent each year until the fee reaches the fully distributed cost level.

The revised fee schedule is set forth below.

DATES: These rules are effective on September 29, 1989.

FOR FURTHER INFORMATION CONTACT: Kathleen M. King, 202–275–7428. [TDD for Hearing Impaired: 202–275–1721.]

SUPPLEMENTARY INFORMATION: The Commission finds that the proposal to increase fees will not have a significant economic impact on a substantial number of small entities because the Commission's regulations provide for the waiver of filing fees when the required showing of financial hardship is established.

This decision will not have a significant impact upon the quality of the human environment or conservation of energy resources.

Additional information is contained in the Commission's decision. To purchase a copy of the full decision, write, call, or pick-up in person from Dynamic Concepts, Inc., Room 2229, Interstate Commerce Commission Building, Washington, DC 20423. Telephone: (202) 289–4357/4359. [Assistance for the hearing impaired is available through TDD services (202) 275–1721].

List of Subjects in 49 CFR Part 1002

Administrative practice and procedure, Common carriers, Freedom of information and User fees.

Title 49 of the Code of Federal Regulation is amended as set forth below.

Decided: August 23, 1989.

By the Commission, Chairman Gradison, Vice Chairman Simmons, Commissioners Andre, Lamboley and Phillips. Chairman Gradison commented with a separate expression.

Noreta R. McGee,

Secretary.

For the reasons set forth in the preamble, title 49, chapter X, part 1002, of the Code of Federal Regulations is amended as follows:

PART 1002—FEES

1. The authority citation for part 1002 continues to read as follows:

Authority: 5 U.S.C. 552(a)(4)(A), 5 U.S.C. 553, 31 U.S.C. 9701 and 49 U.S.C. 10321.

§ 1002.1 [Amended]

2. In § 1002.1, the dollar amount of "$18.00" in paragraph (b) is revised to read "$19.00."

3. In § 1002.1, the dollar amount of "$12.00" in paragraph (c) is revised to read "$13.00."

4. In § 1002.1, the table in paragraph (f)(6) is revised to read as follows:

§ 1002. Fees for records search, review, copying, certification, and related services.

* * * * *

(f) * * *

(6) * * *

Grade	Rate	Grade	Rate
GS–1	$5.55	GS–9	$12.95
GS–2	6.04	GS–10	14.26
GS–3	6.81	GS–11	15.67
GS–4	7.64	GS–12	18.78
GS–5	8.56	GS–13	22.33
GS–6	9.53	GS–14	26.39
GS–7	10.59	GS–15 & over	31.04
GS–8	11.72		

* * * * *

5. In § 1002.2, paragraph (d)(3) is revised to read as follows:

§ 1002.2 Filing fees.

* * * * *

(d) * * *

(3) Separate fees will be assessed for the filing of temporary operating authority applications as provided in paragraphs (f) (8), (9) and (10) of this section, regardless of whether such applications are related to an application for corresponding permanent operating authority. A separate fee will be assessed for the filing of an application for temporary authority to operate a motor or water carrier as provided in paragraph (f)(24) of this section regardless of whether such application is related to a corresponding transfer proceeding as provided for in paragraph (f)(25) of this section or a notice of exemption as provided for in paragraph (f)(27) of this section.

* * * * *

6. In § 1002.2, paragraph (f) is revised to read as follows:

* * * * *

(f) *Schedule of filing fees.*

Type of Proceedings	Fees
Part I: Non-Rail Applications for Operating Authority or Exemptions	
(1) An application for motor carrier operating authority; a certificate of registration including a certificate of registration for certain foreign carriers; broker authority; water carrier operating or exemption authority; or household goods freight forwarder authority	$200
(2) A fitness only application for motor common carrier authority under 49 U.S.C. 10922(b)(4)(E) or motor contract authority under 49 U.S.C. 10923(b)(5)(A) to transport food and related products	100
(3) A petition to interpret or clarify an operating authority under 49 CFR 1160.64	2,200
(4) A request seeking the modification of operating authority only to the extent of making a ministerial correction, when the original error was caused by applicant, a change in the name of the shipper or owner of a plantsite, or the change of a highway name or number	40
(5) A petition to renew authority to transport explosives under 49 U.S.C. 10922 or 10923	150
(6) An application to remove restriction or broaden unduly narrow authority under 49 CFR 1160.107–1160.114	250
(7) An application for authority to deviate from authorized regular route authority under 49 U.S.C. 10923(a)	100
(8) An application for motor carrier or water carrier temporary authority under 49 U.S.C. 10928(b)	100
(9) An application for motor carrier emergency temporary authority under 49 U.S.C. 10928(c)(1)	70
(10) An extension of the time period during which an outstanding application for emergency temporary authority as defined in 49 U.S.C. 10928(c)(1) may continue	19
(11) Request for name change of carrier, broker, or household goods freight forwarder	8
(12) A notice required by 49 U.S.C. 10524(b) to engage in compensated intercorporate hauling including an updated notice required by 49 CFR 1167.4	60
(13) A notice of intent to operate under the agricultural co-operative exemption in 49 U.S.C. 10526(a)(5)	60
(14) [Reserved]	
(15) A joint petition to substitute applicant in a pending operating rights proceeding	22
(16) [Reserved]	
Part II: Non-Rail Applications to Discontinue Transportation	
(17) A notice or petition to discontinue ferry service under 49 U.S.C. 10908	9,000
(18) A petition to discontinue motor carrier of passenger transportation in one state	1,000
(19) [Reserved]	
Part III: Non-Rail Applications to Enter Upon a Particular Financial Transaction or Joint Arrangement	
(20) An application for the pooling or division of traffic	1,700
(21) An application involving the purchase, lease, consolidation, merger or acquisition of control of a motor or water carrier or carriers under 49 U.S.C. 11343	650
(22) An application for approval of a non-rail rate association agreement. 49 U.S.C. 10706	11,000
(23) An application for approval of an amendment to a non-rail rate association agreement	
(i) Significant amendment	1,800
(ii) Minor amendment	40
(24) An application for temporary authority to operate a motor or water carrier. 49 U.S.C. 11349	200
(25) An application to transfer or lease a certificate or permit, including a certificate of registration, and a broker's license or change of control of companies holding broker's license 49 U.S.C. 10926, or a transfer of a water carrier exemption authorized under 49 U.S.C. 10542 and 10544	200
(26) An application for approval of a motor vehicle rental contract. 49 CFR 1057.41(d)	150
(27) A petition for exemption under 49 U.S.C. 11343(e)	200
(28)–(32) [Reserved]	
Part IV: Rail Applications for Operating Authority	
(33) (i) An application for a certificate authorizing the construction, extension, acquisition, or operation of lines of railroad. 49 U.S.C. 10901	2,900
(i) Exempt transaction under 49 CFR 1150.31	1,000
(34) Feeder Line Development Program application filed under 49 U.S.C. 10910(b)(1)(A)(i)	3,500
(35) A Feeder Line Development Program application filed under 49 U.S.C. 10910(b)(1)(A)(ii)	2,000
(36)–(37) [Reserved]	
Part V: Rail Applications to Discontinue Transportation Services	
(38) An application for authority to abandon all or a portion of a line of railroad or operation thereof filed by a railroad (except applications filed by Consolidated Rail Corporation pursuant to the North East Rail Service Act, bankrupt railroads or exempt abandonments under 49 CFR 1152.50)	3,000
(39) An application for authority to abandon all or a portion of a line of railroad or operation thereof filed by Consolidated Rail Corporation pursuant to North East Rail Service Act	150
(40) Abandonments filed by bankrupt railroads. 49 CFR 1152.40	750
(41) Exempt abandonments. 49 CFR 1152.50	1,500
(42) A notice or petition to discontinue passenger train service	9,000
(43) [Reserved]	
Part VI: Rail Applications to Enter Upon a Particular Financial Transaction or Joint Arrangement	
(44) An application for use of terminal facilities or other applications under 49 U.S.C. 11103	7,600
(45) An application for the pooling or division of traffic. 49 U.S.C. 11342	4,100
(46) An application for two or more carriers to consolidate or merge their properties or franchises (or a part thereof) into one corporation for ownership, management, and operation of the properties previously in separate ownership. 49 U.S.C. 11343	
(i) Major transaction	148,200
(ii) Significant transaction	29,600
(iii) Minor transaction	2,500
(iv) Exempt transaction [49 CFR 1080.2(d)]	500
(v) Responsive application	2,500
(47) An application of a non-carrier to acquire control of two or more carriers through ownership of stock or otherwise. 49 U.S.C. 11343	
(i) Major transaction	148,200
(ii) Significant transaction	29,600
(iii) Minor transaction	2,500
(iv) Exempt transaction [49 CFR 1080.2(d)]	600
(v) Responsive application	2,500
(48) An application to acquire trackage rights over, joint ownership in, or joint use of, any railroad lines owned and operated by any other carrier and terminals incidental thereto. 49 U.S.C. 11343	
(i) Major transaction	148,200
(ii) Significant transaction	29,600
(iii) Minor transaction	2,500
(iv) Exempt transaction [49 CFR 1080.2(d)]	600
(v) Responsive application	2,500
(49) An application of a carrier or carriers to purchase, lease or contract to operate the properties of another, or to acquire control of another by purchase of stock or otherwise. 49 U.S.C. 11343	
(i) Major transaction	148,200
(ii) Significant transaction	29,600
(iii) Minor transaction	2,500
(iv) Exempt transaction [49 CFR 1080.2(d)]	600
(v) Responsive application	2,500
(50) An application for a determination of fact of competition 49 U.S.C. 11321 (a)(2) or (b)	29,600
(51) An application for approval of a rail rate association agreement. 49 U.S.C. 10706	27,900
(52) An application for approval of an amendment to a rail rate association agreement. 49 U.S.C. 10706	
(i) Significant amendment	5,200
(ii) Minor amendment	40
(53) An application for authority to hold a position as officer or director. 49 U.S.C. 11322	300
(54) (i) An application to issue securities; an application to assume obligation or liability in respect to securities of another; an application or petition for modification of an outstanding authorization; or an application for competitive bidding requirements of *Ex Parte* No. 158, 49 CFR 1175. 49 U.S.C. 11301	1,300
(ii) An exempt transaction under 49 CFR 1175	600
(55) A petition for exemption (other than a rulemaking) filed by rail carriers. 49 U.S.C. 10505	
(i) Financial exemption petitions	2,500
(ii) Abandonment exemption petitions	2,000
(iii) Other exemption petitions	1,100
(56) An application for forced sale of bankrupt railroad lines. 49 CFR 1180.40–49, 45 U.S.C. 915	1,500
(57)–(59) [Reserved]	
Part VII: Formal Proceedings	
(60) A complaint alleging unlawful rates or practices of carriers, property brokers or freight forwarders of household goods	500
(61) A complaint seeking or a petition requesting institution of an investigation seeking the prescription or division of joint rates, fares or charges. 49 U.S.C. 10705(f)(1)(A)	3,500
(62) A petition for declaratory order	
(i) A petition for declaratory order involving dispute over an existing rate or practice which is comparable to a complaint proceeding	600
(ii) All other petitions for declaratory order	1,100
(63) Requests for nationwide and regional collectively filed general rate increases and major rate restructures accompanied by supporting cost and financial information justifying the increases	6,100
(64) A petition for exemption from filing tariffs by bus carriers	200
(65) An application for shipper antitrust immunity. 49 U.S.C. 10706(a)(5)(A)	2,800
(66) Petition for review of state regulation of intrastate rates, rules or practices filed by interstate rail carriers. 49 U.S.C. 11501	1,000
(67) Petition for review of state regulation of intrastate rates, rules or practices filed by interstate bus carriers. 49 U.S.C. 11501	1,700
(68)–(71) [Reserved]	
Part VIII: Informal Proceedings	
(72) An application for authority to establish released value rates or ratings under 49 U.S.C. 10730 (Except that no fee will be assessed for applications seeking such authority in connection with reduced rates established to relieve distress caused by drought or other natural disaster)	450
(73) An application for special permission for short notice or the waiver of other tariff publishing requirements	50
(74) The filing of tariffs, rate schedules and contracts including supplements	([1])
(75) Special docket applications from rail and water carriers. (There is no fee for requests involving sums of $25,000 or less)	60
(76) Informal complaint about rail rate application	200
(77) (i) An application for original qualification as self-insurer for bodily injury and property damage insurance (BIPD)	3,000
(ii) An application for original qualification as self-insurer for cargo insurance	300
(78) A service fee for insurer, surety or self-insurer accepted certificate of insurance, surety bond other instrument submitted in lieu of a broker surety bond. The fee is based on a formula of $10 per accepted certificate of insurance or surety bond as indication of ICC insurance activity. (There is a $50 annual minimum; but the minimum does not apply to an instrument submitted in lieu of a broker surety bond)	([2])
(79) A petition for waiver of any provision of the lease and interchange regulations. 49 CFR 1057	300
(80) A petition for reinstatement of revoked operating authority	50
(81)–(82) [Reserved]	
(83) Petition for reinstatement of a dismissed operating rights application	300
(84) Filing of documents for recordation. 49 U.S.C. 11303 and 49 CFR 1177.3(c)	([3])
(85) Valuations of railroad lines in conjunction with purchase offers in abandonment proceedings	1,100
(86) Informal opinions about rate applications (all modes)	40
(87)–(95) [Reserved]	
Part IX: Services	
(96) Messenger delivery of decision to a railroad carrier's Washington, DC, agent	([4])
(97) Request for service list for proceedings	([5])
(98) Requests for copies of the one-percent carload waybill sample	100
(99) Verification of surcharge level pursuant to Ex Parte No. 389, Procedures for Requesting Rail Variable Cost & Revenue Determination for Joint Rates Subject to Surcharge or Cancellation	([6])
(100) Application fee for Interstate Commerce Commission Practitioners' Exam	70

[1] 8 per series transmitted.

[2] 10 per accepted certificate or other instrument submitted in lieu of a broker surety bond.

[3] 15 per document.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Parts 32 and 33

RIN 1018–AB25

Addition of Three National Wildlife Refuges to the Lists of Open Areas for Migratory Game Bird and Big Game Hunting, and One to the List for Sport Fishing

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: The Fish and Wildlife Service (Service) is adding three national wildlife refuges (NWRs) to the lists of open areas for migratory game bird and/or big game hunting, and one NWR to the list for sport fishing. The Service has determined that such uses will be compatible with and, in some cases, enhance the major purposes for which each refuge was established. The Service has further determined that this action is in accordance with the provisions of all applicable laws, is consistent with the principles of sound wildlife management, and is otherwise in the public interest by providing additional recreational opportunities.

EFFECTIVE DATE: August 31, 1989.

FOR FURTHER INFORMATION CONTACT: Larry LaRochelle, Division of Refuges, MS 670–ARLSQ, U.S. Fish and Wildlife Service, 18th and C Streets NW., Washington, DC 20240; Telephone (703) 358–2036.

SUPPLEMENTARY INFORMATION: National wildlife refuges are generally closed to hunting and sport fishing until opened by rulemaking. The Secretary of the Interior (Secretary) may open refuge areas to hunting and/or fishing upon a determination that such uses are compatible with the major purpose(s) for which the refuge was established, and that funds are available for development, operation, and maintenance of a hunting or fishing program. The action must also be in accordance with provisions of all laws applicable to the areas, must be consistent with the principles of sound wildlife management, and must otherwise be in the public interest. This rulemaking opens three refuges to hunting and one to sport fishing.

On May 12, 1989, at 54 FR 20623, the Service published a proposed rule to open three NWRs to hunting and one to sport fishing. Department of the Interior policy is, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. Accordingly, written comments received on the proposed rule are addressed in the following section.

Responses to Comments Received

Written comments on the proposed rule were received from 163 parties. Many categorically supported or opposed the proposed actions or hunting in general. Several comments were similar or identical to those received on previous proposed rulemakings opening refuges to hunting and/or fishing contending generically that hunting on refuges is illegal, not in the spirit for which refuges are created, violates the Endangered Species Act, or is not in compliance with the National Environmental Policy Act or various other laws or regulations. These issues have been addressed by the Service—see, *e.g.*, 51 FR 30655 of August 28, 1986, the final rule opening seven refuges to hunting and 11 to sport fishing, and the Service will not here repeat its responses given in that rulemaking, but is instead incorporating those responses here by this reference.

Substantive comments on issues not already addressed in hunting and fishing plans, Environmental Assessments or section 7 Endangered Species Act consultations (all of which were available for public review during the comment period) are responded to below:

The following seven issues concern the deer hunt at the Mason Neck NWR:

Issue: The general health of the deer herd is good and its numbers are not great enough to warrant a public hunt. However, if some animals must be killed, it should not be by public sport hunting but by professional archers or State or Service personnel.

Response: The general health of the deer herd is not good, as indicated by the professionally accepted indicator known as an abomasal parasite count (APC). The APC provides an index of the status of deer density with regard to the nutritional carrying capacity of their habitat. Normally, an APC of 500 is regarded as reflective of a deer population at its optimum carrying capacity and an APC of 1,500 indicates an overpopulation by a herd. The APC of 818 found in a 1986 survey of the Mason Neck NWR indicated the herd was approaching carrying capacity and could require control in two years. The results of an August 1988 survey set the APC at 1,288 indicating a herd that is at the upper level of its carrying capacity and should not be allowed to increase. Overall, the 1988 deer were not in good body condition, were of light weight for their age class and had low fat reserves. The development of a prominent browse line during the winter of 1987–88, a die-off of deer on the refuge and adjacent park lands in the spring of 1988, and spotlight surveys during the summer of 1988 are also all indicators of an overpopulation.

The biological carrying capacity of the refuge is estimated at 90–120 deer, the population is now estimated at 185–235 deer. As early as 1977 biologists noted severe deer browsing problems on tree seedlings at a time when the population was estimated at 167. Current information suggests that a mature forest consisting of a mixture of pines and hardwoods is the forest type preferred by nesting eagles. During 1980–86, eagles in the Chesapeake Bay area selected pine trees for their nests over 70% of the time. Without active forestry management and control of white-tailed deer browsing of seedlings and other understory, the refuges' pine forest will not be able to regenerate. Reducing the present deer population to its carrying capacity is expected to result in better seedling and young tree survival, especially of pines that should eventually provide roosting sites for eagles, and is therefore expected to be beneficial to the conservation of the bald eagle.

The Service recognizes sport hunting as an acceptable, traditional form of wildlife-oriented recreation that can also be used as a management tool to effectively manipulate wildlife population levels. The primary objective of refuge hunting programs is to provide the general public with a quality recreational experience and an opportunity to utilize a renewable resource; having professionals kill the animals would deny the public of that opportunity.

The Service endorses the generally held principle that hunting need not be allowed only when wildlife populations are so high that harvest is necessary to protect a species from the impacts of its own excessive numbers. To delay harvesting until populations reach maximum carry capacity risks habitat damage, disease, unnecessary suffering and population crashes. Game species in suitable habitat will produce harvestable surpluses which can be taken regularly without affecting desired population levels. Refuge hunting programs are monitored and, if necessary, adjusted to achieve desired populations.

The Service believes that the hunting plans and environmental assessments available for public review during the comment period contain adequate biological and management information to support its decisions to conduct the described hunts.

Issue: Sport hunting will reduce the number of deer naturally dying that are important carrion to eagles; this at a time when fish, another important eagle food source, are dying out in the refuge area. There is also a lead poisoning risk to eagles feeding on carcasses of deer killed by buckshot but not recovered by hunters.

Response: The Service has no evidence of eagles feeding on deer carrion at this refuge. Of the several hundred eagle nests of the Chesapeake Bay population examined for food remains from 1977 through 1986 there have been only two occurrences of deer, one from Dorchester County, Maryland, was tentatively identified as either white-tailed or sika deer, the other, from Saint Marys' County, Maryland was identified as white-tailed deer. The possibility of lead poisoning of eagles due to feeding on deer carrion from this hunt is highly unlikely. Therefore, opening Mason Neck NWR to deer hunting is not inconsistent with the conservation of bald eagles.

The Service is unaware of fish die-offs or declining populations in the area.

Issue: Refuge staff or the use of privately-owned 4 x 4 vehicles to recover deer from areas closed to the general public would add to disturbance and the hunt in general will create disturbance that will cause the eagles to abandon the area.

Response: Refuge staff, possibly with the assistance of designated hunters or their vehicles may, in rare cases, need to assist in recovering a deer from a difficult or closed area or for a handicapped hunter. In such instances, disturbance will be held to a minimum. Although access to the area where the archery hunt will be held will continue to be available only to researchers, guided tours and holders of special use permits in order to better protect the eagle nesting and natal area, trails in the gun hunt area have been open to the general public on a year-round basis since 1988 and will continue to be so opened except on hunting days.

Issue: Making the eagle nest location known to hunters will increase the potential for disturbance.

Response: The general location of the present eagle nest has been known to many people from maps and knowledgeable persons for some time without having resulted in intentional harassment. The nest area is protected by a closure to the general public some 4,000 feet in diameter and is so posted. Hunters will be made aware of the general location of the nest area in order to better avoid it.

Issue: The noise from firearms discharging during the hunt will violate the "special noise abatement policy for public lands in the greater Mason Neck Area."

Response: The Bald Eagle Recovery Team as well as the Service's Endangered Species Specialist have concluded that the hunt as planned will not negatively affect the bald eagle population. The referenced "policy" is in fact a simple, verbal agreement amongst the several public land managers in the area to limit, to the extent practical, primarily chain saw use during the December through March period. Therefore, there would be no violation of this agreement.

Issue: The hunt would occur at a time when migrating bald eagles are arriving to overwinter and when resident eagles are beginning breeding activities.

Response: Deliberate zoning constraints and time limitations have been incorporated into the hunt plan to minimize the potential for disturbance of the eagles. The eagle nesting area is located within the archery hunting zone, however, hunting would end about one month before the start of the nesting season. Both the eagle roosting and the nesting area will be closed to hunting.

Issue: Insufficient attention has been given to the effect of the hunt on other wildlife.

Response: Disturbance of other wildlife especially waterfowl and raptors is expected to be minimal because their prime habitat is closed to hunting or not likely to be frequented by deer hunters.

Issue: The Mason Neck and Trustom Pond NWR's should not be closed to the public during hunting season.

Response: The Service believes it is prudent to close the 52 acre hunting area at Trustom Pond NWR during the hunting season and the entire Mason Neck NWR for nine days to the general public during the gun hunting season in consideration of safety aspects and to avoid conflicts between hunters and the general public. However, the schedule for the Mason Neck NWR deer hunt has been designed so that hunting will be permitted only on weekdays when there is less use by the general public. The refuge will remain open to the general public except for the nine weekdays when gun hunting will occur.

Conformance With Statutory and Regulatory Authorities The National Wildlife Refuge System Administration Act of 1966, as amended (NWRSAA)(16 U.S.C. 668dd), and the Refuge Recreation Act of 1962 (16 U.S.C. 460K) govern the administration and public use of national wildlife refuges. Specifically, section 4(d)(1)(A) of the NWRSAA authorizes the Secretary to permit the use of any area within the Refuge System for any purpose, including but not limited to hunting, fishing, public recreation and accommodations, and access, when he determines that such uses are compatible with the major purposes for which each refuge was established. The Service administers the Refuge System on behalf of the Secretary.

The Refuge Recreation Act gives the Secretary additional authority to administer refuge areas within the Refuge System for public recreation as an appropriate incidental or secondary use only to the extent that it is practicable and not inconsistent with the primary purposes for which the refuges were established. In addition, prior to opening refuges to hunting or fishing under this Act, the Secretary is required to determine that funds are available for the development, operation, and maintenance of these permitted forms of recreation.

In accordance with the NWRSAA and the Refuge Recreation Act, the Secretary has determined that opening the refuges listed below to hunting and fishing is compatible and will not interfere with the primary purposes for which each was established, and that funds are available to administer the programs. The hunting and fishing programs will be within State and Federal (migratory game bird) regulatory frameworks. A discussion of the compatibility of the hunting and fishing programs with the purpose(s) for which each refuge was established and the availability of funding for each program, was discussed in the proposed rule, referenced above.

Economic Effect

Executive Order 12291, "Federal Regulation," of February 17, 1981, requires the preparation of regulatory impact analyses for major rules. A major rule is one likely to result in an annual effect on the economy of $100 million or more; a major increase in costs or prices for consumers, individual industries, government agencies or geographic regions; or significant adverse effects on the ability of United States-based enterprises to compete with foreign-based enterprises. The Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*) further requires the preparation of flexibility analyses for rules that will have a significant effect on a substantial number of small entities, which include

OL
54
SS
1
6
8
AG
31
989
UMI

small businesses, organizations or governmental jurisdictions.

It is estimated that opening these refuges to hunting and fishing will generate approximately 6,650 annual visits. Using data from the 1980 National Survey of Hunting, Fishing, and Wildlife-Associated Recreation, and the 1988 Economic Report of the President (Consumer Price Index), total annual receipts generated from purchases of food, transportation, hunting equipment, fishing gear, fees, and licenses associated with these programs are expected to be approximately $199,533, or substantially less than $100 million. In addition, since these estimated receipts will be spread over four states, the implementation of this rule should not have a significant economic impact on the overall economy, or a particular region, industry, or group of industries, or level of government.

With respect to small entities, this rule will have a positive aggregate economic effect on small businesses, organizations, and governmental jurisdictions. The openings will provide recreational opportunities and generate economic benefits that may not now exist, and will impose no new costs on small entities. While the number of small entities likely to be affected is not known, the number is judged to be small. Moreover, the added cost to the Federal government of law enforcement, posting, etc., needed to implement activities under this rule will be considerably less than the income generated from the implementation of these hunting and/or sport fishing programs.

Accordingly, the Department of the Interior has determined that this rule is not a "major rule" within the meaning of Executive Order 12291 and will not have a significant economic effect on a substantial number of small entities within the meaning of the Regulatory Flexibility Act.

Paperwork Reduction Act

The Service has approval from the Office of Management and Budget (OMB) for the information collection requirements of these regulations pursuant to the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). These requirements are presently approved by OMB as cited below:

Type of information collection	OMB Approval No.
Economic and public use permits	1018–0014

These regulations impose no new or additional reporting or recordkeeping requirements that must be cleared by OMB.

Environmental Considerations

The "Final Environmental Statement for the Operation of the National Wildlife Refuge System" [FES 76–59] was filed with the Council on Environmental Quality on November 12, 1976; a notice of availability was published in the **Federal Register** on November 19, 1976 [41 FR 51131]. Pursuant to the requirements of section 102(2)(C) of the National Environmental Policy Act of 1969 [42 U.S.C. 4332(2)(C), environmental assessments (EAs) were prepared for these refuge openings. Alternatives other than public sport hunting, including live trapping and relocation, introduction of predators, increased habitat management, chemical sterilization, population reduction by refuge staff, and no-action were considered and dismissed as not meeting refuge requirements. Based upon the EAs, the Service issued Findings of No Significant Impact with respect to the openings. Section 7 evaluations were prepared, where appropriate, pursuant to the Endangered Species Act. The Service has concluded that the opening of these refuges will not affect endangered or threatened species.

In view of the rapidly approaching hunting seasons, there is an immediate need to place these regulations into effect. It is Service policy to conduct hunting within the framework of State laws, regulations and seasons. To delay opening the refuges to hunting may cause confusion to the public, deny a benefit to the public and small related businesses and would not be in the best interest of the Service or the public. Thus the Department of the Interior concludes that good cause exists within the meaning of 5 U.S.C. 553(d)(3) of the Administrative Procedures Act to make these regulations effective upon publication in the **Federal Register**.

Larry LaRochelle, Division of Refuges, U. S. Fish and Wildlife Service, Washington, DC 20240, is the primary author of this rulemaking document.

List of Subjects

50 CFR Part 32

Hunting, National Wildlife Refuge System, Wildlife, Wildlife refuges.

50 CFR Part 33

Fishing, National Wildlife Refuge System, Wildlife refuges.

Accordingly, parts 32 and 33 of chapter I of title 50 of the Code of Federal Regulations are amended as set forth below:

PART 32—[AMENDED]

1. The authority citation for Part 32 continues to read as follows:

Authority: 5 U.S.C. 301; 16 U.S.C. 460k, 664, 668dd, and 715i.

2. Section 32.11 is amended by adding Trustom Pond NWR, RI, alphabetically by State as follows:

§ 32.11 List of open areas; migratory game birds.

* * * * *

Rhode Island

Trustom Pond National Wildlife Refuge

* * * * *

3. Section 32.31 is amended by adding Quivera NWR, KS and Mason Neck NWR, VA alphabetically by State as follows:

§ 32.31 List of open areas; big game.

* * * * *

Kansas

* * * * *

Quivera National Wildlife Refuge

* * * * *

Virginia

Mason Neck National Wildlife Refuge

* * * * *

4. Section 32.41 is amended by revising the language following the chart to read as follows:

§ 32.41 [Amended]

* * * * *

The information requested in the application form is purely voluntary but failure to answer questions may jeopardize the eligibility of individuals to receive permits. Public reporting burden for the form is estimated to average six minutes per response, including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form.

These regulations impose no new or additional reporting or recordkeeping requirements that must be cleared by the Office of Management and Budget. The information is being collected to assist the Service in administering these programs in accordance with statutory authorities which require that recreational uses be compatible with the primary purposes for which the areas were established.

PART 33—[AMENDED]

1. The authority citation for Part 33 continues to read as follows:

Authority: 5 U.S.C. 301; 16 U.S.C. 460K, 664, 668dd, 715i.

2. Section 33.2(e) is amended by revising the language following the chart to read as follows:

§ 33.2 [Amended]

* * * * *

The information requested in the application form is purely voluntary but failure to answer questions may jeopardize the eligibility of individuals to receive permits. Public reporting burden for the form is estimated to average six minutes per response, including time for reviewing instructions, gathering and maintaining data, and completing and reviewing the form.

These regulations impose no new or additional reporting or recordkeeping requirements that must be cleared by the Office of Management and Budget. The information is being collected to assist the Service in administering these programs in accordance with statutory authorities which require that recreational uses be compatible with the primary purposes for which the areas were established.

* * * * *

3. Section 33.4 is amended by adding Lake Ophelia NWR, LA, alphabetically by State as follows:

§ 33.4 List of open areas; sport fishing.

* * * * *

Louisiana

* * * * *

Lake Ophelia National Wildlife Refuge

* * * * *

Dated: August 8, 1989.

John F. Turner,

Director, Fish and Wildlife Service.

BILLING CODE 4310-55-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 658

[Docket No. 80990-9187]

Shrimp Fishery of the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Emergency interim rule.

SUMMARY: NOAA amends the regulations for the Fishery Management Plan for the Shrimp Fishery of the Gulf of Mexico (FMP) to reduce the area of the Tortugas shrimp sanctuary that is temporarily open to trawl fishing. This action is intended to prevent conflicts between fishermen operating mobile gear (trawls) and fixed gear (lobster traps) while still allowing trawl fishermen to harvest marketable-size shrimp from a small area of the Tortugas shrimp sanctuary and allowing trap fishermen to harvest spiny lobster from an area customarily available to them.

EFFECTIVE DATE: August 6, 1989, through November 3, 1989.

ADDRESSES: Copies of the environmental assessment may be obtained from Michael E. Justen, Southeast Region, NMFS, 9450 Koger Boulevard, St. Petersburg, FL 33702.

FOR FURTHER INFORMATION CONTACT: Michael E. Justen, 813–893–3722.

SUPPLEMENTARY INFORMATION: The shrimp fishery is managed under the FMP and its implementing regulations at 50 CFR part 658, as provided by the Magnuson Fishery Conservation and Management Act (Magnuson Act). Under the FMP, the Director, Southeast Region, NMFS, (Regional Director) may modify by no more than 10 percent the geographical scope of the Tortugas shrimp sanctuary specified at § 658.22 after (1) consultation with the Gulf of Mexico Fishery Management Council (Council), (2) consideration of specified criteria, and (3) determination that benefits may be increased or adverse impacts decreased by the modification.

In accordance with these criteria, the Regional Director reduced the geographical scope of the Tortugas shrimp sanctuary by approximately 54 square nautical miles from November 4, 1988, through February 2, 1989 (53 FR 45270, November 9, 1988) and from May 22, 1989, through November 3, 1989 (54 FR 16123, April 21, 1989). The supporting rationale for the reductions was contained in the above cited rules and is not repeated here.

When the Council considered opening a portion of the Tortugas shrimp sanctuary to shrimp trawling, the probability of conflicts between mobile gear and fixed gear fishermen was unforeseen. In fact, public testimony before the Council in July of 1988 specifically indicated that traps were not fished in the portion of the sanctuary proposed to be opened. That testimony has proved to be incorrect.

Spiny lobster trap fishermen have traditionally set their gear in portions of the Tortugas shrimp sanctuary that are now open to trawling. Catch rates of lobster in those portions have been relatively high, particularly early in the spiny lobster season. The fishing season for spiny lobster reopens on August 6, 1989, and the soak period for traps begins one hour before sunrise on August 1. The deployment of traps in areas where trawling is permitted causes difficulties for trawlers and costly gear losses for trap fishermen.

The Council has found that the potential for conflicts and resultant loss of income based on these circumstances constitutes an emergency. The Secretary of Commerce (Secretary) concurs. Accordingly, the Secretary is promulgating this emergency interim rule to be effective for 90 days, as authorized by section 305(e)(3)(B) of the Magnuson Act.

To avoid conflicts and economic losses, the local shrimp and spiny lobster fishermen have agreed to a geographical separation of trawling and trap fishing. Shrimp trawlers have agreed to refrain from trawling in that portion of the previously opened Tortugas shrimp sanctuary east of 82°01′ W. longitude. In effect, the opened portion of the sanctuary would be reduced by approximately 33 square nautical miles. This emergency rule formalizes the local agreement among fishermen and announces it to shrimp fishermen not otherwise privy to it, such as trawl fishermen from other areas who may fish seasonally in the area of the Tortugas shrimp sanctuary. Without this rule, trap fishermen would be subject to gear losses if they set traps in the opened portion of the Tortugas shrimp sanctuary and would potentially have reduced catches if they refrained from setting gear in that formerly productive area.

Classification

The Assistant Administrator for Fisheries, NOAA (Assistant Administrator), has determined that this rule is necessary to respond to an emergency situation and that it is consistent with the national standards and other provisions of the Magnuson Act and other applicable law.

The Assistant Administrator finds that notice and opportunity for public comment are impracticable and contrary to the public interest pursuant to section 553(b)(B) of the Administrative Procedure Act because of the necessity to prevent conflicts and to provide timely economic relief to spiny lobster trap fishermen. The Council received input for this rule from a significant portion of the fishermen, both trawl fishermen and trap fishermen, directly affected by this rule. The Assistant Administrator also finds for good cause, namely, to prevent conflicts and to provide necessary timely economic relief to spiny lobster trap fishermen, that it is not necessary to delay for 30 days the effective date of this rule pursuant to section 553(d)(3) of the Administrative Procedure Act.

Because of the emergency need for implementation of this rule on August 6, 1989, it is exempt from the normal review procedures of E.O. 12291, as provided in section 8(a)(1) of that order. This rule is being reported to the Director of the Office of Management and Budget with an explanation of why it is not possible to follow the procedures of that order.

This rule is exempt from the procedures of the Regulatory Flexibility

Act because it is issued without opportunity for prior public Comments.

NOAA prepared an Environmental Assessment (EA) for this rule and, based on the EA, the Assistant Administrator concluded that there will be no significant impact on the human environment as a result of this rule. Copies of the EA are available (see ADDRESS).

This rule does not contain a collection-of-information requirement and therefore is not subject to the Paperwork Reduction Act.

This rule does not contain policies with federalism implications sufficient to warrant preparation of a federalism assessment under E.O. 12612.

The Assistant Administrator has determined that this rule will be implemented in a manner that is consistent to the maximum extent practicable with the approved coastal zone management program of Florida. This determination has been submitted for review by Florida under section 307 of the Coastal Zone Management Act.

List of Subjects in 50 CFR Part 658

Fisheries, Fishing, Reporting and recordkeeping requirements.

Dated: August 25, 1989.

James E. Douglas, Jr.,

Deputy Assistant Administrator for Fisheries, National Marine Fisheries Service.

For the reasons set forth in the preamble, 50 CFR Part 658 is amended as follows:

PART 658—SHRIMP FISHERY OF THE GULF OF MEXICO

1. The authority citation for Part 658 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

2. In § 658.22, effective from August 6, 1989, through November 3, 1989, paragraph (b) is revised to read as follows:

§ 658.22 Tortugas shrimp sanctuary

* * * * *

(b) The provisions of paragraph (a) of this section notwithstanding, effective from August 6, 1989, through November 3, 1989, that part of the Tortugas shrimp sanctuary seaward of a line connecting the following points is open to trawl fishing: from point T at 24°47.8′ N. latitude, 82°01.0′ W. longitude (the intersection of 82°01.0′ W. longitude and the sanctuary boundary line from point F to point G) to point U at 24°43.83′ N. latitude, 82°01.0′ W. longitude (the intersection of 82°01.0′W. longitude and the line denoting the seaward of Florida's waters); thence along the seaward limit of Florida's waters, as shown on the current edition (March 21, 1987) of NOAA chart 11439, to point R at 24°44.7′ N. latitude, 82°10.0′W. longitude; thence north to point S at 24°44.7′ N. latitude, 82°10.0′ W. longitude; thence north to point S at 24°45.1′ N. latitude, 82°10.0′ W. longitude (the intersection of 82°10.0′ W. longitude and the sanctuary boundary line from point F to point G) (see Figure 2).

3. Effective from August 6, 1989, through November 3, 1989, Figure 1 is suspended and a new Figure 2 is added to read as follows:

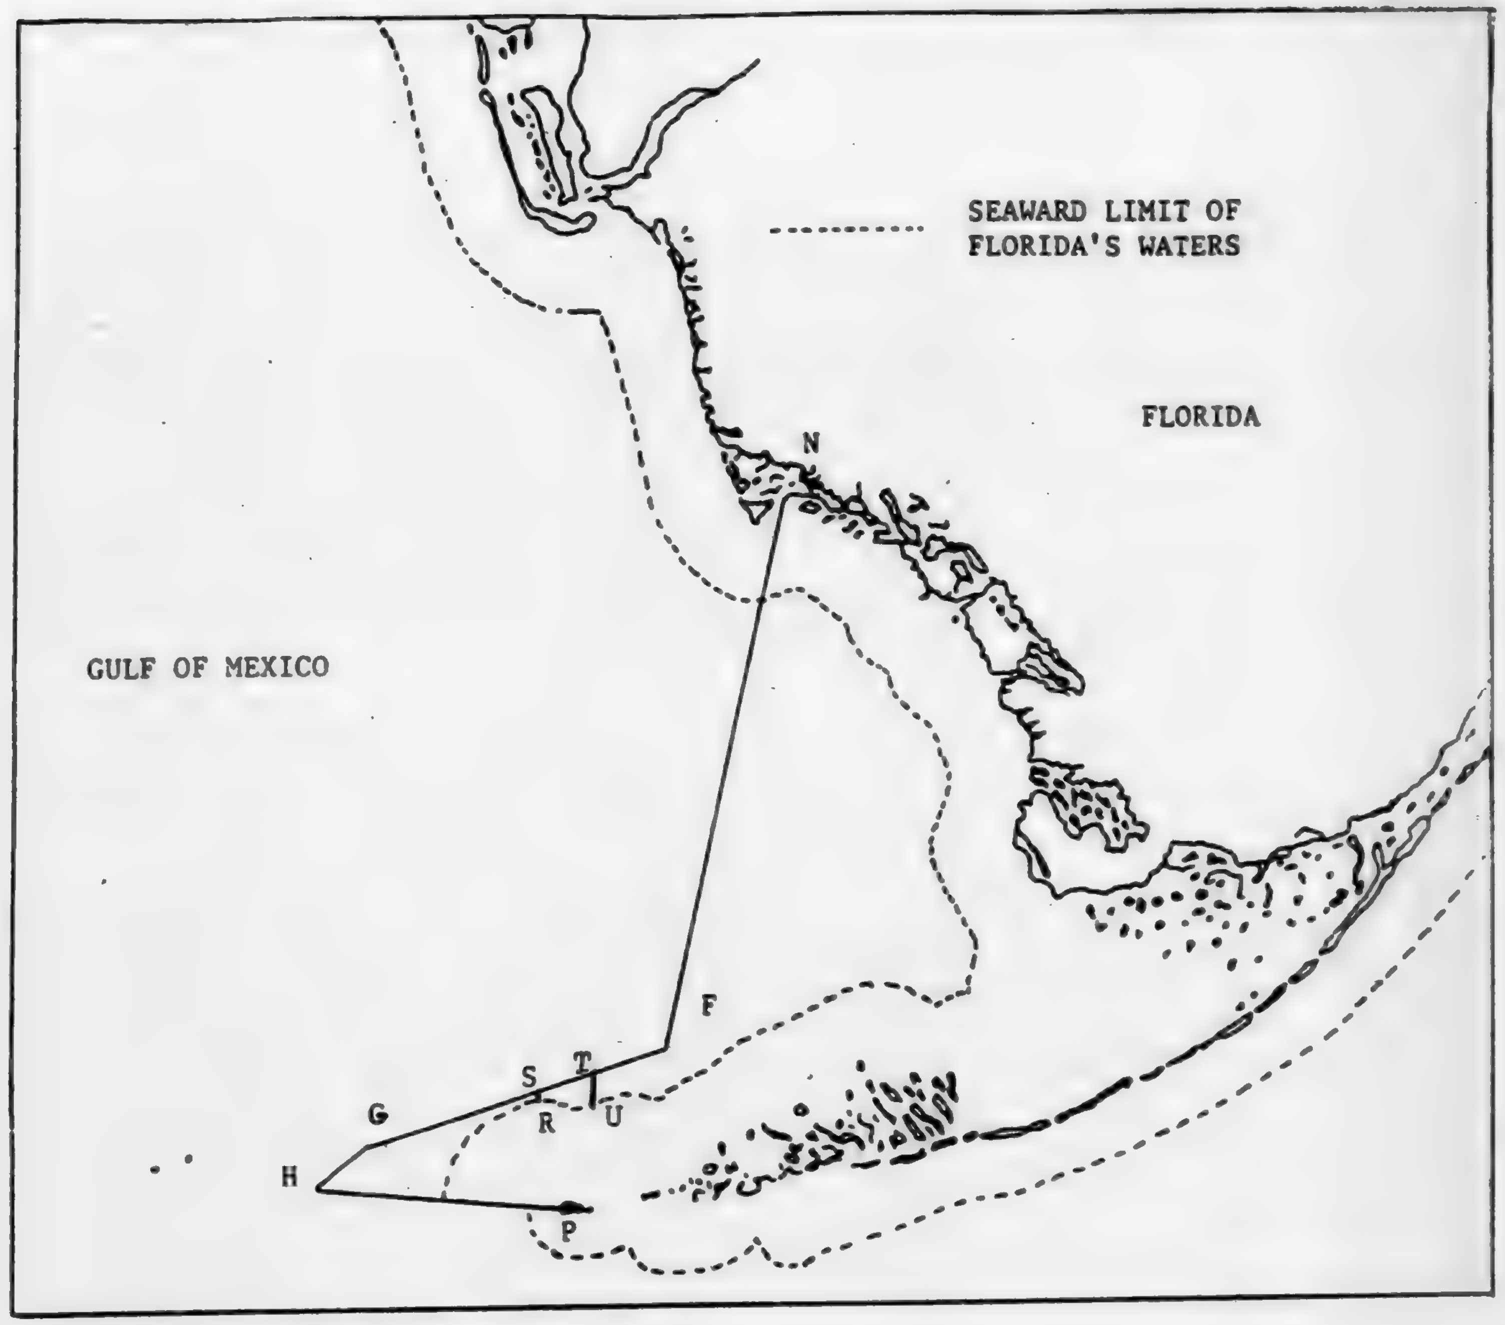

FIGURE 2. TORTUGAS SHRIMP SANCTUARY

Proposed Rules

Federal Register
Vol. 54, No. 168
Thursday, August 31, 1989

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF THE TREASURY

Customs Service

19 CFR Part 4

Proposed Interpretive Rule Regarding the Transshipment and Transportation of Tuna Caught Outside the Exclusive Economic Zone

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Proposed interpretive rule; solicitation of comments.

SUMMARY: Customs has received requests from certain parties that it reconsider its intepretation of rules relating to the transshipment and transportation of tuna. Specifically, these requestors asked Customs to determine whether the transportation of tune is, under various circumstances, within the meaning of "fisheries" as defined for purposes of vessel documentation in 46 U.S.C. 12101(a)(1). One requestor asked whether a foreign-flag vessel which catches tuna on the high seas outside the Exclusive Economic Zone (EEZ), transports them to a point within the EEZ but outside the U.S. territorial waters, and off-loads the tuna onto a U.S.-flag vessel has transported such fish within the meaning of section 12101(a)(1). A U.S. importer also requested a ruling on whether a foreign-flag vessel which catches tuna on the high seas outside the EEZ, transports the fish through the EEZ and U.S. territorial waters, and lands its fish in Guam, has transported the fish as defined in section 12101(a)(1).

Customs must determine whether a vessel not documented for the fisheries has engaged in the fisheries when it transports fish it caught on the high seas outside the EEZ through the EEZ and the territorial waters. A related issue is whether such a vessel may transport, through the EEZ and territorial waters, fish transferred to it on the high seas.

This document invites comments with respect to the operations of the above vessels as they pertain to engagement in the "fisheries," as defined in 46 U.S.C. 12101(a)(1).

DATE: Comments must be received on or before October 30, 1989.

ADDRESS: Written comments (preferably in triplicate) may be submitted to and inspected at the Regulations and Disclosure Law Branch, Room 2119, U.S. Customs Service, 1301 Constitution Avenue, NW., Washington, DC 20229.

FOR FURTHER INFORMATION CONTACT: Glen E. Vereb, Carrier Rulings Branch, Office of Regulations and Rulings (202-566-5706).

SUPPLEMENTARY INFORMATION:

Background

The Commercial Fishing Industry Vessel Anti-Reflagging Act of 1987 (the Act) (Pub. L. 100-239; 101 Stat. 1778) amended 46 U.S.C. 12101(6) by changing the definition of "fisheries" set forth therein to include the "processing, storing, and transporting (except in foreign commerce)" of fish and related fishery resources in United States navigable waters and the Exclusive Economic Zone (EEZ), as well as the catching-related activities provided for in the former definition. Accordingly, the new definition of fisheries, now set forth in 46 U.S.C. 12101(a)(1) reads as follows:

> "fisheries" includes processing, storing, transporting (except in foreign commerce), planting, cultivating, catching, taking, or harvesting fish, shellfish, marine animals, pearls, shells, or marine vegetation in the navigable waters of the United States or in the exclusive economic zone.

The states primary purpose of the Act was to prohibit the reflagging of foreign-built processing vessels as vessels of the United States for operation in the domestic fisheries under the Magnuson Fishery Conservation and Management Act (16 U.S.C. 1811, *et seq.*) (FCMA). The Act was to further "the fundamental purposes of the [FCMA] by displacing foreign-built with domestically-built fishing industry vessels in U.S. fisheries." The Act was intented to "harmonize" or "reconcile" differences between fisheries and maritime law. In the House Report on this Act (H.R. Rep. No. 100-423, 100th Cong., 1st Sess. (1987) published at 1987 U.S.C.C.A.N. 3245), this was described as "the genesis of the legislation."

Section 12108(b) of Title 46 of the United States Code limits employment in the fisheries to a fishery-documented vessel, "[s]ubject to the laws of the United States regulating the fisheries * * *" Under 46 U.S.C. 12108(a), only a vessel eligible for documentation (*i.e.*, over five net tons and owned by a citizen) which was built in the United States may be documented for the fisheries.

The provision relating to the landing of fish in the United States in the Nicholson Act (46 U.S.C. App. 251(a)) has not been changed since its enactment in 1950. Under the Nicholson Act,

> no foreign-flag vessel shall land in a port of the United States its catch of fish taken on board such vessels on the high seas or fish products processed therefrom, or any fish or fish products taken on board such vessel on the high seas from a vessel engaged in fishing operations or in the processing of fish or fish products.

Since this prohibition is directed against *foreign-flag* vessels, a United States-flag, foreign-built vessel (which cannot be documented for the coastwise or fisheries trade) can land in the United States fish it has caught or received on the high seas without violating the Nicholson Act. Furthermore, Customs has held that the Nicholson Act does not apply to prohibit a foreign-flag vessel from landing in Guam, American Samoa, or the Commonwealth of the Northern Mariana Islands, fish it has caught or taken on board on the high seas.

The facts as presented by the first petitioner are as follows: A Japanese fishing vessel longlines for yellow fin or big-eye tuna in international waters outside the 200-mile EEZ. Upon completing its fish-catching operations, the vessel travels toward Hawaii and unloads its tuna within the EEZ, but outside the three-mile United States territorial waters, on a United States-owned and documented vessel. The United States vessel is owned by a duly incorporated business in the State of Hawaii with 75 percent ownership by United States citizens and 25 percent ownership by foreigners. The vessel was built in the United States and its previous owners were all United States citizens. The United States vessel then unloads its cargo of tuna in Honolulu. Approximately 80 percent of the cargo is shiped by air to Japan. The remaining 20 percent is sold locally.

It is apparent that the transshipment to the United States vessel outside

United States territorial waters is not considered to be a "landing" of fish within the meaning of the Nicholson Act. The petitioners contend, however, that the use of a foreign-flag vessel to trasport fish from a point outside the EZZ to a point inside the EEZ, but outside United States territorial waters, is not an engagement in the "fisheries," for purposes of the vessel documentation requirements.

The facts as presented by the second requestor are as follows: Japanese and Taiwanese fishing vessels longline for yellow fin and big eye tuna in international waters outside the EEZ. Upon completing their fishing operations, the vessels land their catch in Guam and it is sold to American and foreign enterprises.

Customs has held that the Nicholson Act does not apply to prohibit a foreign-flag vessel from landing in Guam fish that vessel has caught or taken on board on the high seas. Customs must determine, however, whether the use of a foreign-flag vessel to transport fish it has caught outside the EEZ from a point outside the EEZ to Guam is an engagement in the fisheries for purposes of vessel documentation requirements.

Customs will also consider whether the following constitute an engagement in the fisheries: (1) The transportation through the EEZ and the territorial waters, by a vessel not documented for the fisheries, of fish caught on the high seas outside the EEZ by that vessel; (2) the transportation through the above described area, by a vessel not documented for the fisheries, of fish transshipped to that vessel on the high seas outside the EEZ; (3) the transportation, by a vessel not documented for the fisheries, of fish caught by that vessel on the high seas to a point in the EEZ where the fish are transshipped to vessel documented for the fisheries.

Comments

Before making a determination on these matters, Customs invites written comments from interested parties on the above issues. The requests for reinterpretation received by Customs, as well as all comments received in response to this notice, will be available for public inspection in accordance with the Freedom of Information Act (5 U.S.C. 52) and Section 1.6, Treasury Department Regulations (31 CFR 1.6), and § 103.11(b), Customs Regulations (19 CFR 103.11(b)), on regular business days between the hours of 9:00 a.m. and 4:30 p.m. at the Regulations and Disclosure Law Branch, Room 2119, Customs Headquarters, 1301 Constitution Avenue NW., Washington, DC.

Drafting Information

The principal author of this document was Joseph J. DeSanctis, Regulations and Disclosure Law Branch, Office of Regulations and Rulings, U.S. Customs Service. However, personnel from other offices participated in its development.

BILLING CODE 4820-02-M

---

19 CFR Part 134

Proposed Customs Regulations Amendment Relating to the Country of Origin Marking of Native American-Style Arts and Crafts

AGENCY: U.S. Customs Service, Department of the Treasury.

ACTION: Proposed rule; solicitation of comments.

SUMMARY: This document sets forth a proposed amendment to the Customs Regulations concerning the country of origin marking of arts and crafts which incorporate Native American design motifs, materials or construction. More permanent methods of marking are proposed than are currently required to prevent removal of country of origin markings after importation, but before sale to consumers, thereby preventing the articles from being deceptively or mistakenly offered and purchased as actual products produced by Native Americans. Comments from interested parties will be considered before a final rule is issued.

DATES: Comments must be received on or before October 2, 1989.

ADDRESSES: Comments (preferably in triplicate) may be submitted to and inspected at the Regulations and Disclosure Law Branch, Room 2119, U.S. Customs Service, 1301 Constitution Avenue, NW., Washington, DC 20229.

FOR FURTHER INFORMATION CONTACT: Lorrie Rodbart, Value, Special Programs and Admissibility Branch, (202) 566-5765.

SUPPLEMENTARY INFORMATION:

Background

Section 304 of the Tariff Act of 1930, as amended (19 U.S.C. 1304), requires, subject to certain specified exceptions, that every article of foreign origin imported into the United States shall be permanently marked in a conspicuous place as legibly, indelibly, and permanently as the nature of the article will permit in a manner as to indicate to an ultimate purchaser in the United States the English name of the country of origin of the article. Part 134, Customs Regulations (19 CFR part 134), implements the country of origin marking requirements and exceptions of 19 U.S.C. 1304. Although 19 CFR 134.41(a) provides that the marking requirements are best met by marking worked into an article at the time of manufacture, the regulations generally permit any method of marking, including paper sticker labels, that will remain on the article during handling until it reaches the ultimate purchaser unless deliberately removed. See 19 CFR 134.41(b) and 134.44. Definite methods of marking specific articles are provided for in 19 CFR 134.43.

There have been various concerns that imported jewelry and arts and crafts which look like genuine Native American products are being deceptively or mistakenly offered for sale as actual products of Native Americans after deliberate removal of the required country of origin labels or other markings. These concerns were addressed in section 1907(c) of the Omnibus Trade and Competitiveness Act of 1988 (Pub. L. 100-418). That Act directs the Customs Service to prescribe and implement within one year regulations which require indelible and permanent country of origin marking, to the greatest extent possible, on all imported Native American-style jewelry and arts and crafts. New requirements concerning jewelry were set forth in a notice of proposed rulemaking published in the **Federal Register** on February 10, 1989 (54 FR 6418). That proposal would add a new paragraph (c) to § 134.43. This separate proposed regulation amendment concerning Native American-style arts and crafts proposes to add a paragraph (d) to require indelible country of origin marking on such arts and crafts by means of cutting, diesinking, engraving, stamping, or other equally permanent method.

Section 1907(c) of the Act requiring the implementation of regulations concerning country of origin marking of Native American-style arts and crafts resulted from a Senate floor amendment to the trade bill. In the discussion preceeding the adoption of that amendment, Senator Domenici, the amendment's sponsor, inserted into the Congressional Record the following statement which he said was designed to provide guidance to Customs in defining Native American handicrafts:

> The most appropriate definition of what is *genuine* Native American handicraft product

> (arts, crafts, and jewelry) is found in 25 CFR 308.3a (emphasis added). It reads as follows:
>
> "Objects produced by Indian craftsmen with the help of only such devices as allow the manual skill of the maker to condition the shape and design of each individual product."
>
> The regulations proposed by the U.S. Customs Service in 1988 contain appropriate descriptive information regarding Native American arts, crafts and jewelry.
>
> While it is clear that a detailed description of what these items look like is helpful to a Customs agent, such descriptions cannot be all encompassing. The thrust of the amendment is to ensure that consumers may distinguish between authentic Native American products and the look-alikes from around the world.
>
> The U.S. Customs Service is encouraged to coordinate with the Department of Interior, Bureau of Indian Affairs to ensure that the intent of this provision is carried out. 133 Cong. Rec. S9444 (daily ed. July 8, 1987).

The definition of a genuine Native American handicraft found in 25 CFR 308.3a is a combination of the producer of the product (Indian craftsmen) and the method of production (with the help of only such devices as allow the manual skill of the maker to condition the shape and design of each individual product). We do not find this definition to be instructive in defining "Native American-style arts and crafts" as that term is used in section 1907(c).

First, the thrust of section 1907(c) is to require indelible marking on imported goods which look like arts and crafts made by Native Americans but in fact were not produced by Native Americans. Second, unlike genuine Native American handicrafts which are by definition produced with the help of only such devices as allow the manual skill of the maker to condition the shape and design of each individual product, as the legislative history makes clear, imported articles which look like Native American arts and crafts may have been mass produced rather than handcrafted. Thus, neither portion of the definition regarding the producer of the product nor the method of production is applicable in identifying imported Native American-style arts and crafts.

Moreover, according to the U.S. Department of the Interior, Indian Arts and Crafts Board, the definition of Native American handicrafts purposely makes no mention of what genuine Native American handicrafts look like "because contemporary craftsmen necessarily develop new approaches to the use of traditional materials, adopt new materials, and they necessarily arrive at new finished products of these materials in expressing their changing culture." (Letter dated April 6, 1989, submitted to Customs regarding proposed Customs Regulations Amendment relating to country of origin marking of jewelry, published in the **Federal Register** on February 10, 1989).

Considering the purpose of section 1907(c), which is to ensure that consumers can distinguish between genuine Native American products and imported look-alikes, the proposed amendment merely defines Native American-style arts and crafts as: arts and crafts, such as pottery, rugs, blankets, kachina dolls, and baskets, which incorporate traditional Native American design motifs, materials or construction and therefore look like, and could possibly be mistaken for, arts and crafts made by Native Americans. While we recognize the fact that not all genuine Native American handicrafts incorporate "traditional" design motifs, materials or construction, we are of the opinion that the imports of Native American-style arts and crafts which consumers are likely to mistake for the genuine articles are likely to incorporate "traditional" design motifs, materials or construction.

In view of the requirement that regulations be in place by August 23, 1989, pursuant to section 1907(c) of the Act, comments are requested within 30 days of publication. Comment is particularly sought on the question of identification of Native-American arts and crafts.

Executive Order 12291

This document does not meet the criteria for a "major rule" as specified in E.O. 12291. Accordingly, no regulatory impact analysis has been prepared.

Regulatory Flexibility Act

Pursuant to the provisions of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*), it is certified that the regulation amendment will not have a significant impact on a substantial number of small entities. Accordingly, it is not subject to the regulatory analysis or other requirements of 5 U.S.C. 603 and 604.

Drafting Information

The principal author of this document was James C. Hill, Regulations and Disclosure Law Branch, U.S. Customs Service. However, personnel from other offices participated in its development.

List of Subjects in 19 CFR Part 134

Customs duties and inspection, Labeling, packaging and containers.

Proposed Amendment

It is proposed to amend Part 134, Customs Regulations (19 CFR part 134), as set forth below:

PART 134—COUNTRY OF ORIGIN MARKING

1. The authority citation for part 134 would continue to read as follows:

Authority: 5 U.S.C. 301, 19 U.S.C. 66, 1202 (General Note 8, Harmonized Tariff Schedule of the United States), 1304, 1624.

2. It is proposed to amend § 134.43 by reserving paragraph (c) and by adding a new paragraph (d) to read as follows:

§ 134.43 Methods of marking specific articles.

* * * * *

(c) [Reserved].

(d) *Native American-style arts and crafts.*—(1) *Definition.* Native American-style arts and crafts are arts and crafts, such as pottery, rugs, blankets, kachina dolls and baskets, which incorporate traditional Native American design motifs, materials or construction and therefore look like, and could possibly be mistaken for, arts and crafts made by Native Americans.

(2) *Method of Marking.* Except as provided for in 19 U.S.C. 1304(a)(3) and § 134.32 of this part, Native American-style arts and crafts must be indelibly marked with the country of origin by means of cutting, die-sinking, engraving, stamping, or some other equally permanent method. On textile articles, such as rugs and blankets, a sewn-in label is considered to be an equally permanent method. Less permanent methods of marking, such as adhesive labels, will only be accepted if, because of the nature of an article, it is technically or commercially infeasible to mark by a more permanent method.

William von Raab,

Commissioner of Customs.

Approved: August 25, 1989.

Salvatore R. Martoche,

Assistant Secretary of the Treasury.

Offshore Supply Vessels Including Liftboats

AGENCY: Coast Guard, DOT.

ACTION: Proposed rule, extension of comment period and notice of hearing.

SUMMARY: On May 9, 1989, the Coast Guard published in the **Federal Register** (54 FR 20006) a notice of proposed rulemaking to establish regulations governing new Offshore Supply Vessels (OSVs), including self elevating OSVs known in the industry as lifeboats. These rules would become Title 46 Code of Federal Regulations, Subchapter L. Subchapter L would contain rules for inspection and certification of new OSVs including requirements for construction, outfitting of lifesaving and fire protection equipment, machinery and electrical installations, and operations.

Because of requests for a public hearing from the Offshore Marine Service Association and the Chairman of the House of Representatives Subcommittee on Coast Guard and Navigation, a hearing on this proposal will be held and the deadline for receipt of comments is extended to December 6, 1989.

DATES: Comments on this notice must be received on or before December 6, 1989. The date of the public hearing is September 13, 1989, as explained in **SUPPLEMENTARY INFORMATION** below.

ADDRESSES: Comments should be mailed to Executive Secretary, Marine Safety Council (G-LRA-2/3600) (CGD 82-004/CGD 86-074), U.S. Coast Guard, 2100 Second Street, SW., Washington, DC 20593-0001. The comments and materials referenced in this notice will be available for examination and copying between 8 a.m. and 3 p.m., Monday through Friday, except holidays, at the Marine Safety Council, U.S. Coast Guard, Room 3600, 2100 Second Street, SW., Washington, DC 20593-0001. Comments may also be hand delivered to this address.

A public hearing on the proposed rules will be held at: Doubletree Hotel, 300 Canal Street, New Orleans, LA as explained under **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: LCDR Michael M. Rosecrans, Office of Merchant Marine Safety, Security and Environmental Protection (G-MTH-4/13), Room 1304, U.S. Coast Guard Headquarters, Washington, DC 20593-0001, (202) 267-2997.

SUPPLEMENTARY INFORMATION:

Public Hearing

The Notice of Proposed Rulemaking published on May 9, 1989, stated that the Coast Guard did not plan to hold a public hearing on this rulemaking. The NPRM also stated that a hearing may be held if requested in writing by interested persons who could demonstrate that an opportunity to make an oral presentation would aid the rulemaking.

In a letter dated June 29, 1989, the Chairman of the House of Representatives Subcommittee on Coast Guard and Navigation requested that a public hearing on this proposal be held in New Orleans, LA to allow representatives of the shipbuilding industry and owners, operators and designers of OSVs to make oral presentations. Subsequently, the Offshore Marine Services Association, a group formed by and representing the interests of a large number of OSV owners, operators and shipbuilding concerns, made a similar request.

As a result of these requests and in order to give the public adequate opportunity to make oral presentations on the proposed rulemaking, the Coast Guard will hold a public hearing on the proposed rulemaking in New Orleans, LA, on Wednesday, September 13, 1989. The location will be: Doubletree Hotel, 300 Canal Street, New Orleans, LA. The hearing will begin at 10:00 a.m. and end at 5:00 p.m. or earlier if all speakers have been heard.

Interested persons are invited to participate in this hearing. Those wishing to make an oral statement should register by September 11, 1989. Oral statements by individuals without prior registration will be allowed only if time permits. The Coast Guard reserves the right to impose time limits on oral presentations. To register, write or call the Executive Secretary, Marine Safety Council (G-LRA-2/3600) (CGD 82-004/86-074), U.S. Coast Guard Headquarters, 2100 Second Street, SW., Washington, DC 20593-0001; telephone number (202) 267-1477.

Written Comments

The Notice of Proposed Rulemaking published on May 9, 1989 invited and encouraged interested persons to participate in this proposed rulemaking by submitting written comments, including views, data, or arguments, on the proposal by September 6, 1989. Because of the public hearing and to allow the public more time to evaluate the proposal, the deadline for receipt of comments is extended to December 6, 1989.

Persons submitting comments should include their names and addresses, identify this notice as CGD 82-004/CGD 86-074 and the specific section or paragraph of the proposal to which each comment applies, and include supporting documents or sufficient detail to indicate the reason for each comment. Both comments supporting or opposing specific proposed regulations are encouraged.

The regulations may be changed in light of comments received. All comments received before the expiration of the comment period will be considered before final action is taken on this proposal.

Dated: August 25, 1989.

J. D. Sipes,

Rear Admiral, U.S. Coast Guard Chief, Office of Marine Safety, Security and Environmental Protection.

DEPARTMENT OF AGRICULTURE

Forest Service

Submission of Information Collection to OMB Under Paperwork Reduction Act

AGENCY: Forest Service, USDA.

ACTION: Notice.

SUMMARY: The Forest Service has submitted an information collection package to the Office of Management and Budget (OMB) for emergency clearance under 5 CFR 1320.18, concerning a specialty form (fee envelope) to be used at campgrounds on National Forest System lands nationwide. The agency and OMB solicit comments on this submission. The information collected on the specialty form is required by the Land and Water Conservation Fund Act of 1965.

ADDRESS: Refer to the proposal by name and send comments to: Larry Roberson, Clearance Officer, Office of Information Resource Management, USDA Room 404–W, USDA-Administration Building, Washington, DC 20250; and Gary Waxman, USDA Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Bob Cron, Recreation Management Staff, Forest Service, USDA, P.O. Box 96090, Washington, DC 20090–6090, (202) 382–9408.

SUPPLEMENTARY INFORMATION: The Forest Service has submitted the proposal for collection of information to OMB for clearance as required by the Paperwork Reduction Act (44 U.S.C. 3501–3520). The Forest Service is requesting that OMB approve this submission by September 8 under the provisions of 5 CFR 1350.18, and that OMB waive its requirement of placing the burden statement (5 CFR 1320.21) on the envelope. Because of size limitations (6″ x 3-7/8″), it would not be practical to include such a paragraph.

The information collected on specialty form FS–2300–26, Recreation Fee Permit Envelope, is needed in order to comply with the Land and Water Conservation Fund Act of 1965, as amended (16 U.S.C. 460*l*). The supporting statement explains the need for this collection by use of Form FS–2300–26, Recreation Fee Permit Envelope.

Form FS–2300–26, Recreation Fee Permit Envelope, with the text of the information collection, is set forth as Exhibit 1 at the end of this document.

SUPPORTING STATEMENT

Form FS–2300–26, Recreation Fee Permit Envelope

(1) The Forest Service collects recreation use fees at about 2,000 National Forest campgrounds as provided by section 4(b) of the Land and Water Conservation Fund Act (LWCF), as amended (16 U.S.C. 460*l*), and Forest Service regulations Admission Fees and Recreation Use Fees (36 CFR 291.9). The funds collected are to be used in preserving, developing, and assuring accessibility to quality outdoor recreation resources through Federal assistance to the states for planning, acquisition, and development of needed land and water areas and facilities and through Federal acquisition and development of certain lands and other areas.

In addition to providing for the collection of fees, section 4(h) of the LWCF provides that periodic reports indicating the number and location of fee collection areas, the number and location of potential fee collection areas, capacity and visitation information, the fees collected, and other pertinent data be coordinated and compiled regularly and transmitted to the Committees on Interior and Insular Affairs of the United States House of Representatives and the United States Senate by the National Park Service, Department of the Interior.

This information is compiled by the Forest Service for the National Park Service report and is also used for Forest Service managers to ensure that the appropriate fees are collected, to plan ways to meet public demands for campgrounds, and to inform users of opportunities to use National Forest campgrounds.

(2) Fee collection at most of the 2,000 campsites nationwide is accomplished through use of a self-service fee envelope (Exhibit 1) that is deposited in a secure collection box. The campground customer puts the fee in the envelope and completes eleven blocks of information.

When authorized Forest Service personnel empty the collection box, they check the information on the fee envelope (Exhibit 1) to ensure that the appropriate fee has been paid for occupancy of the location and length of stay.

Block 1 (Amount Enclosed) serves two purposes. It is the amount computed by the campground customer based on fee per day and length of stay. It also provides an audit function for Forest Service personnel. Significant variations between the actual amount in the envelope and the reported amount in Block 2 could be evidence of tampering.

Block 2 (Number of Days) is significant for campground customer and Forest Service personnel in computing the appropriate fee. This information is also compiled and analyzed for the National Park Service annual report to Congress under section 4(h) of the LWCF. Block 3 (Time and Date) is needed to ensure compliance with the 2:00 PM checkout time.

Block 4 (Vehicle License) and Block 5 (State) are used to collect information to comply with section 4(e) of the LWCF concerning the administration and enforcement of regulations for the collections of fees. Using the information in blocks 4 and 5, authorized persons may be able to identify persons who have violated fee collection regulations, and follow up in a manner provided by the LWCF and the regulations.

Block 7 (Camp Unit Number) is needed to identify locations of occupancy. Some fees vary because of additional services available at individual sites. It is also compiled and analyzed for the National Park Service annual report to Congress under Section 4(b) of the LWCF.

Block 9 (Other Charges) is needed for some campgrounds that charge an additional fee for extra vehicles or special services.

Block 10 identifies the campground user as Golden Age and Golden Access Passport holders who pay one-half the

established fee as provided for in Section 4(a) of the LWCF.

Block 11 (Departure Date) is needed to calculate the appropriate fees for each site and may be used by Forest Service managers for analysis of lengths of stay at certain geographic locations.

Block 3 (Date Purchased), Block 11 (Planned Departure Date), Block 8 (Number in Party), and Block 6 (Home Zip Code) provide information used to determine the recreation use of Forest Service fee campgrounds and the home area from which they travel. This information is used for Forest Service management of the National Forest recreation program and to report visitor use information required by the Land and Water Conservation Fund Act. The arrival date and departure date provide the number of days occupied. This information, multiplied by the number in the party, produces the total use of the site for that time period.

Block 6 (Home Zip Code) information is aggregated and used by the Forest Service to identify where campground users reside. The information is used for transportation planning, targeting communication of information, understanding elements of customer satisfaction, and for making management decisions about recreation opportunities to provide on the National Forests.

The Forest Service has chosen to use specialty form FS–2300–26, Recreation Fee Permit Envelope, to reduce the number of personnel at National Forest campgrounds and to reduce the need to collect the information in person.

Not collecting information on the fee envelope would necessitate personal contact with each campground user by Forest Service employees to determine fee compliance. We estimate that this would increase the cost of our fee collection system at the field level by 400%. Not collecting vehicle identification information on the fee envelope would prevent the completion of an undetermined number of law enforcement actions, add an undetermined cost to law enforcement efforts, and keep the Forest Service from complying with section 4(e) of the LWCF and Forest Service regulations at 36 CFR 291.9. Not collecting direct user information on the fee envelope would result in use of alternate methods such as car counters and in-person counts by Forest Service employees at an increased cost or reduction in accuracy of the data. Elimination of zip code information would result in poorer service to the campground users and greater difficulty in providing information they need.

(3) We know of no way today's technology could reduce the burden of this necessary information.

(4) We have reviewed other Forest Service recreation documents that request information. We do not have another document that requests information from campground users.

(5) Fee compliance information is specific to the current user. Historic recreation use information is available but does not provide the current use information required by section 4(h) of the LWCF, nor does it provide trend information for management use.

(6) The fee envelope information does not affect small businesses.

(7) Completing fee envelope information on a random sample basis would produce an acceptable accuracy for recreation use and customer residences. A sample collection would not, however, provide the needed information to insure that fees are properly paid, as provided by section 4(c) of the LWCF. Less frequent collection of fee envelope information would necessitate the individual on-site contacts or in-person fee collection described under Number 2.

(8) Forest Service collection of information on fee envelopes is consistent with 5 CFR 1320.6.

(9) Consultation with recreation users takes place during the forest planning and prior to individual project decisions. Individual campground users also express their views to Forest Service employees working at the recreation site. Our experience with the fee envelope is that users willingly complete the information.

Information collected on the fee envelope is site specific and thus not available from other agencies.

(10) The customer does not provide a name on the fee envelope. Information on the envelope is used for reporting recreation use, a statistic which is available to the public. Information on the envelope could be requested through Freedom of Information but should not be a threat to individual privacy.

(11) Form FS–2300–26, Recreation Fee Permit Envelope, requires no sensitive information concerning sexual habits, attitudes, religious beliefs, or other matters commonly considered private.

(12) Respondent cost is measured by time to complete the information on the envelope. See response to #13. No other cost is incurred.

Government Cost:

Envelopes: 2,000,000 @ $.02/envelope=	$40,000
Maintenance-dispensing boxes; collection-envelopes	90,000
Data analysis and aggregation	195,000
Overhead 15%	48,750
Estimated Annual Cost	$373,750

(13) About 2,000,000 fee envelopes would be completed each year. Some camping users are repeat visitors. Reading the directions, completing the information on the fee envelope, depositing the envelope and placing the receipt stub on the car dash takes an average of two minutes to complete. The burden is 60,000 hours.

(14) This is an increase of 60,000 hours since the Forest Service has not reported the burden before.

(15) Information about campground use is compiled nationwide in the form of recreation visitor days and recreation visits and transmitted to the National Park Service. The National Park Service publishes a Federal Recreation Fee Report annually as provided by Section 4(h) of the LWCF and transmits the report to the Committees on Interior and Insular Affairs of the United States House of Representatives and United States no later than March 31 each year.

Dated: August 25, 1989.

William L. Rice,

Deputy Chief for Administration.

BILLING CODE 3410-11-C

DEPARTMENT OF COMMERCE

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: International Trade Administration.

Title: Overseas Business Interest Questionnaire.

Form Numbers: Agency—ITA-471P, OMB—0625-0039.

Type of Request: Extension of the expiration date of a currently approved collection.

Burden: 1,000 respondents; 500 reporting hours.

Average Hours per Response: 30 minutes.

Needs and Uses: This collection allows U.S. firms participating in overseas trade events sponsored by the International Trade Administration/U.S. Department of Commerce an opportunity to specifically identify their marketing objective for that specific event as well as current marketing activities and status in the specific foreign markets where the event will take place. The U.S. and Foreign Commercial Service/ITA overseas posts use the information to schedule business appointments during the trade event, arrange "blue ribbon" calls on key agents or distributors identified by participants prior to an event, and to issue specific show invitations to appropriate prospective overseas business partners. It is critical to pre-arrange business appointments thus providing U.S. participants with a program of high caliber business appointments.

Affected Public: Businesses or other for profit; small businesses or orgnizations.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Donald Arbuckle, 395-7340.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377-3271, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Donald Arbuckle, OMB Desk Officer, Room 3208 New Executive Office Building, Washington, DC 20503.

Dated: August 25, 1989.

Edward Michals,

Departmental Clearance Officer, Office of Management and Organization.

[FR Doc. 89-20557 Filed 8-30-89; 8:45 am]

BILLING CODE 3510-CW-M

Agency Form Under Review by the Office of Management and Budget (OMB)

DOC has submitted to OMB for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

Agency: International Trade Administration.

Title: NATO ICB Bidders List Application.

Form Numbers: Agency—ITA-4023P, OMB—0625-0055.

Type of Request: Extension of the expiration date of a currently approved collection.

Burden: 60 respondents; 60 reporting hours.

Average Hours for Response: 1 hour.

Needs and Uses: NATO international competitive bidding opportunities for infrastructure project contracts are open only to NATO countries' companies which have had their eligibility to bid certified by their respective governments. The U.S. Department of Commerce (USDOC) is the executive agency which certifies U.S. companies' eligibility. Companies are required to submit an application to the International Trade Administration/USDOC. ITA reviews the application for completeness and accuracy and determines a company's eligibility based on its financial viability, technical capability, and security clearances of the U.S. Department of Defense.

Affected Public: Businesses or other for profit; small businesses or organizations.

Frequency: On occasion.

Respondent's Obligation: Required to obtain or retain a benefit.

OMB Desk Officer: Donald Arbuckle, 395-7340.

Copies of the above information collection proposal can be obtained by calling or writing DOC Clearance Officer, Edward Michals, (202) 377-3271, Department of Commerce, Room 6622, 14th and Constitution Avenue, NW., Washington, DC 20230.

Written comments and recommendations for the proposed information collection should be sent to Donald Arbuckle, OMB Desk Officer, Room 3208 New Executive Office Building, Washington, DC 20503.

Dated: August 25, 1989.

[A-549-502]

Partial Termination of Antidumping Duty Administrative Review: Circular Welded Carbon Steel Pipe and Tube from Thailand

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice.

SUMMARY: On April 28, 1989, the Department of Commerce initiated an administrative review of the antidumping duty order on circular welded carbon steel pipe and tube from Thailand. The Department is now partially terminating this review.

Background: On April 28, 1989, the Department of Commerce published a notice of initiation of administrative review of the antidumping duty order on circular welded carbon steel pipe and tube from Thailand. This notice stated that we would review information submitted by the Thai Hong Steel Pipe Co., Ltd. ("Thai Hong"), the Thai Union Steel Pipe Co., Ltd. ("Thai Union"), and the Saha Thai Steel Pipe Co. Ltd. ("Saha Thai") for the period March 1, 1988 through February 28, 1989. Thai Hong and Thai Union subsequently withdrew their request for review on July 18, 1989. Accordingly, the Department is terminating this review with respect to Thai Hong and Thai Union but proceeding with the review with respect to Saha Thai.

EFFECTIVE DATE: August 31, 1989.

FOR FURTHER INFORMATION:
Contact Alain Letort or Stephen Jacques, Office of Agreements Compliance, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230, telephone: 202/377-2667 (Letort) or 202/377-0180 (Jacques).

SUPPLEMENTARY INFORMATION:

This notice is published pursuant to section 751(a)(1) of the Tariff Act of 1930, as amended, 19 U.S.C. 1675(a)(1), and § 353.22(c)(5) of the Commerce Department's regulations published in the **Federal Register** on March 28, 1989 (54 FR 12742) (to be codified at 19 CFR 353.22(c)(5)).

Dated: August 4, 1989.

Lisa B. Barry,

Acting Assistant Secretary for Import Administration.

Postponement of Final Antidumping Duty Determination and Postponement of the Public Hearing: Mechanical Transfer Presses from Japan

AGENCY: International Trade Administration, Import Administration, Department of Commerce.

ACTION: Notice.

SUMMARY: This notice informs the public that we have received a request from a respondent in the antidumping duty investigation to postpone the final determination, as permitted by section 735(a)(2)(A) of the Tariff Act of 1930, as amended.

Based on this request, we are postponing our final determination as to whether sales of mechanical transfer presses from Japan have occurred at less than fair value until not later than December 26, 1989. We are also postponing our public hearing in the investigation until November 3, 1989.

EFFECTIVE DATE: August 31, 1989.

FOR FURTHER INFORMATION CONTACT: James P. Maeder, Jr. at (202) 377-4929, V. Irene Darzenta at (202) 377-0186 or Mary S. Clapp at (202) 377-3965, Office of Antidumping Investigations, Import Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW., Washington, DC 20230.

SUPPLEMENTARY INFORMATION: On August 18, 1989, we published a preliminary determination of sales at less than fair value of this merchandise. That notice stated that if the investigation proceeded normally, we would make our final determination by October 24, 1989.

On August 17, 1989, Komatsu, Ltd., a respondent which accounts for a significant proportion of exports of the subject merchandise to the United States, requested a postponement of the final determination in the antidumping duty investigation until the 135th day after the date upon which the preliminary determination was signed, pursuant to section 735(a)(2)(A) of the Act. Pursuant to § 353.20(b)(1) of the Department's regulations published in the **Federal Register** on March 28, 1989 (54 FR 12742) (to be codified at 19 CFR 353.38), if exporters who account for a significant proportion of exports of the subject merchandise under investigation request a postponement of the final determination following an affirmative preliminary determination, we are required, absent compelling reasons to the contrary, to grant the request. Accordingly, we are postponing the date of the final antidumping duty determination until not later than December 26, 1989.

Public Comment: In accordance with 353.38 of the Department's regulations, if requested, we will hold a public hearing to afford interested parties an opportunity to comment on the preliminary determination in the antidumping duty investigation at 10:00 a.m. on November 3, 1989, at the U.S. Department of Commerce, Room 3708, 14th Street and Constitution Avenue, NW., Washington, DC 20230.

Ten copies of the business proprietary version and five copies of the public version of case briefs must be submitted to the Assistant Secretary by October 27, 1989. Ten copies of the business proprietary version and five copies of the public version of rebuttal briefs must be submitted to the Assistant Secretary by November 1, 1989.

An interested party may make an affirmative presentation at the public hearing only on arguments included in its case brief, and may make a rebuttal presentation only on arguments included in its rebuttal brief. Written arguments should be submitted in accordance with § 353.38 of the Commerce Department's regulations, and will be considered only if received within the time limits specified in this notice.

The U.S. International Trade Commission is being advised of this postponement in accordance with section 735(d) of the Act. This notice is published pursuant to section 735(d) of the Act.

Dated: August 24, 1989.

Eric I. Garfinkel,

Assistant Secretary for Import Administration.

DEPARTMENT OF DEFENSE

Office of the Secretary

Availability of the Technology Applications Information System (TAIS)

AGENCY: Strategic Defense Initiative Organization, Office of Technology Applications, DoD.

ACTION: Notice.

SUMMARY: The Strategic Defense Initiative Organization Office of Technology Applications (SDIO/TNO) has developed the Technology Applications Information System (TAIS) to identify emerging Strategic Defense Initiative technologies with spinoff potential and expedite the transfer of these technologies. The SDIO TAIS is a data base which has recently been updated to include more than 1,100 unclassified, nonproprietary synopses of technology innovations available for review by the commercial sector, federal agencies, and researchers. The TAIS also contains descriptions of technological innovations and business opportunities originating from two SDIO programs: The Innovative Science and Technology Program and the Small Business Innovative Research Program. Any US citizen or corporation can access the TAIS by computer modem once a militarily critical technology data agreement has been completed and eligibility has been certified by the Defense Logistics Agency under provisions of DOD Directive 5230.25, Control of Unclassified Technical Data with Military or Space Application. Information regarding qualification and certification for access to militarily critical technology may be obtained by calling (800) DLA-DLSC. Information on use of the TAIS is available by calling SDIO/TNO at (202) 693-1563.

FOR FURTHER INFORMATION CONTACT: SDIO/TNO, Room 1E1023, The Pentagon, Washington, DC 20301-7100, (202) 693-1563.

Dated: August 25, 1989.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 3810-01-M

Corps of Engineers, Department of the Army

Intent to Prepare a Draft Environmental Impact Statement/Environmental Impact Report for the Sacramento Metropolitan Area, California Flood Control Investigation

AGENCY: U.S. Army Corps of Engineers, DoD.

ACTION: Notice of intent.

SUMMARY: The proposed action is a Feasibility Study of flood control measures in the Sacramento Metropolitan Area, California. The purpose of the action is to reduce potential flood damages caused by high flows during major storm events. The study will examine the feasibility of providing increased flood protection for the Sacramento Metropolitan Area. The study area includes developed areas along the Sacramento River and Yolo Bypass from the Fremont Weir downstream to an area just south of Freeport. Alternative improvements being studied are located in Sacramento and Yolo Counties. A Reconnaissance Report was prepared for this project in February 1989 that identified several acceptable alternatives to be carried into feasibility studies. A Feasibility Report will be prepared for this project. The Draft Environmental Impact Statement/Environmental Impact Report (DEIS/EIR) will accompany the Feasibility Report. This is a document jointly prepared by the Federal lead agency (Corps of Engineers) to comply with the National Environmental Policy Act and by the State lead agency (The Reclamation Board) to comply with the California Environmental Quality Act.

Scoping and Further Information Contact: Suggestions on the scope of coverage for environmental impact evaluations and related information should be provided in writing to the District Engineer, U.S. Army Corps of Engineers, Sacramento District, 650 Capitol Mall, Sacramento, California 95814-4794. Questions may be addressed to Mr. Mike Welsh, at telephone (916) 551-1861. Responses specifically related to the California Environmental Quality Act requirements for the DEIR may be directed to Ms. Analena Bronsen, The Reclamation Board, Department of Water Resources, P.O. Box 942836, Sacramento, California, 94236-001 (916) 322-3740.

SUPPLEMENTARY INFORMATION:

1. Proposed Action

The study will determine the feasibility of providing increased flood protection to the Sacramento Metropolitan Area. The Corps of Engineers will prepare a report on its findings to be submitted to the United States Congress.

2. Alternatives

Alternatives being considered in detail for feasibility studies consist of (a) No action, (b) Levee modification to provide higher levels of flood protection to the West Sacramento area, (c) Modification of the Sacramento Weir by removing the existing weir gates and lowering the weir crest, leaving the weir crest and removing the gates, or lowering the weir and maintaining the existing gated operation by modifying the gates.

3. Scoping Process

a. Close coordination will be maintained with Federal, State, local agencies, environmental organizations, concerned citizens, and other interested groups. This will be accomplished through public meetings and interagency coordination. A scoping notice will be mailed to the public in August 1989. A public workshop to identify issues of concern is tentatively scheduled for September 1989. A public meeting to discuss the draft Feasibility Report and DEIS/EIR is scheduled for August 1990. Through this Notice of Intent, all segments of the affected public and agencies are invited to participate.

b. An Environmental Information Paper was prepared for the Reconnaissance Report, dated February 1989. This effort identified the following as significant issues that will be discussed in depth in the DEIS/EIR: impacts to fish and wildlife resources; impacts to riparian, wetland, and upland vegetation; cultural resources, endangered species, and use changes; socio-economics; esthetic impacts and cumulative impacts.

c. The Reclamation Board of the State of California is the local non-Federal sponsor for this project. They are participating with the Corps of Engineers in the feasibility and environmental impact studies, and they would cost share in any improvements constructed as a result.

d. Significant review and consultation to be conducted during the preparation of the DEIS/EIR include coordination with the U.S. Fish and Wildlife Service under the Fish and Wildlife Coordination Act and Endangered Species Act, consultation with the State Historic Preservation Officer and Advisory Council on Historic Preservation under the National Historic Preservation Act, and coordination with the California Water Quality Control Board and Environmental Protection Agency on water quality issues under Section 404 of the Clean Water Act.

4. Availability

The DEIS/EIR is scheduled to be available for public review and comment in July 1990.

Dated: August 16, 1989.

Jack A. Le Cuyer,

Colonel, Corps of Engineers, District Engineer.

Department of the Army

Military Traffic Management Command; Military Personal Property Symposium; Open Meeting

Announcement is made of meeting of the Military Personal Property Symposium. This meeting will be held on 14 September 1989 at the Sheraton Crystal City Hotel, Arlington, Virginia, and will convene at 0830 hours and adjourn at approximately 1500 hours.

Proposed Agenda: The purpose of the symposium is to provide an open discussion and free exchange of ideas with the public on procedural changes to the Personal Property Traffic Management Regulation, DOD 4500.34R, and the handling of other matters of mutual interest concerning the Department of Defense Personal Property Shipment and Storage Program.

All interested persons desiring to submit topics to be discussed should contact the Commander, Military Traffic Management Command, ATTN: MTPP-M, at telephone number 756-1600, between 0800-1530 hours. Topics to be discussed should be received on or before 5 September 1989.

Dated: August 17, 1989.

Kenneth L. Denton,

Alternate Army Liaison Officer With the Federal Register.

DEPARTMENT OF ENERGY

Office of Fossil Energy

[FE Docket No. 89-29-NG]

Grand Valley Gas Co.; Order Granting Blanket Authorization To Import Natural Gas from Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of order granting blanket authorization to import natural gas from Canada.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice that it has issued an order granting Grand Valley Gas Company (Grand Valley) blanket authorization to import natural gas from Canada. The order issued in FE Docket No. 89-29-NG authorizes Grand Valley to import up to 75 Bcf of Natural gas during a two-year period beginning on the date of first delivery.

A copy of this order is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056,

Forrestal Building, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-9478. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 25, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

BILLING CODE 6450-01-M

[FE Docket No. 89-51-NG]

Harbert Energy Corp.; Application To Import Natural Gas From and Export Natural Gas to Canada and Mexico

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of application for blanket authorization to import natural gas from and export natural gas to Canada and Mexico.

SUMMARY: The Office of Fossil Energy (FE) of the Department of Energy (DOE) gives notice of receipt on July 31, 1989, of an application filed by Harbert Energy Corporation (Harbert) for blanket authorization to import up to 100 Bcf, and to export up to 100 Bcf, respectively, of Canadian, Mexican and/or domestically produced natural gas for a term of two years, commencing on the date of first delivery. Harbert intends to utilize existing pipeline facilities for transportation of the volumes to be imported and exported, and indicates that it would submit quarterly reports detailing each transaction.

The application is filed under section 3 of the Natural Gas Act and DOE Delegation Order No. 0204-111 and 0204-127. Protests, motions to intervene, notices of intervention, and written comments are invited.

DATE: Protests, motions to intervene or notices of intervention, as applicable, requests for additional procedures and written comments are to be filed no later than October 2, 1989.

FOR FURTHER INFORMATION:

Linda Silverman, Office of Fuels Programs, Office of Fossil Energy, U.S. Department of Energy, Forrestal Building, Room 3F-056, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-7249.

Diane J. Stubbs, Natural Gas and Mineral Leasing, Office of General Counsel, U.S. Department of Energy, Forrestal Building, Room 6E-042, 1000 Independence Avenue, SW., Washington, DC 20585, (202) 586-6667.

SUPPLEMENTARY INFORMATION: Harbert is a Texas corporation with its principal place of business in Houston, Texas. Harbert proposes to import or export natural gas either for its own account or as agent on behalf of both suppliers and purchasers, including local distribution companies, pipelines, and commercial and industrial end-users. According to the application, the authority requested by Harbert contemplates the following types of import and export transactions: (1) Importation of Canadian and Mexican natural gas for consumption in U.S. markets; (2) importation of Canadian natural gas for eventual return (via export) to Canadian markets; (3) exportation of domestically produced natural gas for consumption in Canadian and Mexican markets; and (4) exportation of domestically produced natural gas for eventual return (via import) to U.S. markets.

According to Harbert, the specific terms of each transaction would be negotiated on an individual basis, including price and volumes, to reflect market conditions.

The decision on the application for import authority will be made consistent with the DOE's gas import policy guidelines, under which the competitiveness of an import arrangement in the markets served is the primary consideration in determining whether it is in the public interest (49 FR 6684, February 22, 1984). In reviewing natural gas export applications, the domestic need for the gas to be exported is considered, and any other issues determined to be appropriate in a particular case, including whether the arrangement is consistent with the DOE policy of promoting competition in the natural gas marketplace by allowing commercial parties to freely negotiate their own trade arrangements. Parties, especially those that may oppose this application, should comment in their responses on these matters as they relate to the requested import and export authority. The applicant asserts that this import/export arrangement will be competitive and in the public interest. Parties opposing the arrangement bear the burden of overcoming this assertion.

All parties should be aware that if this blanket import/export application is granted, the authorization may permit the import or export of the gas at any point of entry or exit on the international boundary where existing pipeline facilities are located.

Harbert requests that an authorization be granted on an expedited basis. A decision on Harbert's request for expedited treatment will not be made until all responses to this notice have been received and evaluated.

NEPA Compliance

The DOE has determined that compliance with the National Environmental Policy Act (NEPA), 42 U.S.C. 4321 *et seq.*, can be accomplished by means of a categorical exclusion. On March 27, 1989, the DOE published in the **Federal Register** (54 FR 12474) a notice of amendments to its guidelines for compliance with NEPA. In that notice, the DOE added to its list of categorical exclusions the approval or disapproval of an import/export authorization for natural gas in cases not involving new construction. Application of the categorical exclusion in any particular case raises a rebuttable presumption that the action is not a major Federal action under NEPA. Unless the DOE receives comments indicating that the presumption does not or should not apply in this case, no further NEPA review will be conducted by the DOE.

Public Comment Procedures

In response to this notice, any person may file a protest, motion to intervene or notice of intervention, as applicable and written comments. Any person wishing to become a party to the proceeding and to have the written comments considered as the basis for any decision on the application must, however, file a motion to intervene or notice of intervention, as applicable. The filing of a protest with respect to this application will not serve to make the protestant a party to the proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the application. All protests, motions to intervene, notices of intervention, and written comments must meet the requirements that are specified by the regulations in 10 CFR Part 590. Protests, motions to intervene, notices of intervention, requests for additional procedures, and written comments should be filed with the Office of Fuels Programs, Fossil Energy, Room 3F-056, FE-50, Forrestal Building, 1000 Independence Avenue, SW., Washington, DC 20585. They must be filed no later than 4:30 p.m. e.s.t., October 2, 1989.

It is intended that a decisional record will be developed on the application through responses to this notice by parties, including the parties' written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete

understanding of the facts and issues. A party seeking intervention may request that additional procedures be provided, such as additional written comments, an oral presentation, a conference, or trial-type hearing. Any request to file additional written comments should explain why they are necessary. Any request for an oral presentation should identify the substantial questions of fact, law, or policy at issue, show that it is material and relevant to a decision in the proceeding, and demonstrate why an oral presentation is needed. Any request for a conference should demonstrate why the conference would materially advance the proceeding. Any request for a trial-type hearing must show that there are factual issues genuinely in dispute that are relevant and material to a decision and that a trial-type hearing is necessary for a full and true disclosure of the facts.

If an additional procedure is scheduled, notice to all parties will be provided. If no party requests additional procedures, a final opinion and order may be issued based on the official record, including the application and responses filed by parties pursuant to this notice, in accordance with 10 CFR 590.316.

A copy of Harbert's application is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F-056, at the above address. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

[FR Doc. 89-20540 Filed 8-30-89; 8:45 am]

BILLING CODE 6450-01-M

[FE Docket No. 89-52-NG]

Suncor Inc.; Application To Extend Blanket Authorization Import Natural Gas From Canada

AGENCY: Office of Fossil Energy, Department of Energy.

ACTION: Notice of application for extension of blanket authorization to import natural gas.

SUMMARY: The Office of Fossil Energy of the Department of Energy (DOE) gives notice of receipt on August 3, 1989, of an application filed by Suncor Inc. (Suncor), requesting that blanket authority previously granted in DOE/ERA Opinion and Order No. 185 (Order 185), issued July 27, 1987 (DOE/ERA Docket No. 87-13-NG), be extended for two years beginning on January 1, 1990, the expiration of its current import authorization, through the period ending December 31, 1992. Suncor's existing blanket import authorization allows it to import up to a maximum of 36.5 Bcf of Canadian natural gas. Under the extension requested, Suncor would be authorized to import volumes not to exceed 27.38 Bcf of Canadian natural gas over a two-year period.

The application is filed under section 3 of the Natural Gas Act and DOE Delegation Order Nos. 0204-111 and 0204-127. Protests, motions to intervene, notices of intervention, and written comments are invited.

DATE: Protests, motions to intervene or notices of intervention, as applicable, requests for additional procedures and written comments are to be filed no later than October 2, 1989.

FOR FURTHER INFORMATION:

Allyson C. Reilly, Office of Fuels Programs, Fossil Energy, U.S. Department of Energy, Forrestal Building, Room 3F-094, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-9394.

Diane Stubbs, Natural Gas and Mineral Leasing, Office of General Counsel, U.S. Department of Energy, Forrestal Building, Room 6E-042, 1000 Independence Avenue SW., Washington, DC 20585, (202) 586-6667.

SUPPLEMENTARY INFORMATION: Suncor, a Canadian corporation with its principal office in Toronto, Canada, is an affiliate of Sun Company, Inc., of Randor, Pennsylvania, and Ontario Energy Resources Ltd., a corporation indirectly owned by the Province of Ontario, Canada. Under the proposed import arrangement, the natural gas to be imported would be owned or controlled by Suncor and would be sold on a short-term or spot-market basis to local distribution companies, natural gas marketers and industrial end-users in the midwestern United States. The specific terms of each import and sale would be negotiated on an individual basis including the price and volumes. The proposed import would enter the United States at a point on the international boundary near Port of Morgan, Montana, and would be transported through the facilities of Northern Border Pipeline Company, Northern Natural Gas Company, Natural Gas Pipeline Company of America, and ANR Pipeline Company. No new facilities are required to transport the imported natural gas.

The decision on the application for import authority will be made consistent with the DOE's gas import policy guidelines, under which the competitiveness of an import arrangement in the markets served is the primary consideration in determining whether it is in the public interest (49 FR 6684, February 22, 1984). Parties that may oppose this application should comment in their responses on the issue of competitiveness as set forth in the policy guidelines. The applicant asserts that this import arrangement will be competitive and thus in the public interest. Parties opposing the arrangement bear the burden of overcoming this assertion.

NEPA Compliance

The DOE has determined that compliance with the National Environmental Policy Act (NEPA), 42 U.S.C. 4321, *et seq.*, can be accomplished by means of a categorical exclusion. On March 27, 1989, the DOE published in the **Federal Register** (54 FR 12474) a notice of amendments to its guidelines for compliance with NEPA. In that notice, the DOE added to its list of categorical exclusions the approval or disapproval of an import/export authorization for natural gas in cases not involving new construction. Application of the categorical exclusion in any particular case raises a rebuttable presumption that the DOE's action is not a major Federal action under NEPA. Unless the DOE receives comments indicating that the presumption does not or should not apply in this case, no further NEPA review will be conducted by the DOE.

Public Comment Procedures

In response to this notice, any person may file a protest, motion to intervene or notice of intervention, as applicable, and written comments. Any person wishing to become a party to the proceeding and to have the written comments considered as the basis for any decision on the application must, however, file a motion to intervene or notice of intervention, as applicable. The filing of a protest with respect to this application will not serve to make the protestant a party to the proceeding, although protests and comments received from persons who are not parties will be considered in determining the appropriate action to be taken on the application. All protests, motions to intervene, notices of intervention, and written comments must meet the requirements that are specified by the regulations in 10 CFR Part 590. Protests, motions to intervene, notices of intervention, requests for additional procedures, and written comments should be filed with the Office of Fuels Programs, Fossil Energy, Room 3F-056, FE-50, Forrestal Building, 1000 Independence Avenue, SW., Washington, DC 20585. They must be filed no later than 4:30 p.m., e.d.t., October 2, 1989.

It is intended that a decisional record will be developed on the application through responses to this notice by parties, including the parties' written comments and replies thereto. Additional procedures will be used as necessary to achieve a complete understanding of the facts and issues. A party seeking intervention may request that additional procedures be provided, such as additional written comments, an oral presentation, a conference, or trial-type hearing. Any request to file additional written comments should explain why they are necessary. Any request for an oral presentation should identify the substantial question of fact, law, or policy at issue, show that it is material and relevant to a decision in the proceeding, and demonstrate why an oral presentation is needed. Any request for a conference should demonstrate why the conference would materially advance the proceeding. Any request for a trial-type hearing must show that there are factual issues genuinely in dispute that are relevant and material to a decision and that a trial-type hearing is necessary for a full and true disclosure of the facts.

If an additional procedure is scheduled, notice will be provided to all parties. If no party requests additional procedures, a final opinion and order may be issued based on the official record, including the application and responses filed by parties pursuant to this notice, in accordance with 10 CFR 590.316.

A copy of Suncor's application is available for inspection and copying in the Office of Fuels Programs Docket Room, 3F–056 at the above address. The docket room is open between the hours of 8:00 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued in Washington, DC, August 24, 1989.

Constance L. Buckley,

Deputy Assistant Secretary for Fuels Programs, Office of Fossil Energy.

BILLING CODE 6450-01-M

ENVIRONMENTAL PROTECTION AGENCY

TSCA Chemical Testing; Receipt of Test Data

[OPTS–44536; FRL 3637–6]

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces the receipt of test data on C9 Aromatic Hydrocarbon Fraction (CAS Nos. 25550–14–5, 526–73–8, 108–67–8, and 95–63–6), submitted pursuant to a final test rule under the Toxic Substances Control Act (TSCA). This notice also announces the receipt of test data for 2, 6–dichloro–4–nitroaniline (CAS No. 99–30–9), submitted pursuant to a testing consent order under TSCA. Publication of this notice is in compliance with section 4(d) of TSCA.

FOR FURTHER INFORMATION CONTACT: Michael M. Stahl, Director, Environmental Assistance Division (TS–799), Office of Toxic Substances, Environmental Protection Agency, Rm. EB–44, 401 M St., SW., Washington, DC 20460, (202) 554–1404, TDD (202) 554–0551.

SUPPLEMENTARY INFORMATION: Section 4(d) of TSCA requires EPA to publish a notice in the **Federal Register** reporting the receipt of test data submitted pursuant to test rules promulgated under section 4(a) within 15 days after it is received. Under 40 CFR 790.60, all TSCA section 4 consent orders must contain a statement that results of testin~ conducting pursuant to these testing consent orders will be announced to the public in accordance with section 4(d).

I. Test Data Submissions

Test data for C9 Aromatic Hydrocarbon Fraction was submitted by the American Petroleum Institute, on behalf of the manufacturers of the C9 Aromatic Hydrocarbon Fraction, pursuant to a test rule at 40 CFR 799.2175. It was received by EPA on August 14, 1989. The submission describes a 3–generation reproduction/fertility study in rats with C9 aromatic hydrocarbons. Reproductive effects testing is required by this test rule.

Test data for 2,6–dichloro–4–nitroaniline was submitted by the Synthetic Organic Chemical Manufacturers Association, Inc., (SOCMA), on behalf of the Upjohn Company, pursuant to a testing consent order at 40 CFR 799.5000. It was received by EPA on August 7, 1989. The submission describes the early life stage toxicity of 2,6–dichloro–4–nitrobenzenamine to rainbow trout (slamo gairdneri). Toxicity testing is required by this consent order.

EPA has initiated its review and evaluation process for these data submissions. At this time, the Agency is unable to provide any determination as to the completeness of the submissions.

II. Public Record

EPA has established a public record for this TSCA section 4(d) receipt of data notice (docket number OPTS–44536). This record includes copies of all studies reported in this notice. The record is available for inspection from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays, in the TSCA Public Docket Office, Rm. NE–G004, 401 M St., SW., Washington, DC 20460.

Authority: 15 U.S.C. 2603.

Dated: August 22, 1989.

Joseph J. Merenda,

Director, Existing Chemical Assessment Division, Office of Toxic Substances.

EXPORT-IMPORT BANK OF THE UNITED STATES

Open Meeting of the Advisory Committee

SUMMARY: The Advisory Committee was established by Public Law 98–181, November 30, 1983, to advise the Export-Import Bank on its programs and to provide comments for inclusion in the reports of the Export-Import Bank to the United States Congress.

TIME AND PLACE: Tuesday, September 19, 1989, from 9:30 a.m. to 12:00 noon. The meeting will be held at Eximbank in Room 1143, 811 Vermont Avenue, NW., Washington, DC 20571.

Agenda: The meeting agenda will include a discussion of the following topics: Financial Report, Congressional Matters, Reinvolving Financial Institutions, Tied Aid Credit Status, and other topics.

Public Participation: The meeting will be open to public participation; and the last 15 minutes will be set aside for oral questions or comments. Members of the public may also file written statement(s) before or after the meeting. In order to permit the Export-Import Bank to arrange suitable accommodations, members of the public who plan to attend the meeting should notify Joan P. Harris, Room 935, 811 Vermont Avenue, NW., Washington, DC 20571, (202) 566–8871, not later than September 18, 1989. If any person wishes auxiliary aids (such as a language interpreter) or other special accommodations, please contact, prior to September 14, 1989, the Office of the Secretary, Room 935, 811 Vermont Avenue, NW., Washington, DC 20571, Voice: (202) 566–8871 or TDD: (202) 535–3913.

FURTHER INFORMATION: For further information, contact Joan P. Harris, Room 935, 811 Vermont Avenue, NW., Washington, DC 20571, (202) 566–8871.

Joan P. Harris,

Corporate Secretary.

BILLING CODE 6690-01-M

FEDERAL RESERVE SYSTEM

Canadian Imperial Bank of Commerce, Toronto, Ontario, Canada; Proposal To Engage in Placement as Agent of Debt and Equity Securities

Canadian Imperial Bank of Commerce, Toronto, Ontario, Canada ("Canadian Imperial"), has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.23(a), of the Board's Regulation Y (12 CFR 225.23(a)), for permission for its subsidiary Wood Gundy Corp., New York, New York ("Company"), to engage in the placement, as agent for issuers, of debt and equity securities.

Company is currently authorized to engage in providing various types of brokerage and investment and financial advisory services, as well as underwrite and deal in obligations of the United States, general obligations of states and their political subdivisions, and other obligations that state member banks are authorized to underwrite and deal in under 12 U.S.C. 24 and 335.

Canadian Imperial has applied to engage in the placement, as agent for issuers, of all types of securities within the following limitations: (i) Company will act only as agent, without recourse, solely upon the order and for the account of clients, and will not assume any credit or market risk with respect to the securities privately placed; (ii) Company will remain a broker-dealer registered with the Securities and Exchange Commission and subject to the registration, record-keeping, reporting and other fiduciary standards of the Securities Exchange Act of 1934, as amended, and of the National Association of Securities Dealers, Inc.; (iii) Company will be maintained, and will hold itself out to the public, as a separate and distinct corporate entity with its own properties, assets, liabilities, books and records, will conduct its business separate from its affiliates, with its agreements with clients indicating that it is solely responsible for its contractual obligations and commitments, and will maintain offices separate from those of any bank or thrift subsidiary of Canadian Imperial or any U.S. branch or agency of Canadian Imperial; (iv) Company will comply with the provisions of the Securities Act with respect to each private placement of securities; (v) Company will place securities only with a limited number of financially sophisticated institutions and individuals, and will not offer securities to the general public or make any general solicitation or advertisement of the securities it privately places (Company will not engage in "best efforts" underwriting as part of the proposed activities); and (vi) Company will not purchase or repurchase for its own account any securities privately placed by the Company or inventory (whether overnight or otherwise) unsold portions of an issue; however, Company may, subject to the Board's approval of Canadian Imperial's pending application to underwrite and deal to a limited extent in debt and equity securities, purchase or repurchase for its own account any securities privately placed or inventory any unsold securities (gross revenues derived from the latter activities would be included in the gross revenues that Company derives from ineligible securities activities).

In addition, (viii) neither Canadian Imperial nor any of its subsidiaries will provide any letter of credit or other guarantee arrangement to support any securities placed by the Company; (viii) neither Canadian Imperial nor any of its subsidiaries will knowingly make loans to issuers of securities placed by the Company that are the functional equivalent of purchasing the securities for the account of Canadian Imperial or such subsidiary and Canadian Imperial and its subsidiaries will assure themselves, and maintain appropriate documentary records demonstrating, that any advances by them to an issuer of securities being placed by the Company are not used to repay such securities (or any interest or dividends thereon) or to cover any unsold portion of such securities (i.e., any credit extended to such issuers by Canadian Imperial or its subsidiaries will be under different terms, at different times and for different purposes than the securities being placed by the Company or will have substantial participation by unaffiliated lenders, and will contain terms no more favorable to persons who use the Company's private placement services than to persons who do not use such services); (ix) no U.S. bank, thrift or trust or investment advisory subsidiary of Canadian Imperial and no U.S. branch or agency of Canadian Imperial will purchase, as a trustee or in any other fiduciary capacity, for accounts over which it has investment discretion securities placed by the Company unless, in any such case, such purchase is specifically authorized under the instrument creating the fiduciary relationship, by court order, or by law of the jurisdiction under which the trust is administered; (x) no U.S. bank, thrift or trust or investment advisory subsidiary of Canadian Imperial and no U.S. branch or agency of Canadian Imperial will provide investment advice with respect to securities placed by the Company or will advertise or distribute sales literature concerning such securities and, where any bank or lending affiliate of the Company has a material lending relationship with an issuer of securities being placed by the Company, as required by the securities laws the Company will disclose the existence of that relationship to each purchaser of that issuer's securities and whether the proceeds of the issue will be used to repay outstanding debt to affiliates (such disclosure would describe the difference between Company and Canadian Imperial and Canadian Imperial's subsidiary banks); (xi) there will be no officer, director or employee interlocks between the Company and any of Canadian Imperial's U.S. bank or thrift subsidiaries or any U.S. branch or agency of Canadian Imperial; and (xii) no U.S. bank or thrift affiliate of Canadian Imperial and no U.S. branch or agency of Canadian Imperial shall disclose to the Company, nor shall the Company disclose to an affiliated U.S. bank or thrift or U.S. branch or agency of Canadian Imperial, any nonpubic customer information (including an evaluation of the creditworthiness of an issuer or other customer of that bank or thrift, or underwriting subsidiary) without the consent of that customer.

The Board has not previously determined that the proposed activities are permissible under section 4(c)(8) of the Bank Holding Company Act. Section 4(c)(8) of the Act, provides that a bank holding company may, with Board approval, engage in any activity "which the Board after due notice and opportunity for hearing has determined (by order or regulation) to be so closely related to banking or managing or controlling banks as to be a proper incident thereto."

Canadian Imperial contends that the proposed activities are closely related to banking because banks have provided such services for many years, and because such activities are operationally and functionally equivalent to many traditional commercial banking functions.

In determining whether an activity is a proper incident to banking, the Board must consider whether the proposal may "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Canadian Imperial maintains that approval of the application can be expected to increase competitiveness of Company, particularly since the Company has special expertise in providing such services in the cross-border market between the United States and Canada.

Canadian Imperial contends that the proposed activities would not result in adverse effects as the potential conflicts of interest that might be said to arise are no different from those arising from the private placement activities approved by the Board in *Bankers Trust New York Corporation*, 73 Federal Reserve Bulletin 138 (1987). Canadian Imperial also states that any adverse effects are adequately addressed by the above proposed limitations as well as by the anti-fraud prohibitions of the Securities Act and the Securities Exchange Act of 1934, the NASD Rules of Fair Practice, the anti-tying provisions of the banking and antitrust laws, ERISA, and sections 23A and 23B of the Federal Reserve Act.

Canadian Imperial contends that the proposed activities do not raise an issue under section 20 of the Glass-Steagall Act (12 U.S.C. 377), relying on *Securities Industry Ass'n* v. *Board of Governors*, 807 F.2d 1052 (D.C. Cir. 1986), *cert. denied*, 107 S.Ct 3228 (1987). Section 20 of the Glass-Steagall Act prohibits the affiliation of a member bank, with a firm that is "engaged principally" in the "underwriting, public sale or distribution" of securities.

Any request for a hearing on this application must comply with § 262.3(e) of the Board's Rules of Procedure (12 CFR 262.3(e)).

The application may be inspected at the offices of the Board of Governors or the Federal Reserve Bank of New York.

Any comments or requests for hearing should be submitted in writing and received by William W. Wiles, Secretary, Board of Governors of the Federal Reserve System, Washington, DC 20551, not later than September, 1989.

Board of Governors of the Federal Reserve System, August 25, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control

Tabulation of Natality Vital Statistics Data by Race of Mother

AGENCY: Centers for Disease Control (CDC), Public Health Service, HHS.

ACTION: Notice.

SUMMARY: The National Center for Health Statistics, CDC, provides notice of a change in the tabulation of most natality data as derived from the birth certificate. Tabulations will be made according to race of the mother, rather than the race of the child, which had been assigned by an algorithm.

DATE: This change will be made beginning with reports involving data for the calendar year 1989.

FOR FURTHER INFORMATION CONTACT: John E. Patterson, Director, Division of Vital Statistics, National Center for Health Statistics, CDC, telephone: (301) 436–8951.

SUPPLEMENTARY INFORMATION:

Background

The National Center for Health Statistics (NCHS) has for many years tabulated natality data by the race of the child as determined through an algorithm based on the race of the parents, as reported on the live birth certificate. This is done as follows: When only one parent is white, the child is assigned the other parent's race or national origin. When neither parent is white, the child is assigned the father's race or national origin with one exception; if either parent is Hawaiian or part-Hawaiian, the child is assigned to Hawaiian. If race is missing for one parent, the child is assigned the race of the parent for whom race is given.

Ethnicity is coded and tabulated as a separate item in NCHS data systems. Beginning with data year 1978, when several States added an Hispanic origin item to their birth record, NCHS began to tabulate and publish natality data by the Hispanic origin of the mother.

Change

Beginning with data year 1989, NCHS will tabulate and report most natality data on the basis of the race of the mother. Criteria for reporting the race of the parents will be unchanged, and will continue to reflect the response of the informant (usually the mother). Natality data on Hispanic origin will continue to be tabulated according to the Hispanic origin of the mother.

Rationale

New procedures for tabulations are being instituted at this time in an effort to more accurately produce natality data by racial group. Several related events influenced this decision: Most important is the regular decennial revision of the certificates of live birth, which was implemented in most States in 1989. These certificates include many new items which are related to the mother, including alcohol and tobacco use, weight gain, medical risk factors, and complications of labor and/or delivery. It is appropriate to use the race of the mother in tabulating these items. Many of the other items that have been on the birth certificate since at least 1968 are also characteristics of the mother. These include age, education, the month that pregnancy prenatal care began, number of prenatal visits, marital status, and date of last live birth. With the 1989 revisions, most States will include an Hispanic origin item. The proposed change will provide for tabulation of both race and Hispanic origin according to the same procedures.

Over the years, the percent of births where parents were not of the same race has been increasing. In 1968, these births accounted for only 1.0 percent of births; by 1987 this had increased to 3.0 percent. In addition, the percent of births with father's race missing on the birth certificate has increased from 7.0 in 1968 to 13.3 in 1987. These births are already assigned the race of the mother on a de facto basis. Tabulation using the race of mother will provide for a more uniform approach.

Impact of Change

The effect of this change will be to increase the quality of the data on pregnancy outcome among minorities. For example, tabulations are now based on race of child and Hispanic origin of the mother. Health indicators such as low birth weight and use of prenatal care will be consistently related to maternal characteristics, rather than an arbitrary combination of maternal and paternal characteristics. These changes will be especially important for racial categories other than black or white. For example, the infant mortality rate (IMR) for American Indians based on race of child was 10.7 deaths per 1,000 live births in 1983. If race of mother had been used the IMR would have been 13.5. The latter rate is much closer to the rate obtained using NCHS' program of linking birth and infant death files (14.3), the results of which are not generally available as quickly as the standard vital statistics rates.

Implementation

The NCHS will take several steps to allow for continuity in analysis of data by race during this period. Key tabulations for 1989 and 1990, including all trend tables, will show data for both race of mother and race of child. This will provide a "bridge" so the effects of this change can be separated from real changes in the data. Public use data tapes for these years will continue to include the race of the mother, father, and child, continuing a series beginning with the 1968 data year. In 1991 and subsequent years, the tapes will include both race of mother and father so that users can continue to use the algorithm to derive race of child if they desire. In addition to the "bridge" data in trend tables of the regular publications, a special report will be prepared showing more information on the comparability of the two methods of tabulation. In trend studies every effort will be made to assist the reader in assessing the long-term impact of the change.

Dated: August 24, 1989.

Robert L. Foster,

Acting Director, Office of Program Support, Centers for Disease Control.

BILLING CODE 4160-18-M

Food and Drug Administration

[Docket No. 89F-0338]

E.I. du Pont de Nemours and Co.; Filing of Food Additive Petition

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that E.I. du Pont de Nemours and Co. has filed a petition proposing that the food additive regulations be amended to provide for the safe use of maleic anhydride grafted onto ethylene-vinyl acetate copolymers, and fumaric acid and maleic anhydride grafted onto certain olefin polymers for use in contact with food.

FOR FURTHER INFORMATION CONTACT: Vir D. Anand, Center for Food Safety and Applied Nutrition (HFF–335), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–472–5690.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (sec. 409(b)(5) (21 U.S.C. 348(b)(5))), notice is given that a petition (FAP 9B4163) has been filed by E.I. du Pont de Nemours and Co., 1007 Market St., Wilmington, DE 19898, proposing that § 177.1350 *Ethylene-vinyl acetate copolymers* (21 CFR 177.1350) and § 177.1520 *Olefin polymers* (21 CFR 177.1520) of the food additive regulations be amended to provide for the safe use of fumaric acid and maleic anhydride grafted onto certain olefin polymers, and maleic anhydride grafted onto ethylene-vinly acetate copolymers for use in contact with food.

The potential environmental impact of this action is being reviewed. If the agency finds that an environmental impact statement is not required and this petition results in a regulation, the notice of availability of the agency's finding of no significant impact and the evidence supporting that finding will be published with the regulation in the **Federal Register** in accordance with 21 CFR 25.40(c).

Dated: August 16, 1989.

Richard J. Ronk,

Deputy Director, Center for Food Safety and Applied Nutrition.

BILLING CODE 4160-01-M

[Docket No. 89G–0316]

AVEBE America, Inc.; Filing of Petition for Affirmation of GRAS Status

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that AVEBE America, Inc., has filed a petition (GRASP 9G0353), proposing to affirm that maltodextrin derived from potato starch is generally recognized as safe (GRAS) as a direct human food ingredient.

DATES: Comments by October 30, 1989.

ADDRESSES: Written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, Rm. 4–62, 5600 Fishers Lane, Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Daniel N. Harrison, Center for Food Safety and Applied Nutrition (HFF–334), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–426–5487.

SUPPLEMENTARY INFORMATION: Under the Federal Food, Drug, and Cosmetic Act (sec. 201(s), 409, 72 Stat. 1784–1788 as amended (21 U.S.C. 321(s), 348)) and the regulations for affirmation of GRAS status in § 170.35 (21 CFR 170.35), notice is given that AVEBE America, Inc., Princeton Corporate Center, 4 Independence Way, Princeton, NJ 08450, has filed a petition (GRASP 9G0353) proposing that maltodextrin derived from potato starch be affirmed as GRAS for use as a direct human food ingredient.

The petition has been placed on display at the Dockets Management Branch (address above).

Any petition that meets the requirements outlined in 21 CFR 170.30 and 170.35 is filed by the agency. There is no prefiling review of the adequacy of data to support a GRAS conclusion. Thus, the filing of a petition for GRAS affirmation should not be interpreted as a preliminary indication of suitability for GRAS affirmation.

The potential environmental impact of this action is being reviewed. If the agency finds that an environmental impact statement is not required and this petition results in a regulation, the notice of availability of the agency's finding of no significant impact and the evidence supporting that finding will be published with the regulation in the **Federal Register** in accordance with 21 CFR 25.40(c).

Interested persons may, on or before October 30, 1989, review the petition and/or file comments (two copies, identified with the docket number found in brackets in the heading of this document) with the Dockets Management Branch (address above). Comments should include any available information that would be helpful in determining whether the substance is, or is not, GRAS for the proposed use. A copy of the petition and received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday..

Dated: August 16, 1989.

Richard J. Ronk,

Deputy Director, Center for Food Safety and Applied Nutrition.

UMI

Portions of the meeting will be closed to the public as indicated below in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, for the review, discussion and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

The Subcommittee on Planning and Budget will be closed to the public as indicated below in accordance with the provisions set forth in section 552(c)(9)(B), title 5, U.S.C. and section 10(d) of Public Law 92–463, to discuss the status of the 1990 budget markup and the 1991 budget.

Mrs. Winifred J. Lumsden, Committee Management Officer, National Cancer Institute, 9000 Rockville Pike, Building 31, Room 10A06, National Institutes of Health, Bethesda, Maryland 20892 (301/496–5708) will provide a summary of the meeting and rosters of the Board members, upon request.

Name of Committee: Subcommittee on Cancer Centers

Executive Secretary: Ms. Judith Whalen, Building 31, Room 11A19, Bethesda, MD 20892 (301) 496–5515
Date of Meeting: September 17, 1989
Place of Meeting: Building 31C, Conference Room 7
Open: 6 p.m. to adjournment
Agenda: To discusss progress on the guidelines for comprehensive cancer centers and the 5-year plan for the Cancer Centers Program.

Name of Committee: Subcommittee on Planning and Budget

Executive Secretary: Judith Whalen, Building 31, Room 11A19, Bethesda, MD 20892 (301) 496–5515
Date of Meeting: September 17
Place of Meeting: Building 31C, Conference Room 8
Closed: 7:30 p.m. to 8 p.m.
Agenda: To discuss the status of the 1990 budget markup and 1991 budget
Open: 8 p.m. to adjournment
Agenda: To discuss the 1989–1990 Biennial Report of the NCAB.

Name of Committee: Working Group of the Subcommittee on Agenda

Executive Secretary: Dr. Paulette S. Gray, Westwood Building, Room 852, Bethesda, MD 20892 (301) 496–7173
Date of Meeting: September 18
Place of Meeting: Building 31A, Room 10A03
Open: 12:30 p.m.—Lunch Meeting
Agenda: To continue discussion of the format of NCAB meetings.

Name of Committee: Subcommittee on Special Actions for Grants

Executive Secretary: Mrs. Barbara S. Bynum, Building 31, Room 10A03, Bethesda, MD 20892 (301) 496–5147
Date of Meeting: September 18
Place of Meeting: Building 31C, Conference Room 6
Closed: 1:30 p.m. to adjournment
Agenda: Review and discussion of individual grant applications.

Name of Committee: AIDS Subcommittee

Executive Secretary: Joyce O'Shaughnessy, Building 31A, Room 11A23, Bethesda, MD 20892 (301) 496–3505
Date of Meeting: September 18
Place of Meeting: Building 31C, Conference Room 8
Open: Following NCAB
Agenda: Discussion of a review of the AIDS program.

Name of Committee: Subcommittee on Environmental Carcinogenesis

Executive Secretary: Dr. Richard Adamson, Building 31, Room 11A03, Bethesda, MD 20892 (301) 496–6618
Date of Meeting: September 18
Place of Meeting: Building 31C, Conference Room 7
Open: 6 p.m. to adjournment
Agenda: To review data on the hazard assessment of daminozide.

Name of Committee: National Cancer Advisory Board

Executive Secretary: Mrs. Barbara Bynum, Building 31, Room 10A03, Bethesda, MD 20892 (301) 496–5147
Date of Meeting: September 18–19
Place of Meeting: Building 31C, Conference Room 6
Open: September 18, 8:30 a.m. to recess, September 19, 8:00 a.m. to adjournment
Agenda: Reports on activities of the President's Cancer Panel; the Director's Report on the National Cancer Institute; Subcommittee Reports; and New Business.

Catalog of Federal Domestic Assistance Progam Numbers: (13.392, Project grants in cancer construction; 13.393, Project grants in cancer cause and prevention; 13.394, Project grants in cancer detection and diagnosis; 13.395, Project grants in cancer treatment; 13.396, Project grants in cancer biology; 13.397, Project grants in cancer centers support; 13.398, Project grants in cancer research manpower; and 13.399, Project grants and contracts in cancer control)

Dated: August 21, 1989.

National Eye Institute; The National Advisory Eye Council; Meeting

Pursuant to Public Law 92–463, notice is hereby given of the meeting of the National Advisory Eye Council, National Eye Institute, September 14, 1989, Building 31C, Conference Room 7, National Institutes of Health, Bethesda, Maryland.

This meeting will be open to the public from 9:00 a.m. until approximately 11:30 a.m. on Thursday, September 14. Following opening remarks by the Director, National Eye Institute, there will be presentations by the staff of the Institute concerning Institute programs and various research assistance mechanisms. Attendance by the public will be limited to space available.

In accordance with provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5, U.S.C. and section 10(d) of Public Law 92–463, the meeting will be closed to the public from approximately 11:30 a.m. until closing on September 14 for the review, discussions and evaluation of individual grant applications. These applications and the discussions could reveal confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the applications, the disclosures of which would constitute a clearly unwarranted invasion of personal privacy.

The Vision Research Program Planning Subcommittee will meet on Friday, September 15, 1989, from 9:00 a.m. until noon, in Building 31C, Conference Room 7, National Institutes of Health, Bethesda, Maryland. Attendance by the public will be limited to space available.

Ms. Lois DeNinno, Committee Management Officer, National Eye Institute, Building 31, Room 6A08, National Institutes of Health, Bethesda, Maryland 20892, (301) 496–9110, will provide a summary of meeting, roster of committee members, and substantive program information upon request.

BILLING CODE 4140–01–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Emergency Exemption; Issuance

On 16 August 1989, the U.S. Fish & Wildlife Service Region One Regional Director's permit number 702631 was amended to include the desert tortoise [*Gopherus* =(*Scaptochelys,* =*Xerbates*) *agassizii*]. The 30-day public comment period, required by the Endangered Species Act was waived in accordance with section 10(c) of the Endangered Species Act. The Fish & Wildlife Service determined that an emergency affecting the health and life of specimens of endangered species existed, and no reasonable alternative was available to the applicant. The desert tortoise population is suffering from a respiratory virus. Valuable information needed to control the epidemic would have been lost, because animals being monitored in the wild were likely to begin hibernation before the 30-day comment period had elapsed and would not have been locatable for testing. These animals are scheduled to be recaptured and have blood samples drawn during the next 30 days.

Dated: August 25, 1989.

R.K. Robinson,

Chief, Branch of Permits, Office of Management Authority.

BILLING CODE 4310–55–M

Bureau of Land Management

[(WY-920-08-4120-11); WYW117055]

Coal Exploration License; Cheyenne, WY

AGENCY: Bureau of Land Management, Interior.

ACTION: Invitation for Coal Exploration License.

SUMMARY: Powder River Coal Company hereby invites all interested parties to participate on a pro rata cost sharing basis in its coal exploration program concerning federally owned coal underlying the following described land in Campbell County, Wyoming:

T. 41 N., R. 70 W., 6th P.M., WY, Sec. 8: Lots 4, 10, SW¼NW¼, Sec. 17: Lots 3, 6, 11, 14; Containing 280.14 acres.

All of the coal in the above land consists of unleased Federal coal, within the Powder River Basin known coal leasing area. The purpose of the exploration is to establish the thickness of the Wyo-Dak Anderson coal seam.

ADDRESSES: A detailed description of the proposed drilling program is available for review during normal business hours in the following offices (under serial number WYW117055): Bureau of Land Management, 2515 Warren Avenue, Cheyenne, Wyoming 82003; and Bureau of Land Management, 1701 East "E" Street, Casper, Wyoming 82601.

SUPPLEMENTARY INFORMATION: This notice of invitation will be published in a newspaper once each week for two consecutive weeks beginning the week of August 28, 1989, and in the **Federal Register**. Any party electing to participate in this exploration program must send written notice to both the Bureau of Land Management and to Powder River Coal Company no later than 30 days after publication of this invitation in the **Federal Register**. The written notice should be sent to the following addresses: Mr. Ronald J. Braig, Powder River Coal Company, Caller Box 3034, Gillette, Wyoming 82717 and the Bureau of Land Management, Wyoming State Office, Branch of Mining Law and Solid Minerals, P.O. Box 1828, Cheyenne, Wyoming 82003–1828.

The foregoing is published in the **Federal Register** pursuant to title 43 Code of Federal Regulations, § 3410.2–1(c)(1).

F. William Elkenberry,

State Director.

BILLING CODE 4310–22–M

[WY-060-09-4111-16]

Environmental Assessment and Public Scoping on Production of Coal-Bed Methane; Notice of Intent

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent to prepare an environmental assessment and conduct public scoping on production of coal-bed methane.

SUMMARY: The Buffalo Resource Area, Casper District is proposing to prepare an environmental assessment (EA) and conduct scoping on the drilling, completion and production of coal-bed methane in an area within the Powder River Basin. Information and concerns are requested on this development. The proposed area of consideration is in Johnson and Campbell Counties, Wyoming. The public is encouraged to present their ideas, information and concerns. All issues and concerns will be considered in preparation of the EA.

DATES: Scoping comments will be accepted through September 29, 1989.

FOR FURTHER INFORMATION CONTACT: Information on the proposed coal-bed methane development may be obtained by visiting, writing, or calling the following office. Scoping comments and information may be sent to the same address. Glenn Bessinger, Area Manager, BLM, Buffalo Resource Area, 189 No. Cedar, Buffalo, Wyoming 82834, (307) 684–5586.

SUPPLEMENTARY INFORMATION: The actions to be analyzed in the EA include drilling, operating, and maintaining gas wells completed in Powder River Basin coal beds. Construction and operation of associated transportation systems will also be analyzed. The Powder River Basin has extensive coal deposits and the extent of recoverable reserves of methane is inknown at this point. Information obtained in response to this notice and news releases which are being issued will be used to determine the geographic extent of the EA.

The following issues and concerns have been identified to date:

—Effects of the surface discharge of large amounts (possibly 2000 barrels/day/well) of water produced with the methane gas
—Potential for effects on aquifers by the removal of large amounts of water
—Increases in surface disturbing activities caused by construction of well pads and transportation systems
—Potential for effects on the domestic water wells in or near coal-bearing formations

Applications for Permit to Drill (APD) on coal-bed methane projects will continue to be accepted and processed to the point of approval by the BLM, Buffalo Resource Area Office. The timing of their approval has not been decided yet. The three options listed below are being considered. Comments on these methods would be appreciated.

Each APD received after this notice will be processed, though approval will not be granted until it is determined that it is in conformance with the EA, once it is completed.

APDs will be reviewed to determine if cumulative impacts may occur through their approval. If a determination is made that cumulative impacts might occur then approval may be delayed on some applications until completion of the EA.

Continue to process each APD, but approve only those which applicant(s) can demonstrate that there is no cumulative relationship with existing or approved coal-bed methane wells.

Dated: August 24, 1989.

James Monroe,

District Manager.

BILLING CODE 4310-22-M

[AZ-040-4333-09-SPCA]

Off-Road Vehicle Designation, Livestock Grazing Notice, and Establishment of Supplementary Rules for the San Pedro Riparian National Conservation Area, Arizona

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of decisions and establishment of supplementary rules.

Off-Road Vehicle Designation Decision

Notice is hereby given relating to the use of off-road vehicles (ORVs) on public lands in accordance with the authority and requirements of Executive Orders 11644 and 11989, and regulations contained in 43 CFR part 8340. The following described lands under the administration of the Bureau of Land Management are designated as limited to off-road vehicle use.

The 47,668 acres affected by this designation are in the San Pedro Riparian National Conservation Area (NCA) in the Safford District. This designation is the result of resource management decisions made in the San Pedro River Riparian Management Plan, June 1989.

During the development of the San Pedro Environmental Impact Statement (EIS), Congress passed legislation designating the EIS area plus additional acreage as the San Pedro Riparian National Conservation Area. The legislation was signed by the President on November 18, 1988. There are about 56,431 acres authorized in the NCA. There is a difference in the acreages in this ORV designation and in the NCA. These additional lands will receive planning, including ORV designation, in the Safford District Resource Management Plan, now in preparation.

Limited Designation

Use Limited to Designated Roads—Use is limited to designated roads on all 47,668 acres by licensed, motorized vehicles. Vehicle travel, including the use of mountain bikes, is permitted only on roads designated for such use by BLM. All designated roads will be signed and identified on maps and brochures of the area.

This ORV designation applies to all vehicles regardless of their purpose. Emergency and administrative vehicles are excluded from this designation.

These decisions are final, become effective upon publication in the **Federal Register**, and will remain in effect until rescinded or modified by the authorized officer. This designation is consistent with the language in the enabling legislation for the NCA. The documentation describing the impact of this designation is available for review at the offices listed below.

Livestock Grazing Notice

Livestock grazing is prohibited on the unleased acquired lands for a 15 year period. This announcement constitutes an official notice of livestock closure for the unleased acquired lands in the San Pedro Riparian National Conservation Area. Any unauthorized grazing use on these lands will constitute a violation and is subject to the impoundment provisions of 43 CFR 4150.

Establishment of Supplementary Rules

Summary

The purpose of these supplementary rules is to provide for the protection of persons, property, and public lands and resources. The San Pedro Riparian NCA is the area of consideration for the application of these supplementary rules. In addition to the regulations contained in 43 CFR 8365.2, the following supplementary rules will be applied to the NCA.

1. *Vehicle Use*—Licensed motorized and mechanized vehicles, including mountain bikes, are limited to designated roads. The use of unlicensed motorized vehicles is prohibited. All designated roads will be signed and identified on BLM maps and brochures available at parking areas and at BLM's administrative offices.

2. *Trapping*—Trapping is prohibited, except for health and public safety or administrative purposes as determined by BLM.

3. *Woodcutting*—Woodcutting is prohibited. Gathering of dead and down wood for use in campfires is permitted only for use in designated areas.

4. *Firearms Use*—Firearms discharge is permitted in the area north of Charleston Road and south of Arizona Highway 92 from September 1 to March 31 for the purpose of regulated hunting as authorized by the State of Arizona. The area between Charleston Road and Highway 92 is closed yearlong to either the immediate possession or discharge of firearms for the purpose of public safety. The discharge of firearms is also prohibited within 1/4 mile of developed facilities. Target shooting and "plinking" are prohibited.

Hunting is subject to all the rules and regulations of the Arizona Game and Fish Department. Bow hunting is permitted anywhere, in accordance with State regulations during established hunting periods, except within 1/4 mile of developed facilities.

5. *Length of Stay*—Persons may occupy any specific location within developed campgrounds or on public lands for a period of not more than seven (7) days within any period of 21 consecutive days unless otherwise authorized.

6. *Overnight Camping Outside Developed Campgrounds*—Overnight camping outside developed campgrounds is allowed only with a permit. Permits can be obtained at the NCA's administrative offices. Backcountry campers are required to pack out all trash. Campfires are allowed only in designated areas. Overnight camping and campfires are prohibited within identified research natural areas (RNAs).

7. *Pets*—Pets, including hunting dogs, must be leashed at all developed facilities and in other posted areas. Unleashed hunting dogs may only be used during the recognized hunting period in the areas open to firearms discharge.

8. *Horse Use*—The tethering or corralling of horses is prohibited at campgrounds and picnic areas unless facilities have specifically been provided for such use or unless otherwise authorized. Horse use will be allowed in all other areas.

9. *Closures*—Portions of the NCA may be temporarily closed to all or specific types of public use for the protection of natural and cultural resources or to provide for public safety. These areas will be signed and displayed on maps on the local area.

10. *Metal Detectors*—The use of metal detectors is prohibited to protect cultural resources in the NCA.

DATES: These rules will be in effect upon publication in the **Federal Register**.

SUPPLEMENTARY INFORMATION: The authority for establishing supplemental rules is contained in 43 CFR 8365.1-6. The authority for establishing closures and restrictions is contained in 43 CFR 8364.1. These rules and restrictions were recommended and adopted through the San Pedro River Riparian Management Plan. These rules and restrictions will be available in the local offices having jurisdiction over the NCA.

ADDRESSES: For further information about the ORV designation or the

supplementary rules, contact either the Project Manager, Bureau of Land Management, San Pedro Riparian National Conservation Area, Box 9853, RR 1, Huachuca City, AZ 85616, telephone (602) 457-2265 or the Safford District Office, Bureau of Land Management, 425 East 4th Street, Safford, AZ 85546, telephone (602) 428-4040.

Dated: August 17, 1989.

Ray A. Brady,

District Manager.

[FR Doc. 89-20505 Filed 8-30-89; 8:45 am]

BILLING CODE 4310-32-M

[OR-030-09-4332-10: GP9-309]

Off-Road Vehicle Designations; Vale District

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice given relating to restrictions of off-road motorized vehicle use on public lands.

SUMMARY: Notice is hereby given relating to the use of off-road vehicles on certain lands in accordance with the authority and requirements of Executive Orders 11644 and 11989, and regulations contained in 43 CFR part 8340.

The following lands under the administration of the Bureau of Land Management are changed from existing open designation and are hereby redesignated limited to designated roads and trails, in accordance with the Interim Management Policy and Guidelines for Lands under Wilderness Review.

The areas affected by the designations are managed by the Malheur Resource Area of the Vale District in Harney and Malheur Counties, Oregon.

These designations are published as final, and are in effect from the date of publication of this **Federal Register** Notice until such time that changes in resource management warrant modifications.

FOR FURTHER INFORMATION CONTACT: Bob Alward, Outdoor Recreation Planner, Bureau of Land Management, P.O. Box 700, Vale, Oregon 97918, telephone (503) 473-3144.

SUPPLEMENTARY INFORMATION:

Limited Designations—Fifteen Wilderness Study Areas (WSAs) comprising 269,280 acres will be managed in accordance with the nonimpairment criteria of the Wilderness Interim Management Policy which allows off-road vehicle use to continue in the same manner and degree on vehicular roads and ways where such use was occurring on October 21, 1976. This redesignation from open to limited affects approximately 89,600 acres of public land within 14 of these WSAs which were previously designated as open. Current limited and closed off-road designations are not affected by this action.

WSA No.	WSA Name	Acres
3-18	Castle Rock	495
3-27	Beaver Dam Creek	20,020
3-31	Camp Creek	3,940
3-32	Cottonwood Creek	1,375
3-33	Gold Creek	3,940
3-35	Sperry Creek	1,110
3-47	Cedar Mountain	3,920
3-53	Dry Creek	22,895
3-56	Dry Creek Buttes	1,370
3-59	Owyhee Breaks	5,245
3-73	Blue Canyon	8,435
3-75	Slocum Creek	320
3-77A	Honeycombs	14,450
3-77B	Wild Horse Basin	2,085
Total		89,600

The limited vehicle use designations will remain in effect until Congressional designation as wilderness of these lands or until review and any subsequent changes through the Bureau of Land Management's land use planning process. At any time, should actual or unforeseeable use levels cause the wilderness nonimpairment criteria to be violated, more restrictive designations may be made.

The designations become effective upon publication in the **Federal Register** and will remain in effect until rescinded or modified by the Vale District Manager. Information and maps of the above areas are available at the Bureau of Land Management, Vale District Office, 100 Oregon Street, Vale, Oregon 97918, telephone (503) 473-3144.

David P. Lodzinski,

Acting District Manager.

BILLING CODE 4310-33-M

[CO-920-09-4111-15; COC44779]

Colorado; Proposed Reinstatement

Notice is hereby given that a petition for reinstatement of oil and gas lease COC44779 for lands in Moffat County, Colorado, was timely filed and was accompanied by all the required rentals and royalties accruing from April 1, 1989, the date of termination.

The lessee has agreed to new lease terms for rentals and royalties at rates of $5 and 16⅔ percent, respectively.

The lessee has paid the required $500 administrative fee for the lease and has reimbursed the Bureau of Land Management for the estimated cost of this **Federal Register** notice.

Having met all the requirements for reinstatement of the lease as set out in section 31 (d) and (e) of the Mineral Lands Leasing Act of 1920, as amended, (30 U.S.C. 188), the Bureau of Land Management is proposing to reinstate the lease effective April 1, 1989, subject to the original terms and conditions of the lease and the increased rental and royalty rates cited above.

Questions concerning this notice may be directed to Jesse Broskey of the Colorado State Office at (303) 236-1772.

Janet M. Budzilek,

Chief, Fluid Minerals Adjudication Section.

Realty Action; Noncompetitive Sale of Public Land in Siskiyou County

AGENCY: United States Department of Interior, Interior.

ACTION: Notice of realty action; noncompetitive sale of public land in Siskiyou County.

SUMMARY: The following public land has been found suitable for direct sale under section 203 of the Federal Land Policy and Management Act of 1976 (90 Stat. 2750, 43 USC 1713), at not less than the estimated fair market value.

Mount Diablo Meridian

T. 41 N., R. 8 W.,
  Section 8: E½NE¼SE¼NW¼NW¼
  Containing approximately 1.43 acres.

The land described is hereby segregated from appropriation under the public land laws, including the mining laws, pending disposition of this action or 270 days from the date of publication of this notice, whichever occurs first.

SUPPLEMENTARY INFORMATION: This land is being offered by direct sale to Robert N. and Sigrid Burns, owners of contiguous land and improvements inadvertently located on this tract. It is has been determined that the subject parcel contains no known minerals values; therefore, mineral interests may be conveyed simultaneously. Acceptance of the direct sale offer will qualify the purchaser to make application for conveyance of those mineral interests.

At least sixty days after publication of this notice, the subject parcel will be offered by direct sale to Robert N. and Sigrid Burns for the fair market value.

BEST COPY AVAILABLE

Failure to accept this offer of sale within 15 days shall constitute a waiver of this preference consideration. The lands would then be offered for competitive sale until sold pursuant to 43 CFR 2711.3–1 procedures. An appraisal for this tract will be available prior to sale in the Redding Bureau of Lands Management Office.

The patent, when issued, will contain reservations to the United States for ditches and canals, and will be subject to the following:

1. A right-of-way to Pacific Power and Light for a power line (SAC 046581).
2. A right-of-way to Siskiyou Telephone for telephone cable (CA 22711).

ADDRESS: Related information concerning specific conditions of the sale are available for review at the Redding Resource Area Office, Bureau of Land Management, 355 Hemsted Drive, Redding, California 96002.

DATE: For a period of 45 days from the date of publication of this notice in the **Federal Register**, interested parties may submit comments to the Area Manager, Redding Resource Area, at the above address. In the absence of timely objections, this proposal shall become the final determination of the Department of the Interior.

FOR FURTHER INFORMATION CONTACT: Patricia Cook, Realty Specialist, at the above address.

Mark T. Morse,
Area Manager.

Realty Action; Exchange of Public Lands for Private Lands; New Mexico

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of realty action—NM 77728; An Exchange of Public Land in Dona Ana, and Otero counties for Private Land in Eddy and Grant Counties, New Mexico.

SUMMARY: The following described lands and interests therein have been determined to be suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of 1976 (43 U.S.C. 1716):

Dona Ana County

T. 23 S., R. 3 E., NMPM,
  Sec. 19: lots 1 & 2, E½SE¼NW¼.

Otero County

T. 16 S., R. 10 E., NMPM,
  Sec. 5: NE¼SW¼, SE¼.

The above lands aggregate 278.47 acres, more or less. This is a continuation of the exchange process as provided for in the Memorandum of Understanding between the New Mexico State Office Bureau of Land Management and The Nature Conservancy dated September 19, 1988. In exchange for an equal value of some of the above lands, the United States proposes to acquire the following lands from The Nature Conservancy:

Grant County

T. 18 S., R. 21 W., NMPM,
  Sec. 11: E½, SE¼NW¼, NE¼SW¼;
  Sec. 12: NW¼, W½SW¼;
  Sec. 14: N½N½.

Eddy County

T. 25. S., R. 24 E., NMPM,
  Sec. 25: Those lands in the W½NW¼, less those lands north and west of that certain Eddy County Road 418 more particularly described by metes and bounds as recorded on May 27, 1987, in the Eddy County Clerks office in Book 289, page 1043.
  Sec. 26: Those portions of the E½ and E½W½, lying southerly and easterly of that certain Eddy County Road 418, to be more particularly described by a cadastral survey to be performed.
  Sec. 35: N½NE¼, SW¼NE¼, E½NW¼, SE¼.
T. 26 S., R. 24 E., NMPM,
  Sec. 2: W½NW¼, NW¼SW¼;
  Sec. 3: NE¼SE¼, S½SE¼;
  Sec. 10: NE¼NE¼.

The above lands aggregate 1729 acres, more or less.

DATES: Comments must be submitted on or before October 16, 1989.

ADDRESS: Comments should be sent to Bureau of Land Management, P.O. Box 1778, Carlsbad Resource Area, New Mexico 88220.

FOR FURTHER INFORMATION CONTACT: Area Manager, Carlsbad Resource Area or Alan E. Kraus at the address above or at (505) 887–6544.

SUPPLEMENTARY INFORMATION: The land to be transferred will be subject to:

1. A reservation to the United States of a right-of-way for ditches or canals constructed by the authority of the United States in accordance with 43 USC 945.
2. Mineral resources that have potential for oil and gas, and geothermal and related right shall be reserved to the United States together with the right to prospect for, mine and remove the minerals.
3. All valid existing rights and reservations of record. The purpose of this exchange is to acquire lands along the Black River and the Apache Box. These lands have been identified through the BLM planning process as having significant riparian values for wildlife habitat and for having high public recreational potential. The Apache Box lands are adjacent to the Apache Box Wilderness Study Area (WSA) and therefore will enhance the protection and preservation of the WSA.

Publication of this Notice in the **Federal Register** will segregate the public land from all appropriations under the public land laws, including the mining laws but not mineral leasing laws. This segregation will terminate upon the issuance of patent or 2 years from the date of publication of this Notice in the **Federal Register** or upon publication of a Notice of Termination.

Any adverse comments will be evaluated and a decision issued by the appropriate authorized officer. In the absence of any objection, this realty action will become the final determination of the Department of the Interior.

Francis R. Cherry, Jr.,
District Manager.

[FR Doc. 89–20509 Filed 8–30–89; 8:45 am]
BILLING CODE 4310-FB-M

[WAOR 45087; OR–130–09–4212–13; GP9–278]

Realty Action: Exchange of Public Lands in Franklin County, Washington

AGENCY: Bureau of Land Management, Interior.

SUMMARY: The following described public lands have been determined to be suitable for disposal by exchange under section 206 of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1716:

Willamette Meridian

T. 13 N., R. 33 E.,
  Sec. 10, SW¼NW¼
T. 13 N., R. 34 E.,
  Sec. 24, W½SE¼;
  Sec. 26, NE¼NE¼, NW¼SW¼, N½NE¼SW¼, SW¼NE¼SW¼.
T. 14 N., R. 34 E.,
  Sec. 30, E½NW¼, SW¼SE¼;
  Sec. 32, NW¼, NE¼SW¼, N½SE¼, SE¼SE¼;
  Sec. 34, Lot 1, S½SW¼, SW¼SE¼.
T. 14 N., R. 35 E.,
  Sec. 12, NW¼SW¼;
  Sec. 20, E½NE¼, SE¼NW¼, SW¼SW¼;
  Sec. 30, Lots 1 and 2, NE¼NW¼, SE¼SE¼.
T. 14 N., R. 36 E.,
  Sec. 4, Lots 1 and 2;
  Sec. 6, Lots 3 and 4, SE¼SW¼;
  Sec. 24, NE¼NE¼.

The area described above aggregates approximately 1,428 (±) acres in Lincoln County, Washington.

In exchange for these lands, the Federal Government will acquire the following described private lands:

Willamette Meridian

T. 25 N., R. 31 E.,
  Sec. 12, N½, N½SW¼, N½N½S½SW¼, N½N½SE¼.
T. 26 N., R. 32 E.,
  Sec. 31, Lots 3 and 4, E½SW¼, SE¼;
  Sec. 32, Portions NW¼ lying west of Lincoln Co. Rd. No. 1613.

The area described above aggregates approximately 777 (±) acres in Lincoln County, Washington.

The purpose of the land exchange is to facilitate resource management opportunities in the Wilson Creek area as identified in the Spokane District's Resource Management Plan. The private lands being offered have very important values for recreation, fish and wildlife habitat, and watershed management. The public interest will be highly served by making this exchange.

The value of the lands to be exchanged is approximately equal. The exchange proponent will be required to make a small payment to equalize the values of the lands based upon the approved appraisal.

The exchange is subject to:

1. The reservation to the United States of a right-of-way for ditches or canals constructed by the authority of the United States, Act of August 30, 1890 (43 U.S.C. 945).
2. All other valid existing rights, including but not limited to any right-of-way, permit, or lease of record. All existing oil and gas leases will remain in effect until expiration.

The publication of this notice in the **Federal Register** will segregate the public lands described above to the extent that they will not be subject to appropriation under the public land laws, including the mining laws.

Detailed information concerning the exchange, including the environmental analysis and the record of public discussions, is available for review at the Spokane District Office, East 4217 Main Avenue, Spokane, Washington 99202.

For a period of 45 days, interested parties may submit comments to the Spokane District Manager at the above address. Any adverse comments will be reviewed by the State Director. In absence of any adverse comments, this realty action will become a final determination of the Department of the Interior.

Date of Issue: August 21, 1989.

Joseph K. Buesing,
District Manager.

Supplementary Rules for Designated Recreation Sites

AGENCY: Bureau of Land Management, Interior.

ACTION: Rules of conduct and supplemental rules.

SUMMARY: This notice amends the previous notices published in the **Federal Register**, December 15, 1988 (Volume 53, No. 241) and July 24, 1989 (Volume 54, No. 140) establishing Supplementary Rules for Designated Recreation Sites, Special Recreation Management Areas and Other Public Land in the Las Cruces District, New Mexico.

La Cueva And Aguirre Spring Recreation Sites (Organ Mountains Recreation Lands)

1. The entrance gate located in T. 23 S., R. 3 E., Section 2 on the Dripping Springs road (controlling access to La Cueva Recreation Site, A. B. Cox Visitor Center, and Dripping Springs) will be locked at 6:00 p.m. from October 1 through March 31, and at 8:00 p.m. from April through September 30. Authorized permittees and administrative access are exempt from this closure.
2. The two gates located in T. 22 S., R. 4 E., Section 20 on the Aguirre Spring access road (controlling access to the Aguirre Spring Campground) will be locked at 6:00 p.m. from October 1 through March 31, and at 8:00 p.m. from April 1 through September 30. Use of the campground will be limited to overnight campers after the gates are locked. Authorized permittees and administrative access are exempt from this closure.
3. Exceptions to the vehicle closure of roads in Upper Ice Canyon (from the A. B. Cox Visitor Center to Dripping Springs and along the powerline road) will include administrative access, authorized permittees, and handicapped or otherwise physically disabled persons who obtain prior authorization.

DATES: These rules will become effective August 31, 1989.

FOR FURTHER INFORMATION CONTACT: Scott Florence, Multi-Resource Staff Chief, Bureau of Land Management, Mimbres Resource Area, 1800 Marquess, Las Cruces, NM 88005, (505) 525–8228 (FTS 571–8350).

SUPPLEMENTARY INFORMATION: The authority for establishing supplementary rules is contained in 43 CFR 8365.1–6. The authority for establishing closures and restrictions is contained in 43 CFR 8364.1. These rules and closures have been recommended and adopted through development of resource management plans and recreation management plans. These rules and closures will be available in each local office having jurisdiction over the lands, sites, or facilities affected.

Dated: August 23, 1989.

H. James Fox,
District Manager.

Proposed Resource Management Plan/Final Environmental Impact Statement; San Rafael Resource Area; Moab District, Utah

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of availability of proposed resource management plan and final environmental impact statement.

SUMMARY: The proposed resource management plan and final environmental impact statement (RMP/EIS) for the San Rafael Resource Area, Moab District, Emery County, Utah and the Forest Planning Unit of the Sevier River Resource Area, Richfield District, Sevier County, Utah is available for distribution to the public, Federal, state and local agencies, and Indian tribes. The RMP will guide management of the public lands and resources in the San Rafael Resource Area and the Forest Planning Unit of the Sevier River Resource Area, Bureau of Land Management (BLM).

The RMP would provide comprehensive management for 1.5 million acres in Emery County and Sevier County, Utah. It would designate thirteen Areas of Critical Environmental Concern (ACECs). The EIS presents the RMP and six land use alternatives for management of the San Rafael Resource Area and Forest Planning Unit.

A 30-day protest period for the RMP will commence with publication of a Notice of Availability for the EIS in the **Federal Register** by the Environmental Protection Agency.

The RMP will be implemented after publication of a separate Record of Decision and Final RMP.

FOR FURTHER INFORMATION CONTACT: James Dryden, San Rafael Resource Area Manager, BLM, 900 North 700 East, Price, Utah 84501; (801) 637–4584.

SUPPLEMENTARY INFORMATION: The San Rafael RMP/EIS analyzes six alternatives and the RMP. Each plan provides management guidance for all relevant resource programs administered by the BLM within the planning area. Various combinations of special designations are analyzed under the alternatives.

Alternatives Analyzed

1. Alternative A (no action) presents the continuation of current management.
2. Alternative B emphasizes the production of mineral resources and livestock forage.
3. Alternative C emphasizes opportunities for nonmotorized recreation and management of wildlife habitat to allow wildlife population to attain prior stable numbers.
4. Alternative D emphasizes the protection of watershed values and maximum protection of cultural resources.
5. Alternative E emphasizes maximum access and opportunities for motorized recreation.
6. Alternative F provides for the protection of critical soils, scenic resources within the San Rafael Swell, crucial wildlife habitat; special management for certain vegetation and cultural resource values; continuation of livestock, wild horse and burros use; and making public lands available for production of mineral resources.
7. The RMP provides for protection and management of the resource values described in Alternative F with slightly greater emphasis placed on protecting critical soils, scenic resources within the San Rafael Swell and crucial wildlife habitat; and managing certain vegetative and cultural values. The RMP would designate thirteen ACECs. The special management designations are summarized in the accompanying table.

This action is announced pursuant to section 102(2)(c) of the National Environmental Policy Act of 1969, section 202(a) of the Federal Land Policy and Management Act of 1976, and 43 CFR 1610. The RMP is subject to protest from any adversely affected party who participated in the planning process. Protests must be made in accordance with the provisions of 43 CFR 1610.5–2. Protests must be received by the Director of the BLM, 18th and C Streets NW., Washington, DC 20240, within 30 days after the date of publication of Notice of Availability for the final EIS in the **Federal Register** by the Environmental Protection Agency.

Dated: August 23, 1989.

W.R. Papworth,

Acting State Director.

PROPOSED ACEC DESIGNATIONS

Name	Public Land Acres	Critical Values Protected	Summary of Special Conditions on Surface Use
Big Flat Tops	2,640	Relict Plant Community	Closed to mineral entry and leasing; no grazing; closed to ORV use; managed as VRM Class I; excluded from rights-of-way; closed to disposal of mineral materials.
Bowknot Bend	1,830	Relict Plant Community	Closed to mineral entry and leasing; no grazing; closed to ORV use; managed as VRM Class I; excluded from rights-of-way; closed to disposal of mineral materials.
Copper Globe	220	Historical Resources	Closed to mineral entry and leasing; ORV use limited to designated roads and trails; excluded from rights-of-way; managed as VRM Class II; closed to disposal of mineral materials.
Dry Lake Archaeological District	16,990	Cultural Resources	ORV use limited to designated roads and trails.
Highway I–70 Scenic Corridor	50,650	Scenic Values	No surface occupancy; closed to disposal of mineral materials; ORV use limited to designated roads and trails; managed as VRM Class I.
Muddy Creek *	27,510	Scenic and Historical Values	No surface occupancy; closed to disposal of mineral materials; ORV use limited to designated roads and trails; managed as VRM Class I.

BILLING CODE 4310-DQ-M

[ID-943-09-4214-11; IDI-14917 et al.]

Proposed Continuation of Withdrawal; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The U.S. Forest Service, Department of Agriculture, proposes that 170.37 acres of land withdrawn for two administrative sites and a recreation site continue for an additional 30 years based upon the anticipated remaining useful life of the associated improvements. The land will remain closed to surface entry and mining, but has been and will remain open to mineral leasing under the proposal.

EFFECTIVE DATE: Comments should be received on or before November 29, 1989.

FOR FURTHER INFORMATION CONTACT: Larry R. Lievsay, Idaho State Office, BLM, 3380 Americana Terrace, Boise, Idaho 83706, 208–334–1735.

The U.S. Forest Service proposes that the existing land withdrawals made by the Secretarial orders dated June 29, 1908 and January 28, 1908, and General Land Office order dated June 19, 1912, be continued for a period of 30 years pursuant to section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751; 43 U.S.C. 1714, insofar as they affect the following described land:

Boise Meridian

(IDI–14917)

Soldier Creek Recreation Area,

T. 2 N., R. 14 E.
  Sec. 19, S½SE¼;
  Sec. 30, N½NE¼.

(IDI–25466)

Copper Basin Administrative Site

T. 6 N., R. 22 E. (unsurveyed),
  Sec. 33, metes and bounds description within SE¼NE¼.

(IDI–14944)

Fairview Administrative Site

T. 12 N., R. 26 E.,
  Sec. 27, metes and bounds description within SW¼SW¼.

The areas described aggregate 170.37 acres in Lemhi, Custer and Camas Counties.

The withdrawals are essential for protection of the recreation and administrative sites involved. The withdrawals closed the described land to surface entry and mining but not to mineral leasing. No change in the segregative effect or use of the land is proposed by this action.

For a period of 90 days from the date of publication of this notice, all persons who wish to submit comments in connection with the proposed withdrawal continuations may present their views in writing to the Idaho State Director at the above address.

The authorized officer of the Bureau of Land Management will undertake such investigations as necessary to determine the existing and potential demand for the land and its resources. A report will also be prepared for consideration by the Secretary of the Interior, the President, and Congress, who will determine whether or not the withdrawals will be continued; and if so, for how long. The final determination of the withdrawals will be published in the **Federal Register**. The existing withdrawals will continue until such final determination is made.

Dated: Augst 25, 1989.

William E. Ireland,

Chief, Realty Operations Section.

BILLING CODE 4310-GG-M

[ID-943-09-4214-11; IDI-3874]

Proposed Continuation of Withdrawal; Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice.

SUMMARY: The U.S. Forest Service, Department of Agriculture, proposes that a 146.95 acre withdrawal for the Middle Fork Salmon River Scenic Area and two other recreation areas be continued for an additional 30 years. The land is still being used for recreation purposes. These lands would remain closed to surface entry and mining, but have been and would remain open to mineral leasing under the proposal.

EFFECTIVE DATE: Comments should be received on or before November 29, 1989.

FOR FURTHER INFORMATION CONTACT: Larry R. Lievsay, Idaho State Office, BLM, 3380 Americana Terrace, Boise, Idaho 83706, 208–334–1735.

The U.S. Forest Service proposes that the existing land withdrawal made by Public Land Order No. 5207, for three recreation areas be continued for a period of 30 years pursuant to section 204 of the Federal Land Policy and Management Act of 1976, 90 Stat. 2751; 43 U.S.C. 1714, insofar as it affects the following-described land:

Boise Meridian

Five Points Recreation Area

T. 2 N., R. 14 E.,
  Sec. 5, NE¼ of lot 3.

Worswick Hot Springs Recreation Area

T. 3 N., R. 14 E.,
  Sec. 28, W½NW¼SE¼, E½NE¼SW¼ and NW¼SW¼SE¼.

Middle Fork Salmon River Scenic Area

All of the designated Middle Fork Scenic River Area lying outside of Frank Church River of No Return Wilderness boundary in:

T. 14 N., R. 10 E. (unsurveyed),
  Sec. 19, metes and bounds description;
  Sec. 30, metes and bounds description.

The areas described aggregate 146.95 acres in Valley, Custer and Camas Counties.

The withdrawal is essential for protection of substantial capital improvements and recreation values. The withdrawal closed the described land to surface entry and mining but not to mineral leasing. No change in the segregative effect or use of the land is proposed by this action.

For a period of 90 days from the date of publication of this notice, all persons who wish to submit comments in connection with the proposed withdrawal continuation may present their views in writing to the Idaho State Director at the above address.

The authorized officer of the Bureau of Land Management will undertake such investigations as necessary to determine the existing and potential demand for the land and its resources. A report will also be prepared for consideration by the Secretary of the Interior, the President, and Congress, who will determine whether or not the withdrawal will be continued; and if so, for how long. The final determination of the withdrawal will be published in the **Federal Register**. The existing withdrawal will continue until such final determination is made.

Dated: August 25, 1989.

Minerals Management Service

Locations and Dates of Public Hearings Regarding the Draft Supplement to the Final Environmental Impact Statement for the Proposed 5-Year Outer Continental Shelf Oil and Gas Leasing Program for Mid-1987 to Mid-1992

On August 24, 1989, a Federal Register Notice 54 FR 35256 announced the

---

availability of the draft Supplemental Environmental Impact Statement (SEIS) for the current 5-Year Outer Continental Shelf (OCS) Oil and Gas Leasing Program indicating that the exact dates, times, and locations of public hearings on the draft SEIS would be announced at a later date. The U.S. Court of Appeals for the District of Columbia ruled that the final EIS for the current 5-year program failed to adequately analyze the cumulative impacts of the current leasing program on migratory species. The SEIS supplements the previous analysis.

The purpose of these hearings is to receive specific comments on the adequacy of the draft SEIS and to provide the Secretary of the Interior with additional information from both public and private sectors to help evaluate fully the potential cumulative environmental effects of the current 5-year program on migratory species. This draft document pertains specifically to the current 5-year leasing program.

The public hearings are scheduled on the following dates and times at the following locations:

September 26, 1989, Portland, Oregon, Memorial Coliseum, Georgia Pacific Room, 1401 North Wheeler, 9 a.m. to 9 p.m., Contact: Mary Elaine Dunaway, (213) 894–4480
September 28, 1989, Sacramento, California, Beverly Garland Hotel, 1780 Tribute Road, 9 a.m. to 9 p.m., Contact: Mary Elaine Dunaway, (213) 894–4480
September 28, 1989, Anchorage, Alaska, Minerals Management Service, Sixth Floor Conference Room, 949 East 36th Avenue, 9 a.m. to 1 p.m., Contact: Michael Baffrey, (907) 261–4677.

The hearings in Portland, Oregon, and Sacramento, California, will recess from 12 noon until 1 p.m. and from 5:30 p.m. to 7 p.m.

Interested individuals, representatives of organizations, and public officials who wish to testify at the hearings are requested to contact the person listed above for the particular location at least 5 days prior to the hearing. Time limitations may make it necessary to limit the length of each oral presentation to 5 minutes or less. An oral statement may be supplemented, however, by a more complete written statement which should be submitted to the hearing officer at the time of the oral presentation. After the presentation of oral statements by those who have preregistered, if time is still available during the period of time listed for the hearings, other individuals will be given an opportunity to be heard.

Written comments on the draft SEIS including comments from individuals unable to present oral statements or to attend the hearings will be accepted until October 17, 1989. All written comments should be mailed to the Associate Director for Offshore Minerals Management, Minerals Management Service, Mail Stop 644, 381 Elden Street, Herndon, Virginia 22070. Specify on the envelope "5-Year Program draft SEIS." Both the oral and written statements will be given equal consideration. After all the public hearing testimony and written comments on the draft SEIS have been reviewed and analyzed, a final SEIS will be prepared.

Dated: August 25, 1989.

Carolita Kallaur,

Acting Associate Director for Offshore Minerals Management, Minerals Management Service.

BILLING CODE 4310-MR-M

INTERSTATE COMMERCE COMMISSION

[Finance Docket No. 31502]

The Garden City Northern Railway, Inc.—Acquisition and Operation Exemption—The Atchison, Topeka and Santa Fe Railway Co. and the Garden City, Gulf and Northern Railroad Co.; Corrected Notice of Exemption [1]

The Garden City Northern Railway, Inc. (GCN), a non-carrier, has filed a notice of exemption to acquire and operate approximately 30.59 miles of rail line located in Finney and Scott Counties, KS. The line, which extends between milepost 156.48 at or near Garden City and milepost 125.89 at or near Shallow Water, is presently owned by The Garden City, Gulf and Northern Railway Company and The Atchison, Topeka and Santa Fe Railway Company.

This transaction is related to a petition for exemption filed concurrently by Garden City Co-op, Inc. (Co-op), in Finance Docket No. 31503, *The Garden City Co-op, Inc.—Exemption from 49 U.S.C. 10746 and 11343.* That petition seeks an exemption from the requirements of 49 U.S.C. 11343 for Co-op to continue in control of GCN and from the provisions in 49 U.S.C. 10746, the "commodities clause". GCN expects to consummate this transaction upon Co-op receiving its exemption in Finance Docket No. 31203.

Any comments must be filed with the Commission and served on: Thomas F. McFarland, Jr., Belnap, Spencer, McFarland, Emrich & Herman, 20 North Wacker Drive, Suite 3710, Chicago, IL 60606; and (2) Dennis W. Wilson, The Atchison, Topeka and Santa Fe Railway Company, 80 East Jackson Boulevard, Chicago, IL 60604-2401.

This notice is filed under 49 CFR 1150.31. If the notice contains false or misleading information, the exemption is void *ab initio.* Petitions to revoke the exemption under 49 U.S.C. 10505(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the transaction.

Decided: August 18, 1989.

By the Commission, Jane F. Mackall, Director, Office of Proceedings.

Noreta R. McGee,

Secretary.

BILLING CODE 7035-01-M

DEPARTMENT OF JUSTICE

Lodging of Consent Decree; Amoco Chemical Co., et al.

In accordance with section 122 of the Comprehensive Environmental Response, Compensation and Liability Act, as amended ("CERCLA"), 42 U.S.C. 9622, and the policy of the Department of Justice, 28 CFR 50.7, notice is hereby given that a complaint styled *United States* v. *Amoco Chemical Company, et al.,* Civil Action No. 892734, was filed in the United States District Court for the Southern District of Texas on August 15, 1989, and, simultaneously, a consent decree was lodged with the Court in settlement of the allegations in the complaint. This consent decree settles the government's claims in the complaint pursuant to sections 104, 106 and 107 of CERCLA, 42 U.S.C. 9604, 9606, 9607, for injunctive relief to abate an imminent and substantial endangerment to the public health, welfare or the environment because of actual or threatened releases of hazardous substances from a facility, and for the recovery of response costs incurred by the United States with respect to a facility located southeast of Houston, Harris County, Texas, known as the "Brio Refining Site" (hereafter "the Site"). The complaint alleged, among other things, that the defendants are persons who by contract, agreement or otherwise arranged for disposal of hazardous substances at the industrial waste control Site or who arranged for transport of hazardous substances to the Site. The complaint further alleged that the United States has incurred and will continue to incur response costs in response to the release or threat of release of hazardous substances.

Under the terms of the proposed consent decree, the defendants agree to fund and implement a remedy at the Brio Refining Site which includes excavation and either acqueous-phase biological treatment or onsite incineration of affected materials and soils, dismantlement of the chemical process facility, tanks and drums, construction of a cap and cover for waste impoundments, installation of a package wastewater treatment plant or the routing of wastewater to a POTW, and long-term monitoring of air and groundwater in the vicinity of the Site. The Department of Justice will receive comments relating to the proposed consent decree for a period of 30 days from the date of this publication. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, 10th and Pennsylvania Avenue, NW., Washington, DC 20530. All comments should refer to *United States* v. *Amoco Chemical Company,* D.J. Ref. 90–11–2–325. The proposed consent decree may be examined at the following offices of the United States Attorney and the Environmental Protection Agency ("EPA"):

United States Attorney's Office

Contact: Chief, Civil Division, Office of the United States Attorney, U.S. Courthouse, 515 Rusk, Houston, Texas 77002, (713) 229–2600

EPA Region VI

Contact: Pamela Phillips, Office of Regional Counsel, U.S. Environmental Protection Agency, Region VI, 1445 Ross Avenue, Dallas, Texas 75202–2733, (214) 655–2120

Copies of the proposed consent decree may also be examined at the Environmental Enforcement Section, Land and Natural Resources Division; United States Department of Justice, Room 1515, 10th and Pennsylvania Avenue, NW., Washington, DC 20530. A copy of the proposed consent decree may be obtained by mail from the Environmental Enforcement Section, Land and Natural Resources Division, Department of Justice, P.O. Box 7611, Ben Franklin Station, Washington, DC 20044. In requesting a copy of the decree, please enclose a check for copying costs in the amount of $7.10 payable to Treasurer of the United States.

Donald A. Carr,

Acting Assistant Attorney General, Land and Natural Resources Division.

[FR Doc. 89–20512 Filed 8–30–89; 8:45 am]

BILLING CODE 4410-01-M

Lodging of Consent Decree Pursuant to CERCLA; The Craig Wrecking Corp.

In accordance with Department policy, 28 CFR 50.7, notice is hereby given that on August 21, 1989, a proposed consent decree in *United States* v. *The Craig Wrecking Corporation,* Civil Action No. C2–87–692 was lodged with the United States District Court for the Southern District of Ohio. The proposed consent decree resolves a judicial enforcement action brought by the United States against The Craig Wrecking Corporation and Stanley R. Craig for violations of the Clean Air Act, 42 U.S.C. 7401 *et seq.,* relating to violations of regulations governing the removal of asbestos materials.

The proposed consent decree requires the defendants to pay the sum of seven hundred dollars ($700.00) to the United States Government as a civil penalty. The decree also orders these defendants not violate the asbestos removal violations in the future.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *The Craig Wrecking Corporation,* D.J. Ref. 90–5–2–1–1048.

The proposed consent decree may be examined at the office of the United States Attorney, 5th and Walnut Streets, 220 U.S. Post Office & Courthouse, Cincinnati, Ohio 45202.

Copies of the consent decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1517, Ninth and Pennsylvania Avenue, NW., Washington, DC 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy, please enclose a check in the amount of $1.20 (10 cents per page reproduction cost) payable to the Treasurer of the United States.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Lodging of Consent Decree Pursuant to CERCLA; The Craig Wrecking Corp.

In accordance with Department policy 28 CFR 50.7, notice is hereby given that on August 21, 1989, a proposed consent decree in *United States* v. *The Craig Wrecking Corporation,* Civil Action No. C2–87–692 was lodged with the United States District Court for the Southern District of Ohio. The proposed consent decree resolves a judicial enforcement action brought by the United States against the City of Cincinnati and Frank Messer and Sons Wrecking Company for violations of the Clean Air Act, 42 U.S.C. 7401 *et seq.,* relating to violations of regulations governing the removal of asbestos material.

The proposed consent decree requires the defendants to pay the sum of fourteen thousand dollars ($14,000.00) to the United States Government as a civil penalty. The decree also orders these defendants not violate the asbestos removal violations in the future.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *The Craig Wrecking Corporation,* D.J. Ref. 90–5–2–1–1048.

The proposed consent decree may be examined at the office of the United States Attorney, 5th and Walnut Streets, 220 U.S. Post Office & Courthouse, Cincinnati, Ohio 45202.

Copies of the consent decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1517, Ninth and Pennsylvania Avenue NW., Washington, DC 20530. A copy of the proposed consent decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy, please enclose a check in the amount of $1.20 (10 cents per page reproducton cost) payable to the Treasurer of the United States.

---

[1] The Notice served and published August 1, 1989 (54 FR 31739) incorrectly cited the docket number of the directly-related exemption in Finance Docket No. 31503.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Consent Decree in Clean Water Act Enforcement Action; Menominee, MI

In accordance with Departmental Policy, 28 CFR 50.7, notice is hereby given that a Consent Decree in *United States* v. *City of Menominee*, Civil Action No. M88-107 (W.D. Michigan), has been lodged with the United States District Court for the Western District of Michigan. The United States' Complaint in the action alleged that the City of Menominee violated the Clean Water Act by discharging waste in excess of the effluent limitations in the City's National Pollutant Discharge Elimination System (NPDES) permit.

The Consent Decree requires the City of Menominee to take a number of specified measures to ensure compliance with the Clean Water Act, including terminating acceptance of wastewater from the Menominee Paper Company, and upgrading facilities at the City wastewater treatment plant. Compliance with final permit effluent limits is to be achieved no later than November 1, 1989. The City of Menominee is also required to pay a civil penalty of $105,000 to the United States.

The Department of Justice will receive for thirty (30) days from the publication date of this notice written comments relating to the judgment. Comments should be addressed to the Assistant Attorney General, Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and refer to *United States* v. *City of Menominee*, Civil Action No. M88-107 (W.D. Michigan), DOJ No. 90-5-1-1-3158.

The proposed Consent Decree may be examined without charge at the office of the United States Attorney, Federal Building, 399 Federal Building, Grand Rapids, Michigan 49503; at the Region V Office of the Environmental Protection Agency, 230 South Dearborn Street, Chicago, Illinois 60604; and at the Environmental Enforcement Section, Land and Natural Resources Division, U.S. Department of Justice, Ninth Street and Pennsylvania Avenue, NW., Washington, DC 20530. Copies of the Consent Decree may be requested in person or by mail from the Department of Justice, at the above address. A copying charge of $1.60 (10 cents per page reproduction cost) must be paid, by check or money order payable to the Treasurer of the United States, at the time of the request.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Lodging of Consent Decree Pursuant to the Clean Air Act; Metro Wrecking Company, Inc.

In accordance with Department policy, 28 CFR 50.7, notice is hereby given that a proposed Consent Decree in *United States* v. *Metro Wrecking Company, Inc.*, Civil Action No. 88CV27962DT, has been lodged with the United States District Court for the Eastern District of Michigan. The complaint filed by the United States alleged that the defendant violated the Clean Air Act, 42 U.S.C. 7401 *et seq*, and the National Emission Standard for Hazardous Air Pollutants for asbestos (the "asbestos NESHAPs") by failing to give the required notice of demolition work involving asbestos removal and by violating Federal regulations governing the proper handling and disposal of materials containing friable asbestos.

The proposed Decree requires Defendant to achieve and maintain compliance with the Act and its implementing regulations by reporting its demolition activities to the appropriate local, state, and/or federal agencies, retaining accredited asbestos abatement contractors for all jobs requiring asbestos removal, and submitting to U.S. EPA specified information regarding demolition projects on which Defendant bids unsuccessfully. The proposed Consent Decree also requires Defendant to pay a civil penalty of $22,100 for its violations of the Act, and provides for substantial stipulated penalties in the event that Defendant fails to comply with any Decree requirements.

The Department of Justice will receive comments relating to the proposed Consent Decree for a period of thirty (30) days from the date of this publication. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to the *United States* v. *Metro Wrecking Company, Inc.*, DJ Ref. No. 90-5-2-1-1205.

The proposed Consent Decree may be examined at the office of the United States Attorney, 817 Federal Building, 231 W. Lafayette, Detroit, Michigan, 48226, and at the Office of Regional Counsel, United States Environmental Protection Agency, Region V, 230 South Dearborn Street, Chicago, Illinois 60604. Copies of the Consent Decree may be examined at the Environmental Enforcement Section, Lands and Natural Resources Division of the Department of Justice, Room 1647(d), Ninth Street and Pennsylvania Avenue, NW., Washington

DC 20530. A copy of the proposed Consent Decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy please enclose a check in the amount of $1.80 (ten cents per page reproduction cost) payable to the Treasurer of the United States.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Lodging of Proposed Consent Decree Under the Clean Water Act; Pine Bluff Waste-water Utility Commission and Arkansas

In accordance with Departmental policy and 28 CFR 50.7, notice is hereby given that on August 15, 1989, a proposed Consent Decree in *United States* v. *Pine Bluff Waste-water Utility Commission, and the State of Arkansas*, Civil Action No. PB-C-89-461 was lodged with the Eastern District of Arkansas, Pine Bluff Division. The complaint filed by the United States alleged several violations of the Clean Water Act by Pine Bluff Waste-water Utility Commission. The compliant sought to impose injunctive relief and civil penalties. The proposal Consent Decree imposes injunctive relief and civil penalties for past violations.

The Department of Justice will review for a period of thirty (30) days from the date of this publication comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to the *United States* v. *Pine Bluff Waste-water Utility Commission and the State of Arkansas*, Civil Action No. PB-C-89-461, (E.D. Ar.), D.J. #90-5-1-1-2798.

The proposed Consent Decree may be examined at the Clerk's Office of the United States District Court for the Eastern District of Arkansas, Pine Bluff Division, Room 3103, Post Office and U.S. Courthouse, 100 East Eight, Pine Bluff, Arkansas, 71601 and at the Region VI Office of the Environmental Protection Agency, Allied Bank Tower, 1445 Ross Avenue, Dallas, Texas 75202-2733. Copies of the Consent Decree may be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 2630, Washington, DC 20530. A copy of the proposed Consent Decree may be obtained by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice at a cost of $.10 per page, for a total of $1.20.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

[FR Doc. 89-20519 Filed 8-30-89; 8:45 am]

BILLING CODE 4410-01-M

Lodging of Consent Decree Pursuant to Clean Air Act; R.E.A.G., et al

In accordance with Departmental policy, 28 CFR 50.7, notice is hereby given that on August 15, 1989 a proposed consent decree in *United States* v. *R.E.A.G. et al.*, Civil Action No B-87-24 (TFGD), was lodged with the United States District Court for the District of Connecticut. The proposed consent decree concerns a complaint filed by the United States that alleged violations of section 112 of the Clean Air Act, 42 U.S.C. 7412 and the National Emission Standards for Hazardous Air Pollutants ("NESHAP") for Asbestos, 40 CFR part 61, subpart M during the renovation of the former Beverly Theater in Bridgeport, Connecticut. The complaint alleged that defendant AA Building Wrecking Co., Inc. ("A"), as well as other defendants R.E.A.G., Cristwood Associates, Inc., and Northern Asbestos Abatement Co., Inc., violated the asbestos NESHAP during the building renovation. The complaint sought injunctive relief to require compliance with the asbestos NESHAP and civil penalties for past violations. The proposed consent decree involves only the claims against defendant AA. The consent decree requires AA's president to take asbestos training courses and AA to refrain from demolition or renovation activities involving asbestos. AA is also required to pay a civil penalty of $10,000 in settlement of the government's civil penalty claims. The consent decree only resolves the liability of AA and does not address the portions of the complaint against the other defendants.

The Department of Justice will receive for a period of thirty (30) days from the date of the publication comments relating to the proposed consent decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *R.E.A.G. et al.*, D.J. Ref. 90-5-2-1-1076.

The proposed consent decree may be examined at the office of the United States Attorney for the District of Connecticut, Room 309, Federal Building and Courthouse, 915 Lafayette Blvd., Bridgeport, CT. 06604 and at the Region I Office of the United States Environmental Protection Agency, John F. Kennedy Federal Building, Boston, MA 02203–2211. Copies of the consent decree may also be examined at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1517, Ninth Street and Pennsylvania Avenue, NW., Washington, DC 20530. A copy of the proposed decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice. In requesting a copy, please enclose a check in the amount of $1.40 (10 cents per page reproduction cost) payable to the Treasurer of the United States.

Donald A. Carr,

Acting Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Lodging of Consent Decree Under Comprehensive Environmental Response, Compensation and Liability Act; Wausau Chemical Co., et al.

In accordance with Departmental policy, notice is hereby given that on August 25, 1989, a proposed Consent Decree in *United States* v. *Wausau Chemical Company, et al.*, Case No. 87–C–919–C, was lodged with the United States District Court for the Western District of Wisconsin. The proposed Consent Decree provides for reimbursement by Wausau Energy Corporation to the United States of $5,000 in response costs incurred by the United States Environmental Protection Agency under the Comprehensive Environmental Response, Compensation, and Liability Act at the Wausau Groundwater Contamination Site through January 5, 1985.

The Department of Justice will receive for a period of thirty (30) days from the date of this publication, comments relating to the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General of the Land and Natural Resources Division, Department of Justice, Washington, DC 20530, and should refer to *United States* v. *Wausau Chemical Company*, D.J. reference #90–11–2–286.

The proposed Consent Decree may be examined at the office of the United States Attorney, Western District of Wisconsin, 120 North Henry Street, Madison, Wisconsin 53703, at the Region V office of the United States Environmental Protection Agency, 230 South Dearborn Street, Chicago, Illinois 60604, and at the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice, Room 1647, 10th Street and Pennsylvania Avenue NW., Washington, DC 20530. A copy of the proposed Consent Decree may be obtained in person or by mail from the Environmental Enforcement Section, Land and Natural Resources Division of the Department of Justice.

Richard B. Stewart,

Assistant Attorney General, Land and Natural Resources Division.

BILLING CODE 4410-01-M

Antitrust Division

National Cooperative Research Act of 1984; Development of a Computer-Aided Armor Design/Analysis System

Notice is hereby given that, on August 7, 1989, pursuant to section 6(a) of the National Cooperative Research Act of 1984, 15 U.S.C. 4301 *et seq.* ("the Act,") Southwest Research Institute ("SwRI") filed a written notification simultaneously with the Attorney General and the Federal Trade Commission disclosing the addition of a party to its group research project regarding "The Development of a Computer-Aided Armor Design/Analysis System". The notification was filed for the purpose of invoking the Act's provision limiting the recovery of antitrust plaintiffs to actual damages under specified circumstances. Specifically, the SwRI advised that General Dynamics Land Systems Inc. (effective June 26, 1989) has become a party to the group research project.

No other changes have been made in either the membership or planned activity of the group research project.

On June 26, 1989, SwRI filed its original notification pursuant to section 6(a) of the Act. The Department of Justice (the "Department") published a notice in the **Federal Register** pursuant to section 6(b) of the Act on July 20, 1989, 54 FR 30481.

Joseph H. Widmar,

Director of Operations, Antitrust Division.

BILLING CODE 4410-01-M

LEGAL SERVICES CORPORATION

Grant Award to Nova University, Center for the Study of Law-Civil Law Clinic for the Expansion and Development of a Law School Civil Clinical Program

AGENCY: Legal Services Corporation.

ACTION: Announcement of a grant award.

SUMMARY: The Legal Services Corporation (LSC) hereby announces its intention to award a grant in the amount of $47,825 to Nova University, Center for the Study of Law-Civil Law Clinic through the 1989–90 Law School Civil Clinical Program. The purpose of this grant is to render civil legal assistance to LSC-eligible clients who are also handicapped children. Pursuant to the Corporation's announcement of funding availability in Volume 54, No. 90, pages 20454 and 20455 of the **Federal Register** of May 11, 1989, a total of $1,053,591 will be awarded to nineteen applicants for funding, including Nova University, Center for the Study of Law. Announcement of the grant awards to the other applicants was published in the August 15, 1989 and the August 23, 1989 issues of the **Federal Register**.

This one-year grant is awarded pursuant to authority conferred by sections 1006(a)(1)(B) and 1006(a)(3) of the Legal Services Corporation Act of 1974, as amended. This public notice is issued pursuant to section 1007(f) of this Act, with a request for comments and recommendations within a period of thirty (30) days from the date of publication of this notice. The grant award will not become effective and grant funds will not be distributed prior to expiration of this thirty-day period.

DATE: All comments and recommendations must be received by the Office of Field Services of the Legal Services Corporation on or before September 30, 1989.

FOR FURTHER INFORMATION CONTACT: Charles T. Moses, III, Associate Director, or Victoria O'Brien, Counsel to the Director, Legal Services Corporation, Office of Field Services, 400 Virginia Ave., SW., Washington, DC 20024–2751, telephone number: (202) 863–1837.

SUPPLEMENTARY INFORMATION: This grant is issued to support the provision of legal services to client-eligible, handicapped children residing in or near Fort Lauderdale, Florida. The grant is intended to assist these children with cases falling under Florida's Education for All Handicapped Children's Act, Public law 94–142. Through the Nova University clinical program, designed to

address this need, the Corporation educates law students to the legal problems of poor persons. This clinical experience encourages future lawyers to become interested in the provision of legal services to poor persons, acting either as legal aid attorneys or through *pro bono* or reduced fee efforts as members of the private bar.

Dated: August 28, 1989.

Ellen J. Smead,

Acting Director, Office of Field Services.

BILLING CODE 7050-01-M

NATIONAL SCIENCE FOUNDATION

Permit Applications Received Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of Permit Applications Received Under the Antarctic Conservation Act of 1978, Public Law 95–541.

SUMMARY: The National Science Foundation (NSF) is required to publish notice of permit applications received to conduct activities regulated under the Antarctic Conservation Act of 1978. NSF has published regulations under the Antarctic Conservation Act of 1978 at Title 45 Part 670 of the Code of Federal Regulations. This is the required notice of permit applications received.

DATES: Interested parties are invited to submit written data, comments, or views with respect to these permit applications by October 2, 1989. Permit applications may be inspected by interested parties at the Permit Office address below.

ADDRESS: Comments should be addressed to Permit Office, Room 627, Division of Polar Programs, National Science Foundation, Washington, DC 20550.

FOR FURTHER INFORMATION CONTACT: Charles E. Myers at the above address or (202) 357–7934.

SUPPLEMENTAL INFORMATION: The National Science Foundation, as directed by the Antarctic Conservation Act of 1978 (Pub. L. 95–541), has developed regulations that implement the "Agreed Measures for the Conservation of Antarctic Fauna and Flora" for all United States citizens. The Agreed Measures, developed in 1964 by the Antarctic Treaty Consultative Parties, recommended establishment of a permit system for various activities in Antarctica and designation of certain animals and certain geographic areas as requiring special protection. The regulations establish such a permit system to designate Specially Protected Areas and Sites of Special Scientific Interest. Additional information was published in the **Federal Register** on July 17, 1989.

The applications received are as follows:

1. *Applicant:* Paul K. Dayton, Scripps Institution of Oceanography, La Jolla, CA 92093

Activity for Which Permit Requested: Enter site of Special Scientific interest (SSSI). The applicant proposes to enter SSSI No. 1., Cape Royds in order to conduct scientific diving operations at Horseshoe Bay. The objective of this project is to conduct surveys of the mud bottom habitat and collect water samples. The Adelie penguin rookery will not be entered.

Location: Cape Royds, Ross Island, Antarctica.

Dates: November—December 1990.

2. *Applicant:* Cornelius W. Sullivan, Department of Biological Sciences, University of Southern California, Los Angeles, CA 90089

Activity for Which Permit Requested: introduction of non-indigenous species into Antarctica. The applicant is conducting a study of photosynthetic energy transfer in ice algae. The study requires running parallel experiments using standard laboratory algal cultures. It is proposed to import three species of laboratory algal cultures to Antarctica for these experiments. The cultures will be used only in the laboratory and not introduced into the natural environment.

Location: McMurdo Station, Antarctica.

Dates: October—December 1989.

3. *Applicant:* Albert F. Bennett and Zoe A. Eppley., Ecology and Evolutionary Biology, University of California, Irvine, Irvine, CA 92717

Activity for Which Permit Requested: Taking. Enter site of special scientific interest. The applicants have received Antarctic Conservation Act permit 89–4 for a study of physiological adaptation of Antarctic birds to cold. They request permission to collect 45 sheathbill eggs (of the 75 previously permitted) from Harmony Point SSSI.

Location: Harmony Point SSSI, Nelson Island, Antarctica.

Dates: December 1989—January 1990.

Charles E. Myers,

Permit Office.

[FR Doc. 89–20523 Filed 8–30–89; 8:45 am]

BILLING CODE 7555-01-M

Permits Issued Under the Antarctic Conservation Act of 1978

AGENCY: National Science Foundation.

ACTION: Notice of permits issued under the Antarctic Conservation Act of 1978, Pub. L. 95–541.

SUMMARY: The National Science Foundation (NSF) is required to publish notice of permits issued under the Antarctic Conservation Act of 1978. This is the required notice of permits issued.

FOR FURTHER INFORMATION CONTACT: Charles E. Myers, Permit Office, Division of Polar Programs, National Science Foundation, Washington, DC 20550.

SUPPLEMENTARY INFORMATION: On July 17, 1989, the National Science Foundation published a notice in the **Federal Register** of permit applications received. Permits were issued to the following individuals on August 22, 1989:

1. Zoe A. Eppley and Albert F. Bennett
2. William R. Fraser
3. Arthur L. DeVries
4. Gerald L. Kooyman
5. W. Zehnder and J. Claus
6. Mark D. Osadjan

Charles E. Myers,

Permit Office, Division of Polar Programs.

BILLING CODE 7555-01-M

Delegation of Award-Approval Authority From the National Science Board to the National Science Foundation Director

AGENCY: National Science Foundation.

ACTION: Notice of delegation of award-winning authority from the National Science Board to the Director of the National Science Foundation.

SUMMARY: This notice sets forth a delegation of authority from the National Science Board to the Director of the National Science Foundation that was adopted by the Board on August 18, 1989. This delegation is required by section 5(e)(1) of the National Science Foundation Act of 1950, as amended (42 U.S.C. 1864(e)(1)). It enables the Director to exercise the authority provided by section 11(c) of the NSF Act (42 U.S.C. 1870(c)) to enter into contracts, grants, and other arrangements for such scientific and engineering activities as the Foundation deems necessary for the purposes of the Act. Publication of this notice is required by section 5(e)(2) of the NSF Act (42 U.S.C. 1864(e)(2)).

DATE: This delegation of authority was effective on August 18, 1989.

FOR FURTHER INFORMATION CONTACT: Thomas Ubois, Executive Officer, National Science Board, National Science Foundation, Washington, DC

20550, 202–357–9582 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: The following is the delegation:

(1) The Director of the National Science Foundation shall make no award involving a total commitment of more than six million dollars or more than one and one-half million dollars in any one year without the prior approval of the National Science Board, except for:

a. Any award for a new project or facility where the Board has approved a project development plan and budget and has not specifically required approval of the award; or

b. Any continuing project, facility, or logistics-support arrangement listed in the Exemption List attached to this resolution. Such Exemption List is to be compiled, at least annually, for each calendar year for NSB approval in November of the preceding calendar year.

(2) Paragraph (1)a. does not apply, however, if the award amounts would exceed the corresponding amounts specified in the budget accompanying the development plan by either: (1) More than eight percent times the number of full years since the initial award for that project or facility, or (ii) more than twenty-four percent.

(3) Except as provided in paragraphs (1) and (2) or by specific resolution of the National Science Board, the Board hereby delegates to the Director authority to make any award within the authority of the Foundation, consistent with the authority of the Board to approve the Foundation's programs.

(4) Except as provided in paragraph (2) or by specific resolution of the National Science Board, when the Board approves the award of a specific amount of funds, the Director may subsequently amend the award to commit additional sums, not to exceed ten percent of the amount specified, or to change the expiration date of the award.

(5) This resolution is effective for two years and supersedes and replaces the resolution of the National Science Board on this subject adopted in August 1987.

As stated in its final section, this delegation replaces an earlier one on the same subject. This delegation, like those preceding it, is a matter of internal agency management and therefore not subject to Executive Order 12291 of February 17, 1981 (3 CFR 1981 Comp., p. 127). Publication of this notice is required by section 5(e)(2) of the NSF Act (42 U.S.C. 1864(e)(2)), which was enacted by section 109(b) of the National Science Foundation Authorization Act, Fiscal Year 1986 (99 Stat. 889; Pub. L. 99–159).

Dated: August 23, 1989.

Thomas Ubois,

Executive Officer.

[FR Doc. 89–20525 Filed 8–30–89; 8:45 am]

BILLING CODE 7555-01-M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–255]

Consumers Power Co.; Palisades Plant; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Provisional Operating License No. DPR–20 issued to the Consumers Power Company (the licensee), for operation of the Palisades Plant, located in Van Buren County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment involves revising the Palisades Plant Technical Specifications (TS) relating to containment integrity. Specifically, the proposed amendment, submitted by application dated September 15, 1988, and supplemented by letter dated June 23, 1989, would revise Technical Specification sections 1.4, 3.6.1, and 3.6.5, and would add a new section 4.5.6. The proposed amendment also would add a new Table 3.6.1 to identify all containment penetrations and isolation valves.

The Need for the Proposed Action

The changes proposed are needed to (1) allow for manual operation of certain containment isolation valves for the purpose of sampling the Safety Injection Tanks for boron while the reactor is at power, (2) provide consistency with the Standard Technical Specifications with respect to containment isolation valve requirements, and (3) reflect the present containment vent pathway.

Environmental Impacts of the Proposed Action

TS section 4.2, Table 4.2.1.5, Minimum Frequencies for Sampling Tests, requires monthly sampling of the Safety Injection Tanks for boron concentration. To obtain the required sample, it is necessary to open the manual isolation valves associated with the Safety Injection Tank drain line and route the flow to the sample tap at the Nuclear Steam Sampling System. However, the current TS section 3.6.1, Containment Integrity, does not allow the opening of manual containment isolation valves except when the plant is in the cold shutdown condition. The proposed amendment would allow these valves to be opened while the plant is operating for the purpose of obtaining the required sample. The potential impact of this change is that a release of radioactive material could occur while the valves are opened for sampling. For a release to occur, however, the following conditions would have to exist concurrently:

1. An accident which results in core damage and release of fission products to the reactor coolant,
2. A pathway for fission products to reach the environment from the reactor coolant via a failure of two check valves between the Reactor Coolant System and the Safety Injection Tank discharge piping, and
3. The required safety injection tank sampling in progress with the manual containment isolation valves open.

An alternate accident scenario for a release to occur would be the following conditions concurrently:

1. An accident which results in core damage and release of fission products to the containment from the reactor coolant,
2. A pathway for fission products to reach the environment from the containment via a failure of the Safety Injection Tank drain line so as to create communication of the containment atmosphere with the environment, and
3. The required safety injection tank sampling in progress with the manual containment isolation valves open.

The first alternative scenario is beyond the design basis for the plant in that two check valves must fail for the pathway to exist. The plant design basis is that only a single active or passive component is assumed to fail during the course of the accident.

The Final Safety Analysis Report offsite dose calculations are based on Standard Review Plan assumptions for the maximum hypothetical accident. Those assumptions do not consider failure of lines penetrating containment. Therefore, the alternate scenario for activity release discussed above, which would require such a line failure, is beyond the plant design basis.

The proposed amendment would change the definition of "Containment Integrity" to reflect the addition of Table 3.6.1 and TS section 4.5.2. Table 3.6.1 lists all containment penetrations and the penetration isolation requirements. TS section 4.5.2 adds surveillance requirements for the containment valves. Neither the definition change, the added table listing penetration

isolation requirements, nor the added surveillance requirements affect the installation or manner of operation of any plant equipment beyond permitting opening of the manual valves discussed above.

The Commission has completed its evaluation of the environmental impact of the proposed amendment and has determined that there would be no increase in any radiological plant effluents released offsite during normal (non-accident) operation.

The Commission has also determined that the probability of accidents has not been increased by the proposed changes, and that post-accident radiological releases would not be greater than determined previously. The proposed changes do not increase individual or cumulative occupational radiation exposure. Therefore, the Commission concludes that this action would result in no significant radiological environmental impact.

With regard to potential non-radiological impacts, the proposed changes to requirements with respect to the use of a facility component and a change to a surveillance requirement involves systems located within the restricted area as defined in 10 CFR part 20. The changes do not affect non-radiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant non-radiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on June 20, 1989 (54 FR 25920). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Since the Commission has concluded that the environmental effects of the proposed action are not significant, any alternatives with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendment. This would not reduce the environmental impacts attributable to this facility. Denial of the action would prevent sampling the safety injection tanks from outside the containment. Although an alternate sampling scheme is possible, entry into containment would be required and would result in substantially increased occupational radiation exposure.

Alternative Use of Resources

This action does not involve the use of resources not previously considered in the Final Environmental Statement dated February 1978 related to operation of the Palisades Plant.

Agencies and Persons Contacted

The Commission's staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of No Significant Impact

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the Commission has determined not to prepare an environmental impact statement for the proposed amendment.

For further details with respect to this action, see the application for amendment dated September 15, 1988, and letter dated June 23, 1989, which are available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Van Zoeren Library, Hope College, Holland, Michigan 49423.

Dated at Rockville, Maryland, this 22nd day of August 1989.

For the Nuclear Regulatory Commission.

Albert De Agazio,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20496 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–341; Fermi–2]

Detroit Edison Co.; Wolverine Power Supply Cooperative, Inc.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–43, issued to the Detroit Edison Company (DECo) and the Wolverine Power Supply Cooperative, Incorporated (the licensees) for the operation of Fermi–2 located in Monroe County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the Technical Specifications (TS) to clarify the requirements for operation with the Moisture Separator Reheater (MSR) out of service.

The proposed action is in accordance with the licensees' application for amendment dated January 27, 1988 as supplemented May 10, 1989.

The Need for the Proposed Action

The proposed changes to the TS are required in order to properly reflect the bases for operation with an MSR out-of-service. The Fermi–2 transient analyses take credit for the MSR being in service. However, the TS do not currently restrict operation with an MSR out-of-service.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the TS. The proposed revision would (1) modify TS 3/4.7.9 by specifying operating limitations of the MSR; (2) clarify that the limits in TS 3/4.2.3, Figure 3.2.3–1 (Curve B) apply to the operating scenario for the MSR out-of-service; and (3) provide an additional limitation (Curve C) to TS Figure 3.2.3–1 for the operating scenario of an inoperable main turbine bypass and MSR out-of-service. Therefore, the proposed changes do not increase the probability or consequences of any accidents, no changes are being made in the types of any effluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological impact and could result in the reduction of the radiological impacts.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems located within the restricted area as defined in 10 CFR Part 20. They do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on April 5, 1988 (53 FR 11151). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Because the Commission has concluded that there is no significant environmental impact associated with the proposed amendment, any alternative would have either no or greater environmental impact. The principal alternative would be to deny the requested amendment. This would not provide the needed limitations for operation with an MSR out-of-service.

Alternative Use of Resources

This action involves no use of resources not previously considered in connection with the "Final Environmental Statement Related to Operation of Fermi–2," dated August 1981.

Agencies and Persons Consulted

The Commission's staff reviewed the licensees' request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated January 27, 1988 as supplement May 10, 1989, which are available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Dated at Rockville, Maryland, this 24th day of August 1989.

For the Nuclear Regulatory Commission.

Albert W. De Agazio,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20492 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–341; Fermi–2]

Detroit Edison Co.; Wolverine Power Supply Cooperative, Inc.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–43, issued to the Detroit Edison Company (DECo) and the Wolverine Power Supply Cooperative, Incorporated (the licensees) for the operation of Fermi–2 located in Monroe County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the Technical Specifications (TS) for Primary Containment Isolation Valves by removing the Traversing Incore Probe (TIP) Purge System Primary Containment Isolation Valve from the TS.

The proposed action is in accordance with the licensees' application for amendment dated March 10, 1989.

The Need for the Proposed Action

The proposed changes to the TS are required in order to reflect the elimination of the TIP Purge System Primary Containment Isolation Valves from the plant design. The purge system is being modified to achieve compliance with General Design Criterion 56 of appendix A of 10 CFR 50.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the TS. The proposed revision would reflect the elimination of the TIP Purge System Primary Containment Isolation Valves and the sealing of the associated penetration with a qualified welded cap which will be leak tested per 10 CFR part 50, appendix J. This will reduce the probability of leakage during an accident from this potential leakage path. In addition, a reduction in occupational radiation exposure can be expected because of lower maintenance, inspection and testing requirements of the new design. Therefore, the proposed changes do not increase the probability or consequences of any accidents, no changes are being made in the types of any affluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological impact and could result in the reduction of the radiological impacts.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems located within the restricted areas as defined in 10 CFR part 20. They do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on August 1, 1989 (54 FR 31750). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Because the Commission has concluded that there is no significant environmental impact associated with the proposed amendment, any alternative would have either no or greater environmental impact. The principal alternative would be to deny the requested amendment. This would prevent the design modifications and thus prevent compliance with General Design Criterion 56.

Alternative Use of Resources

This action involves no use of resources not previously considered in connection with the "Final Environmental Statement Related to Operation of Fermi–2," dated August 1981.

Agencies and Persons Consulted

The Commission's staff reviewed the licensees' request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated March 10, 1989, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Dated at Rockville, Maryland, this 24th of August 1989.

For the Nuclear Regulatory Commission.

Albert W. De Agazio,

Acting Director, Project Directorate III–1, Division of Reactor Projects–III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20493 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–341; Fermi–2]

Detroit Edison Co.; Wolverine Power Supply Cooperative, Inc.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–43, issued to the Detroit Edison Company (DECo) and the Wolverine Power Supply Cooperative, Incorporated (the licensees) for the operation of Fermi–2 located in Monroe, County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would revise the Technical Specifications (TS) for Isolation Actuation Instrumentation. The table entries previously listed in a section entitled "Containment Isolation" are separated into two sections; one for Primary Containment and one for Secondary Containment isolation functions. Revisions to table entries, table notations and nomenclature are made to either more clearly reflect the plant configuration, remove duplication or ambiguity, or reflect the new sections of the table. Provisions have been included to allow routine testing of the Reactor Water Cleanup system without necessitating removal of the system from service. In addition, the definition of Channel Calibration is revised to better reflect standard industry practice.

The proposed action is in accordance with the licensees' application for amendment dated December 22, 1988.

The Need for the Proposed Action

The proposed changes to the TS are required in order to provide clearer, more usable TS requirements which more clearly reflect the plant configuration.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the TS. The proposed revision would separate the requirements currently grouped together under Table Sections entitled "Containment Isolation" into two sections; one for Primary Containment and one for Secondary Containment isolation functions. Table entries, table notations and nomenclature are revised to more clearly reflect the plant configuration, remove duplication or ambiguity or reflect the new table sections. These above changes are proposed to improve the ability of the plant operators to effectively use the TS and do not modify the intended isolation actuation instrumentation requirements. New provisions have been proposed to allow routine testing of the Reactor Water Cleanup System (RWCS) without necessitating removal of the RWCS from service provided other means of accomplishing the function under test is provided during the test period. This will reduce the probability of RWCS failure and subsequent potential radiological release due to cyclic fatigue from frequent RWCS shutdowns for testing. In addition, the definition of Channel Calibration is revised solely to better reflect standard industry practice by including specific provisions for channels with Resistance Temperature Detector or Thermocouple sensors. Therefore, the proposed changes do not increase the probability or consequences of any accidents, no changes are being made in the types of any effluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological impact and could result in the reduction of the radiological impacts.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems located within the restricted area as defined in 10 CFR part 20. They do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on June 26, 1989 (54 FR 29118). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Because the Commission has concluded that there is no significant environmental impact associated with the proposed amendment, any alternative would have either no or greater environmental impact. The principal alternative would be to deny the requested amendment. This would not provide the safety benefits of clearer, more usable TS requirements or eliminate the potential cyclic fatigue of frequent RWCS shutdowns for testing.

Alternative Use of Resources

This action involves no use of resources not previously considered in connection with the "Final Environmental Statement Related to Operation of Fermi–2," dated August 1981.

Agencies and Persons Consulted

The Commission's staff reviewed the licensees' request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated December 22, 1988, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Dated at Rockville, Maryland, this 24th day of August 1989.

For the Nuclear Regulatory Commission.

John O. Thoma,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20494 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–341; Fermi–2]

Detroit Edison Co.; Wolverine Power Supply Cooperative, Inc.; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–43, issued to the Detroit Edison Company (DECo) and the Wolverine Power Supply Cooperative, Incorporated (the licensees) for the operation of Fermi–2 located in Monroe County, Michigan.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would

revise the Technical Specification (TS) to reflect the use of sodium pentaborate enriched with the Boron–10 isotope to meet the requirements of the Anticipated Transient Without Scram (ATWS) Rule, 10 CFR 50.62. The proposed change also corrects some inconsistencies between Action Statements in sections 3/4.1.5 and 3/4.8.4.5.

The proposed action is in accordance with the licensees' application for amendment dated May 11, 1989.

The Need for the Proposed Action

The proposed changes to the TS are required in order to meet the requirements of the Anticipated Transient Without Scram (ATWS) Rule, 10 CFR 50.62.

Environmental Impacts of the Proposed Action

The Commission has completed its evaluation of the proposed revision to the TS. The proposed revision would reflect the use of sodium pentaborate enriched with the Boron–10 isotope to enhance the SLCS to meet the ATWS Rule, 10 CFR 50.62. The proposed revision would also modify the TS Actions and Surveillance Requirements to be consistent with the use of enriched Boron. The use of enriched Boron also reduces the required concentration of sodium pentaborate which causes the solution saturation temperature to decrease. This eliminates the need for supplemental heat tracing and the proposed TS reflect this by eliminating the requirements for heat tracing. Therefore, the proposed changes do not increase the probability or consequences of any accidents, no changes are being made in the types of any effluents that may be released offsite, and there is no significant increase in the allowable individual or cumulative occupational radiation exposure. Accordingly, the Commission concludes that this proposed action would result in no significant radiological impact and could result in the reduction of the radiological impacts.

With regard to potential nonradiological impacts, the proposed changes to the TS involve systems located within the restricted area as defined in 10 CFR Part 20. They do not affect nonradiological plant effluents and have no other environmental impact. Therefore, the Commission concludes that there are no significant nonradiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on July 11, 1989 (54 FR 29118). No request for hearing or petition for leave to intervene was filed following this notice.

Alternative to the Proposed Action

Because the Commission has concluded that there is no significant environmental impact associated with the proposed amendment, any alternative would have either no or greater environmental impact. The principal alternative would be to deny the requested amendment. This would prevent compliance with the ATWS rule, 10 CFR 50.62.

Alternative use of Resources

This action involves no use of resources not previously considered in connection with the "Final Environmental Statement Related to Operation of Fermi-2," dated August 1981.

Agencies and Persons Consulted

The Commission's staff reviewed the licensees' request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based upon the foregoing environmental assessment, the Commission concludes that the proposed action will not have a significant effect on the quality of the human environment.

For further details with respect to this action, see the application for amendment dated May 11, 1989, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Monroe County Library System, 3700 South Custer Road, Monroe, Michigan 48161.

Dated at Rockville, Maryland, this 24th day of August 1989.

For the Nuclear Regulatory Commission

Albert De Agazio,

Acting Director, Project Directorate III–1, Division of Reactor Projects—III, IV, V & Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20495 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–498]

Houston Lighting & Power Co., et al. South Texas Project, Unit 1; Environmental Assessment and Finding of No Significant Impact

The U.S. Nuclear Regulatory Commission (the Commission) is considering the issuance of an amendment to Facility Operating License No. NPF–76, issued to Houston Lighting & Power Company, et al., (the licensee) for the South Texas Project, Unit 1, located at the licensee's site in Matagorda County, Texas.

Environmental Assessment

Identification of Proposed Action

The proposed amendment would make changes to the plant and the Final Safety Analysis Report regarding design changes to the Unit 1 core. The changes are the same as those resulting from a similar review for Unit 2, thus giving both plants a common licensing basis.

The proposed action is in accordance with the licensee's application for amendment dated June 1, 1989.

The Need for the Proposed Action

The proposed changes are necessary to describe the core and accompanying accident analysis for Cycle 2 for the South Texas Project, Unit 1 (STP–1).

Environmental Impacts of the Proposed Action

An assessment was made of the potential impact of the change on the radiological assessment of the design basis accidents (DBA's). The DBA which was most affected by the changes was the locked rotor. The thyroid dose changed from 0.73 rem to 1.04 at the Exclusion Zone Boundary (EZB) and 1.07 rem to 1.53 rem in the Low Population Zone (LPZ). Whole body doses changed from 0.029 rem to 0.038 rem at the EZB and from 0.018 rem to 0.022 in the LPZ. These changes are small and well within the 10 CFR part 100 limits of 25 rem for the EZB and 300 rem within the LPZ. Accordingly, the Commission concludes that this proposed action would result in no significant radiological environmental impact. With regard to potential non-radiological impacts, the proposed change involves systems located within the restricted area as defined in 10 CFR Part 20. It does not affect non-radiological plant effluents and has no other environmental impact. Therefore, the Commission concludes that there are no significant non-radiological environmental impacts associated with the proposed amendment.

The Notice of Consideration of Issuance of Amendment and Opportunity for Hearing in connection with this action was published in the **Federal Register** on June 13, 1989 (54 FR 25184). No request for hearing or petition for leave to intervene was filed following this notice.

Alternatives to the Proposed Action

Since the Commission concluded that there are no significant environmental effects that would result from the proposed action, any alternative with equal or greater environmental impacts need not be evaluated.

The principal alternative would be to deny the requested amendment. This would not reduce environmental impacts of plant operation and would result in reduced operational flexibility.

Alternative Use of Resources

This action does not involve the use of any resources not previously considered in the Final Environmental Statement (NUREG–171, August 1986) for the South Texas Project, Units 1 and 2.

Agencies and Persons Consulted

The NRC staff reviewed the licensee's request and did not consult other agencies or persons.

Finding of No Significant Impact

The Commission has determined not to prepare an environmental impact statement for the proposed license amendment.

Based upon the foregoing environmental assessment, we conclude that the proposed action will not have a significant effect on the quality of the human environment.

For information concerning this action, see the application of amendment dated June 1, 1989, which is available for public inspection at the Commission's Public Document Room, 2120 L Street, NW., Washington, DC, and at the Wharton County Junior College, J.M. Hodges Learning Center, 911 Boling Highway, Wharton, Texas 77488 and Austin Public Library, 810 Guadalupe Street, Austin, Texas 78701.

Dated at Rockville, Maryland this 22nd day of August 1989.

For the Nuclear Regulatory Commission.

Frederick J. Hebdon,

Director, Project Directorate IV, Division of Reactor Projects—III, IV, V and Special Projects, Office of Nuclear Reactor Regulation.

[FR Doc. 89–20501 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

Advisory Committee on Reactor Safeguards Joint Subcommittees on Severe Accidents and Probabilistic Risk Assessment; Meeting

The ACRS Subcommittees on Severe Accidents and Probabilistic Risk Assessment will hold a joint meeting on September 19, 1989, Room P–110, 7920 Norfolk Avenue, Bethesda, MD.

The entire meeting will be open to public attendance

The agenda for the subject meeting shall be as follows:

Tuesday, September 19, 1989—8:30 a.m. until the conclusion of business.

The Subcommittees will discuss the second draft of NUREG–1150, "Severe Accident Risks: An Assessment for Five U.S. Nuclear Power Plants."

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and Staff. Persons desiring to make oral statements should notify the ACRS staff member named below as far in advance as is practicable so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittees, along with any of their consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittees will then hear presentations by and hold discussions with representatives of the NRC Staff, their consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the cognizant ACRS staff member, Mr. Dean Houston (telephone 301/492–9521) between 7:30 a.m. and 4:15 p.m. Persons planning to attend this meeting are urged to contact the above named individual one or two days before the scheduled meeting to be advised of any changes in schedule, etc., which may have occurred.

Dated: August 22, 1989.

Richard Savio,

Acting Assistant Executive Director for Project Review.

[FR Doc. 89–20454 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

Advisory Committee on Reactor Safeguards Subcommittee on Severe Accidents; Meeting

The ACRS Subcommittee on Severe Accidents will hold a meeting on September 20, 1989, Room P–110, 7920 Norfolk Avenue, Bethesda, MD.

The entire meeting will be open to public attendance.

The agenda for the subject meeting shall be as follows:

Wednesday, September 20, 1989—8:30 a.m. until the conclusion of business

The Subcommittee will discuss the proposed Generic Letter by NRR, the NRC research program, and the NUMARC/EPRI, activities in the accident management area.

Oral statements may be presented by members of the public with the concurrence of the Subcommittee Chairman; written statements will be accepted and made available to the Committee. Recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Subcommittee, its consultants, and Staff. Persons desiring to make oral statements should notify the ACRS staff member named below as far in advance as is practicable so that appropriate arrangements can be made.

During the initial portion of the meeting, the Subcommittee, along with any of its consultants who may be present, may exchange preliminary views regarding matters to be considered during the balance of the meeting.

The Subcommittee will then hear presentations by and hold discussions with representatives of the NRC Staff, its consultants, and other interested persons regarding this review.

Further information regarding topics to be discussed, whether the meeting has been cancelled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time alloted therefor can be obtained by a prepaid telephone call to the cognizant ACRS staff member, Mr. Dean Houston (telephone 301/492–9521) between 7:30 a.m. and 4:15 p.m. Persons planning to attend this meeting are urged to contact the above named individual one or two days before the scheduled meeting to be advised of any changes in schedule, etc., which may have occurred.

Dated: August 22, 1989.

Gary R. Quittschreiber,

Chief, Project Review Branch No. 2.

[FR Doc. 89–20455 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

Annual License Fees for Fiscal Year 1990 for Power Reactor Operating Licenses

AGENCY: Nuclear Regulatory Commission.

ACTION: Notification of amount of fiscal year 1990 annual fees for nuclear power reactor operating licenses.

SUMMARY: The Nuclear Regulatory Commission is hereby publishing the amount of the annual fees to be assessed during fiscal year 1990 for nuclear power reactor operating licenses.

FOR FURTHER INFORMATION CONTACT: H. Lee Hiller, Deputy Controller, U.S. Nuclear Regulatory Commission, Washington, DC 20555, telephone 301/492–7351.

Background and Notice of Fees

On December 29, 1988, the Nuclear Regulatory Commission published a final rule which revised its fee schedules contained in 10 CFR parts 170 and 171. This regulation implemented the requirements of 5601 of the Omnibus Budget Reconciliation Act of 1987 as signed into law on December 22, 1987 (Pub. L. 100–203). The law requires the NRC to collect under 10 CFR parts 170 and 171, as well as other provisions of law, not less than 45 percent of the Commission's budget for each of fiscal years 1988 and 1989. Congress limited for 45 percent recovery provision to fiscal years 1988 and 1989 after which the NRC's authority to collect fees reverts back to the level of 33 percent of the budget. As of this date, the Congress has not amended the Public Law. Therefore, for fiscal year 1990, the law requires that approximately 33 percent of the budget be collected. Based on ongoing actions by the Congress, the NRC fully expects, however, that the law will be changed to a recovery level in excess of 33 percent. Because Congress has neither changed the law nor passed an appropriation for fiscal year 1990, the NRC, in accordance with 10 CFR 171.13, is publishing the amount of the annual fees for fiscal year 1990 based on the existing law of 33 percent of the President's budget of $475 million.

Notice is hereby given, pursuant to 10 CFR 171.13, that the annual fees to be assessed in fiscal year 1990 are those amounts shown in Table I below for each nuclear power operating license. When the Congress passes a final appropriation for fiscal year 1990, the annual fee will be revised and the effected licensees notified pursuant to 10 CFR 171.13.

TABLE I—ANNUAL FEES FOR OPERATING POWER REACTORS—FY 1990

	Containment type	Annual fee
Westinghouse Reactors		
1. Beaver Valley 1	PWR-Large Dry Containment.	$718,000
2. Beaver Valley 2	do	718,000

The above fees are applicable beginning October 1, 1989 and will be collected in accordance with 10 CFR part 171. The analysis used for determining the annual fees is available in the NRC Public Document Room at 2120 L Street, NW. (Lower Level), Washington, DC 20555, the Gelman Building.

Dated at Bethesda, MD, this 25th day of August 1989.

For the Nuclear Regulatory Commission.

Ronald M. Scroggins,

Controller.

[FR Doc. 89–20500 Filed 8–30–89; 8:45 am]

BILLING CODE 7590-01-M

[Docket No. 50–170; License No. R–84; EA 88–289]

Defense Nuclear Agency Armed Forces Radiobiology Research Institute (AFRRI); Order Imposing Civil Monetary Penalty

I

Defense Nuclear Agency, AFRRI, (licensee) is the holder of License No. 50–170 (license) issued by the Nuclear Regulatory Commission (Commission or NRC) which authorizes the licensee to possess and operate the reactor as a utilization facility at the designated location in Bethesda, Maryland. The license was issued on June 26, 1962.

II

An NRC safety inspection of the licensee's activities under the license was conducted on October 26–28 and November 7, 1988. During the inspection, the NRC staff determined that the licensee had not conducted its activities in full compliance with NRC requirements. Further, based on NRC review of the findings of the Area Director of the United States Department of Labor's (DOL) Wage & Hour Office in Baltimore, Maryland, the NRC also found that one of the licensee's former employees who raised certain safety concerns was discriminated against, in violation of another NRC requirement. A written Notice of Violation and Proposed Imposition of Civil Penalty was served upon the licensee by letter dated March 22, 1988. The Notice stated the nature of the violations, the provisions of the Nuclear Regulatory Commission's requirements that the licensee had violated, and the amount of the civil penalty proposed for the violations. Two responses, dated May 4, 1989, to the Notice of Violations and Proposed Imposition of Civil Penalty, were received from the licensee denying one violation, denying portions of another violation, and requesting mitigation of the civil penalty.

III

Upon consideration of the licensee's response and the statement of facts, explanation, and argument for mitigation contained therein, the Deputy Executive Director for Nuclear Materials Safety, Safeguards and Operations Support has determined that the violations occurred as stated and that the penalty proposed for the violations designated in the Notice of Violation and Proposed Imposition of Civil Penalty should be imposed.

IV

In view of the foregoing and pursuant to Section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, It is Hereby Ordered That :

The licensee pay a civil penalty in the amount of Two Thousand Five Hundred Dollars ($2,500) within thirty days of the date of this Order, by check, draft, or money order, payable to the Treasurer of the United States and Mailed to the U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555.

V

The licensee may request a hearing within 30 days of the date of this Order. A request for a hearing shall be clearly marked as a "Request for an Enforcement Hearing" and shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commisison, Attention: Document Control Desk, Washington, DC 20555 with a copy to the Regional Administrator, Region I.

If a hearing is requested, the Commission will issue an Order designating the time and place of the hearing. If the licensee fails to request a hearing within 30 days of this Order, the provisions of this Order shall be effective without further proceedings. If payment has not been made by that time, the matter may be referred to the Attorney General for collection.

In the event the licensee requests a hearing as provided above, the issue to be considered at such hearing shall be: (a) Whether the licensee was in violation of the Commission's requirements as set forth in Violation B.1.a, B.1.b, B.2, and D of the Notice of Violation and Proposed Imposition of Civil Penalty referenced in Section II above, and (b) whether, on the basis of the admitted and contested violations, this Order should be sustained.

Dated at Rockville, Maryland this 22nd day of August 1989.

For the Nuclear Regulatory Commission

Hugh L. Thompson, Jr.,

Deputy Executive Director for Nuclear Materials Safety, Safeguards and Operations Support.

Appendix—Evaluation and Conclusions

On March 22, 1989, a Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was issued for violations identified during a routine NRC inspection and as a result of the NRC's review of the findings of the Area Director of the United States Department of Labor's (DOL) Wage & Hour Office in Baltimore, Maryland. The licensee responded to the Notice in two letters, dated May 4, 1988, and admits two of the violations in total (A and C); admits two of the five examples of one violation (B.3. and B.4.); denies three examples of that violation (B.1.a., B.1.b. and B.2); and denies one violation in total (D). The licensee also requests that the civil penalty not be imposed. The NRC's evaluation and conclusion regarding the licensee's response are as follows:

I. Restatement of Contested Violations

B. Technical Specification 6.3, Procedures, requires written procedures for certain activities (including the conduct of experiments that could affect the operation and safety of the reactor; checkout startup, standard operations, and securing the facility) to assure safe operation of the reactor.

1. Reactor Operations Procedures III, Maintenance Procedures, written pursuant to Technical Specification 6.3.1, requires that malfunctions are annotated in the Malfunction Logbook by the operator who discovered the deficiency.

Contrary to the above,

a. on July 28, 1988 and August 1, 1988, the Gas Stack Monitor (GSM) malfunctioned, but this malfunction was not recorded in the Malfunction Logbook; and

b. on June 3, 1987, the GSM pump was turned off due to an apparent malfunction (smell of smoke), but this condition was not recorded in the Malfunction Logbook.

2. Reactor Operation Procedure I, Conduct of experiments, written pursuant to Technical Specification 6.3, requires that a Reactor Use Request (RUR) be completed prior to conduct of an experiment prior to irradiation.

Contrary to the above, an experiment was conducted on October 8, 1985, and an RUR was not completed prior to irradiation.

D. 10 CFR 50.7 prohibits discrimination by a Commission licensee, or a contractor or subcontractor of a licensee, against an employee for engaging in certain protected activities. Discrimination includes discharge and other actions that relate to compensation, terms, conditions, and privileges of employment. The protected activities are established in section 210 of the Energy Reorganization Act, and in general, are related to the administration or enforcement of a requirement imposed under the Atomic Energy Act or the Energy Reorganization Act.

Contrary to the above, in October 1988, Angela Munno, a reactor operator for the Defense Nuclear Agency, was discriminated against by the licensee in that she was reassigned to duties outside the reactor area for engaging in protected activities consisting of her raising allegations of safety violations. These allegations were raised to facility management and were related to possible technical specification violations.

II. Summary of Licensee Reponse and NRC Evaluation

A. Concerning Licensee's Denial of example B.1.a

Summary of Licensee Response. In its response, the licensee asserts that no violation occurred on July 28, 1988 because the Reactor Logbook entries for that date contain no indication of a Gas Stack Monitor (GSM) malfunction and that normal GSM operation for July 26, 1988 was confirmed by review of the Daily Operational Startup and Shutdown Checklists. The licensee also contends that abnormal readings and a data dump caused by an electrical storm on the previous day (July 25, 1988), and which was discovered during testing on July 26, 1988, did not constitute a malfunction of the GSM requiring a recording in the Malfunction Log.

The licensee also states that no violation on August 1, 1988 because entries in the Reactor Operations Logbook for August 1, 1988 show no indication of a GSM malfunction and that only the GSM Printer had malfunctioned on Augeut 1, 1988 resulting in the inability of the operators to print the one hour historical report. The licensee contends that the notation on the relevant line of the Daily Operational Shutdown Checklist signifying "N/A" meant "not available" and that the unit otherwise properly performed on August 2, 1988 and thus, there was no malfunction on August 1, 1988 requiring a recording in the Malfunction Log.

NRC Evaluation. The absence of documentation of a malfunction of the GSM in the Reactor Logbook for July 26, or August 1, 1988 is insufficient to establish that the violation did not occur as stated. The NRC has concluded that a malfunction occurred based on abnormal readings in the GSM Historical Logbook which indicate an electrical upset and data dump on July 25, 1988 which was discovered on July 26, 1988. Although the data dump may have occurred as a result of the outside effect caused by the power loss from a storm, Reactor Operations Procedure III, para. 3, does not distinguish between malfunctions caused by external and internal conditions. Thus, a malfunction within the meaning of the procedure occurred on July 26, 1988 which required recording in the Malfunction Logbook.

With respect to the August 1, 1988 malfunction, the NRC considers the GSM printer to be an integral part of the GSM system and a printer malfunction is within the meaning of Reactor Operations Procedure III. Furthermore, others of the licensee's staff apparently considered the printed failure to be a malfunction within the meaning of the referenced procedure in that another operator recorded the malfunction the following day on August 2, 1988.

B. Concerning Licensee's Denial of Example B.1.b.

Summary of Licensee Response. The licensee states that the GSM was not turned off on June 3, 1987 because of a malfunction (smell of smoke) which would require a recording in the Malfunction Logbook. The licensee states that the GSM pump was turned off only because the pump noise level interfered with the conduct of a 9:00 a.m. meeting on the reactor deck and was restarted after the meeting. During the time the pump was shut down, no reactor runs were conducted.

NRC Evaluation. On June 3, 1987 AFRRI Reactor Facilities Director told the two NRC inspectors that the reason the GSM was shut down earlier on that date was because of a concern over the smell of smoke. Therefore, the NRC has concluded that this violation occurred as stated in the Notice.

C. Concerning Licensee's Denial of Example B.2.

Summary of Licensee Response. The licensee asserts that the reactor run, performed on October 8, 1988 was not an "experiment" requiring a Reactor Use Request (RUR). The licensee states the reactor run was one of a series made that day to modify a radiation environment that had been previously achieved but as to which precise core configurations were not known. Thus, the licensee maintains the reactor run constituted an example of a reactor test authorized by Technical Specification 6.4.2c, "Reactor Parameters Authorization," rather than an "experiment" requiring an RUR.

NRC Evaluation. Technical Specification 6.4.2c, "Reactor Parameters Authorization," authorizes routine measurement of reactor parameters, routine core measurements and other instrumentation and calibration checks to verify reactor outputs. In this instance, the reactor run involved the insertion of test cells into the reactor with no intention or purpose of obtaining routine reactor parameters. Instead, the reactor run was conducted in an effort to identify specific core configurations through which a slow neutron flux to produce a radiation environment could be produced that would kill the test cells. The NRC concludes that this reactor run can only be interpreted as an experiment requiring an RUR and is not a reactor test authorized by Technical Specification 6.4.2c.

D. Concerning Licensee's Denial of Violation D

Summary of Licensee Response. The licensee denies that it discriminated against an employee for engaging in protected activities (raising safety concerns) by reassigning the employee to duties outside the reactor area. The licensee asserts that upon initial receipt of the employee's allegations, an aggressive investigation of the concerns, which included attempts to obtain more specific information from the employee, was initiated and these attempts to gain further information led the employee to believe that she was being discriminated against.

The licensee states that the basis of the violation (Department of Labor investigation findings) was narrowly focused on the month prior to reassignment of the employee (September–October 1988) and failed to properly account for the actual reasons in the larger context for the employee's temporary reassignment which included a sequence of events involving the employee beginning in April 1988. The licensee maintains the employee's transfer from her duties as a Reactor Operator was not a consequence of her engaging in protected activity. Rather, it was the result of the stressful environment in the Operations Department created by deteriorating co-worker and supervisor-subordinate relationships between the employee and the remainder of the staff which had the potential to lead to unsafe reactor operations.

Furthermore, the licensee states that the employee's temporary removal was not proscribed within the definition of "discrimination" in the regulation since it had no effect on her "compensation, terms, conditions and privileges of employment." The licensee concludes that the reason for the reassignment action (reactor operational safety) fits an example of a "nonprohibited consideration" permits by 10 CFR 50.7(d).

NRC Evaluation. Notwithstanding the departmental stress and deteriorated relationships that may have existed within the Operations Department as a result of personnel conflicts between licensee management, staff, and the employee in question, based on the record established by the Area Director of DOL, the NRC concludes that the employee would not have been reassigned on October 13, 1988 had she not raised safety concerns relative to violations of requirements within the Operations Department. Further, the NRC agrees with the conclusions of the Department of Labor investigations that if the employee had recanted the allegations made on her performance appraisal, she would not have been removed and the subsequent management actions taken to support her removal would not have taken place. The Department of Labor Area Director determined that while the alleged personnel problems with the employee were said to be the basis for her removal, it was significant that the problems existed since April 1988, yet there was no management effort to formally pursue or consider her removal until immediately after the employee declined to recant her concerns in October 1988. He also found that the perceived detrimental impact on safe reactor operations as a result of the negative staff/employee relationship was only formally surfaced "after the fact" by management in an effort to support the removal.

In sum, the NRC does not dispute that there were tensions within the Operations Department between the employee and the remainder of the staff. However, the protracted period of time in which these personnel problems were said to exist during which time there was no formal management action against the employee, coupled with the employee's immediate transfer after the concerns were raised and management's "after the fact" attempt to justify the transfer, supports the conclusion that the employee was removed as a direct result of raising safety concerns. Such actions clearly carry a "chilling effect" on other employees who in the future may wish to raise safety concerns.

With respect to the assertion that the temporary removal of the employee was not discriminatory because it had no adverse affect on the "compensation, terms, conditions and privileges of employment," the NRC notes that the employee was employed as a reactor operator and to be removed to duties outside of the reactor area is clearly adverse to the terms and conditions for which she was hired. The removal of an individual from a skilled position to general duties unrelated to the individual's expertise is detrimental to her potential when compared to that of her peers. Further, because the NRC had concluded that the removal occurred because the employee was engaged in protected activities, rather than

for reactor operational safety reasons, the removal action does not constitute a "nonprohibited consideration" within the meaning of 10 CFR 50.7(d).

E. Concerning Licensee's Position That the Civil Penalty Should Not Be Imposed

Summary of Licensee Response. The licensee asserted in its May 4, 1989 response that a civil penalty should not be imposed since there are constitutional reasons which prohibit imposition of a civil penalty on AFRRI as another agency of the Federal Government. Further, the licensee states that the civil penalty may not be payable since there is a question under federal appropriations law as to whether an agency's appropriations are available to pay the penalty. The licensee implies that there has been some discrepancies in holdings by the Comptroller General in connection with this issue and therefore the disbursing or certifying official should obtain an advance decision from the Comptroller General under 31 U.S.C. § 3529. The licensee states that action will be taken to obtain such a decision. Lastly, the licensee asserts that, even as to the violations admitted, the problems actually present were not of environmental or safety significance and do not warrant imposition of a fine.

NRC Evaluation. The licensee withdrew its argument regarding the constitutionality of the imposition of civil penalties by the NRC on another agency of the Federal Government in a letter dated June 29, 1989. Regarding the question raised by the licensee as to whether its appropriations are available to pay the civil penalty, this provides no basis for the NRC not to follow the process established by the Atomic Energy Act (Section 234) and the Commission's regulations to issue an Order Imposing a Civil Monetary Penalty for violations by any person, defined to include other federal agencies, of applicable requirements. In addition, it should be noted that other agencies of the federal government licensed by the NRC have paid civil penalties for violations of NRC requirements. *See, e.g.,* letter from Gary D. Vest, Deputy Assistant Secretary of the Air Force (Environment, Safety and Occupational Health), to Hugh L. Thompson, Jr., Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support, NRC, dated June 30, 1989.

The NRC does not accept the licensee's assertion that the violations are not of environmental or safety significance. The violations represent weaknesses in the general conduct of facility operation. Although each of these violations, when reviewed individually, may not be significant, when reviewed in total, they reflect a breakdown in the licensee's program to control the conduct of operations. The NRC relies on its licensees to self-identify and correct potential problems before they can become a serious problem. The failure of the licensee to identify and correct the problems that led to the violations, and to ensure that individuals who identify safety concerns feel free to raise them to management without fear or reprisal, is a significant safety concern.

III. NRC Conclusion

For the reasons set forth above, the NRC has concluded that the violations occurred as stated in the Notice and mitigation or remission of the civil penalty is not warranted. Therefore, a civil penalty in the amount of $2,500 shouild be imposed.

BILLING CODE 7590-01-M

[Docket No. 50-322; License No. NPF-82]

Long Island Lighting Co.; Shoreham Nuclear Power Station Unit 1

Notice is hereby given that three Petitions have been received regarding the Shoreham Station. By Petition dated July 14, 1989, James P. McGranery, Jr., on behalf of the Shoreham-Wading River Central School District, requested that action be taken with regard to Shoreham Nuclear Power Station Unit 1. By Petition dated July 26, 1989, James P. McGranery, on behalf of Scientists and Engineers for Secure Energy, Inc. (SE2), requested that the same action be taken, on the same bases, as that which he requested in the Petition filed on behalf of the Shoreham-Wading River Central School District. Specifically, the Petitioner requests that the Executive Director for Operations issue an immediately effective order to Long Island Lighting Company to cease and desist from any and all activities related to the defueling and destaffing of the facility and return to the "*status quo ante*" pending further consideration by the Commission. The Petitioner further requests that such an order be accompanied by an announcement of the Commission's intention to fine the licensee a substantial amount per day for any violation or continuing violation of the Commission's orders.

As bases for his request, the Petitioner asserts that (1) the defueling of the core of the Shoreham Station involves an unreviewed safety question, because it is unnecessary and because the increased risk of accidents in the transfer of fuel to the spent fuel pool outweighs the slight additional margin of safety provided by the spent fuel pool, and, as such, requires prior Commission approval in accordance with 10 CFR 50.59; (2) the issuance of the full-power operating license for the facility was premised, among other things, on adequate staffing, and the licensee has now declared to the Commission its intention to willfully reduce staffing by about half, which would violate the basis of the issuance of its license and the licensee's prior commitments to the Commission; (3) the lack of maintenance activities at the facility is contrary to a March 1989 Operational Readiness Assessment Report; (4) the licensee's plan to substitute fossil-fuel-burning units for the Shoreham Station is a matter that may result in a significant increase in an adverse environmental impact previously evaluated in the Final Environmental Statement for the operating license and, as such, presents an unreviewed environmental question that requires prior Commission approval; (5) such an order would allow for a full environmental review pursuant to the National Environmental Policy Act (NEPA), the Council on Environmental Quality guidelines, and the Commission's regulations in 10 CFR part 51; and (6) the issuance of a license amendment authorizing decommissioning is a major Commission action significantly affecting the quality of the environment and requires an environmental impact statement or supplement to an environmental impact statement as specified in 10 CFR 51.20 (b)(5) and (b)(13).

In addition, by Petition dated August 4, 1989, Leonard Bickwit, Jr., on behalf of the Long Island Association, requested that action be taken with regard to Shoreham Nuclear Power Station, Unit 1. Specifically, the Petitioner requests that the Director, Office of Nuclear Reactor Regulation, issue an order to Long Island Lighting Company to suspend its "Minimum Posture" activities pending an investigation and an environmental review.

The above described requests are being treated pursuant to 10 CFR 2.206 of the Commission's regulations. The Petitions have been referred to the Director of the Office of Nuclear Reactor Regulation (NRR). By letter dated July 20, 1989, the Petitioner's request of July 14, 1889 for immediate action was denied. As provided by § 2.206, appropriate action will be taken on the Petitions within a reasonable time.

Copies of the Petitions and the July 20 letter are available for public inspection at the Commission's Public Document Room at 2120 L Sreet NW., Washington, DC 20555.

Dated at Rockville, Maryland, this 24th day of August 1989.

For the Nuclear Regulatory Commission.

Thomas E. Murley,

Director, Office of Nuclear Reactor Regulation.

[Docket No. 030-05980 et al., License No. 37-00030-02 et al.; EA 89-29]

Safety Light Corp. et al.; Order Modifying Licenses (Effective Immediately)

In the matter of: Safety Light Corp., United States Radium Corp., USR Industries, Inc., USR Lighting, Inc., USR Chemical, Inc., USR Metals, Inc., USR Natural Resources, Inc., Lime Ridge Industries, Inc., Metreal, Inc.; and all other successor corporations to either USR Industries or U.S. Radium Corp. (herein referred to as the Corporations)

[Docket Nos.: 030-05980, 030-05982, 030-5981, 030-08335, 030-08444; License Nos.: 37-00030-02, 37-00030-08, 37-00030-07E, 37-00030-09G, 37-00030-10G]

I

Safety Light Corporation (Safety Light) is the named licensee on Byproduct Material License Nos. 37-00030-02, 37-00030-08, 37-00030-07E, 37-00030-09G, and 37-00030-10G, issued by the Nuclear Regulatory Commission (NRC).

License No. 37-00030-02 authorizes the possession, storage, and use of any byproduct material for purposes of decontamination, cleanup, and disposal of equipment and facilities previously used for manufacturing, research and development in operations performed at the facility located at 4150-A Old Berwick Rd., Bloomsburg, PA (the Bloomsburg facility). License No. 37-00030-02 was originally issued on June 20, 1956 and was renewed on January 25, 1979. This license has been under timely renewal since February 29, 1984.

License No. 37-00030-08 authorizes the licensee to conduct research and development and to manufacture various devices containing tritium. License No. 37-00030-08 was originally issued on August 5, 1969, and was last renewed on January 6, 1983. This license has been under timely renewal since December 31, 1987. The above licenses permit use of material only at facilities at 4150-A Old Berwick Road, Bloomsburg, Pennsylvania.

License No. 37-00030-07E authorizes the distribution of timepieces, hands and dials to which luminous paint containing tritium has been applied, to persons exempt from NRC licensing pursuant to 10 CFR 30.15. License No. 37-00030-07E was originally issued on April 16, 1965 and was last renewed on May 27, 1986. This license expires on April 30, 1991.

License No. 37-00030-09G authorizes the distribution of luminous devices containing tritium to persons generally licensed pursuant to 10 CFR 31.5. License No. 37-00030-09G was originally issued on January 13, 1966 and was last renewed on October 24, 1983. This license has been under timely renewal since October 31, 1988.

License No. 37-00030-10G authorizes the distribution of sealed self-luminous sources to persons generally licensed pursuant to 10 CFR 31.7 License No. 37-00030-10G was originally issued on December 13, 1961 and was last renewed on April 22, 1985. This license expires on April 30, 1990.

II

The buildings, soil and groundwater at the Bloomsburg facility, collectively hereafter referred to as the Bloomsburg facility or facility, have become radioactively contaminated as a result of past operations at the facility. The known principal radionuclides contaminating the facility are tritium, strontium-90 (Sr-90), cesium-137 and radium-226. The levels of radioactivity exceed those that would permit unrestricted access to the facility. Tritium has also been detected off-site in the well of a nearby house. Although the tritium in that well is not yet above drinking water limits set by the U.S. Environmental Protective Agency, further off-set contamination is likely to occur over time due to the movement of groundwater and soil erosion. Pits at the facility contain unknown types and quantities of radioactive material that pose a potential threat to the health and safefy of employees and others at the facility.

III

To ensure that the Corporations would characterize the type and extent of radioactive contamination at the Bloomsburg facility, and plan and implement an orderly and timely decontamination of the facility, an Order Modifying Licenses (Effective Immediately) and Demand for Information was issued by the NRC on March 16, 1989 to the Corporations. This Order required the preparation of plans for site characterization and decontamination and specified, as part of the required site characterization plan, that "the plan shall specify the amount of funds that each of the Corporations is to provide for implementation of the plan" (section VII.B of the Order).

In two letters dated April 17, 1989, the Corporations filed answers to the March 16, 1989 Order. On June 2, 1989, after receiving an extension of time to comply with the requirement of the Order to submit a characterization plan for the site, the Corporations submitted a Joint Characterization Plan (JCP) prepared by IT Corporation for providing a radiological assessment of the Bloomsburg facility. The NRC reviewed the plan and found that it did not satisfy the terms of the Order in a number of significant respects, which were described in a letter from the NRC to the Corporations dated June 16, 1989. The NRC informed the Corporations that they were in apparent violation of the Order, and described the actions that might follow as a result of this failure to comply with the terms of the Order. Among the many apparent violations of the Order, the NRC noted in its June 16, 1989 letter that the Corporations had failed to specify funding as required by section VII.B of the Order.

The other apparent violations of the Order included: (1) The failure to describe a complete radiological and geohydrological survey of all facilities and of the surrounding surface and subsurface soil and groundwater to determine radionuclide concentrations and their lateral and depth profiles, as well as their movement in the groundwater; (2) the failure to provide for the characterization of the source of tritium contamination and for the radioactive source term, and for assessment of contaminant transport in the groundwater; (3) the failure to address the assessment of the extent to which lagoons and drainage canals are actively releasing contaminants to the environment; (4) the failure to address the characteristics of the sources of radiological contamination which may exist off-site, in general, or on the adjacent property, in particular; (5) the failure to address the assessment of the extent and rate of the off-site transport of contaminated groundwater; and (6) the failure to describe the actions that will be taken to determine whether Sr-90 and other radioactive nuclides besides tritium have also been transported off-site in groundwater.

Subsequently, the NRC held an Enforcement Conference with the Corporations on July 6, 1989. At that conference, the NRC informed the Corportions that the JCP failed to comply with the requirements of the March 16, 1989 Order. With respect to the financial aspects of the JCP, the Corporations made it clear that the JCP submitted on June 2, 1989, was intended to determine if there are any immediate health effects and reflected the Corporations' limited financial capability. The Corporations indicated that implementation of the June 2, 1989 JCP was estimated to cost $116,000 and that implementation of the characterization plan required by the Order would cost about $1,000,000. The Corporations reiterated their limited financial condition in a letter to the NRC dated July 14, 1989 and stated that

approximately $115,000 was the total amount of funds available for site characterization. The NRC has independently estimated the cost of implementation of the site characterization plan which meets the requirements of the March 16, 1989 Order and has determined that $1,000,000 (plus or minus 30%) is a reasonable estimate. Based upon information provided to the NRC by the Corporations, it appears that the net income of Safety Light Corporation is approximately $200,000 per year and USR Industries is presently running a deficit. Assets of USR Industries appear to be approximately $5,000,000, some of which may be encumbered. The President of USR Industries indicated a willingness to sell an interest in a building in Houston, Texas, to raise funds to accomplish the JCP proposed by the Corporations.

By letter dated August 10, 1989, the Corporations submitted a site characterization plan prepared by IT Corporation. The August 10th plan was stated to meet the intent of NRC's Order of March 16, 1989. While this plan described certain planning, implementation, reporting, scheduling, and quality assurance activities, the plan failed to provide any indications related to the funding to implement the plan, as required by the March 16, 1989 Order and as indicated previously in the NRC's letter dated June 16, 1989. By letter dated August 17, 1989, Safety Light Corporation certified that it committed to jointly fund the plan with USR Industries, et. al. up to a total of $115,000, of which Safety Light will fund fifty percent, with the balance required for implementation of the plan being sought from their insurance carriers. By certification dated August 18, 1989, USR Industries, Inc. and its wholly owned subsidiaries certified that they intend to fund the plan up to 50 percent of projected total costs of $115,000 and to the extent practicable seek the balance of funds from their respective insurance carriers. These certifications are inadequate to provide assurance that the require site characterization plan, which is estimated to cost approximately $1,000,000,000 will be funded. The continued failure to assure adequate funding to complete implementation of a site characterization plan which satisifies the March 16th Order is a significant concern to the NRC. The NRC's assessment of the technical adequacy of the plan will be described in future correspendence.

IV

The Corporations' failure to provide assurance of adequate funding to complete implementation of a satisfactory site characterization plan, the uncertainty regarding the nature and exent of contamination at the Bloomsburg facility, and the statements made by the Corporations' principal officers as to the limited financial resources available for site characterization, let alone decontamination, demonstrate that additional actions are immediately needed to protect public health and safety by assuring that sufficient resources are made available by the Corporations to initiate the site characterization and taken necessary immediate remedial action for any signfiicant health and safety problems. Based on the above, I have determined, pursuant to 10 CFR 2.204, that the public health, safety, and interest require that this Order be made immediately effective.

V

In view of the foregoing, and pursuant to sections 81, 161b, 161c, 161i, 161o, 182, and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.204 and 10 CFR parts 30 and 32, It is Hereby Ordered, effective immediately, that license Nos. 37-00030-02, -08, 07E, -09G, and -10G are modified as follows:

A. The Corporations shall establish a trust pursuant to a trust agreement as specified below and, within 30 days of the date of this Order, shall submit an originally signed duplicate of the trust agreement to the Regional Administrator, NRC Region I (hereafter referred to as Regional Administrator);

B. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a Federal or State agency;

C. The Corporations:

1. Shall make payments into the trust fund on or before the dates specified in the following schedule:

Date	*Deposit required*
October 2,1989	$50,000
November 1, 1989	50,000
December 1, 1989	50,000
January 2, 1990	50,000
February 1, 1990	100,000
March 1, 1990	100,000
April 2, 1990	100,000
May 1, 1990	100,000
June 1, 1990	100,000
July 2, 1990	100,000
August 1, 1990	100,000
September 4, 1990	100,000
Total	1,000,000

The Corporations shall be jointly and severally responsible for satisfying this payment schedule;

2. Shall, within 7 days of payment scheduled under section V.C.1 above, certify to the Regional Administrator, under oath or affirmation, that the payment has been made as required;

3. May accelerate payments into the trust fund or may deposit the full amount specified above at the time the fund is established. However, they must maintain the value of the fund at no less than the value that the fund would have if the payments were made as specified above;

4. Will be deemed to be without the required financial assurance or liability coverage in the event of bankruptcy of the trustee, or a suspension or revocation of the authority of the trustee institution to act as trustee, and must establish a new trust that meets the requirements given below within 60 days after such an event.

D. The trust agreement shall provide that:

1. The Corporations shall be the Grantors of the trust;

2. The Grantors shall establish the trust to provide assurance that funds will be available to implement an NRC-approved plan to characterize the type and extent of the radioactive contamination at the Bloomsburg facility and to take immediate remedial action at any time such action is necessary;

3. The Grantors shall designate an identified individual, who is a responsible corporate officer, as the Grantors' authorized representative, and two alternates;

4. The Grantors or the Grantors' authorized representative shall, with written approval from the Regional Administrator, select a contractor to implement the site characterization plan, which contractor will be the beneficiary of the trust, and which may be replaced by the Grantors on reasonable notice, with written approval from the Regional Administrator;

5. The Grantors or the Grantors' authorized representative shall have the option of selecting one or more additional contractors to plan or implement remedial action at the facility, or both, with the written approval from the Regional Administrator, which contractors would be additional beneficiaries of the trust, and which may be replaced by the Grantors on reasonable notice, with

written approval from the Regional Administrator;

6. The Trustee shall make disbursements from the trust fund to the beneficiary or beneficiaries as the Grantors or the Grantors' authorized representative shall direct in writing, with written approval of the Regional Administrator for disbursements exceeding $5,000, or as the Regional Administrator shall direct in writing;

7. The Grantors' payments of principal into the trust fund shall consist of cash, but may also consist of short-term obligations of the United States government or other property as the Regional Administrator shall approve in writing;

8. The Trustee shall invest and reinvest the principal and income of the trust fund, including interest earned, and keep the trust fund invested, without distinction between principal and income, in accordance with the following provisions: the Trustee shall hold the trust fund in demand deposits that earn interest and are insured by an agency of the United States government or in short-term obligations of the United States government, provided, however, that the Trustee may hold cash awaiting investment or distribution for a reasonable time (approximately five working days) without liability for the payment of interest;

9. The Trustee shall: (1) Within seven days after the end of each month beginning with October 1989, provide to the Regional Administrator a summary of the disbursements made during the past month to include: the date of disbursement, amount of disbursement, party receiving disbursement, and purpose for or activity accomplished by disbursement; and (2) within seven days after the end of each quarter beginning October 2, 1989, furnish to the Regional Administrator a summary accounting statement of the trust fund for the past quarter, to include: amounts paid into the trust fund, disbursements from the trust fund, interest earned, and the current value of the trust fund;

10. The Trustee may resign, or the Grantors may replace the Trustee, but such resignation or replacement shall not be effective until (1) the Grantors notify the Regional Administrator in writing that the Grantors have appointed a successor trustee and that the successor trustee has accepted the appointment; (2) the successor trustee assumes administration of the trust;

11. The Trustee shall implement orders, requests, and instructions only if they are in writing and signed by either the Grantors or the Grantors' authorized representative, with a copy to the Regional Administrator, or if they are in writing and signed by the Regional Administrator;

12. The Trustee shall notify the Grantors and the Regional Administrator, by certified mail, within seven days following the expiration of the seven day period after each month following the establishment of the Trust, if no payment is received from the Grantors during that period;

13. The trust agreement may be amended by an instrument in writing executed by the Grantors and the Trustee, with the written approval of the Regional Administrator, or by the Trustee and the Regional Administrator if the Grantors cease to exist;

14. The Trust shall be irrevocable and shall continue until terminated at the written agreement of the Grantors, the Trustee and the Regional Administrator, or by the Trustee and the Regional Administrator if the Grantors cease to exist;

15. Wherever the trust agreement refers to the Regional Administrator, it shall also be deemed to refer to the Regional Administrator's designee or the NRC Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support or his designee.

E. Should the Corporations' total payments into the trust fund ($1,000,000) be insufficient to fund implementation of the site characterization plan or to take necessary immediate remedial action and the trust fund be exhausted, the Regional Administrator may, at his discretion, and in writing, require the Grantors to make additional payments totalling no more than $300,000 into the trust fund.

The Regional Administrator or the Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support, may, in writing, relax, rescind, or modify any provision of this Order upon the showing by the Corporations, in writing, of good cause. This authority includes, but is not limited to, the authority to extend deadlines and to permit the establishment of separate trust funds with good cause shown, so long as the Corporations otherwise satisfy the requirements of this Order.

VI

The Corporations or any person adversely affected by this Order may request a hearing within 20 days of the date of its issuance. Any answer to this Order or request for a hearing shall be addressed to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, ATTN: Document Control Desk, Washington, DC 20555, with a copy to the Assistant General Counsel for Hearings and Enforcement, Office of the General Counsel, at the same address, and to the Regional Administrator, NRC Region I, 475 Allendale Road, King of Prussia, Pennsylvania 19406. If a hearing is requested by the Corporations, the Commission will issue an Order designating the time and place of hearing. If a hearing is held, the issue to be considered at the hearing shall be whether this Order should be sustained. If a person other than the Corporations requests a hearing, that person shall set forth with particularly the manner in which the petitioner's interest is adversely effected by this Order and should address the criteria set forth in 10 CFR 2.714(d). An answer to this Order or Request For Hearing shall not stay the immediate effectiveness of this Order. Upon the failure of the Corporations herein named to answer or request a hearing within the time specified, this Order shall be final without further proceedings.

Dated at Rockville, Maryland this 21st day of August 1989.

For the Nuclear Regulatory Commission

Hugh L. Thompson, Jr.,

Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support.

BILLING CODE 7590-01-M

RAILROAD RETIREMENT BOARD

Agency Forms Submitted for Office of Management and Budget Review

AGENCY: Railroad Retirement Board.

ACTION: In accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. chapter 35), the Board has submitted the following proposal(s) for the collection of information to the Office of Management and Budget for review and approval.

SUMMARY OF PROPOSAL(S):

(1) *Collection title:* Application for Employee Annuity Under the Railroad Retirement Act
(2) *Form(s) submitted:* AA-1, AA-1d and G-204
(3) *OMB Number:* 3220-0002
(4) *Expiration date of current OMB clearance:* 04/30/90
(5) *Type of request:* Revision of a currently approved collection
(6) *Frequency of response:* On occasion
(7) *Respondents:* Individuals or households
(8) *Estimated annual number of respondents:* 16,700
(9) *Total annual responses:* 22,325
(10) *Average time per response:* .4837 hours
(11) *Total annual reporting hours:* 10,799
(12) *Collection description:* The RRA provides for payment of age, disability and supplemental annuities to qualified employees. The application and related forms obtain information about the applicant's family, work history, military service, disability benefits from other government agencies and public or private pensions. The information is used to determine entitlement to and amount of annuity applied for.

(1) *Collection title:* Application for Spouse Annuity Under the Railroad Retirement Act
(2) *Form(s) submitted:* AA-3
(3) *OMB Number:* 3220-0042
(4) *Expiration date of current OMB clearance:* 04/30/90
(5) *Type of request:* Revision of a currently approved collection
(6) *Frequency of response:* On occasion
(7) *Respondents:* Individuals or households
(8) *Estimated annual number of respondents:* 19,500
(9) *Total annual responses:* 19,500
(10) *Average time per response:* .4351 hours
(11) *Total annual reporting hours:* 8,484
(12) *Collection description:* The RRA provides for the payment of annuities to spouses of railroad retirement annuitants who meet the requirements under the Act. The application will obtain information supporting the claim for benefits based on being a spouse of an annuitant. The information will be used for determining entitlement to and amount of annuity applied for.

ADDITIONAL INFORMATION OR COMMENTS: Copies of the proposed forms and supporting documents may be obtained from Ronald J. Hodapp, the agency clearance officer (312-751-4692). Comments regarding the information collection should be addressed to Ronald J. Hodapp, Railroad Retirement Board, 844 Rush Street, Chicago, Illinois 60611 and the OMB reviewer, Justin Kopca (202-395-7316), Office of Management and Budget, Room 3002, New Executive Office Building, Washington, DC 20503.

Ronald J. Hodapp,

Director of Information Resources Management.

SECURITIES AND EXCHANGE COMMISSION

[34-27174; File No. SR-ICC-89-02]

Self-Regulatory Organizations; Filing of Proposed Rule Change by the Intermarket Clearing Corporation Relating to Delivery and Settlement of Treasury Bond Futures Contracts

August 24, 1989.

Pursuant to section 19(b) (1) of the Securities Exchange Act of 1934, 15 U.S.C. 78s(b) (1), notice is hereby given that on August 15, 1989, The Intermarket Clearing Corporation ("ICC") filed with the Securities and Exchange Commission the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change is intended to facilitate the delivery and settlement of Treasury Bond Futures Contracts for which the New York Futures Exchange ("NYFE" or "Exchange") is the designated contract market. These contracts will be eligible for cross-margining.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule change is intended to facilitate the delivery and settlement of on-the-run Treasury Bond Futures contracts for which the New York Futures Exchange ("NYFE" or "Exchange") is the designated contract market. Identical rules were submitted to the Commodity Futures Trading Commission ("CFTC"). The CFTC has approved ICC's rule changes in accordance with Regulation 1.41b of the Commodity Exchange Act.[1] Although this rule change relates primarily to ICC's futures clearing activities, this rule change is being submitted pursuant to section 19(b)(2) in that it is a product which ICC intends to make eligible for cross-margining.

Because the provisions of Chapter XIII are based in numerous respects upon other ICC rules that already have been reviewed and approved by the Securities and Exchange Commission, the discussion below focuses principally upon those aspects of the rules in Chapter XIII that differ significantly from other Rules of ICC.

Rule 1301 provides generally that the Rules in Chapter XIII are applicable to NYFE Treasury bond futures and that, except to the extent that specific rules in Chapter XIII shall govern, the provisions of all other Rules of ICC continue to apply. Rule 1302 sets forth certain definitions for purposes of Chapter XIII. The definition of the term "notice day," contained in Rule 1301(c), reflects the special provision for deliveries on the last day of the delivery month. As discussed in greater detail in connection with Rule 1307, any open short positions for which a delivery notice has not already been tendered must at that point be settled by delivery on the last business day of the delivery month. A delivery notice is superfluous in such circumstances and ICC will instead require deliveries to be made in accordance with the reports of positions it has already received from its Clearing Members. Rule 1305(a) accordingly provides that ICC will not accept notices calling for delivery on the last business day of the delivery month. For ease of reference, however, the Rules in Chapter XIII continue to employ the generally accepted terminology of "last notice day" to denote the date on which notices would otherwise be required to be submitted in respect of all remaining open positions and Rule 1301(c) so provides. The remaining defined terms are self-explanatory and conform to the substance of the proposed NYFE rules.

The proposed NYFE contract will trade on a quarterly cycle, with delivery taking place during the contract month on any business day during that month. In general, Clearing Members who intend to deliver on that contract must issue a notice of their intention to deliver two business days before the intended delivery date. (As noted above, an exception has been made for deliveries that are to be made on the last business day of the delivery month.) ICC will assign ("allocate") delivery notices on an oldest-open-long basis except on the last delivery day when ICC will net the long and short positions in the accounts of Clearing Members. Rules 1303–1310 implement these provisions.

---

[1] *See*, letter from John C. Lawton, Associate Director, Division of Trading Markets, Commodity Futures Trading Commission to James C. Young, Assistant Secretary of the Intermarket Clearing Corporation, dated April 6, 1989 and attached to SR-ICC-89-02 as "Exhibit A."

Because deliveries will be allocated by ICC to the oldest open long and because there will be no netting of deliveries until the last business day of the delivery month, ICC will require all Clearing Members to report to ICC their total (gross) open long position in each account maintained by that Clearing Member with ICC. Under Rule 1303, these reports will be required to be submitted three business days before the first notice day through and including the last notice day of the delivery month. Because the timely submission of accurate reports is essential to the processing of delivery notices and assignments, Rule 1303 further provides that a Clearing Member will be subject to discipline if it fails timely to submit the required reports or if those reports are found to be substantially inaccurate.

Rule 1304 provides that the delivery date for Treasury bond futures will be the second business day after a selling Clearing Member (as defined in Rule 101(g)) has tendered a delivery notice to ICC in accordance with the provisions of Rule 1305. Taken together, Rules 1304 and 1305 implement proposed Exchange Rule 831 and provide that a selling Clearing Member may tender such a notice on any notice day other than the last notice day of the delivery month. Rule 1304(b) provides that ICC may advance or postpone any delivery date for Treasury bond futures contracts whenever such action is deemed by ICC to be necessary or desirable to meet unusual conditions. Similar provisions are contained elsewhere in ICC rules. See, e.g., Rule 1203(b) (foreign currency futures).

As noted above, Rule 1305 provides that a selling Clearing Member that intends to make delivery must tender a delivery notice to ICC two business days before the intended delivery date. That Rule further provides that notices that are not timely received will not be accepted by ICC and any notice tendered after that time will be null and void and of no force or effect unless validly tendered on a subsequent business day. Rule 1305(b) provides generally that a selling Clearing Member must issue a delivery notice for each of its accounts for which it intends to make delivery on the date specified in the notice. That Rule additionally specifies that a Clearing Member is not permitted to net deliveries in or between accounts of the Clearing Member except as provided in Rule 1307(g), which governs deliveries on the last business day of the delivery month.

Rule 1306 states the general obligation of a Clearing Member to cause all positions that remain open after the close of trading in a delivery month to be settled by: (i) Making or taking delivery or (ii) entering into an exchange of Treasury bond futures for Treasury bonds or comparable instruments in accordance with the rules of the Exchange ("an exchange for physicals" or "EFP"). ICC Rule 1306 corresponds to proposed NYFE Rule 830 and provides that notice of any exchange for physicals consummated after the close of trading must be received by ICC no later than 1:00 p.m. Chicago time (2:00 p.m. New York time) on the second business day after the last trading day in the delivery month.[2]

Rule 1307(a) sets for ICC's procedures for the assignment of delivery notices during the delivery month. As noted above, ICC will allocate delivery notices to Clearing Members on an oldest-open-long basis. Rule 1307 provides, however, that positions that are offset on the business day on which a delivery notice is received by ICC will not be subject to allocation as long as the offset of that position is reflected in the reports made by a Clearing Member to ICC in accordance with Rule 1303. Rule 1307(a) further provides that where the number of contracts to be delivered pursuant to the terms of delivery notices received by ICC on any business day is less than the number of open long positions established on a particular date, ICC will allocate those delivery notices on a pro rata basis to all Clearing Members having long positions established on that date. An Interpretation and Policy following Rule 1307 provides that where the converse situation is applicable (i.e., the number of contracts to be allocated equals or exceeds the number of "oldest open longs"), ICC will endeavor to match delivering and receiving Clearing Members so as to minimize the number of deliveries.

These procedures are unnecessary and inappropriate on the last delivery day because a Clearing Member that has long or short positions remaining open on that day will be required to settle those positions by making or taking delivery, as the case may be. As discussed above in connection with the definition of "notice day," ICC will not accept delivery notices on the last notice day. ICC will instead net deliveries in the accounts of Clearing Members and assign the obligation to make or take delivery on any remaining positions on the basis of the position reports submitted to ICC by its Clearing Members.

Specifically, Rule 1307(b) provides that ICC will determine at or before 7:00 a.m. Chicago time (8:00 a.m. New York time) the number of long and short Treasury bond futures contracts remaining open in each account of a Clearing Member: (i) For which a delivery notice has not been submitted by that Clearing Member to ICC (in respect of a short position) or (ii) as to which ICC has not already allocated a delivery notice received from a Clearing Member (in respect of a long position).[3] Having determined the remaining open and unallocated gross position in each account of its Clearing Members, ICC will net the settlement obligations of each Clearing Member in the firm account (and any non-customer account) of that Clearing Member and separately, in the customer accounts of the Clearing Member. Unlike other contracts cleared by ICC, such as the foreign currency contracts traded on the Philadelphia Board of Trade, ICC does not presently contemplate that it will net positions between the firm account of a Clearing Member and its customer accounts.[4]

---

[2] Proposed NYFE Rule 830 provides that there is to be no trading in Treasury bond futures during the last seven business days of a delivery month and further provides that any EFP conducted after the close of trading must be submitted to ICC by no later than the fifth business day prior to the last business day of the delivery month. Thus, the time limit established by that Rule for the submission of EFP transactions—the fifth business day prior to the last business day of the delivery month—is equivalent to the second business day after the last trading day set forth in ICC Rule 1306.

[3] Because there is a two-day interval between the tender of a delivery notice to ICC and the obligation to make and take delivery on the contracts represented by that notice, there may be open positions in the account of a Clearing Member on the last notice day for which delivery notices have already been tendered to ICC or allocated by ICC to a Clearing Member. Any such contracts would be settled in the usual manner without regard to the last-day netting provisions of Rule 1307(b).

[4] ICC Rule 402 authorizes a Clearing Member to establish and maintain with ICC different types of accounts, including a "firm account," a "public customers' account," and various accounts for floor traders and others who, depending on their relationship to the Clearing Member, may appropriately be contained in a "proprietary trader's account," a "customer floor trader's account," a "combined floor traders' account," or an "off-floor trader's account." Rule 1307(b) provides that the firm (house) account of the Clearing Member is to be netted against any positions remaining open in any non-customer accounts of the

Continued

Thus, any net long or short positions remaining open in either of those types of accounts will be settled by delivery in the same manner as any other position.

Rule 1307(c) describes the reports issued by ICC to facilitate the delivery process. Where deliveries are being made in the usual manner, ICC will issue to each Clearing Member a report, identifying for each Clearing Member: (i) The identity of the opposite Clearing Member with whom settlement is to be made; (ii) the accounts of the Clearing Member for which delivery is to be made or taken; (iii) the delivery date; (iv) the number of contracts for which delivery is being made; and (v) the settlement price of Treasury bond futures on the date the delivery notice was tendered to ICC or, in the case of deliveries remaining to be made on the last delivery day after the netting process required by Rule 1307(b) has been completed, the date on which a delivery notice was allocated in accordance with that Rule. Where, however, the positions of a Clearing Member have been netted in accordance with rule 1307(b)(2) or (b)(3), a report specifying the terms on which settlement by delivery is to be made is inappropriate. A provision to Rule 1307(c) therefore provides that ICC will in such a case issue a report reflecting the netting that has already been conducted in the accounts of the Clearing Member.

Rule 1308(a) provides that where a Clearing Member's settlement obligations have been netted as described above, those obligations will be deemed to be discharged on the last delivery day. This is similar to the treatment of netted foreign currency deliveries, which pursuant to the terms of Rule 1206, are deemed to be fully discharged at the time those contracts would otherwise have been settled by delivery. Rule 1308 also affords similar treatment to those situations in which a delivery notice tendered by a Clearing Member to ICC is allocated to that same Clearing Member because the Clearing Member is among the "oldest open longs."

Rule 1308(b) implements proposed NYFE Rule 830(f) and sets forth the information which must be included in the delivery instructions issued by a Clearing Member. These instructions, which must be issued by the Clearing Member prior to 2:00 p.m. Chicago time (3:00 p.m. New York time) on the business day on which open short positions have been allocated by ICC to the receiving Clearing Members (i.e., the day after the delivery notice was tendered to ICC), must include a description of the Treasury bonds that are to be delivered, an invoice for the delivery amount for each contract, the delivery date, the delivering Clearing Member's correspondent bank and account number at that bank, and such other information as ICC deems necessary. Rule 1308(c), in turn, requires the receiving Clearing Member to provide to the delivering Clearing Member by 3:00 p.m. Chicago time (4:00 p.m. New York time) on the same business day a Banking Notification containing the information necessary to complete delivery.

Rule 1308(d) corresponds to proposed NYFE Rule 830(j) and provides, in essence, that the delivering Clearing Member must have Treasury bonds in place at a correspondent bank (as defined in rule 1309) by no later than 10:00 a.m. Chicago time (11:00 a.m. New York time) on the delivery date. Delivery is to be made by book entry against payment of the delivery amount in Federal funds in accordance with the applicable procedures of the Department of the Treasury. Except as otherwise provided in paragraphs (f) and (g) of Rule 1308 (relating to banking holidays and failures of the "Fedwire" system), all deliveries must be completed by 1:00 p.m. Chicago time (2:00 p.m. New York time) on the delivery date.

Rule 1310 corresponds to the provisions of proposed NYFE Rules 822(c) and 830(g) and provides that the amount to be paid in settlement of a Treasury bond futures contracts is equal to the settlement price on the date: (i) The delivery notice has been tendered to ICC in accordance with Rule 1305 or (ii) on which outstanding delivery obligations are netted or allocated in accordance with Rule 1307(b) (in effect, the last notice day) multiplied by the price at which the Treasury bond with the same time to maturity or call and the same coupon rate as the issue to be delivered will yield 8%, as determined in accordance with bond tables disseminated by the Exchange. Under Rule 1310, interest accrues only through and including the delivery date so as to remove any incentive for a short Clearing Member to fail to make delivery.

Rules 1311–1313 relate to a Clearing Member's failure to make or take delivery and are similar to the provisions of existing ICC Rules 1209–1211. The principal difference is contained in ICC Rule 1311 which provides that in the event of the failure of a Clearing Member to deliver Treasury bonds, the receiving Clearing Member may wait up to 20 days before issuing a notice of its intention to buy in the undelivered Treasury bonds. These provisions parallel the rules of the Public Securities Association for failed deliveries of Treasury securities instruments in the cash market and also correspond closely to Rule 1400 of The Options Clearing Corporation ("OCC") relating to the failure to deliver on Treasury securities options issued and cleared by OCC.

As required by Commission Regulation 190.05(b), ICC Rule 1314 permits customers to make or take delivery in the event that the Clearing Member carrying their account has been adjudicated bankrupt or has filed a voluntary petition for bankruptcy at the time that any of the events specified in that Regulation have transpired. Rule 1314 is substantially similar to existing ICC Rule 1213 but makes allowance for the possibility that a delivery notice may have been tendered by a delivering Clearing Member or allocated to a receiving Clearing Member before the date of the entry of the order for relief.[5] A proviso makes clear that a customer electing to proceed under the provisions of this Rule must provide written notice of that election prior to the time that its Clearing Member would have been required to provide any notice or perform any act required by the ICC Rules governing such deliveries. The purpose of this provision is to ensure that non-defaulting Clearing Members who are receiving delivery from or making delivery to the customers of the bankrupt Clearing Member are not disadvantaged or exposed to financial loss by the failure of a customer to provide timely notice of its intentions in this regard. This provision also has the effect of making it impossible for a customer to take advantage of the

---

Clearing Member, such as a proprietary floor trader's account. That Rule further specifies that the public customers' account is to be netted against all other accounts of the Clearing Member (i.e., any customer floor trader, combined floor trader, or off-floor trader accounts).

[5] These latter provisions are unnecessary in respect of foreign currency futures contracts because deliveries on those contracts are made only where positions have not been liquidated by the close of trading in the contract. Unlike the Treasury bond futures contract, delivery notices cannot be issued or allocated in currency futures prior to the last trading day and no provision corresponding to Regulation 190.05(b)(1)(ii) of the Commodity Exchange Act is necessary in that context.

fortuity of its Clearing Member's bankruptcy to extend any of the deadlines that would otherwise have been applicable to that customer absent the intervening bankruptcy.

Interpretations and Policies .01 to Rule 1308 clarifies the responsibilities of the parties in their efforts to comply with Regulation 1.42 of the Commodity Exchange Act. Regulation 1.42 directs the contract market to furnish, or cause to be furnished, certain information and delivery advices to the Commodity Futures Trading Commission ("CFTC") upon a special call from the CFTC or its designee. In practice, the information that is required by the CFTC in furtherance of its market surveillance program, which includes the quantity, maturity and yield of the instrument being delivered, is not contained in the program delivery notices issued by ICC. Instead, the information is included in delivery instructions issued by a short Clearing Member to a long Clearing Member that previously had been assigned a delivery notice by ICC. Since these instructions are handled solely by the delivering and the assigned Cleaning Member, ICC would have no knowledge of the contents of those instructions absent a failure to deliver or receive by either Clearing Member. Interpretation and Policy .01 clarifies that it is the Clearing Member's obligation to provide this information once the CFTC issues a special call for that information.

This provision also has the effect of making it impossible for a customer to take advantage of the fortuity of its Clearing Member's bankruptcy to extend any of the deadlines that would otherwise have been applicable to that customer absent the intervening bankruptcy.

The proposed rule change is consistent with the purposes and requirements of section 17A of the Securities Exchange Act of 1934, as amended because it expands the products which would be eligible for cross-margining. Cross-margining of these positions would enhance the safety of the clearing system while providing lower clearing margin costs to ICC's Clearing Members.

B. Self-Regulatory Organization's Statement on Burden on Competition

ICC does not believe that the proposed rule change would impose any burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

Comments were not and are not intended to be solicited with the proposed rule change and none were received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the **Federal Register** or within such longer period: (i) As the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding, or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve such proposed rule change, or,

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to the file number SR–ICC–89–02 and should be submitted by September 21, 1989.

For the Commission by the Division of Market Regulation, pursuant to delgated authority.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Release No. 34-27177; File No. SR-NASD-89-24]

Self-Regulatory Organizations; National Association of Securities Dealers, Inc.; Order Approving Proposed Rule Change Relating to the Definition of Direct Participation Programs in Schedule C to the By-Laws

The National Association of Securities Dealers, Inc. ("NASD") submitted on May 17, 1989, a proposed rule change pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act") and Rule 19b–4 thereunder to exclude from the definition of "direct participation programs" in part II, section 2(d)(ii) of Schedule C to the NASD By-Laws those programs that are quoted on the NASDAQ System or listed on a registered national securities exchange or for which an application for quotation or listing has been made.

Notice of the proposed rule change together with its terms of substance was given by the issuance of a Commission release (Securities Exchange Act Release No. 27036, July 24, 1989) and by publication in the **Federal Register** (54 FR 30494, July 20, 1989). No comments were received with respect to the proposed rule change.

The Commission finds that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to the NASD and, in particular, the requirements of section 15A and the rules and regulations thereunder.

It is therefore ordered, pursuant to section 19(b)(2) of the Act, that the above-mentioned proposed rule change be, and hereby is, approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority, 17 CFR 200.30–3(a)(12).

Dated: August 24, 1989.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8010-01-M

[Rel No. IC–17119; 812-7288]

Keystone America Equity Income Fund, et al.; Application To Amend a Prior Order

August 24, 1989.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of Application for Exemption under the Investment Company Act of 1940 ("1940 Act").

APPLICANTS: Keystone America Money Market Fund, Keystone America Tax Free Money Market Fund (together, "Money Market Funds"), Keystone America Equity Income Fund, Keystone America Fund of Growth Stocks, Keystone America Global Opportunities Fund, Keystone America Government Securities Fund ("KA Government"), Keystone America High Yield Bond Fund ("KA High Yield"), Keystone America Investment Grade Bond Fund, Keystone America Tax Free Income Fund (collectively, "Load Funds"), Keystone America Global Income Fund (formerly, International Heritage Fund) ("Global") and Keystone America Omega Fund, Inc. (formerly, Omega Fund, Inc.) ("Omega") (all of the above, "Keystone America Funds") and Keystone Distributors, Inc. ("KDI") (collectively, "Applicants"), on behalf of themselves and other registered open-end companies which may in the future become members of the Keystone America "group of investment companies," as defined in Investment Company Act Release No. 16504 (July 20, 1988) (together with the Keystone America Funds, "Keystone America Fund Group").

RELEVANT 1940 ACT SECTIONS: Amended exemptive order requested should be accompanied by proof of service on the Applicants in the form of affidavits or, for lawyers, certificates of service. Requests for notification of a hearing may be made by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 5th Street, Washington, DC 20549. Applicants, c/o Alan C. Porter, Esq., Sullivan & Worcester, 1025 Connecticut Avenue, NW., Washington, DC 20036.

FOR FURTHER INFORMATION CONTACT: Staff Attorney Cathey Baker (202) 272–3033 or Branch Chief Karen L. Skidmore (202) 272–3023 (Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application is available for a fee. One may obtain a copy by going to the SEC's Public Reference Branch or by telephoning the SEC's commercial copier (800) 231–3282 (in Maryland (301) 258–4300).

Applicants' Representations

1. The Keystone America Funds are open-end management investment companies registered under the 1940 Act. Each is a Massachusetts business trust, with the exception of Omega, a Massachusetts corporation. Keystone Custodian Funds, Inc. ("Keystone") is investment adviser and manager of the Keystone America Funds and KDI, a wholly-owned subsidiary of Keystone, is principal underwriter.

2. Shares of the Money Market Funds are sold at their net asset value without an initial or deferred sales load, except that a CDSL may be assessed upon redemption of Money Market shares acquired by means of an exchange from a Load Fund to the extent under section 6(c) exempting the Applicants from sections 2(a)(32), 2(a)(35), 22(c), 22(d) of the 1940 Act and Rule 22c–1.

SUMMARY OF APPLICATION: Applicants seek an order amending the order issued in Investment Company Act Release No. 15684 (April 15, 1987) ("Prior Order"). The amended order would permit Global, Omega and future members of the Keystone America Fund Group, in accordance with the terms and conditions of the Prior Order and consistent with proposed Rule 6c–10, to waive an initial sales load on sales of certain shares, to assess a contingent deferred sales charge ("CDSL") on redemptions of certain shares, and to waive or credit amounts against the CDSL in certain instances. In addition, the amended order would provide exemptive relief permitting the Applicants (ii) to waive the initial sales load and the CDSL with respect to shares of Omega purchased after April 19, 1989 by shareholders of Omega of record as of May 1, 1987, and (iii) to waive the CDSL on redemptions of shares of Global and Omega outstanding on April 19, 1989.

FILING DATE: The application was filed on April 7, 1989, and amended on June 23, 1989 and July 21, 1989.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing the SEC's Secretary and serving the Applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on September 18, 1989, and should state the nature of the requester's interest, the reason for the request, and the issues contested. Hearing requests also that the exchanged shares would have been subject to a CDSL at the time of redemption. The exchange privilege under the Prior Order is discussed below. Shares of each Load Fund are offered for sale at their net asset value plus a 2% initial sales load (2.04% of the net amount invested). The initial sales load is paid to KDI, which, in turn, normally pays the selling broker or dealer 4% of the offering price (4.08% of the net amount invested). Shares may also be purchased directly from KDI. In this event, KDI receives and retains the 2% initial sales load paid by the invester, but no payments are made to KDI with respect to such shares under the Distribution Plan described in item 3 below. The 2% initial sales load is waived on certain share sales, as described further below.

3. Each Load Fund has adopted a plan of distribution in accordance with Rule 12b–1 under the 1940 Act ("Distribution Plan") which provides that amounts may be expended daily at an annual rate of 0.75% of average daily net asset value to finance any activity which is principally intended to result in the sale of shares. Amounts paid to KDI under the Distribution Plan are used to pay others, such as brokers or dealers, a commission and/or (ii) maintenance fees.

4. The Prior Order permits the Applicants (other than Global, Omega and future members of the Keystone America Fund Group, as defined in this application) to waive an initial sales load on sales of certain shares, to assess a CDSL on certain redemptions of shares within four calendar years after their purchase, and to waive or credit amounts against the CDSL in certain instances. If imposed, the CDSL is 2% of the lesser of (i) the net asset value of the shares redeemed, or (ii) the net cost of such shares. Such amount is deducted from the redemption proceeds otherwise payable to the shareholder and is retained by KDI. In determining whether a CDSL is payable, shares not subject to the CDSL, as described in the following sentence, are redeemed first; thereafter, it is assumed that shares held the longest are the first to be redeemed. No CDSL is assessed when the shareholder redeems (i) shares representing amounts attributable to increases in the value of an account above the net cost of the investment due to increases in net asset value per share, (ii) certain shares with respect to which a commission is not paid upon issuance, including shares acquired by reinvestment of dividends and distributions, or (iii) shares held during more than four consecutive calendar years. In no event does any combination of the initial sales charge and the CDSL exceed applicable limitations imposed by the Rules of Fair Practice of the National Association of Securities Dealers, Inc. ("NASD Rules"). Assets represented by redeemed shares are removed from the asset base on which the percentage charge paid under the Distribution Plan will be calculated.

5. Both the initial sales charge and the CDSL are waived with respect to shares sold to certain affiliated purchasers, employee benefit plans and banks which are eligible under the terms of the

Prior Order. In addition, the CDSL is waived on the redemption of shares (i) following the death or disability of a shareholder, (ii) a lump-sum distribution from a benefit plan qualified under the Employment Retirement Income Security Act of 1974 ("ERISA"), (iii) systematic withdrawals from ERISA plans if the shareholder is at least 59½ years old, (iv) involuntary redemptions of accounts having an aggregate net asset value of less than $1,000, or (v) systematic withdrawals under a systematic withdrawal plan of up to 1½% per month or 4½% per quarter of the shareholder's net investment. The Prior Order also permits a one-time only reinvestment privilege under which a shareholder may elect to make a reinvestment purchase with any part of the proceeds of a total or partial redemption of shares. The dollar amount of the deferred sales load previously deducted is credited and the initial sales load on the subsequent purchase is waived. The calendar year of the purchase of shares acquired by reinvestment, for purposes of any future deferred sales load, is deemed to be the year the redeemed shares were originally purchased. Such an election must be made within 30 days of the date of redemption and the shares purchased must be those of the fund whose shares were redeemed.

6. The Prior Order also permits the implementation of an exchange privilege pursuant to which shareholders of a Keystone America Fund may exchange their shares for shares of another Keystone America Fund on the basis of their respective net asset values without an initial sales load or CDSL. However, if the shares tendered for exchange have been held for fewer than four years and are still subject to a CDSL, the CDSL carries over to the shares acquired in the exchange transaction, and the calendar year of purchase for the acquired shares, for purposes of any future CDSL, is deemed to be the year the exchanged shares were originally purchased. A $5 charge is imposed for each exchange transaction.

7. Prior to April 19, 1989, Global and Omega were managed by International Heritage Corp. ("IH Corp.") and distributed by International Heritage Securities, Inc. ("IH Securities"). Keystone and IH Corp. entered into a Purchase and Sale Agreement dated December 16, 1988, under which IH Corp. agreed to sell to Keystone all of its assets relating to the business of providing investment management services to Global and Omega, subject to certain conditions, including shareholder approval of the proposals. Pursuant to such approvals, two portfolios of Global were merged, respectively, into KA Government and KA High Yield, and the names of Omega and Global, respectively, were changed to Keystone America Omega Fund, Inc. and Keystone America Global Income Fund. The reorganizations of the Global portfolios were completed on April 6, 1989. The distribution arrangements of KA Government and KA High Yield are being conducted in accordance with the terms and conditions of the Prior Order.

9. On April 19, 1989, Global and Omega became members of the Keystone America Funds and KDI replaced IH Securities as principal underwriter of Global and Omega. In addition, Global and Omega each adopted a plan of distribution in accordance with Rule 12b–1 under the 1940 Act identical in all material respects to the Distribution Plan of the Load Funds described in item 3 above.

10. The Applicants propose that Global, Omega and future members of the Keystone America Fund Group be permitted to waive the initial sales charge on sales of certain shares, to impose a CDSL on redemptions of certain shares, and to waive or credit amounts against the CDSL in certain circumstances, all in the same manner as the other Keystone America Funds under the Prior Order. In addition, the Applicants propose to waive the CDSL on redemptions of shares of Global and Omega outstanding on April 19, 1989. The Applicants also propose to waive the initial sales load and the CDSL with respect to Omega shares purchased after April 19, 1989 by shareholders of Omega of record as of May 1, 1987. Such persons became Omega shareholders when shares of Omega were distributed on a no-load basis. These shareholders have been given the right, which KDI has agreed to maintain, to reinvest in Omega shares without being subject to an initial sales load and to redeem shares of Omega without imposition of a deferred sales load. Shares of Global and Omega purchased after April 19, 1989 by shareholders of Global and by shareholders of Omega who became shareholders of record after May 1, 1987 will be subject to the 2% initial sales load and the CDSL. The Applicants will meet all the conditions of Rule 22d–1 in connection with any waivers of the initial sales load, as well as in connection with waivers of or credits against the CDSL. In each case, all waivers will be applied uniformly in a manner consistent with the provisions of Rule 22d–1.

11. The Applicants will offer the exchange privilege permitted by the Prior Order to shareholders of Global and Omega on the same basis. In implementing the exchange privilege with respect to Global and Omega, the Applicants will rely upon Rule 11a–3, as adopted by the Commission in Investment Company Act Release No. 17087 (August 3, 1989).

Applicants' Legal Analysis and Conclusions

1. The Prior Order was sought on behalf of the then existing Keystone America Funds and such other Keystone America funds as might be organized in the future. The Prior Order is not applicable to Global and Omega because they were organized prior to its issuance and were not members of the Keystone America Fund Group at that time. The Applicants submit that the requested order is appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the 1940 Act. The Applicants acknowledge that they bear the burden of ensuring that the administration of the sales load, the CDSL and the exchange offer comply with the conditions set forth below. The Applicants further acknowledge that the granting of the requested order will not imply Commission approval, authorization or acquiescence in any particular level of payments that may be made pursuant to the Distribution Plan adopted by any member of the Keystone America Fund Group. The Boards of Trustees or Directors of the Keystone America Funds in their respective periodic 12b–1 reviews will consider, among other things, the revenues received by KDI as a result of imposition of the CDSL. The Boards of Trustees or Directors will also consider whether shareholders have paid, or are reasonably likely to pay, directly or indirectly, more for sales or promotional services or activities than the maximum sales charge that could have been imposed on shares of the Keystone America Funds at the time of purchase under the NASD Rules.

Applicants' Conditions

The Applicants agree that the following may be made conditions to the proposed relief:

1. The Applicants will comply with the provisions of Rule 11a–3, Investment Company Act Release No. 17087 (August 3, 1989), as adopted and as it may be modified in the future.

2. The Applicants will comply with Rule 12b–1, as adopted and as it may be modified in the future.

---

3. The Applicants will comply with the provisions of proposed rule 6c–10, Investment Company Act Release No. 16169 (November 2, 1988), 53 FR 45275 (November 9, 1988), as such rule is currently proposed and as it may be further revised and/or adopted.

For the Commission, by the Division of Investment Management, under delegated authority.

Shirley E. Hollis,

Assistant Secretary.

BILLING CODE 8025-01-M

Temporary Disqualification of Certain Newly Legalized Aliens from Receiving Financial Assistance

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: On July 12, 1989, the Immigration and Naturalization Service published final regulations (INS rule) in the **Federal Register** (54 FR 29434) to implement the Immigration Reform and Control Act of 1986, Public Law 99–603, 100 Stat. 3359. With certain exceptions, such INS rule prescribes that newly legalized aliens are temporarily disqualified from receiving financial assistance under various Government programs. By this Notice, the Small Business Administration is implementing the INS rule.

EFFECTIVE DATE: October 2, 1989.

ADDRESS: Comments may be sent to Harry D. Kempler, Chief Counsel for Business Loans, Office of General Counsel, Small Business Administration, 1414 L Street, NW., Washington, DC 20416. Telephone (202) 653–6757.

SUPPLEMENTARY INFORMATION: Notice is hereby given that pursuant to section 245A(h) of the Immigration and Nationality Act ("Act"), as amended aby section 201 of the Immigration Reform and Control Act of 1986, Public Law 99–603 ("IRCA"), aliens granted lawful temporary resident status pursuant to section 245A(a) ("legalization") are not eligible for a period of five years after such grant to receive a direct or guaranteed loan ("financial assistance") from the Small Business Administration (SBA) under section 7(a) of the Small Business Act. To reflect the IRCA provisions, the Immigration and Naturalization Service amended its regulations (8 CFR Part 245a) which were published in the **Federal Register** on July 12, 1989 (54 FR 29434).

Such temporary disqualification (for five years after being granted legalization) does not apply under IRCA to a Cuban or Haitian entrant as defined in paragraph (1) or (2)(A) of section 501(e) of Public Law 96–422, 94 Stat. 1799, or to an alien who is an aged, blind or disabled person as defined in section 1614(a)(1) of the Social Security Act (42 USC 1382c).

A Cuban or Haitian entrant means any individual granted parole status as a Cuban/Haitian Entrant (Status Pending) or granted any other special status subsequently established under the immigration laws for nationals of Cuba or Haiti, regardless of the status of the individual at the time assistance or services are provided. The term also includes any other national of Cuba or Haiti who (1) was paroled into the United States and has not acquired any other status under the Immigration and Nationality Act; or (2) is the subject of exclusion or deportation proceedings under the Immigration and Nationality Act; or (3) has an application for asylum pending with the the Immigration and Naturalization Service.

Generally, the definition of an aged, blind or disabled person in section 1614(a)(1) of the Social Security Act is equivalent to the criteria of the SBA in determining eligibility for handicapped assistance.

SBA has developed a form of self-certification (SBA Form 1261A) which each applicant for a loan under section 7(a) of the Small Business Act will be required to fill out at the time of application in order to assist SBA to determine whether the applicant is temporarily disqualified for SBA financial assistance under section 7(a) of the Small Business Act because of legalization. This form will be included in SBA's normal application eligibility review process.

Dated: August 16, 1989.

Susan Engeleiter,

Administrator.

BILLING CODE 8025-01-M

[Application No. 09/09–0386]

First Commerce & Loan Limited Partnership; Application for a License To Operate as a Small Business Investment Company

Notice is hereby given for the filing of an application with the Small Business Administration (SBA) pursuant to § 107.102 of the regulations governing small business investment companies (13 CFR 107.102 (1989)), by First Commerce & Loan Limited Partnership, (the Applicant), 2806 N. Camino Principal, Tucson, Arizona 85715 for a license to operate as a limited partnership small business investment company (SBIC) under the provisions of the Small Business Investment Act of 1958, as amended, (the Act), (15 U.S.C. 661. *et seq.*) and the Rules and Regulations.

The general partners, its officers and directors of the Applicant are as follows:

Name	Title
First Commerce and Loan, Inc., 2806 North Camino Principal, Tucson, AZ 85715.	Corporate General Partner.
Ross M. Horwitz, 2806 North Camino Principal, Tucson, AZ 85715.	Individual General Partner, SBA General Manager, President, Director, and sole stockholder of the Corporate General Partner.
Allen A. Abrahamson, 816 East Avenue, Bayhead, NJ 08742.	Director, Vice President of Finance.
Jeffrey W. Goldstein, 355 E. River Road, Tucson, AZ 85718.	Vice President of Marketing.
Stella Kollopoulos, 6001 E. Pima, #256, Tucson, AZ 85712.	Secretary-Treasurer.
Joe Acosta, 4869 E. Lafayette Blvd., Phoenix, AZ 85015.	Director.
John T. Emery, 110 Elsa Drive, Fullerton, CA 92635.	Director.
Warren S. Rustand, 5750 Santa Fe, Tucson, AZ 85715.	Director.
George W. Taylor, 1661 W. Hazelwood St., Phoenix, AZ 85015.	Director.
James V. Walther, 2217 S. Clayton, Denver, CO 80210.	Director.

There are 12 limited partners each owning less than ten percent of the total partnership interests.

The Applicant, a limited partnership' organized under the provisions of the State of Arizona Limited Partnership Act and duly qualified to do business in the State of Arizona, will begin operations with approximately $1,005,000 of paid-in capital and paid-in surplus to be obtained through a private placement. The applicant will conduct its activities primarily in the State of Arizona, and will consider investments in businesses in other areas of the United States.

Matters involved in SBA's consideration of the application include the general business reputation and character of the general partners and the probability of successful operations of the Applicant under their management, including adequate profitability and financial soundness, in accordance with the Act and the SBA Rules and Regulations.

Notice is further given that any person may, not later than 30 days from the date of publication of this Notice, submit written comments on the proposed Applicant. Any such communication should be addressed to the Deputy Associate Administrator for Investment, Small Business Administration, 1441 "L" St., NW., Washington, DC. 20416

A copy of this Notice will be published in a newspaper of general circulation in the Tucson, Arizona area.

[License No. 02/02-5369]

Ibero-American Investors Corp.; Filing of an Application for Approval of a Conflict of Interest Transaction

Notice is hereby given that Ibero-American Investors Corporation (Ibero-American), 38 Scio Street, Rochester, New York, 14604, a Federal licensee under the Small Business Investment Act of 1958, as amended (the Act), has filed an application with the Small Business Administration (SBA) pursuant to section 312 of the Act and covered by § 107.903 of the SBA Rules and Regulations (the Regulations) governing Small Business Investment Companies (13 CFR 107.903 (1988)) for approval of a conflict of interest transaction falling within the scope of the above Sections of the Act and Regulations.

Subject to such approval, Ibero-American proposes to provide funds to Anita's International Travel, 52–54 Jay Street, Rochester, New York, for the purpose of establishing an independent travel agency in the city of Rochester, New York.

The proposed financing is brought within the purview of § 107.903(b)(1) of the SBA Rules and Regulations because Ms. Anita Alomar Lopez is the daughter of Mrs. Daisey Alomar-Hamza, President of the Board of Directors of Ibero-American Action league, a not-for-profit social organization that owns Ibero-American Investment Corporation. Mrs. Alomar-Hamza is considered to be an associate of Ibero-American as defined by § 107.3 of the Regulations.

Notice is further given that any person may, not later than 30 days from the date of publication of this Notice, submit written comments on the proposed transaction to the Deputy Associate Administrator for Investment, Small Business Administration, 1441 "L" Street, NW., Washington, DC 20416.

A copy of this notice shall be published in accordance with section 107.903(e) of the Regulations, in a newspaper of general circulation in Rochester, New York.

DEPARTMENT OF STATE

[Public Notice 1126]

Public Information Collection Requirement Submitted to OMB for Review

AGENCY: Department of State.

ACTION: The Department of State has submitted the following public information collection requirements to OMB for review and clearance under the Paperwork Reduction Act of 1980, Public Law 96-511.

SUMMARY: To obtain a passport, a travel document attesting to one's identity and U.S. citizenship, a U.S. national must complete the passport application. The application is retained in the files of the Department of State and is consulted when a passport has been lost, in citizenship claims, as evidence in the prosecution of individuals making false statements, and to support a derivative claim to citizenship made by an applicant's children. The following summarizes the information collection proposals submitted to OMB:

1. Type of request—Extension.
Originating office—Bureau of Consular Affairs.
Title of information collection—Application for Passport/Registration.
Form Number—DSP-11.
Frequency—On occasion.
Respondents—Applicants for U.S. Passports.
Estimated number of respondents—4,000,000.
Average hours per response—7 minutes.
Total estimated burden hours—466,666.

2. Type of request—Extension.
Originating office—Bureau of Consular Affairs.
Title of information collection—Application for Passport by Mail.
Form number—DSP-82.
Frequency—On occasion.
Respondents—Applicants for U.S. Passports.
Estimated number of respondents—2,000,000.
Average hours per response—5 minutes.
Total estimated burdan hours—166,666.

Section 3504(h) of Public Law 96-511 does not apply.

ADDITIONAL INFORMATION OR COMMENTS: Copies of the proposed form and supporting documents may be obtained from Gail J. Cook (202) 647-3538. Comments and questions should be directed to (OMB) John Harrigan (202) 395-7340.

Date: August 22, 1989.

Arthur W. Fort,

Assistant Secretary for Administration and Information Management.

[Public Notice 1127]

Public Information Collection Requirement Submitted to OMB for Review

AGENCY: Department of State.

ACTION: The Department of State has submitted the following public information collection requirement to OMB for review and clearance under the Paperwork Reduction Act of 1980, Public Law 96-511.

SUMMARY: Recipients of State Department publications are queried biennially to ascertain that addresses are correct and that they wish to continue receiving publications. It allows respondents to indicate the kinds of publications they prefer to receive and to prioritize their preferences. The following summarizes the information collection proposal submitted to OMB:

Type of request—Extension.
Originating office—Bureau of Public Affairs.
Title of information collection—Mailing List Notice.
Frequency—Biennial.
Respondents—Applicants for State Department publications.
Estimated number of respondents—3,750.
Average hours per response—7 minutes.
Total estimated burden hours—438.

Section 3504(h) of Public Law 96-511 does not apply.

ADDITIONAL INFORMATION OR COMMENTS: Copies of the proposed form and supporting documents may be obtained from Gail J. Cook (202) 647-3538. Comments and questions should be directed to (OMB) John Harrigan (202) 395-7340.

Dated: August 22, 1989.

Arthur W. Fort,

Assistant Secretary for Administration and Information Management.

BILLING CODE 4710-11-M

[Public Notice CM-8/1300]

Oceans and International Environmental and Scientific Affairs Advisory Committee; Partially Closed Meeting

The Antarctic Section of the Oceans and International Environmental and Scientific Affairs Advisory Committee will meet at 10 a.m., Tuesday, September 19, 1989, in Room 7835, Department of State, 22nd and C Street, NW., Washington, DC.

At this meeting, officers responsible for Antarctic affairs in the Department of State will discuss the recently adopted Convention on the Regulation of Antarctic Mineral Resource Activities. Attention will center upon issues to be addressed in legislation necessary to implement the Convention and in the separate protocol on liability called for in the Convention. There will also be consideration of preparations for the Fifteenth Antarctic Treaty Consultative Meeting which will be held in Paris in October, 1989. Department officials will be prepared to discuss other key issues and problems involving the Antarctic in the context of current domestic and international developments. This session will be open to the public. The public will be admitted to the session to the limits of seating capacity and will be given the opportunity to participate in discussion according to the instructions of the Chairman. As access to the Department of State is controlled, persons wishing to attend the meeting should enter the Department through the Diplomatic ("C" Street) Entrance. Department officials will be at the Diplomatic Entrance to escort attendees.

The Antarctic Section of the Oceans and International Envrionmental and Scientific Affairs Advisory Committee will also meet on Monday, September 18, in Room 1406, Department of State, 22nd and C Street, NW. The purpose of these discussions will be to elicit views concerning the further development of United States policy regarding Antarctic resources, particularly Antarctic mineral resources. The Fifteenth Antarctic Treaty Consultative Meeting will also be discussed. The meeting will include classified briefings and examination and discussion of documents classified pursuant to Executive Order 12356. The disclosure of classified material and revelation of considerations which go into policy development would subtantially undermine and frustrate the U.S. position in future meetings and negotiations. Therefore, the meeting will not be open to the public, pursuant to section 10(d) of the Federal Advisory Committee Act and 5 U.S.C. 552b (c)(1) and 5 U.S.C. 552b (c)(9)(B).

Requests for further information on the meetings should be directed to R. Tucker Scully of OES/OA, Room 5801, Department of State. He may be reached by telephone on (202) 647-3262.

Frederick M. Bernthal,

Chairman.

BILLING CODE 4710-09-M

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket No. 301-79]

Initiation of Section 302 Investigation and Request for Public Comment: Procurement of Electronic Highway Toll Identification Systems by the Government of Norway

AGENCY: Office of the United States Trade Representative.

ACTION: Notice of initiation of investigation under section 302 of the Trade Act of 1974, as amended; request for written comments.

SUMMARY: The United States Trade Representative (USTR) has initiated an investigation under section 302 of the Trade Act of 1974, as amended ("the Trade Act") regarding the Government of Norway's government procurement practices with respect to an electronic highway toll identification system for a highway surrounding Oslo, Norway. USTR invites written comments on the matter being investigated.

DATES: This investigation was initiated on August 25, 1989. Written comments from interested persons are due October 2, 1989.

ADDRESS: Office of the United States Trade Representative, Room 223, 600 17th St., NW, Washington, DC 20506.

FOR FURTHER INFORMATION CONTACT: Timothy Richards, Director of Information Industry Trade Policy, (202) 395–6160, Beverly Vaughan, Director, Government Procurement, (202) 395–3063, or Kenneth Freiberg, Associate General Counsel, (202) 395–7305.

SUPPLEMENTARY INFORMATION: On July 11, 1989, AMTECH Corporation, a Dallas-based manufacturer of electronic highway toll identification systems, filed a petition under section 302 of the Trade Act of 1974, as amended, regarding practices by the Government of Norway related to procurement of the electronic highway tollgate system surrounding Oslo. Specifically, Petitioner asserts that the actions of the Norwegian government, through its Ministry of Transport, in overturning a decision of the Oslo Toll Road Authority to award a contract to Petitioner and its Norwegian correspondent for the Oslo tollgate system violate Article III of the General Agreement on Tariffs and Trade (GATT), the GATT Agreement on Government Procurement (Procurement Code), and Article VIII of the U.S.-Norway Treaty of Friendship, Commerce and Navigation. AMTECH also alleges that the Norwegian Government's actions are unjustifiable, unreasonable or discriminatory and burden U.S. commerce.

After the petition was filed, according to Petitioner, the City of Oslo announced its intention to award the project to Petitioner and its Norwegian correspondent, but subsequently the Minister of Transportation withdrew authority from the Oslo Toll Road Authority for this procurement and gave that authority to a new entity. A further evaluation of bids will now be conducted on the basis of the original invitation to tender, but the new entity has been directed to consider six new criteria for evaluating the bids. A contract award is expected on or about September 15, 1989.

Investigation: On August 25, 1989, pursuant to section 302(a) of the Trade Act, the USTR initiated an investigation of the Norwegian government's procedures and practices with respect to this proposed procurement. The Office of the USTR also requested consultations with the Government of Norway, as required by section 303(a) of the Trade Act. In preparing for such consultations, USTR will seek information and advice from the petitioner and the appropriate committees established pursuant to section 135 of the Trade Act, as provided in section 303(a)(3) of that Act.

Public Comment: Interested persons are invited to submit written comments on the issues raised in the petition. Comments must be filed in accordance with the regulations at 15 CFR 2006.8 and are due by noon on October 2, 1989. Comments must be in English and provided in twenty copies to: Chairman, Section 301 Committee, Room 223, USTR, 600 17th Street, NW., Washington, DC 20506. Comments will be placed in a file (Docket 301–79) open to public inspection pursuant to 15 CFR 2006.12 (except confidential business information exempt from public inspection in accordance with 15 CFR 2006.15).

A. Jane Bradley,

Chairman, Section 301 Committee.

[FR Doc. 89–20467 Filed 8–30–89; 8:45 am]

BILLING CODE 3190-01-M

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

Environmental Impact Statement: Townships of Robinson and Collier, Allegheny, County, PA

AGENCY: Federal Highway Administration, Transportation.

ACTION: Notice of intent.

SUMMARY: The FHWA is issuing this notice to advise the public that an Environmental Impact Statement (EIS) will be prepared for a proposed highway project in the Townships of Robinson and Collier, Allegheny County, Pennsylvania.

FOR FURTHER INFORMATION CONTACT: George Catselis, District Engineer, Federal Highway Administration, 228 Walnut Street, P. O. Box 1086, Harrisburg, Pennsylvania 17108–1086, Telephone (717) 782–3410, or Henry M. Nutbrown, District Engineer, Pennsylvania Department of Transportation, Engineering District 11–0, Four Parkway Center, 875 Greentree Road, Pittsburgh, Pennsylvania 15220, Telephone (412) 937–4638, or Herbert C. Higginbotham II, Director, Department of Engineering and Construction, County of Allegheny, 501 County Office Building, Forbes Avenue and Ross Street, Pittsburgh, Pennsylvania 15219, Telephone (412) 355–5902.

SUPPLEMENTARY INFORMATION: The FHWA, in cooperation with the Pennsylvania Department of Transportation and Allegheny County, will prepare an Environmental Impact Statement on a proposal for the reconstruction for safety and capacity of the existing two lane Campbell's Run Road. The project limits extend from T.R. 60 at the T.R. 60 Interchange with T.R. 22/30 east to the intersection of Campbell's Run Road with Baldwin Road for a total length of 3.7 miles in Robinson and Collier Townships

Functional, structural, operational, and physical deficiencies of existing Campbell's Run Road and significant land use and traffic changes—to date and proposed—dictate this action.

Project alternatives will be assessed at three levels: No-Build, Minimum-Build, and Optimum-Build. The "No-Build" alternate will address the Do-Nothing option, i.e. the maintenance of the existing two lane Campbell's Run Road, with the existing partial interchange with T.R. 22/30 (the Parkway West), to quantify existing and design year service levels and other functional, structural, operational and physical deficiencies. The "Minimum-Build" alternate(s) will address proposed work at a level necessary to meet minimum criteria to correct significant but not all deficiencies in the design year. The "Optimum-Build" alternate(s) will address proposed work at a level necessary to meet minimum to desirable criteria with limited, if any, substandard features to correct all deficiencies in the design year. No fewer than one variation of Minimum and Optimum-Build alternates will be developed.

The EIS will assess the alternatives and their environmental effects through detailed studies of socioeconomic resources, natural resources, and cultural resources, air quality, noise impacts, energy utilization, transportation, safety and utilities. The studies will be documented in Technical Basis Report(s) which will set forth methods and findings. The EIS will summarize those findings. The assessment will include community and agency coordination.

An Early Coordination Form describing the proposed action and studies, and soliciting comments will be forwarded to appropriate Federal, State, and Local agencies. Public and Agency Scoping Meetings will be held in the project area in the autumn 1989. In addition, future public plans displays and public meetings will be held, and a Public Hearing may be held. Public notice will be given for the time and place of the meetings and hearing. The Draft EIS will be available for public and agency review and comment.

To ensure that the full range of issues related to this proposed action are addressed and all significant issues identified, comments and suggestions are invited from all interested parties. Comments and questions concerning this proposed action and the EIS should be directed to the FHWA, Pennsylvania Department of Transportation, or Allegheny County at the address provided above.

(Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction. The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program.)

Issued on: August 23, 1989.

George L. Hannon,

Assistant Division Administrator, Harrisburg, Pennsylvania.

[FR Doc. 89–20531 Filed 8–30–89; 8:45 am]

BILLING CODE 4910-22-M

National Highway Traffic Safety Administration

[Docket No. IP89–07; Notice 1]

Receipt of Petition for Determination of Inconsequential Noncompliance; Lagusa, Inc.

Keller and Heckman of Washington, DC, has petitioned on behalf of Lagusa, Inc. of Belcamp, Maryland, to be exempted from the notification and remedy requirements of the National Traffic and Motor Vehicle Safety Act (15 U.S.C. 1381 *et seq.*) for an apparent noncompliance with 49 CFR 571.106, Federal Motor Vehicle Safety Standard (FMVSS) No. 106, *Brake Hoses*, on the basis that it is inconsequential as it relates to motor vehicle safety.

This Notice of receipt of a petition is published under Section 157 of the National Traffic and Motor Vehicle Safety Act (15 U.S.C. 1417) and does not represent any agency decision or other exercise of judgment concerning the merits of the petition.

Paragraphs S7.3.9 and S7.2.1 (a) of Standard No. 106 respectively require that "an air brake hose assembly shall not rupture when exposed to hydrostatic pressure of 800 psi" and that each air brake hose be labeled with the symbol DOT, constituting a certification by the hose manufacturer that the hose conforms to all applicable motor vehicle safety standards. Lagusa imported approximately 100 European built motorcoaches equipped with air hoses that do not comply with the above mentioned paragraphs of Standard No. 106.

Lagusa supports its petition for inconsequential noncompliance for the following reasons:

1. Noncompliance with S7.3.9 is inconsequential as it relates to motor vehicle safety because the noncomplying air brake hoses meet, in all respects, the Deutsche Industrie Norm (DIN) standard, a state-of-the-art standard which, for many years, has provided a high level of safety in European motor vehicles.

2. The National Highway Traffic Safety Administration recognizes the Deutsche Industrie Norm as a standardization organization for purposes of certain U.S. Motor Vehicle Safety Standards, and should so recognize the DIN Standard for air brake hoses.

3. In its 13 years of manufacturing motorcoaches, there has never been an accident or a proven incident relating to failure or nonperformance of the air brake hoses on motorcoaches manufactured by Lagusa. The absence of such accidents or proven incidents is indicative of the safety of these air brake hoses.

4. The maximum air pressure regulated in the motorcoach air system is 120 psi. A situation which would create pressure of 639 psi, the lowest pressure at which any of the hoses burst, is highly unlikely. There are two safety features inherent in the system, a governor on a compressor and a safety valve. When 120 psi is reached, the air is exhausted to the outside, precluding the hose from bursting.

5. On February 26, 1974, the National Highway Traffic Safety Administration reduced the burst strength value from 900 psi to 800 psi for purposes of the burst strength test set forth at S7.3.9. In explaining the reduction, the NHTSA stated that "the burst strength value is reduced to 800 psi to accommodate nylon and thermoplastic tubing *while retaining a safety performance level five times that of normal operating conditions".* (emphasis added).

6. Lagusa submits that the 800 psi standard, as an across-the-board requirement, is unreasonable and fails to take into account different vehicle sizes and their attendant different braking system requirements, that it is unrealistically high where, as in this case, there are dual backup controls.

7. Motor Vehicle Safety Standard No. 121, *Air Brake Systems*, provides at S5.1.2.2 that air compressor service reservoirs be capable of withstanding "an internal hydrostatic pressure of five times the compressor cutout pressure or 500 psi, whichever is greater for 10 minutes." As the pressure in the system is constant, there is an inherent inconsistency in requiring the reservoir to meet a 500 psi standard and the air brake hoses to meet a 800 psi standard.

8. The universe of Lagusa's noncomplying vehicles is limited. There are only 106 vehicles in the United States to which this noncompliance relates.

9. Lagusa has taken steps to ensure that all motorcoaches currently imported into the United States fully meet the requirements of Motor Vehicle Safety Standard No. 106. In fact, all motorcoaches entering the U.S. since March 1988 have fully complied with Motor Vehicle Safety Standard No. 106.

10. If the NHTSA finds that noncompliance with S7.3.9 is inconsequential, it must also find noncompliance with the labeling requirements set forth at S7.2.1(a) is inconsequential. That standard merely requires that the hoses be labeled with the DOT symbol to indicate they conform to alll applicable Motor Vehicle Safety Standards. Obviously, such labelling is and would be misleading if the hoses conformed to a standard other than the NHTSA's Motor Vehicle Safety Standard.

Interested persons are invited to submit written data, views and arguments on the petition of Lagusa, Inc. described above.

Comments should refer to the docket number and be submitted to: Docket Section, National Highway Traffic Safety Administration, Room 5109, 400 Seventh Street, SW., Washington, DC., 20590. It is requested but not required that five copies be submitted.

All comments received before the close of business on the closing date indicated below will be considered. The application and supporting materials, and all comments received after the closing date, will be considered to the extent possible. When the petition is granted or denied, the Notice will be published in the **Federal Register** pursuant to the authority indicated below.

BILLING CODE 4910-59-M

UNITED STATES INFORMATION AGENCY

Cultural Property Advisory Committee; Meeting

The Cultural Property Advisory Committee will conduct a meeting of the full Committee on September 13, 1989, at 9:30 a.m. e.d.t. The meeting will be by conference call and will be closed to the public. For further information contact the Cultural Property Advisory Committee staff at (202) 485–6612. The agenda for the meeting is as follows:

Wednesday, September 13

9:30 a.m. Closed to the public: Chairman will convene the meeting by telephone. There will be discussion, if necessary, of the Committee's report on its findings and recommendations with regard to Peru's request for U.S. import restrictions on certain archaeological material. The Committee will formally vote whether or not to recommend the imposition of U.S. import restrictions.

Since this meeting is concerned with the Committee's report to the Deputy Director of USIA and its recommendations regarding Peru's request, it will be closed to the public in accordance with 5 U.S.C. 552b, and 19 U.S.C. 2601 *et seq.* as amended. The meeting will be closed because it will involve information the premature disclosure of which would be likely to frustrate significantly implementation of proposed actions and policies. Disclosure of information at this time that identifies specific cultural property is likely to frustrate the possible imposition of import restrictions on such cultural property. The Committee will vote on its recommendations as to appropriate U.S. action regarding the emergency request from Peru under the terms of the Cultural Property Implementation Act. For the foregoing reasons the closing of the meeting is authorized under 5 U.S.C. 552b(c)(9)(B), and 19 U.S.C. 2605(h).

Dated: August 25, 1989.

Eugene Kopp,

Deputy Director United States Information Agency.

Determination to Close the Meeting of the Cultural Property Advisory Committee September 13, 1989

Based on information provided to me by the Cultural Property Advisory Committee, I hereby determine that the meeting of the Committee on September 13 may be closed to the public.

The Committee has requested that its meeting be closed in accordance with 5 U.S.C. 552b(c)(9)(B), and 19 U.S.C. 2605(h).

Dated: August 25, 1989.

Eugene Kopp,

Deputy Director United States Information Agency.

BILLING CODE 8230-01-M

DEPARTMENT OF VETERANS AFFAIRS

Career Development Committee; Meeting

The Department of Veterans Affairs gives notice under Public Law 92–463 that a meeting of the Career Development Committee, authorized by 38 U.S.C. 4101, will be held in the Diamond A Room of the Radisson Suite Hotel, 315 Julia Street, New Orleans, LA, October 19 through 20, 1989, starting at 8 a.m., October 19. The meeting will be for the purpose of scientific review of applications for appointment to the Career Development Program in the Department of Veterans Affairs. The committee advises the Director, Medical Research Service, on selection and appointment of Associate Investigators, Research Associates, Clinical Investigators, Medical Investigators, and Senior Medical Investigators.

The meeting will be open to the public up to the seating capacity of the room from 8 a.m. to 8:30 a.m. on October 19, 1989, to discuss the general status of the program. Because of the limited seating capacity of the room, those who plan to attend should contact Mr. David D. Thomas, Executive Secretary of the Career Development Committee (151J), Department of Veterans Affairs Central Office, Washington, DC 20420 (202–233–2317) prior to October 10, 1989. The meeting will be closed from 8:30 a.m. to 5 p.m., on October 19, 8 a.m. to 3 p.m. on October 20, for consideration of individual applications for positions in the Career Development Program. This necessarily requires examination of personnel files and discussion and evaluation of the qualifications, competence, and potential of the candidates, disclosure of which would constitute a clearly unwarranted invasion of personal privacy. Accordingly, closure of this portion of the meeting is permitted by section 10(d) of Public Law 92–463 as amended, in accorance with subsection (c)(6), 5 U.S.C. 552b.

Minutes of the meeting and rosters of the committee members may be obtained from David P. Thomas, Chief, Career Development Program, Medical Research Service (151J), Department of Veterans Affairs, Washington, DC 20420 (phone 202–233–2317).

Dated: August 24, 1989.

By direction of the Secretary:

Sylvia C. Long,

Committee Management Officer.

[3] Radisson Park Terrace Hotel, 1515 Rhode Island Avenue, NW., Washington, DC 20005.

[4] Hyatt Regency Atlanta, In Peace Tree Center, 265 Peach Tree St., NE., Atlanta, GA 30303.

These meetings will be for the purpose of evaluating the scientific merit or research conducted in each specialty by Veterans' Administration investigators working in Veterans' Administration Medical Centers and clinics.

The meetings will be open to the public up to the seating capacity for the rooms at the start of each meeting to discuss the general status of the program. All of the Merit Review Board meetings will be closed to the public after approximately one-half hour from the start, for the review, discussion and evaluation of initial, and renewal research projects.

The closed portion of the meeting involves: discussion, examination, reference to, and oral review of site visits, staff and consultant critiques of research protocols, and similar documents. During this portion of the meeting, discussion and recommendation will deal with qualifications of personnel conducting the studies, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy, as well as research information, the premature disclosure of which would be likely to significantly frustrate implementation of proposed agency action regarding such research projects. As provided by subsection 10(d) of Public Law 92–463, as amended by Public Law 94–409, closing portions of these meetings is in accordance with 5 U.S.C., 552b(c) (6) and (9)(B). Because of the limited seating capacity of the rooms, those who plan to attend should contact Dr. Arlene E. Mitchell, Assistant Director for Scientific Review, Medical Research Service, Veterans' Administration, Washington, DC, (202) 233–5065 at least five days prior to each meeting. Minutes of the meetings and rosters of the members of the Boards may be obtained from this source.

Dated: August 23, 1989.

By direction of the Secretary:

Sylvia C. Long,

Committee Management Officer.

Voluntary Service National Advisory Committee; Meeting

The Department of Veterans Affairs gives notice under Public Law 92–463 that the annual meeting of the Department of Veterans Affairs Voluntary Service National Advisory Committee, comprised of 56 national voluntary organizations, will be held at the Red Lion Inn, Lloyd Center, Portland, Oregon, October 26 through October 29, 1989.

Registration of the conferees and orientation of new committee members will be held beginning at 1 p.m. on October 26, 1989. The committee will officially convene with the Opening Session at 9 a.m., October 27, 1989, and will conclude at 12 noon, October 29, 1989.

The purposes of the meeting are to instruct committee members and organization officials of the obligations they have accepted for volunteer recruitment, communications and program interpretation, and to seek the advice of the committee in further developing volunteer participation in the care and treatment of veteran patients throughout the Department's nationwide medical program.

For further information contact Mr. Edward F. Rose, Director, Voluntary Service (135), Department of Veterans Affairs, 810 Vermont Avenue, NW., Washington, DC 20420, Telephone (202) 233–4110.

Dated: August 24, 1989.

Sunshine Act Meetings

Federal Register
Vol. 54, No. 168
Thursday, August 31, 1989

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

BLACKSTONE RIVER VALLEY NATIONAL HERITAGE CORRIDOR

Notice of Meeting

Notice is hereby given in accordance with section 552b of title 5, United States Code, that a meeting of the Blackstone River Valley National Heritage Corridor Commission will be held on Thursday, September 7, 1989.

The Commission was established pursuant to Public Law 99–647. The purpose of the Commission is to assist federal, state and local authorities in the development and implementation of an integrated resource management plan for those lands and waters within the Corridor.

The meeting will convene at 7:00 p.m. at the North Smithfield Annex Bldg., 575 Smithfield Rd., N. Smithfield, RI for the following reasons:

1. Treasurer's Report.
2. FY '89 budget adjustments and approval.
3. Report of the Chairman.
4. Report of the Executive Director.
5. Presentation and request for support for park plans from North Smithfield.
6. A South Pennine Region "Sister City" resolution.
7. Discussion and Adoption of the Cultural Heritage and Land Management Plan for the Blackstone River Valley National Heritage Corridor as provided in accordance with Public Law 99–647.

It is anticipated that about twenty people will be able to attend the session in addition to the Commission members.

Interested persons may make oral or written presentations to the Commission or file written statements. Such requests should be made prior to the meeting to: James Pepper, Executive Director, Blackstone River Valley National Heritage Corridor Commission, P.O. Box 34, Uxbridge, MA 01569. Telephone (508) 278–9400 or (508) 278–5124.

Further information concerning this meeting may be obtained from James Pepper, Executive Director of the Commission, at the address below.

James Pepper,

Executive Director, Blackstone River Valley National Heritage Corridor Commission.

[FR Doc. 89–20668 Filed 8–29–89; 1:53 pm]

BILLING CODE 4310-70-M

FEDERAL RESERVE SYSTEM BOARD OF GOVERNORS

TIME AND DATE: 11:00 a.m., Tuesday, September 5, 1989.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets, NW., Washington, D.C. 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452–3204. You may call (202) 452–3207, beginning at approximately 5 p.m. two business days before this meeting, for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: August 29, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

FEDERAL RESERVE SYSTEM BOARD OF GOVERNORS

TIME AND DATE: 10:00 a.m., Wednesday, September 6, 1989.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets, NW., Washington, D.C. 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452–3204. You may call (202) 452–3207, beginning at approximately 5 p.m. two business days before this meeting, for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: August 29, 1989.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-M

UNITED STATES INSTITUTE OF PEACE

DATE: Thursday, and Friday, September 6 and 7, 1989.

TIME: 9:15 a.m. 5:30 p.m.

PLACE: The United States Institute of Peace, 1550 M Street, NW., ground floor (conference room).

STATUS: Open session—Thursday 9:15 a.m. to 5:30 p.m. (portions may be closed pursuant to subsection (c) of section 552(b) of title 5, United States Code, as provided in subsection 1706(h)(3) of the United States Institute of Peace Act, Pub. L. (98–525).

AGENDA: (TENTATIVE): Meeting of the Board of Directors convened. Chairman's Report. President's Report. Committee Reports. Consideration of the Minutes of the Thirty-Fourth meeting of the Board. Consideration of grant application matters.

CONTACT: Ms. Olympia Diniak. Telephone (202) 457–1700.

Dated: August 29, 1989.

Bernice J. Carney,

Administrative Officer, The United States Institute of Peace.

BILLING CODE 3155-01-M

POSTAL SERVICE BOARD OF GOVERNORS

Notice of a Meeting

The Board of Governors of the United States Postal Service, pursuant to its Bylaws (39 C.F.R. Section 7.5) and the Government in the Sunshine Act (5 U.S.C. Section 552b), hereby gives notice that it intends to hold a meeting at 8:30 a.m. on Tuesday, September 12, 1989, in Washington, D.C. The meeting is open to the public and will be held in the Benjamin Franklin Room at Postal Service Headquarters, 475 L'Enfant Plaza, SW. The Board will also meet at 1:00 p.m. on Monday, September 11, 1989, but as indicated in the following paragraph, the meeting is closed to the public. The Board expects to discuss the matters stated in the agenda which is set forth below. Requests for information about the meeting should be addressed to the Secretary of the Board, David F. Harris, at (202) 268–4800.

At its meeting on August 14, 1989, the Board voted to close to public observation its meeting scheduled for September 11, 1989, to consider 1) the Postal Rate Commission Recommended Decision Upon Reconsideration in Docket No. MC88–2, Second-Class Eligibility, and 2) a contract award for outside audit services (See 54, FR 34639, August 21, 1989).

Agenda

Monday Session

September 11—1:00 p.m. (Closed)

1. Consideration of the Postal Rate Commission Recommended Decision Upon Reconsideration in Docket No. MC88–2, Mail Classification Schedule 1988, Second-Class Eligibility. (Mr. Heselton)
2. Consideration of Contract Award for Outside Audit Services. (Mr. Coppie)

Tuesday Session

September 12—8:30 a.m. (Open)

1. Minutes of the Previous Meeting, August 14–15, 1989.
2. Remarks of the Postmaster General.
3. Postal Rate Commission FY 1990 Budget Request. (Chairman Robert Setrakian)
4. Future Technology in the Postal Service. (Karen T. Uemoto, Assistant Postmaster General, Technology Resource Department)
5. Review of Capital Investmenmt Program and FY 1990 Borrowing for Capital Investments. (Comer S. Coppie, Senior Assistant Postmaster General, Finance Group)
6. USPS Tentative FY 1991 Appropriations Request. (Mr. Coppie)
7. Review of Legislative Matters and Government Relations. (William T. Johnstone, Assistant Postmaster General, Government Relations Department)
8. Capital Investments: (Stanley W. Smith, Assistant Postmaster General, Facilities Department)
   a. Mail Processing Center, North Chicago, IL.
   b. Carol Stream, IL, GMF/VMF.
   c. Rancho Park Station, Los Angeles, CA.
9. Tentative Agenda for October 2–3, 1989, meeting in Norman, Oklahoma.

Note: Certification on reverse side of this page.

David F. Harris,

Secretary.

[FR Doc. 89–20670 Filed 8–29–89; 1:54 pm]

DEPARTMENT OF EDUCATION

Office of Special Education and Rehabilitative Services

34 CFR Part 379

RIN 1820-AA82

Projects With Industry

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends the regulations in part 379 governing the Projects with Industry (PWI) program by amending existing regulations, and by adding regulations in a new subpart F to implement requirements in sections 621(f) and 621(h) of the Rehabilitation Act (Act) as added by Public Law 99-506, the Rehabilitation Act Amendments of 1986. The 1986 statutory amendments require: that indicators of minimum compliance with program evaluation standards approved by the National Council on Disability be published in the **Federal Register**; that, beginning with fiscal year 1989, each PWI grantee report to the Secretary at the end of each project year the extent to which it is in compliance with the evaluation standards; that continuation funding be provided only to grantees who are carrying out the provisions of their approved grant application and who meet the evaluation standards; and that the Secretary give priority to unserved geographic areas and, beginning in fiscal year 1991, consider past project performance in making new grant awards.

EFFECTIVE DATE: These regulations take effect either 45 days after publication in the **Federal Register** or later if the Congress takes certain adjournments. If you want to know the effective date of these regulations, call or write the Department of Education contact person. A document announcing the effective date will be published in the **Federal Register.**

FOR FURTHER INFORMATION CONTACT: Sandy DeSantis, Rehabilitation Services Administration, Mary E. Switzer Building, Room 3411, 330 C Street SW., Washington, DC 20202-2740. Telephone (202) 732-1333.

SUPPLEMENTARY INFORMATION:

Development of Evaluation Standards, Proposed Compliance Indicators, Performance Levels and Weights

In accordance with section 621(d) (1), (3) and (4) of the Act, PWI evaluation standards, based on statutory provisions and successful project practices, were developed by the Rehabilitation Services Administration (RSA) and approved by the National Council on Disability. The evaluation standards are published as an appendix to the regulations. As required by section 621(d)(2) of the Act, an evaluation of the PWI program, using the approved evaluation standards, was conducted in 1985. A report on the evaluation was forwarded to Congress in February 1986.

In the Rehabilitation Act Amendments of 1986, Congress added the requirement that the Secretary develop indicators of what constitutes minimum compliance with the evaluation standards. Proposed indicators were developed based on the PWI evaluation standards and the results of the national PWI program evaluation.

A proposed performance level was developed for each compliance indicator based upon analysis of grantee data, consideration of the data collected in the program evaluation in 1985, and the Department's views as to satisfactory grantee performance. A proposed weight was developed for each compliance indicator based on the Department's assessment of the relative importance of each indicator.

On February 14, 1989, the Secretary published a notice of proposed rulemaking (NPRM) containing proposed compliance indicators, performance levels, and weights in the **Federal Register** (54 FR 6808). For a detailed discussion of the development of the compliance indicators, the weights, and performance levels, please see the NPRM. The principal change in the final regulations is the adoption of performance ranges for each compliance indicator rather than a single performance level under which a project would receive either no points or full points, as proposed in the NPRM. This change is discussed in detail in the section of this preamble discussing comments and changes.

Adoption of Compliance Indicators, Performance Ranges and Points

The purpose of these regulations is to adopt compliance indicators, minimum performance levels, performance ranges, and points for each indicator to measure the effectiveness of individual projects in critical performance areas. The indicators will be used to evaluate performance to determine whether a grantee's application for continuation funding should be approved. As a measure of past performance, compliance with the indicators will also be a factor in making new awards beginning in fiscal year 1991.

A composite scoring system is adopted. This system allows a project that performs poorly on a few indicators to be eligible for continuation funding or a new award based on past performance if the project performs well on most of the indicators. The maximum possible composite score is 150 points. A grantee must achieve a composite score of at least 70 points to be in minimum compliance with the program evaluation standards.

A minimum performance level is established for each indicator. If a grantee fails to meet the minimum performance level for a particular indicator, the grantee will receive no points on that indicator. If a grantee meets or exceeds the minimum performance level for an indicator, the grantee will receive some points.

Three performance ranges are established for each compliance indicator. Each performance range represents a group of comparable performance levels. The three ranges represent progressively higher levels of performance. The higher the level of performance, the greater the number of points assigned to that range. A grantee will receive the number of points assigned to the performance range corresponding to the grantee's actual level of performance.

A grantee that meets only the lowest performance range on every indicator cannot accumulate sufficient points to meet the passing composite score necessary to be in minimum compliance with the evaluation standards.

Application of the Compliance Indicators

A grantee's performance is determined by the data it submits from the most recent complete project year. If a grantee does not meet the minimum composite score on the basis of the previous year's data, the regulations provide an additional opportunity for the grantee to demonstrate compliance with the standards by submitting data from the first six months of the current project year.

Because grant awards under this program are made near the end of the fiscal year with project periods that run concurrent with the following fiscal year, grantees will receive two years of funding before data are available for a complete project year. When a grantee's application is submitted for the third year of funding, i.e., the second continuation application, project data from the first year of funding must be submitted with that application.

The indicators, minimum performance levels, and performance ranges will be first applied to continuation grants funded from fiscal year 1990 appropriations, which will be awarded by September 30, 1990 and will cover the

---

project year that begins October 1, 1990 and ends September 30, 1991. The awards will be based, in part, on grantee compliance with the standards as implemented by the indicators. The data used to measure performance will be the twelve months of data from the project year running from October 1, 1988 to September 30, 1989 or, if necessary, six months of data from October 1, 1989 through March 31, 1990.

Consideration of Prior Performance and Geographical Location

In making new awards, the regulations provide for giving priority to geographic areas among the States that are currently not served or are underserved by PWI projects and for consideration of past performance, if appropriate.

Analysis of Comments and Changes

In response to the Secretary's invitation in the NPRM, 32 parties submitted comments on the proposed regulations. The major issue raised in the comments was the objection to the "all or nothing" scoring approach to measuring performance and awarding points. Resolution of this issue resulted in changes to a number of sections of the regulations. Major issues are grouped according to subject. Technical and other minor changes—and suggested changes the Secretary is not legally authorized to make under the applicable statutory authority—are not addressed.

Definitions

Comments: A few commenters requested definitions of "full-time," "severely disabled," "competitive employment," "placed," and "served." The commenters did not propose specific definitions for these terms. One commenter stated, however, that he assumed any regulatory definition of "placement" would still mean retention of a job for at least 60 days.

Discussion: The Secretary does not believe that definitions are needed for the terms "full-time" and "severely disabled." The term "full-time" was not used in the NPRM. It is, however, used in a definition of "competitive employment" added to the final regulations and refers to the standard 40-hour work week. A definition of "severely disabled" would be superfluous because PWI program regulations in 34 CFR 379.4 incorporate by cross reference terms that are defined in part 369, one of which is "individual with severe handicaps." This definition tracks the statutory definition of this term in section 7(15)(A) of the Rehabilitation Act.

The Secretary does, however, believe that definitions are needed for the terms "competitive employment," "person served," and "placement," which are used in many of the compliance indicators, in order to ensure that applicants and grantees uniformly understand the performance requirements contained in the compliance indicators and to ensure that data reported by grantees is consistent.

"Competitive employment," as the placement outcome under the PWI program, is defined to mean productive full-time or part-time work in business or industry at a rate of compensation at least equal to the applicable minimum wage. This definition is consistent with the statutory focus on private industry placements and with the statutory requirement that employers pay placed individuals at least the applicable minimum wage.

A definition of "person served" is also added to the final regulations. This term includes any individual who has completed the project's intake process, who has been approved for project services, and who has begun to receive services—during the project period—with the objective that those services will result in a competitive employment placement. This definition is consistent with the definition of "person served" that was included in the PWI data collection instrument and reporting instructions published in the **Federal Register** (Notice of Proposed Information Collection Request, 53 FR 22450, June 15, 1988; Notice of Information Collection Request, 53 FR 25105, July 1, 1988).

A definition of "placement" is also included in the final regulations. This term applies to any person served by a PWI project who has successfully completed training, who has obtained a competitive employment placement, and who has maintained that placement for at least 60 continuous days. The 60-day retention requirement is consistent with longstanding program interpretation of the term "placement" and with grantee understandings and practices. The published PWI data collection instrument and reporting instructions, previously referred to, also stipulated that a placement cannot be counted until the individual has held a job for at least 60 continuous days. The preamble to the NPRM specifically mentioned the published PWI data collection instrument and reporting instructions.

Changes: A change has been made in § 379.4 to add definitions for "competitive employment," "person served," and "placement."

Reporting Requirements

Comments: Commenters observed that the reporting process will count persons served during one year, but not placed until the next. They asked whether this "statistical warp" is acceptable. Other commenters objected that the timing of data submission does not end funding in a timely manner for unsatisfactory projects.

Discussion: The "statistical warp" referred to in the comment is common when programs such as PWI collect project data for each funding period and project services to individuals are provided that span two funding periods. Grantees, when projecting project performance, should take into consideration the possibility that some of the individuals that they serve in one funding period may not be placed into competitive employment until the next funding period. This time lag between services provision and placement is primarily a factor only during grant start-up periods when clients spend time in training before being placed into employment. After the start-up period, the movement of clients from training to competitive placements should be on a continuum, although movement may not coincide with the project year. The data collected for a project year is a "snapshot" of project performance and is not dependent on following a particular individual from project entry to exit.

The time lag between the collection of project year data and the application of that data to decisions for continuation funding is inevitable, given the timing of the grants process. If a full year of data is used, it must be data from the prior project year. The final regulations, however, provide an additional opportunity for grantees to meet the compliance indicators by using partial data from the current project year.

Changes: None.

Effective Date of Compliance Indicators

Comments: Several commenters objected to the compliance indicators taking effect in 1990. It was suggested that there should be at least a full year of experience under the final regulations before they are applied. Another commenter asked how the indicators will be applied to new applications in 1991 and how this will differ from continuation awards in 1990.

Discussion: The 1986 amendments to section 621 of the Act require grantees to begin to report data in fiscal year 1989 to be used for fiscal year 1990 continuation awards. As noted in the NPRM, existing grantees have been aware of the evaluation standards since 1985, the draft indicators since January of 1988, and the project performance areas since July 1988 when the Notice of Information Collection Request was published in the **Federal Register** (53 FR 25105). The NPRM published in February 1989 proposed weights and minimum performance levels for the indicators.

Adoption of performance ranges in the final regulations makes it easier for grantees to achieve the composite score necessary to be eligible for continued funding. In addition, any grantee who fails to meet the compliance indicators based on its 1989 data may submit data for the first six months of 1990 to show that its project performance has improved sufficiently to meet the compliance indicators. For these reasons, grantees are considered to have had ample notice and will have ample opportunity to meet the indicators.

Section 621(h)(3) provides that new grant awards shall be made on a competitive basis and shall include consideration of past performance, if appropriate. A grantee applying for continuation funding does not compete with other applicants; it need only adhere to the provisions in its original application and meet the evaluation standards, as implemented by the compliance indicators.

Changes: None.

Scoring System

Comments: Many of the commenters objected to the "all or nothing" scoring system proposed in the NPRM under which projects would receive full points for meeting or exceeding the minimum performance level and none for not meeting that level. They observed that this scoring system is opposed to the PWI philosophy that "diversity, flexibility, and creativeness is our strength"; that it leads to inequities; and that there is no incentive for projects to excel and no margin for project error. One commenter submitted a detailed proposal with suggested ranges with point scores for each range. This commenter took the proposed minimum performance level in the NPRM for each compliance indicator as a point of departure, gave points for effort in a range of performance below the proposed minimum performance level and points for superior performance in a range above the minimum performance level. One commenter suggested that the minimum composite score be raised to 80 points.

Discussion: The Secretary agrees that the use of performance ranges, rather than the "all or nothing" scoring system proposed in the NPRM, is a better way to measure grantee performance. The use of ranges is a more flexible and sensitive scoring system that recognizes different levels of grantee performance from the minimally acceptable to the superior. The use of ranges also allows grantees to meet the composite passing score, even though they may earn no or few points on some indicators, by performing well and earning many points on other indicators. By raising the maximum possible score from 100 to 150 points and lowering the minimum performance level to give points for effort, as suggested in the comments, the overall effect is that the passing composite score in the final regulations is slightly less stringent than that proposed in the NPRM.

Changes: A change in the scoring system has been made in the final regulations to provide for performance ranges with points assigned to each range. The minimum performance level for each indicator has been lowered slightly from the NPRM level. The maximum composite score has been raised from 100 to 150 points. The passing composite score has been changed from 60 points to 70 points.

Performance Levels

Comments: Some commenters suggested that the performance levels for certain compliance indicators be changed.

Discussion: The minimum performance levels proposed in the NPRM were reviewed in response to the comments. The Secretary agrees that performance ranges better reflect grantee effort. In developing the final regulations, consideration was given both to the performance level proposed in the NPRM and the performance ranges suggested in the comments.

Changes: Three performance ranges have been established for each compliance indicator. On each compliance indicator, the NPRM minimum performance level falls within range (2). The bottom performance level in range (1) is the minimum performance level. The minimum performance level has thus been reduced below that proposed in the NPRM.

Compliance Indicators for Persons Served

Comments: Several commenters suggested that compliance indicators measuring persons served should be deleted from the final regulations. The commenters believed that measuring particular types of persons served can be a disincentive to projects to serve other categories of individuals with disabilities. They indicated that the emphasis should be on project results rather than method.

Discussion: The final regulations, like the NPRM, reflect a greater emphasis on project results than on types of persons served; however, the Secretary believes that certain of the compliance indicators measuring persons served (the unemployed and severely disabled) should be retained. These compliance indicators provide an incentive for projects to serve difficult populations even if the percentage of these persons placed may be low. The points earned on these indicators may provide a partial offset for a grantee serving a difficult-to-place population if reduced points are earned on some of the outcome indicators.

Changes: None, with the exception of the compliance indicators covering persons receiving Social Security Insurance (SSI) or Social Security Disability Insurance (SSDI), which are discussed separately.

Serving Persons Who Have Been Unemployed for Six Months

Comments; Commenters argued that some credit should be given for serving persons unemployed less than six months and contended that the six-month time period would encourage "creaming" (selecting for project participation only those unemployed persons who meet this six months standard) or delay initiation of services. One commenter stated that the regulations should not consider persons in workshops, work-study, or having only summer work experience as employed persons. This commenter also suggested the regulations may discriminate against older workers versus youth in transition from school to work.

Discussion: The Secretary believes that separate emphasis needs to be placed on serving persons who have been unemployed for at least six months. The six-month time period was retained because the 1985 evaluation study of the PWI program established that persons in this group are the most difficult to place.

The PWI evaluation study also disclosed that persons with some work experience within six months of project entry were less difficult to place into competitive employment. In establishing the performance ranges for the compliance indicator measuring persons served who are unemployed at least six months and the compliance indicator measuring increased earnings, careful consideration was given to afford latitude for grantees serving significant populations of underemployed or temporarily employed persons such as

those in workshops, summer employment, transition, or work-study.

The Secretary does not believe that this indicator would encourage "creaming," delay services to individuals who have been employed within the six-month period prior to project entry, or impact adversely on projects serving older individuals with disabilities.

Changes: The minimum performance level for this indicator has been lowered from 60 percent to 50 percent, and three performance ranges have been established to award points for different levels of performance.

Serving and Placing SSI or SSDI Recipients

Comments: A number of commenters were concerned about establishing compliance indicators for particular transfer payment groups. Some rural grantees believed these two compliance indicators would present problems in geographic areas where there is no control over project referrals; others forsaw discrimination and manipulation problems, such as refusing services to a person not receiving SSI or SSDI benefits, or refusing services to a person until the person has been determined eligible for these benefits. There were also several suggestions that these compliance indicators be expanded to include other transfer payment groups.

Discussion: In developing the final regulations consideration was given initially either to expanding these two indicators to include other transfer payment groups, such as Aid to Families with Dependent Children (AFDC) and General Assistance (GA), or to changing these compliance indicators to focus on particular disability populations, such as persons with traumatic brain injury and long term mental illness, that the Secretary wishes to encourage grantees to serve.

Expansion to other transfer payment groups was rejected as administratively burdensome. Expansion to other disability groups not mentioned in the NPRM was not justified by the data. Also, the most difficult to place disability groups, which include SSI and SSDI recipients, are believed to already be covered by the compliance indicators on unemployed individuals. There was some concern, too, that grantees would not have data available in fiscal year 1989 if these compliance indicators were changed substantially or new performance areas were added.

After careful consideration, the Secretary has determined that it would be inappropriate in these regulations to single out particular transfer payment groups for special emphasis, particularly when these groups are subsumed under other indicators measuring types of persons served.

Changes: The two proposed compliance indicators on serving and placing SSI and SSDI recipients have been removed from the final regulations, and the points have been allotted to the compliance indicators that measure serving and placing persons unemployed for at least six months at the time of project entry.

Cost Per Placement

Comments: A number of commenters suggested that the cost was set too low, especially if a project's emphasis is on persons with severe disabilities. Other commenters suggested that since the Social Security Administration reimbursement for an individual who succeeds in a Substantial Gainful Activity (SGA) placement is approximately $7,000, the PWI cost per placement rate should be set accordingly. A commenter also cited a study regarding placement of individuals in supported employment as support for a higher cost per placement.

Discussion: A computer analysis was conducted to determine whether there was a correlation between serving individuals with severe disabilities and higher costs per placement. No measurable correlation was found.

The cost per placement for a person served by a PWI project includes the cost of services provided to the individual with the objective that those services will result in a placement in competitive employment plus the cost of any support services provided by the project during the mandatory 60-day placement retention period. Reimbursement for SGA is payment for the costs of training and support services for a placement for nine months. The costs referred to in the supported employment study were for a one-year placement. It is difficult to meaningfully compare these various costs.

It is acknowledged that a PWI grantee with a lengthy training and presupport program will incur higher costs, but it is believed that a grantee with this type of project can score high on other compliance indicators and offset a low score on this particular indicator. Moreover, the adoption of performance ranges does permit a grantee to achieve some points for average placement costs up to $1600 rather than the $1350 proposed in the NPRM.

Changes: The average cost per placement was raised to $1600.

General Comments

Comments: Several commenters observed that there was no proposed provision in the regulations for periodic review of performance levels. Others advised that the nature of some indicators, such as cost per placement, should be monitored and modified as necessary.

Discussion: The Secretary recognizes that some indicators may be influenced by outside factors. For instance, the indicator regarding change in earnings will probably be affected if the minimum wage is raised. The adoption of performance ranges rather than a single pass or fail score for each compliance indicator is expected to absorb some changes or fluctuations in project performance. Since this is the first application of this approach to measuring grantee performance and since performance levels were established based on available grantee data through 1988, the data submitted by projects for fiscal years 1989 and 1990 will be carefully reviewed to determine what, if any, changes to the performance levels may be necessary.

Changes: None.

Comments: A number of commenters mentioned that the diversity among PWI projects makes it difficult to develop uniform compliance indicators that fairly measure the performance of different types of projects.

Discussion: The scoring system adopted reflects a careful balancing of various factors through the use of a variety of compliance indicators and performance ranges. The scoring system, as simulated by a number of computer analyses of the available grantee performance data, is designed to enable diverse kinds of projects to achieve the composite score necessary to be eligible for continued funding by counterbalancing different indicators.

Changes: None.

Executive Order 12291

These regulations have been reviewed in accordance with Executive Order 12291. They are not classified as major because they do not meet the criteria for major regulations established in the order.

List of Subjects in 34 CFR Part 379

Education, Grant programs—education, Grant programs—social programs, Reporting and recordkeeping requirements, Vocational rehabilitation.

(Catalog of Federal Domestic Assistance Number: 84.128 Projects With Industry)

Dated: August 14, 1989.

Lauro F. Cavazos,

Secretary of Education.

The Secretary amends part 379 of Title 34 of the Code of Federal Regulations as follows:

PART 379—PROJECTS WITH INDUSTRY

1. The table of contents for part 379 is amended by adding a new subpart F and the authority citation is revised to read as follows:

Subpart F—What Requirements Must a Grantee Meet To Receive Continuation Funding?

379.50 What are the requirements for continuation funding?
379.51 What are the program compliance indicators?
379.52 How is grantee performance measured using the compliance indicators?
379.53 What are the weights, minimum performance levels, and performance ranges for each compliance indicator?

Authority: Secs. 12(c) and 621 of the Act; 29 U.S.C. 711(c) and 795g, unless otherwise noted.

2. Section 379.4 is revised to read as follows:

§ 379.4 What definitions apply to this program?

(a) The definitions in 34 CFR part 369 apply to this program.

(b) The following definitions also apply to this program:

Competitive employment, as the placement outcome under this program, means productive full-time or part-time work in business or industry at a rate of compensation at least equal to the applicable minimum wage.

Person served means an individual for whom services by a PWI project have been initiated with the objective that those services will result in a placement in competitive employment.

Placement means the attainment of competitive employment by a person served by a PWI project who has successfully completed training and maintained employment for at least sixty continuous days.

(Authority: Secs. 12(c) and 621 of the Act; 29 U.S.C. 711(c) and 795g)

§ 379.32 [Redesignated from § 379.31]

3. Section 379.31 is redesignated as § 379.32 and a new § 379.31 is added to read as follows:

§ 379.31 What other factors does the Secretary consider in reviewing an application?

In addition to the selection criteria in § 379.30, the Secretary, in making awards under this program, considers—

(a) The geographical distribution of projects among the States and gives priority to geographic areas that are currently not served or are underserved by the Projects With Industry program; and

(b) Beginning with fiscal year 1991, the past performance of the applicant in carrying out a similar Project With Industry under previously awarded grants, as indicated by factors such as compliance with grant conditions, soundness of programmatic and financial management practices, and meeting the requirements of subpart F of this part.

(Authority: Secs. 621(h)(3) and 621(i) of the Act; 29 U.S.C. 795g(h)(3) and 795g(i))

4. Section § 379.46 is revised to read as follows:

§ 379.46 What are the reporting requirements?

(a) Beginning with fiscal year 1990, each application for continuation funding for the third or any subsequent year of a PWI grant must include data for the most recent complete project year in order for the Secretary to determine if the grantee has met the program compliance indicators established in subpart F of this part.

(b) If the data for the most recent complete project year provided under paragraph (a) of this section shows that a grantee has failed to achieve the minimum composite score required in § 379.52(f) to meet the program compliance indicators, the grantee may, at its option, submit data from the first six months of the current project year to demonstrate that its project performance has improved sufficiently to meet the minimum composite score.

(Approved by the Office of Management and Budget under control number 1820–0566)

(Authority: Section 621(f)(2) of the Act; 29 U.S.C. 795g(f)(2))

5. Part 379 is amended by adding a new subpart F, consisting of §§ 379.50 through 379.53, to read as follows:

Subpart F—What Requirements Must a Grantee Meet To Receive Continuation Funding?

§ 379.50 What are the requirements for continuation funding?

Beginning with fiscal year 1990, in order to receive a continuation award for the third or any subsequent year of a PWI grant a grantee shall adhere to the provisions of its approved application and shall receive a minimum composite score of at least 70 points on the program compliance indicators contained in § 379.53.

(Authority: Section 621(h)(4)(B) of the Act; 29 U.S.C. 795g(h)(4)(B))

§ 379.51 What are the program compliance indicators?

The program compliance indicators implement program evaluation standards, which are contained in an appendix to this part, by establishing minimum performance levels and performance ranges in essential project areas to measure the effectiveness of individual grantees.

(Authority: Secs. 621(d)(1) and 621(f)(1) of the Act; 29 U.S.C. 795g(d)(1) and 795g(f)(1))

§ 379.52 How is grantee performance measured using the compliance indicators?

(a) Each compliance indicator establishes a minimum performance level.

(b) Each compliance indicator also establishes three performance ranges with points assigned to each range. The higher the performance range, the greater the number of points assigned to that range.

(c) If a grantee does not achieve the minimum performance level for a compliance indicator, the grantee receives no points.

(d) If a grantee achieves or exceeds the minimum performance level, the grantee receives the points assigned to the particular performance range that corresponds to its actual level of performance.

(e) The maximum possible composite score that a grantee can receive is 150 points.

(f) A grantee must receive a composite score of at least 70 points to meet the evaluation standards and qualify for continuation funding.

(Authority: 621(h)(4)(B) of the Act; 29 U.S.C. 795g(h)(4)(B))

§ 379.53 What are the weights, minimum performance levels, and performance ranges for each compliance indicator?

(a) *Percent of persons served whose disabilities are severe.* (3–10 points) A minimum of 50 percent of persons served by the project are persons who have severe disabilities. The performance ranges and the points assigned to each range are as follows:

(1) 50 percent to 59 percent—3 points.
(2) 60 percent to 75 percent—7 points.
(3) 76 percent or more—10 points.

(b) *Percent of persons served who have been unemployed for at least six months at the time of project entry.* (5–15 points) A minimum of 50 percent of persons served by the project have been unemployed for at least six months at the time of project entry. The performance ranges and the points assigned to each range are as follows:

(1) 50 percent to 59 percent—5 points.
(2) 60 percent to 75 percent—10 points.
(3) 76 percent or more—15 points.

(c) *Cost per placement.* (8–25 points) The average cost per placement of persons served by the project does not exceed $1600.00. The performance ranges and the points assigned to each range are as follows:

(1) $1351 to $1600—8 points.
(2) $1000 to $1350—17 points.
(3) Less than $1000—25 points.

(d) *Projected cost per placement.* (5–15 points) The actual average cost per placement of persons served by the project does not exceed 140 percent of the projected average cost per placement in the grantee's application. The performance ranges and the points assigned to each range are as follows:

(1) 126 percent to 140 percent—5 points.
(2) 111 percent to 125 percent—10 points.
(3) 110 percent or less—15 points.

(e) *Placement rate.* (8–25 points) A minimum of 40 percent of persons served by the project are placed in competitive employment. The performance ranges and the points assigned to each range are as follows:

(1) 40 percent to 49 percent—8 points.
(2) 50 percent to 69 percent—17 points.
(3) 70 percent or more—25 points.

(f) *Projected placement rate.* (5–15 points) The actual number of persons served by the project that are placed into competitive employment is at least 50 percent of the number of persons that the grantee, in the grant application, projected would be placed. The performance ranges and the points assigned to each range are as follows:

(1) 50 percent to 74 percent—5 points.
(2) 75 percent to 94 percent—10 points.
(3) 95 percent or more—15 points.

(g) *Change in earnings.* (7–20 points) The earnings of persons served by the project who are placed into competitive employment have increased by an average of at least $75.00 a week over earnings at project entry. The performance ranges and the points assigned to each range are as follows:

(1) $75 to $124—7 points.
(2) $125 to $199—14 points.
(3) $200 or more—20 points.

(h) *Percent placed who have severe disabilities.* (3–10 points) At least 50 percent of persons served by the project who are placed into competitive employment are persons who have severe disabilities. The performance ranges and the points assigned to each range are as follows:

(1) 50 percent to 59 percent—3 points.
(2) 60 percent to 75 percent—7 points.
(3) 76 percent or more—10 points.

(i) *Percent unemployed placed.* (5–15 points) At least 50 percent of persons served by the project who are placed into competitive employment are persons who were unemployed for at least six months at the time of project entry. The performance ranges and the points assigned to each range are as follows:

(1) 50 percent to 59 percent—5 points.
(2) 60 percent to 75 percent—10 points.
(3) 76 percent or more—15 points.

(j) *Summary chart of weights and performance ranges.* The following composite chart shows the weights assigned to the performance ranges for each compliance indicator.

Indicator	Performance ranges:		
	Range (1)	Range (2)	Range (3)
Persons with severe disabilities served	3	7	10
Unemployed served	5	10	15
Cost per placement	8	17	25
Projected cost per placement	5	10	15
Placement rate	8	17	25
Projected placement rate	5	10	15
Change in earnings	7	14	20
Percent placed who have severe disabilities	3	7	10
Percent unemployed placed	5	10	15
Total possible score	49	102	150

(Authority: Section 621(f)(1) of the Act; 29 U.S.C. 795g(f)(1))

6. An appendix is added to part 379 to read as follows:

Appendix to Part 379—Evaluation Standards

Standard 1: The primary objective of the project shall be to assist individuals with disabilities to obtain competitive employment. The activities carried out by the project shall support the accomplishment of this objective.

Standard 2: The project shall serve individuals with disabilities that impair their capacity to obtain competitive employment. In selecting persons to receive services, priority shall be given to individuals with severe disabilities.

Standard 3: The project shall ensure the provision of services that will assist in the placement of persons with disabilities.

Standard 4: Funds shall be used to achieve the project's primary objective at minimum cost to the federal government.

Standard 5: The project's advisory council shall provide policy guidance and assistance in the conduct of the project.

Standard 6: Working relationships, including partnerships, shall be established with agencies and organizations in order to expand the project's capacity to meet its objectives.

Standard 7: The project shall obtain positive results in assisting individuals with disabilities to obtain competitive employment.

DEPARTMENT OF LABOR

Mine Safety and Health Administration

30 CFR Part 75

RIN 1219–AA63

Safety Standards for Roof, Face and Rib Support

AGENCY: Mine Safety and Health Administration, Labor.

ACTION: Proposed rule and notice of hearing.

SUMMARY: This proposed rule would revise two sections of the Mine Safety and Health Administration's (MSHA) underground roof support safety standards which were promulgated on January 27, 1988. These two standards, which address the quality of roof bolts and the removal of permanent roof supports, were challenged in the D.C. Circuit Court of Appeals. This proposal is being initiated because of the opinion of the Court in that case which would vacate the affected sections on February 15, 1990.

DATES: Written comments must be submitted on or before October 6, 1989.

A public hearing will be held at the Lexington Hilton Inn, 1938 Stanton Way, Lexington, Kentucky 40511 on October 19, 1989, beginning at 9 a.m. Requests to make oral presentations for the record should be submitted at least 5 days prior to the hearing. However, immediately before the hearing begins, any unallotted time will be made available to persons making late requests.

ADDRESS: Send written comments and requests to make oral presentations at the hearing to the Mine Safety and Health Administration, Office of Standards, Regulations and Variances, Room 631, Ballston Tower No. 3, 4015 Wilson Boulevard, Arlington, Virginia 22203.

FOR FURTHER INFORMATION CONTACT: Patricia W. Silvey, Director, Office of Standards, Regulations and Variances, MSHA, phone (703) 235–1910.

SUPPLEMENTARY INFORMATION:

I. Background and Discussion of Proposed Rule

MSHA is proposing revisions of two standards that were promulgated on January 27, 1988 (53 FR 2354). These safety standards address roof support in underground coal mines. These revisions are proposed under 30 U.S.C. 811.

On January 27, 1988 (53 FR 2354), MSHA published final rules revising its safety standards for roof, face and rib support in underground coal mines. This proposal affects existing 30 CFR 75.204 (a) and (b), which set out requirements for roof bolts, and 30 CFR 75.213, which sets out requirements for roof support removal.

On March 10, 1989, the U.S. Court of Appeals for the District of Columbia Circuit decided the case of *United Mine Workers of America (UMWA)* v. *Elizabeth H. Dole*, 870 F.2d 662. The Court held that MSHA's preamble discussion of two specific standards challenged by the UMWA did not fully address whether the new standards provided the same or greater level of safety protection as the prior standards. Therefore, the Court held the two standards invalid. On May 17, 1989, the Court of Appeals issued an order which will vacate 30 CFR 75.204 (a) and (b), and 75.213 on February 15, 1990.

In accordance with the May 17, 1989 court order, the Agency is proposing revisions that address the issues raised in litigation and take into account MSHA's statutory mandate contained in 30 U.S.C. 811(a)(9) which requires that new mandatory standards not reduce the protection provided to miners by existing mandatory standards. The relevant prior rules that should be used for purposes of comparison with these proposed rules are 30 CFR 75.200–6, 75.200–7(a)(1), 75.200–14, 75.204 and 75.204–1 (1987). The provisions of these prior rules are described elsewhere in this preamble.

The purpose of the public hearing is to receive relevant comment and to answer questions concerning the proposal. The hearing will be conducted in an informal manner by a panel of MSHA officials. Although formal rules of evidence will not apply, the presiding official may exercise discretion in excluding irrelevant or unduly repetitious material and questions.

The hearing will begin with an opening statement from MSHA. The public will then be given an opportunity to make oral presentations. During these presentations, the hearing panel will be available to answer relevant questions. At the discretion of the presiding official, speakers may be limited to a maximum of 20 minutes for their presentations. Time will be made available at the end of each hearing for rebuttal statements. A verbatim transcript of the proceeding will be taken and made a part of the rulemaking record. Copies of the hearing transcript will be available for review by the public.

MSHA will also accept additional written comments and other appropriate data from any interested party, including those not presenting oral statements. Written comments and data submitted to MSHA will be included in the rulemaking record. To allow for the submission of any post-hearing comments, the record will remain open until October 30, 1989.

Section-by-Section Discussion

Section 75.204 Roof Bolting

Paragraphs (a) and (b) of this standard address the quality of roof bolts and accessories that are installed in underground coal mines. Paragraphs (c) through (g) are not included in this rulemaking and were not at issue in the litigation.

The proposal has been updated to reflect technological advancements in the development of roof bolts and would provide improved protection to miners when compared to the prior rule. The proposal also updates the existing standard by referencing the most recent revision of the American Society for Testing Materials (ASTM) standard which was published in 1988.

Paragraph (a) would require the operator to obtain a certification from the manufacturer that roof bolts and accessories addressed in ASTM F432–88, "Standard Specification for Roof and Rock Bolts and Accessories," were manufactured in accordance with the ASTM standard. The certification would verify that the roof bolts and accessories were manufactured and tested in accordance with the ASTM standards. The ASTM standard for roof bolts and accessories is a consensus standard used throughout the United States for the design of such materials.

Requiring that the operator obtain a certification from the manufacturer would eliminate the concern that mine operators would need to have the same knowledge of ASTM standards as manufacturers. The proposal would require operators to have available for inspection a certification from the manufacturer that the roof bolts and accessories used at the mine meet the ASTM specifications. This approach is consistent with the industry practice of manufacturers routinely furnishing such certification to the mine operator when requested to do so in a contract or purchase order. In addition, ASTM F432–88 specifies that the manufacturer is to provide such a certification upon request. Interested persons may obtain ASTM F432–88 from the publisher, American Society for Testing and Materials, 1916 Race Street, Philadelphia, Pennsylvania 19103. It may also be examined at any Coal Mine Safety and Health district or subdistrict office.

The prior rule, 30 CFR 75.200–7(a) (1987), stated that roof bolt assemblies should meet American National Standards Institute's (ANSI), "Specifications for Roof Bolting Materials in Coal Mines." This rule, which was published in 1970, referred to the ANSI document in existence at that time. The 1988 ASTM standard which is referenced in the proposed rule is a more comprehensive and updated document which reflects advances in roof bolt technology. Examples of such improvements are: A grade rating system for bearing plates; a color coding scheme used to identify the length of bolts; increased strength specifications for threaded parts; increased coverage of roof bolt accessories, i.e., hardened washers, reinforcement bars, and couplings; upgrade of the quality of steel used and specifications for chemical requirements of materials used in the manufacture of roof bolts and accessories; and standard test methods for manufacturers to assure that bolts and accessories meet performance specifications. As a result, the proposal would provide additional safety for miners, as compared to the prior rule.

Paragraph (b) of the proposal would allow the use of roof bolts and accessories not addressed in ASTM F432–88, provided that they are effective. The effectiveness of such bolts or accessories would be required to be demonstrated by their successful use in an area of a coal mine with similar strata opening dimensions and roof stresses, or by their effective use under controlled conditions in a representative area of the affected mine. Testing would be conducted in an area with conditions that are representative of those where the materials are expected to be used. Until testing demonstrates the effectiveness of the bolts or accessories proposed to be used, access to the area would be controlled to permit entry only by those persons necessary for the testing process.

MSHA proposed to add the phrase "approved by the District Manager" to clarify that all new roof bolts and accessories not addressed by the ASTM standard be approved for use through the roof control plan before they are permitted to be used as roof support at a mine. The prior rule, 30 CFR 75.200–12 (1987), called for test areas for new support materials but did not set out the performance that these materials would be required to meet. The proposal would improve the prior rule by specifying the performance of bolts and accessories that must be demonstrated before approval is granted.

Section 75.213 Roof Support Removal

This standard, which is derived from prior rules 30 CFR 75.204, 75.204–1 and 75.200–14, would set forth requirements for removing permanent roof supports. It would require taking certain precautions to minimize the hazards involved in the removal of roof supports and identify circumstances under which roof supports cannot be removed.

The proposed requirements would differ from the prior rules, which provided that operators who intend to recover roof supports include a plan for such recovery in the mine's approved roof control plan. Under the proposal, the criteria provisions in 30 CFR 75.200–14 (1987), which were considered by the District Manager when approving roof support recovery plans, would no longer be implemented through roof control plans. Instead, roof support removal would be separately addressed in the proposed standard. As a result, roof control plans would be less cumbersome and complex.

Paragraph (a) specifies that the removal of permanent roof supports be done either by persons experienced in this work or by persons under the supervision of a person, designated by the operator, who is experienced in removing roof supports. In addition the proposal would require persons performing roof support removal to have at least one year of underground mining experience. With this experience, miners performing roof support removal could be expected to be aware of the general hazards associated with underground mining.

The prior rule, 30 CFR 75.200–14(a) (1987), provided that "Recovery should only be done under the direct supervision of a mine foreman, assistant mine foreman, or section foreman." The prior rule also provided that experienced miners be assigned to recovery work but did not specify the amount of experience required. Under the prior rule, persons with a supervisory title could supervise roof support removal, even if they had no experience with this type of work. The proposal focuses directly on the support removal experience of the supervisor and the persons who perform roof support removal.
